*The trademark of the Hartford Fire Insurance Co.
Engraved by TIMOTHY COLE*

It is good business practice to buy fire insurance by name and trademark just as you depend upon a trademark in selecting shoes, or food, or machinery.

For more than a century the name of the Hartford Fire Insurance Company on an insurance policy has been a guarantee of full, prompt indemnity for loss by fire or as a consequence of fire, and a full measure of helpful service by an organization of local agents of dependable character.

Wherever there is property subject to loss there is a Hartford agent ready to serve you. He will give you information and rates, and through the Hartford's trained Fire Prevention Engineers will co-operate in eliminating the possibility of fire. And if fire comes, despite your precautions, the Hartford will make good the loss.

For a Hartford policy, bearing the Hartford trademark, call on the nearest Hartford agent or write to the Company.

HARTFORD FIRE INSURANCE CO.

HARTFORD, CONN., U. S. A.

*The Hartford Fire Insurance Co. and the Hartford Accident and Indemnity Co.
write practically every form of insurance except life.*

TERMS: \$4.00 a year, in advance; six months, \$2.25; three months, \$1.50; a single copy, 10 cents; postage to Canada, 85 cents a year; other foreign postage, \$1.00 a year. **BACK NUMBERS**, not over three months old, 25 cents each; over three months old, \$1.00 each. **QUARTERLY INDEXES** will be sent free to subscribers who apply for them. **RECEIPT** of payment is shown in about two weeks by date on address-label; date of expiration includes the month named on the label. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL**, **DISCONTINUANCE**, or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect.

Both old and new addresses must always be given. **PRESENTATION COPIES:** Many persons subscribe for friends. Those who desire to renew such subscriptions must do so before expiration. **THE LITERARY DIGEST** is published weekly by the Funk & Wagnalls Company, 354-360 Fourth Avenue, New York, and Salisbury Square, London, E. C. Entered as second-class matter, March 24, 1890, at the Post-office at New York, N. Y., under the act of March 3, 1879. Entered as second-class matter at the Post-office Department, Ottawa, Canada.

New Minds for Old In 12 Weeks!

THOUSANDS of people who only a short while ago were struggling along in low-salaried routine positions are to-day earning double and treble their former salaries and are enjoying all the luxuries that make life worth while.

They owe their sudden success to the evolution of a new science; a science through which they actually acquired **new minds**—minds which were entirely remade in **12 to 15 weeks!**

This may seem like an utter impossibility. Yet one has only to investigate the facts. Thousands of signed statements from students of this new science offer indisputable evidence to the fact that it is easily possible for anyone to acquire a new mind—that it is easily possible for anyone to secure great increases in salary. (A few of these statements are reproduced below.)

How are these apparent miracles accomplished? The explanation is quite simple. Psychologists have definitely established the fact

that the average man goes through life using only about **one-third** of his possible brain-power. This is not as surprising as it may seem. Your brain is just like any one of your muscles. Unless you keep it "in trim"—unless you give it proper exercise—it soon becomes dull, awkward, inefficient and "flabby." Yet the average man takes no steps whatever to keep his brain well developed. As a result his success faculties become

weakened, and unless he develops a **new mind** he is doomed to live a life of inferiority or failure. If YOU are now working for low pay, if YOU have gotten yourself into a rut, if YOU are a subordinate instead of an executive—it is a certain indication that you have let your mind "go slack." Success depends upon brain power. With a mind which is only one-third as efficient as it should be you cannot even hope for success. The thing to do, therefore, is to acquire a new mind. You *can* do it, just as thousands of others have done it. The way is easy—it is through **Pelmanism**.

Pelmanism is the science of intensive mental development. Since its first appearance 27 years ago it has spread, with the sweep of a great religion, to every corner of the globe, until to-day its students number over half a million men and women in every walk of life.

The results that Pelmanism is bringing are nothing short of amazing. Instances of quick promotion through it are countless. Cases of doubled salary in less than six months and trebled salary in less than a year are not at all unusual. And all because **Pelmanism shows the way to new minds for old!**

There is no "magic" about Pelmanism. There is no mystery about Pelmanism itself. Further, it does not promise anything but what it already has accomplished in thousands of cases.

Pelmanism is meant for everyone. That is what makes Pelmanism a truly great science—it can help all mankind without respect to age, sex, position, religion or previous education. It is easily understood; its principles are easily applied. You will find it of deep and fascinating interest. You will be gripped by its clear logic. You will begin to feel its mysterious effect almost immediately. Many have said that even after the first hour they were conscious of a startling change in their whole attitude toward life.

Pelmanism will give you the vital spark—it will give you the type of mind you have always admired and longed for. Under its powerful influence such handicaps as timidity, lack of

initiative, faulty judgment, dull perception and lack of directive ability disappear as if by magic. Pelmanism will swing the wasted two-thirds of your brain into action. You will actually be given a new mind—a mind which will sweep you forward, which will lead you on from success to success—until you have attained your goal.

"Scientific Mind Training"—FREE

The coupon below will bring you, without cost or obligation, a copy of a splendidly bound 48-page book on scientific mind training. This vitally interesting book describes Pelmanism in detail and reveals the unique method whereby thousands of people everywhere are acquiring new minds for old in 12 to 15 weeks. It also contains the actual experiences of former students, showing how this great new science led them to unexpected heights of intellectual, social and financial success.

Your copy is ready for you. Simply fill out and mail the coupon. It is absolutely free. Send for it to-day. **NOW! The Pelman Institute of America, Suite 39, 2575 Broadway, New York City.**

Success Through New Minds for Old

(A few of the thousands of letters from successful students.)

"From a salary of \$975 I rose in one step to \$2,000 a year and in January this year to \$4,000 a year."

"I am glad to inform you that I have just received an increase in salary amounting to \$1,000 a year extra."

"Since becoming a Pelmanist I have actually increased my salary 300 per cent."

"I had the pleasure of taking the course during 1917-18. Previous to my joining the army my salary was \$20 a week. My present salary is \$10,000 a year."

No Motor so Simple—None More Flexible—Full Power Every Stroke

TREMENDOUS MILEAGE

Uniting Luxury with Economy

Records of 100,000 and 200,000 miles almost wholly free from repair give vivid emphasis to this owner verdict: That the Willys-Knight provides luxurious riding comfort with economy of service year after year.

It is the Willys-Knight Sleeve-Valve Motor which provides this tremendous mileage. Study the design. No tappets; no valve-heads to check the in-rush and exhaust of gas; no clicking springs to weaken; no cams to hammer and wear out.

But instead: Wide free ports for the gas in metal sleeves which slide noiselessly on a film of oil. A big, round combustion chamber with center-fire spark where every drop of gas is turned into power for your use. The little carbon that forms helps to seal compression more tightly.

The stalwart chassis matches the age-resisting motor. The coachwork completes the car's perfections. Thus luxurious travel becomes a continuous economy with the Willys-Knight.

Sleeve Valve Motor Improves With Use

PYORRHOCIDE POWDER

keeps the gums healthy

Receding gums a sign of Pyorrhea

YOU may be one of the many thousands in whose mouth Pyorrhea has gained a foot-hold. You are if you have receding, tender and bleeding gums. Act quickly to stop Pyorrhea's progress or you may lose your teeth.

The sure way to check pyorrhea—or better still, to prevent it—is to see your dentist frequently and use Pyorrhocide Powder regularly.

The value of Pyorrhocide Powder has been proved by dental clinics devoted exclusively to pyorrhea research and treatment.

Use Pyorrhocide Powder for healthy gums and clean, white teeth. Dentists everywhere prescribe it. The economical dollar package contains six months' supply.

Sold by druggists and dental supply houses.

LAW

Course in 2 Years

Be a lawyer. Law trained men earn big money and occupy top positions in social, business and public life.

\$5,000 to \$10,000

a year is what you can earn. Our improved system guides you step by step until you have passed the bar examination in any state. You can't lose a cent. Our money refund guarantee protects you. Low cost, easiest terms. We furnish everything including complete Law Library. Send for free catalog.

American School, Dept. L-52, Drexel Ave. & 58th Chicago

BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's biggest business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$30 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete course in shorthand and typewriting, new principles, insures exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed goes accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you nevertheless need New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salary position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be a Big Man's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

THE TULLOSS SCHOOL, 435 College Hill, Springfield, Ohio

Corns

Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

Edward Wesley and Co., Cincinnati, O.

The Summer Quarter

Courses are the same in educational and credit value as those offered in other quarters of the year.

The colleges, the graduate schools and the professional schools provide courses in Arts, Literature, Science, Commerce and Administration, Education, Law, Divinity, Medicine, Social Service Administration.

Ideal place for recreation as well as study. Golf, tennis, rowing, etc. Two great parks and Lake Michigan within walking distance. Students may register for either term or both.

1st Term—June 19—July 26
2nd Term—July 27—Sept. 1

SPRING in CANADA

SPRING brings to Canada a rush of renewed activity in city, town and country. In other words, Spring in Canada is "good for business". It is Spring in Canada now, and Industry, like a giant with his head in Halifax and his heels in Vancouver, is arousing himself to the new tasks before him.

There is a definite determination in Canada to give greater impetus to the mysterious Wheels of Industry. These alone grind out Prosperity. Building, and all the products of labor that go with it, is increasing in volume. The industry of farming, which in Canada is the basis of all commercial life, is feeling the stimulus of better markets and lower prices of manufactured goods. The farm market is again absorbing the many products needed to carry on business. The "opening of navigation" means "fitting out", and freer and more economical movement of goods. These are some of the reasons why Spring in Canada is "good for business".

*MARK THIS—Canada's nine million people are energetic "traders" carrying on a per capita import and export trade three times that of the United States—owning more automobiles than any other country, save two, with per capita savings exceeding any other country in the world—with financial resources sufficient to buy the goods and services they require. It is **Purchasing Power**—not numbers—that counts, and in this particular Canada exceeds countries having many times her population.*

The Daily Newspapers of Canada

Below in this advertisement is a list of the most prominent and influential newspapers of Canada. They circulate not only in the cities, but in the country 'round about. In this particular, they differ from newspapers in some other countries. The city man reads them, the farmer subscribes, the mechanic and the lumberman look to these papers for news and information. To obtain for your goods National as well as local Publicity, advertise in these papers. If you want the details of circulation, the classes of people among their subscribers, or any data regarding them, ask your advertising agency or write these papers direct. There is business in Canada this Spring for those who go after it with energy.

A PLAN TO HAVE US PAY THE GERMAN INDEMNITY

THE SEMI-OFFICIAL British proposal to "wipe out" all inter-Allied war debts and to credit this amount "to the account of German reparations" is seen by some of our press as in effect a suggestion that the United States contribute \$10,000,000,000 to Germany toward the payment of her reparations bill. One result, London dispatches point out, would be the reduction of Germany's debt to the Allies from 110,000,000,000 to 45,000,000,000 gold marks. The plan was laid before the Paris Conference of Allied Finance Ministers last month by Sir Robert Horne, British Chancellor of the Exchequer, and was expounded at length in the news and editorial columns of Lloyd George's paper, the *London Daily Chronicle*. This exposition, together with British and European press opinions, will be found on page 18 in our department of Foreign Comment. But as the *Manchester Guardian* pertinently remarks, "the success of the scheme depends largely upon the attitude of the United States." And the *Daily Chronicle* mentions the fact that "the debt owing to America by the Allies is twice as great as that owing to us."

The attitude of the United States, as reflected in the editorial columns of the daily press, is not one of immediate, enthusiastic and universal endorsement of Sir Robert's plan. The proposal "is neither wise nor practicable," remarks the *Raleigh News and Observer*, which goes on to discuss the debt and reparations problems in the following temperate but definite terms:

"The United States has shown its willingness to aid a suffering world, but the suggestion of canceling the debts for money loaned European Nations meets with little response. It has no disposition to press the payments rapidly, but the debts should be put in proper shape and paid in instalments. The proper reduction of armaments and armed forces will enable the nations to save enough to pay the interest on the debts and gradually meet the principal. The German reparations funds should be fixed independent to the debts due America. This country has asked for no reparation. It urged in Paris an immediate fixing of the sum. It was a great mistake to have played politics by delaying fixing the amount. All suggestions looking to considering Allied debts with reference to the amount of repara-

tions add to the delay by raising false hopes Germany should pay and pay to the full a fair amount. It should be fixed at once and made payable on such terms as to enable Germany to carry on its industries.

"The sooner this is done, the sooner Allied debts are funded and provision made for the payment of interest, and the European countries quit chasing the rainbow of canceling debts, the sooner we will have world stability."

The British proposal is "preposterous" and has no claim to serious consideration, avers Mr. Hearst's *Chicago Herald-Examiner*, which points out that:

"The debt can not be canceled in the ordinary sense of the word. It is evidenced by bonds and the bonds must be paid. If not paid by the European nations, for which the debt was contracted, they must be paid by the American people. So cancellation would mean simply the transfer of the obligation from Europe's to America's shoulders."

The indebtedness of European nations to the government of the United States "is a matter purely between the American Government and the separate Powers who owe us about \$11,000,000,000" [the original debt plus interest], while the collection of reparations "is a matter solely between the German Government and the nations which signed the Treaty of Versailles,"

remarks the *Dayton News*. To quote further from Governor Cox's newspaper, which goes on to discuss at some length in its editorial columns another British suggestion involving the transfer of German reparations payments to the United States in cancellation of the Allies' debts to us:

"The Allies are collecting and expect to keep on collecting from Germany by virtue of this treaty. America has nothing to do with the Versailles Treaty and therefore could not be bound by its terms even if the reparations collection were shifted to our Government. The United States would have no legal right to collect a single penny from the German Government under the Versailles pact. The Knox separate peace which the Administration so glibly negotiated bears no relation to reparations payments. If it takes the combined military efforts of France and England to make Germany pay these war reparations now, what chance would America, thousands of miles away and with a rapidly dwindling army along the Rhine have to col-

THE WILL O' THE WISP?

—Morris for the George Matthew Adams Service.

lect or to enforce payment demands? We might have to send a huge army to Europe eventually or else leave our national interests unguarded. The British proposal is impractical and wholly out of the question as affairs now stand. It is to begin with out of accord with the Administration's policy of isolation."

In the same vein the Columbus *Ohio State Journal* remarks:

"From the day when Lloyd George casually mentioned to President Wilson at Paris the idea of nations voluntarily can-

celling war debts due from other nations, there has been no reason to doubt that it was the serious purpose of European leaders to try to bring that about. Now there appears a more cunning invention from the brains of European statesmen on that subject, the countries over there planning to shift to the shoulders of this country the burden of collecting the entire German indemnity. One need not be an expert in international finance to foresee what would happen if America tried to collect a war indemnity. Germany would finance an American campaign over night and put the question into politics here in an effort to delay or escape payment. In the issue of the paper that carried the latest plan for juggling the debts was a story that the Steuben League of former German citizens would launch a movement to have the United States be easier on Germany in settlement of war claims. It would be a clever stroke of European diplomacy to dump the entire matter into the lap of America, but it would be a clever stroke of American diplomacy to see that it is not done."

In the Des Moines *Capital*, which "is in favor of requiring every country to which the United States Government furnished money during the war to pay every dollar of its indebtedness," we read:

"The countries may be poor, but they had better pay their debts than be creating new military establishments and preparing for more wars. All Europe must have the lessons of the war burned into its system and it will do harm rather than good for any debts to be forgiven. The United States furnished an army and paid its own expenses. The United States paid for transportation of its army and in some instances paid for the use of ground upon which battles were fought. In addition to all these reasons may be added that the United States needs her money."

"This country is in no mood for further sacrifices," remarks the Milwaukee *Sentinel*, which sees no virtue in the proposal to deduct from the bill for German reparations every billion of inter-Allied debt canceled. Says this Wisconsin paper:

"Time and again it has been pointed out that the real difficulty is not German reparations or the Allied debt or our unwillingness to cancel it, but the absolute determination of Europe to continue its bottomless wasteful expenditures that bid fair to swallow more money than all reparations and Allied debts combined. It is the very first principle of business that a petitioner for financial assistance must satisfy his prospective creditor that his money will not be poured into rat-holes. If Europe showed

an ounce of common sense and willingness to put its economic house on a business basis instead of on the quicksands of mounting militarist budgets, sentiment in this country would be more friendly and all other problems could be talked over."

The latest British proposal, remarks the Springfield *Republican*, "is not quite so frank as the hints formerly dropt, that the United States might take its pay in German bonds, which it could collect or cancel as it might think best, but its drift is in the same direction." The New York *Freeman* characterizes the suggestion as "a plan for the rehabilitation of intergovernmental finance at the expense of the United States," and the Rochester *Times-Union* predicts that "Washington is likely to make its displeasure known in no uncertain terms."

Nevertheless, the *Times-Union* goes on to say, "the British scheme emphasizes a fact that Americans have been busily engaged in forgetting ever since the rejection of the Treaty of Versailles." This fact, we read, is that "the question of the Allied credits to the United States is inextricably bound up with the question of the German indemnity." To quote further:

"There is no discussing the one without the other. Of course, in time, no doubt, no matter what is done, or what is left undone, the world will blunder through to a settlement. . . .

"The sooner this fact is faced the better it will be. American policy just now is that of the ostrich with its head in the sand. It is high time to look around, see what the dangers and the hopes of the situation are, and act accordingly."

The New York *Tribune* sees some merit in the British proposal inasmuch as "it puts Europe in the position of doing some debt cancellation on its own account before negotiating for remissions by the United States." It says:

"The main obstacle to any movement on our part to remit the debt is the realization here that as it now stands the obligation is, in fact, no present burden on Europe. It is only the shadow of a burden. No interest is being paid. We hold demand notes

which have not yet been funded into long-term bonds. We are not harassing our debtors. All that we are asking of them is the conversion of one form of confession of indebtedness into another.

"Under the Funding Act passed by Congress we retain our claim. It is now, as before, nothing but a claim. If Europe goes ahead on the assumption that this claim is to be moderated, as it undoubtedly will be, both as a matter of international equity and of financial prudence, the connection of American debt cancella-

AFTER ALL HE DID FOR HER IN 1917—

DOES HE DESERVE THIS?

—Knott in the Dallas News.

tion with European debt cancellation will be much more definitely and convincingly established. Europe has everything to gain and nothing to lose by starting first. If she readjusts her inter-Entente debt account it will be easier for the United States to make that final gesture which will lift in large part the hold-over war incubus which weighs on labor, industry, commerce and finance and blocks a return to normal interchanges and prosperity.

"The British Government's step is a wise one. It is Europe's move first."

A Texas paper which sees little likelihood that Sir Robert Horne's suggestion will ever be adopted, inclines to the opinion that it was probably devised for the purpose of exposing "a flagrant inconsistency in the attitude of the United States toward the perplexities of Europe." The *Dallas News* goes on to interpret our Government's attitude as one of insisting that the Allies pay their debts to the last penny and at the same time "remit a substantial part of their claims against Germany." That is, we counsel generosity as a measure of self-interest, while at the same time "we have refused to listen to appeals address to our own sense of generosity." In the Texas editor's opinion, "it was chiefly because the revised agenda of the Genoa Conference presented no possibility of effecting a reduction of the reparations claims against Germany that the United States has declined to participate in the deliberation." And in the *Rochester Democrat and Chronicle* we read:

"It has been stated by writers and correspondents, who are presumed to be on the inside in Washington, that the United States eventually, in the interest of world economic recovery, will cancel a large portion of the Allied debt. No statement to this effect has been made by any responsible government official, however. It has been stated, on the other hand, both by astute writers and by responsible public officials that the two most formidable obstacles to economic recovery in Europe are the reparations bill and the cost of the military establishments, and that until Europe shows a disposition to overcome these obstacles she must not expect any of the aid which the United States is in a position to give.

"The British financiers' plan at least offers a starting-point for discussion between the European nations for overcoming the reparations obstacle."

The pros and cons of the earlier proposal to cancel the inter-Allied war debts, without relation to the reparations issue, are reviewed by *The Commerce Monthly* of the New York National Bank of Commerce, in which we read:

"The case for cancellation was well stated in a recent address by Mr. Justice Clarke of the United States Supreme Court.

"The arguments of the Justice are the familiar ones made by the champions of cancellation, and are dual, resting upon moral and sentimental justification on the one hand and upon business prudence on the other hand. The arguments run that for three years the Allies fought the Central Powers without our assistance. Had Germany and her supporters been successful we should have had to oppose them alone in subsequent years with tremendous cost to us. The cost in men and money for each of

our allies was enormously greater proportionately to resources than was the cost to us. Our advances went to further the common victory and were nothing less than our share in the war, so that in equity there really is nothing owing us. For France, Italy and Belgium the carrying charges upon their present national debt are so inordinately heavy in proportion to their national incomes that their problem even to meet interest during the next few years will be an exceedingly difficult one. The position of Great Britain in this connection is better, but by no means easy.

"But assuming that the Allies can pay—so runs the argument—may it not be a question whether it is to our best interest that they do so? It is not necessary to demonstrate that our debtors must meet both the yearly interest payments and amortizations chiefly by sending goods—manufactured goods—into this country. The annual interest alone on our foreign credits at 4½ per cent. comes to a round half billion dollars. Our favorable trade balance of last year was about \$2,000,000,000. If our allies are able to meet their interest obligations, our trade balance will probably show a rapid readjustment during the next few years. The balance may shift to a so-called unfavorable one, with imports exceeding exports conceivably by as much as a half billion dollars. Such a sudden readjustment, such an influx of manufactured goods from abroad, would possibly entail serious consequences, prolonging for a long period unsatisfactory business conditions. If, however, our investors should purchase foreign securities on a large scale, readjustment may be partially arrested. Such are the main points of this phase of the case.

"One of the most forceful of the arguments of the pro-cancellation forces is only incidentally moral or economic. They hold that if we press for the collection of these advances, we shall in the years to come gain the reputation of being the Shylock of international finance. They point to history to demonstrate that the repayment of huge international debts, whether tribute or borrowings, usually breeds a spirit of mutual distrust, suspicion and ultimate hatred between the parties involved. And they raise the question whether for a nation with a large foreign trade, the possibility of such an outcome is worth the candle."

Turning to the other side of the case, *The Commerce Monthly* continues:

"Those who wish to see our loans collected in full present counter arguments. They hold that the war was primarily the war of Europe, precipitated by European imperialism, to which her opponents contributed as well as Germany. Our sole interest was to insure the defeat of Germany so that in future years we should not have to oppose her alone. We asked no assistance in maintaining our armies in the line; the funds borrowed from us by our allies to maintain their armies are their just and due obligations; and they should expect to repay them. The cancellation of international obligations is a dangerous precedent to establish. Furthermore, the spoils of war in the shape of land acquisition and reparations in kind and money have gone entirely to others; we asked nothing in this connection.

"On the economic side of the question, the opponents of cancellation maintain that if our Government can collect from its debtors yearly interest of a half billion dollars or more, our taxes can be commensurably cut down. Lightened taxation is in turn expected to give a decided impetus to business revival."

DESERTING FARM AND KITCHEN

FOR THE FIRST TIME in our history there are now more of us working in factories than on the farm. The 1920 census shows that in two fields of labor there has actually been a decrease in the number of workers, namely, the farm and "domestic and personal service." The National City Bank of New York has been summing up the chief changes shown in the 1920 census of persons "engaged in gainful occupations." It discovers in the first place that the analyses of occupations which have been made every ten years during the last half century show that while the number of persons at work in agriculture was in 1920 less than double that of 1870, the number engaged in "manufacturing and mechanical industries" was in round terms five times as many as in 1870, and those engaged in "trade and transportation" six times as many as in 1870. While some allowance in the case of the farm figures must be made for the fact that the censuses in 1910 and 1920 were not taken at the same season of the year, the writer for the bank does not see how that can entirely account for the large decrease, the figures for farm labor being 6,141,000, in 1870, 10,382,000 in 1900, 12,659,000 in 1910, and then dropping to 10,951,000 in 1920. At the same time, the number engaged in "manufacturing and mechanical industries" grew from 2,451,000 in 1870 to 7,086,000 in 1900, 10,658,000 in 1910, and 12,821,000 in 1920, "making it quite clear that irrespective of the change in the date of the census of agricultural occupations, the growth in the number of those engaged in manufacturing is far greater than those engaged along agricultural lines." Then,

"In the group showing the number engaged in 'trade and transportation' there is a still larger percentage of increase than in manufacturing and far larger than that of agriculture, the total number engaged in 'trade and transportation' having advanced from 1,240,000 in 1870 to 4,767,000 in 1900, 6,251,000 in 1910, and 7,390,000 in 1920, these increases having been of course coincidental with the growth in railroads and other transportation facilities, and in very recent years the use of the horseless vehicle for transportation as an adjunct to or in competition with the railways, which have shown but little growth in very recent years."

The housekeeper who says she simply can't find anybody to come and work in her kitchen is backed up by the Census Bureau, the writer for the New York bank notes. Owing to changes in grouping it is impossible to make comparisons farther back than 1910, but it does appear that the number of persons in "domestic and personal service" was materially smaller in 1920 than in 1910, being the only group besides farm labor showing a decrease. As we read:

"The total number of persons ten years of age and over employed under the designation 'domestic and personal service' was in 1920, 3,400,000 against 3,772,000 ten years earlier. The number of females engaged in 'domestic and personal service' fell from 2,521,000 in 1910 to 2,184,000 in 1920, while the males engaged in 'domestic and personal service' showed a much less reduction, from 1,241,000 in 1910 to 1,216,000 in 1920."

DUBLIN'S ROCKY ROAD

IT LOOKS AS IF EAMON DE VALERA had forgotten the deeper interests of Ireland in his anxiety to defend his own position," is the conclusion reached by the Columbus (Ohio) *Dispatch*, after a review of the Irish Free State's first stormy weeks of life and, indeed, we find the same sentiment in scores of American newspaper editorials—and not one to defend the recent activities of the former "President of the Irish Republic." "Talk with whom you will outside the 'die-hard' coterie that would rather keep on fighting Great Britain than see Ireland free, and you will find the sentiment

for the Irish Free State overwhelming," asserts the New York *Tribune*. Altho we are assured by foreign correspondents that "Ireland has a better chance now for peace, prosperity, and political development than at any time in her previous history," as the Los Angeles *Times* puts it, we find the country in turmoil, threatened not only with sectional conflict, but, as the Philadelphia *North American* notes, "with factional war in the majority and wide-spread anarchy."

De Valera, it seems, maintains that he is still president of the "Republic," and as such commander-in-chief of its military forces, with the result that a considerable part of the army refuses to obey the orders of the provisional government of Arthur Griffith and Michael Collins. First there

was trouble with the Irish railway workers, who are said to have seized the transition period in which to strike. After that had been settled by Collins, there came the dispute over the boundary between Ulster and Southern Ireland. This was the first of three distinct yet related factors in the situation. Second was the acute issue raised by the raiding of Ulster territory by armed bands and the kidnaping of scores of officials and civilians. The third, which is considered the most serious, is the avowed purpose of the De Valera faction to overthrow the provisional Free State Government. A quarrel over the terms of the treaty between Great Britain and Ireland, ratified by the Dail Eireann, has broken out between De Valera and his adherents on the one hand, and Griffith and Collins on the other.

The issue, as seen by the New York *World*, is "whether freedom and home rule in the British Commonwealth shall be accepted in lieu of further struggle for the dream of absolute independence." De Valera, observes the Norfolk *Virginian-Pilot*, "has launched an anti-treaty campaign that virtually amounts to a declaration of civil war." On St. Patrick's Day this former leader is said to have declared that "if the treaty with Great Britain is accepted, the fight for freedom will still go on. The Irish people, instead of fighting foreign soldiers, however, will have to fight Irish soldiers or the Irish Government." As we are told by the Providence *Journal*:

"This beaten politician refuses to accept the adverse verdict in the Dail Eireann. He declines to play fair, as Griffith and Collins have done. At a moment when every honorable Irishman should be striving, by word and deed, to uphold the hands of the Provisional Government, he is busily engaged in reviving old animosities in Ulster and lighting the fires of revolution in

Southern Ireland. His only object, in the language of Collins, is to destroy the existing authority at Dublin. Deprived of his old post of authority, he is unwilling to see any one elevated in his stead. He has shown himself narrow-minded, jealous of his 'rights,' intolerant of the views of others, bound to rule or ruin. If De Valera had kept out of the way, the Irish Free State would be operating unhampered. He has been the storm center, the source and origin of Ireland's troubles for a long while, and never so much so as since the Dail Eireann repudiated him in January."

"De Valera's fanatical policy of rule-or-ruin is the most threatening factor in the whole situation, and his course has been so devious as to indicate that he is unscrupulous in pursuing his ends," believes the Philadelphia *North American*. According to this paper:

"He champions an independent republic, and professes never to have countenanced anything less; yet he and the Dail he controlled sent delegates to London to negotiate a treaty upon the distinct understanding that recognition of a republic would not be discussed. When the treaty had been signed, he said it could have no effect unless it were approved by the Dail; yet when that body approved it he repudiated the rule of the majority and bolted. Then he declared that he would support the provisional government while awaiting the verdict of the people; but he has sought incessantly to undermine the government and to incite popular sentiment against the Free State by misrepresenting it as a helpless agency of Great Britain. Now he says that if he has his way the people will no more submit to the treaty eliminating British rule from Ireland than they did to the act of 1800, which established it, and the program of his party is to war against the Government, no matter what may be the verdict at the election."

The election to which *The North American* refers was postponed at a convention in Dublin until late in May. Meanwhile, agree

adverse vote, there shall be no elections during the period of truce, and at the May election there shall be submitted to the voters the constitution of the Free State, together with the London treaty. "Each side yielded something and gained something by this truce," thinks *The North American*:

"The Provisional Government got assurance of three months' freedom from overthrow in the Dail, and three months in which

to strengthen its position through its control of public affairs. But it had to pay the price of postponing the election, giving its enemies opportunity to foment public discontent with the Government and opposition to the treaty."

Guerilla warfare, similar to that which prevailed in South Ireland before the armistice with Great Britain, is occasionally reported from Ulster. Along the border line are the opposing armies of the Irish Republicans and the Ulsterites, the latter numbering five thousand. Sir James Craig, Ulster Premier, says he can not carry out the agreement made with Michael Collins to restore to their places of employment workers in Belfast industries who had been expelled. This, he explains, is because of the differences arising from the boundary question, and the tense feeling that exists in all Ulster.

So the first free government that Ireland has known for centuries struggles on. "If the frail ship of state rides out the storm that now threatens to engulf her, it will be a miracle," avers the Norfolk *Virginian-Pilot*. "But Ireland is the land of miracles," it adds. "Her future is in her own hands," remarks the Philadelphia *Enquirer*. "Even without the De Valera menace the transition period would have been discouraging enough," observes the New York *Globe*. However—

"Time lessens the strain and every day adds to the stability of the new Government. Many questions can not be instantly settled. The period between the ending of the Revolutionary War and the establishment of the United States was measured by years, not weeks, of anxiety. It is not natural to expect Collins to build a perfect government overnight. But he is making progress in the face of heart-breaking opposition, and if he succeeds he will go down in history with those memorable men who are honored for public service rendered in spite of such handicaps as those against which the heads of the Irish Free State are now contending."

both De Valera and Collins, there will be a truce, during which the Dail Eireann will continue to act. The ministry or the Provisional Government shall not be subject to dismissal by an

TO MAKE MORE HOMES IN NEW YORK

A SHORTAGE OF HOMES means a shortage of babies, remarks the *New York Evening Mail*, and "to lose the babe is good-by to the future." "Let us," it concludes, then, "build, and build, and build, for every home is a family and every family is a tower of strength for the nation." The twin evils of high rents and housing shortage which came in the wake of war have been most acute in New York City, but they have been felt almost everywhere in the country and have called forth bitter protest, and public and private efforts to provide remedies. To-day editors are perceiving the dawn of better things for the home builder and the home dweller. They note gains in building operations throughout the country. They note the promise of aid from the Federal Government. They note the achievements of the Lockwood Housing Committee, both in the way of new legislation and of improvement in the labor situation. They note a Supreme Court decision validating the New York State rent laws, and reasserting the State's right to resort to its police power in meeting the "social emergency caused by an insufficient supply of dwelling houses and apartments." They note decisions of State courts fixing a fair profit for landlords, thus doing away with rent gouging. The report of the Lockwood Housing Committee seems to the *New York World* to be "the most important piece of constructive work done in this State since the insurance investigation." This committee, which has been investigating the housing shortage, exposing building-trade conspiracies and overhauling the fire insurance business in New York with the aid of Samuel Untermyer, made its report early last month. In the long 256-page document appears this eloquent but disheartening picture of existing housing conditions in New York City:

"The term 'overcrowding' conveys no conception of the situation. In the city it has become necessary to practically suspend the operation of our sanitary and building laws so as to preserve any sort of roof over the heads of the poorer population. There are said to be here over 100,000 recorded violations lodged against buildings that the public authorities dare not enforce; thousands of our people are huddled together in insanitary and even unsafe tenements that are unfit for human habitation. If a contagious disease should take hold of the City of New York it would spread like wildfire in these many congested districts and nothing short of good fortune would prevent it from becoming a plague-stricken city.

"In the City of New York alone there is now a shortage of approximately 80,000 low-priced homes to house 400,000 human beings as compared with the normal conditions of pre-war times. This has, of course, meant abnormally high rents, while high rents have in turn involved doubling-up and indecent, insanitary overcrowding.

"Your committee finds that the conditions continue to exist and that the housing shortage in the City of New York is increasing in the class of accommodations that are required for the masses of our people. The fact that rents for this character of accommodations are in many instances 150 per cent. higher than in pre-war times and that there are no vacancies is to our minds conclusive.

"The problem will not solve itself by the operation of economic laws. The deficiency in accommodations of the character most needed will not be supplied for the reason that this type of house can not be produced as a paying investment for rentals

that the average wage-earners can afford to pay at the present costs of construction and materials, nor at the prevailing prices of labor, except in large units on a nonspeculative plan.

"Your committee found profiteering, restriction of competition, price-fixing, trade strangulation and similar abuses in almost every phase of the building and allied industries. The manufacturer, jobber, middleman, contractor, labor leader and the laborers themselves, were all found to be locked in combinations, having the cumulative effect of making the construction of a building well-nigh an economic impossibility."

This frightful situation, however, can be largely remedied, in the committee's opinion, by the aid of the legislation it has recommended. This legislation came before the New York State lawmakers just as the session was closing. Nine bills went through. Nine others had fallen by the wayside when the session ended on March 18. Among the latter was a bill setting up a State trade commission and others regulating life insurance companies. It was the failure of this group of measures which impelled Mr. Untermyer to call the final

result "a crushing defeat for all save a few of the many important features of the committee's program." But the measures which were passed, declares the *New York Globe*, "constitute in themselves a great victory." They are listed as follows in a *New York Tribune* dispatch from Albany:

"Permitting the insurance companies to invest up to 10 per cent. of their assets in apartments where the monthly rental shall not exceed \$9 a room.

"Extending the rent laws for another two years.

"Extending the tax exemption building law to April 1, 1923.

"Requiring landlords to give tenants thirty days' notice of an increase in rent, and preventing them from depriving the tenant of the right to claim the rent is unjust and unreasonable by exacting three months' rental on making a lease.

"Compelling the return of jury fees to tenants in untried cases.

"Permitting New York City officials to avail themselves of subcontracts where the principal contractor defaults.

"Giving mutual insurance companies the same privileges as stock insurance companies.

"Giving the Superintendent of Insurance power to regulate [insurance] rate-making bodies.

"Preventing mutual companies from converting themselves into stock companies."

With the passage of these measures, comments the *New York Herald*, "further relief will be assured to the people of New York." Certain of the bills promise relief from the housing congestion and from "the devices of profiteering landlords," says the *Brooklyn Eagle*, while the insurance bills promise a general reduction in rates of fire and casualty insurance throughout the State. *The Eagle* expects that a notable gain in construction will follow the permission to insurance companies to enter the building business, a permission which, as the *New York World* points out, is intended "primarily to enable the Metropolitan Life Insurance Company to invest \$100,000,000 in model tenements, the rental for which will not exceed ten dollars a room."

But New Yorkers are warned by *The Tribune* that the passage of the Lockwood bills is not "going to end the building shortage." In its opinion,

"Building may be temporarily accelerated by the granting to life insurance companies of permission to invest a larger

A CITY OF DREADFUL CROWDING.

While wealth accumulates and population increases in the Metropolis of the Western world, whose great skyscrapers boom up in the foreground of this picture, thousands of the people, says the Lockwood Housing Committee, "are huddled together in insanitary and even unsafe tenements, that are unfit for human habitation." Altho the population increased by 230,000 between 1919 and 1921, there was an actual decrease of 2,817 in the number of tenements and apartments. For five successive years there has been a yearly decrease in the number of cheaper tenements and for the last three years a decrease in both tenements and apartments. This remarkable aerial photograph here reproduced in practically the original size, shows all of Manhattan Island, with parts of Brooklyn, Queens and the Bronx.

percentage of their funds in the erection of houses. There can be no permanent cure for the present situation until economic laws are left unhampered by State legislatures."

The more hopeful feeling manifested in regard to the housing situation is the result of various signs that 1922 is likely to be a big year for building. As we read in an optimistic editorial in the *Dayton News*:

"The first touch of spring will be sufficient to send home-owners and contractors into the field. The sound of the concrete mixer and the pounding of the carpenter's hammer will be heard in the land. It is estimated that builders in the country have been advancing construction operations at the rate of \$600,000,000 a month. At a very low and conservative estimate it is suggested that the building in the United States in the present year will be no less than 50 per cent. greater than in 1921. These figures mean, if they possess anything of meaning at all, that there will be considerable more employment in the building business in 1922 over 1921. In the larger cities of the country in particular, stimulated activity in construction lines has been observed. New York has more than \$54,000,000 worth of work already under way. Central West contractors, it is reported, have about \$24,700,000 worth of projects started of which more than four and one-half million concern industry. From every section of the country, in fact, has come news of the projected revival in the building game. It is interesting to observe that in this array of figures a considerable portion of the work is to be for residences. The apparent need for more homes, added to a reduced cost in construction and the longing for self-owned houses, has increased the desire of citizens to get building under way."

That there was 60 per cent. more actual construction going on during January and February than during the first two months of 1921, and that "contemplated work is double that of a year

ago," are assertions made by Mr. Arthur Evans in a *Chicago Tribune* article based on a survey recently made by the United States Department of Labor. *The American Contractor* (Chicago), which tabulates building-permit statistics every month, tells us that the February figures "have just enough edge on January's goodly totals to justify saying there is a gain." But "in comparison with respective totals for 1921, January of this year showed a 125 per cent. gain while February shows only a 50 per cent. gain, this being due, of course, to the fact that February of last year showed a remarkable advance over January." Of all our large cities, Chicago shows the largest increase in building permits in February, while New York shows a very slight decrease. This authority on building concludes that there is more to be reckoned with here than the mere numerical showing:

"The figures for February of this year mean much because they rest upon what is almost universally conceded to be a period of upward trend in all business activity and such upturn means building and then more building throughout the United States. At present the demand for residential building and school building is to the fore, but once let business get a good start and there will be demand for industrial building in addition to continuance of present demands."

Both property owners and renters in New York and other cities have been greatly interested in recent New York court decisions fixing a landlord's profit at 8 per cent. on a fair value of the property in one decision and at 10 per cent. in another.

Of wider application is the Federal Supreme Court decision upholding the New York State rent laws of 1920, as warranted by the police power of the State in the presence of a housing shortage constituting "a serious menace to the health, morality

A STRIKE VICTIM'S FUNERAL

Scene at the church after the funeral service for an innocent spectator, killed in a strike riot at Pawtucket, Rhode Island.

and comfort and even to the peace of a large part of the people of the State." The *Brooklyn Eagle* observes that the trend toward making the "police power" more elastic began about thirty years ago. Since then, "control of business, control of labor's relations with employers, regulation of hours of work by women and children, destruction of property in tenement house values, a dozen other interferences with vested or personal rights have been sustained." The *New York Evening World*, thinking more of persons than principles, tells the landlords who have lost their cases, that now "they will have to depend upon Divine retribution to punish unregenerate tenants who have been unwilling to pay all the profiteers have demanded." And it questions "whether the landlords will want to rush their case before any Higher Tribunal."

There is, of course, another side to this landlord-and-tenant matter. Not all landlords are necessarily satanic, or all tenants necessarily angelic. We have heard so much of "gouging" and "profiteering" landlords that space may well be given to a protest sent to the New York City courts by a real estate association crying for protection from the bedevilment of tenants. To quote this in part from the *New York World*:

"There is night and day warfare between the majority of tenants and landlords, and tenants are the aggressors. Landlords who live in the same premises as their tenants are orally insulted by night and day, coming and going, and on the streets: women are physically assaulted by women tenants and by female members of male tenants' families.

"Tenants are continually and viciously destroying and dirtying the rooms and public halls—ripping off wall paper, cutting holes in the plaster with knives and even hatchets, poking holes in ceilings, breaking glass, letting water overflow, injuring the plumbing. There isn't a single physical destruction devilment that the human mind can conceive of that is not daily occurring in thousands of homes in New York City. For what? So that tenants may go to the Tenement House and Health Departments and even to the Fire Department to make complaints against decent landlords who have dared to ask for living rents. When violations are filed many of these tenants refuse to permit access to their premises to have repairs made in the hope that the landlord will be heavily fined for failure to comply with the orders. Some tenants have even set small fires in the premises and then put the blame on the landlord."

It is hard, we read further, for the landlord to get justice:

"Jurors are from the neighborhood; they generally supply the tenants with commodities; they are all also tenants and their decisions are not given from the evidence, but 'we tenants must stick together and it will be our turn next.'"

NEW ENGLAND'S TEXTILE WAR

AN EXAMPLE OF LABOR'S RESISTANCE to wage deflation is seen in the New England textile strike. Having had their wages cut 22½ per cent. early in 1921, the mill workers of Rhode Island and New Hampshire in particular declared last January that they would not take another 20 per cent. cut in wages and at the same time accept an increase in the working hours from 48 to 54 per week. The cotton manufacturers, on the other hand, claim that their business will be ruined, mainly by Southern competition, unless expenses can be decreased and production increased in the manner stated. In the first ten weeks of the strike, according to Rhode Island's State Labor Commissioner, the workers of that State alone suffered a total loss in wages of \$2,000,000; production loss throughout New England is put at 59,380,000 yards of cloth. During that time Federal Department of Labor mediators and officials of the Rhode Island State Board of Mediation made every effort to bring the two sides together, but both sides held firm. Union leaders declared that they were ready to order the strikers back to work at once if the mill owners would show before an impartial commission that they were unable to continue the old wage and still make a fair profit, but that they would not arbitrate the question of hours. Then the deadlock began, for the manufacturers refused to submit the controversy to open arbitration, and permit an examination of their books and production cost records because, as they said, they conduct a "highly competitive business." Which led the *New York Times* to remark that "the generally bad impression made by the mill owners is accentuated by their refusal to accept the good offices of the mediators."

To the statement by the mill owners that they "can not operate the mills except at a ruinous loss at the early January scale of wages," the *Springfield Republican* replies that, "unfortunately for the standing of this statement, there seems to be no disposition of the manufacturers to prove the point." In other years, notes the *New York Globe*, "the argument in favor of low wages was English competition, and for that reason tariffs were sought." In the present instance, writes Wesley W. Stout, staff correspondent for that paper "at the front," "the ghost of Southern competition, like the ghost of Antigone, does not bear close examination, for the Southern scale of wages was within 35 cents per week of New England wages in January."

In the Pawtuxet Valley of Rhode Island, where the mills have been operated for nearly a century without union labor, the wage-reduction order appears to have been a boomerang, for these workers have now flocked into the union. As we read in the *New York Evening Post*:

"Union ranks have been swelled until some districts, like the Pawtuxet Valley, are solidly organized. Local sympathy is pronounced. Merchants and professional men lend help to needy families.

"According to mill owners, the average wage has been \$21.82 a week, which the cut would reduce to \$17.46. But these figures admittedly include the salaries of well-paid overseers, master mechanics, and engineers. Union officers place the average mill wage in the region of \$18.71, which the reduction would make \$14.97. If we split the difference and say that the average is \$16.25 a week, we have a yearly income of \$845. Does any one believe that a family can live decently—we might almost say that it can live at all—on such a sum?"

"It is humanly impossible to live on such a wage," replies the *Socialist Milwaukee Leader*; "the employers say they can not afford to pay more, but they will not tell what their profits were during the war, and what they have been since." "The action of the mill owners in trying to lengthen hours when the country is full of unemployed, deserves universal condemnation," declares this paper. "They measure labor by the pound—estimating it as a commodity that may be cheap one day and dearer the next." in the opinion of the *Providence News*. As the *Lowell Courier-Citizen* sees the present situation, "it involves altogether too much dogmatism and too little mutual confidence; labor should be treated with reason and candor, rather than regarded as a mere commodity." "Whatever may be said of the whole situation, the tendency to drag the workers from a higher to a lower level is a fact," avers the *Socialist New York Call*. "Women and children," asserts the *New York Globe*, "have been universally compelled to work in the cotton factories in order that the family might be supported, and nothing could be more destructive to the family system in America."

Special correspondents of both *The Globe* and *The Times* tell us that mill workers live in "company houses that would not be permitted to stand by the New York City Board of Health." These houses, we are told, are rented to the worker at a very low figure, but, notes *The Globe* correspondent, "mill wages are fixt with this nominal rent in mind." Sanitary conditions are as bad as they could possibly be, say these correspondents after a survey of Rhode Island mill districts. Model cattle barns built by the former owners of the largest mills in the Pawtuxet Valley are electric lighted, steam-heated, and sanitary, writes *The Times* correspondent, while kerosene is still burned in hundreds of company houses. As to "Southern competition," *The Globe* correspondent reports that this amounts to "Dr. Jekyll of Rhode Island crying out against the pernicious practises of Mr. Hyde of the South," for, he goes on, the same companies which own mills in the New England States also own large mills in Georgia, Virginia, North Carolina, Kentucky and Texas. Moreover, he maintains:

"For two of the years between 1917 and 1922, Fall River, Mass., mills made profits equal to their total capitalization on a forty-eight-hour week. The great Amoskeag Mills at Manchester, N. H., operating voluntarily on a forty-eight-hour week, declared a stock dividend of 100 per cent."

The mill owners, nevertheless, maintain that they must reduce wages and increase working hours in order to meet the cheap labor competition of Southern mills. They point out that the public is demanding lower prices, and that this is the only way to meet the demand. "The wage reduction was not put into effect until months after it was necessary, and until the average cotton-mill in New England was operating at a loss," states the Secretary of the Rhode Island Textile Association, "nor was the reduction made until after the most rigid economies had been

effected by reducing overhead and operating expenses in other ways." The salaries of executives have been generally reduced, we are told, and every available means taken to meet the prices of Southern mills. But a Boston dispatch to the *New York Journal of Commerce* gives "the consumers' strike" as the main reason for reducing wages; it was found necessary to bring down the cost of mill products in order to encourage buying. In fact, reports *The Textile World* (New York), "there is so little buying that it is rare to-day to find a mill in the North operating at more than two-thirds of normal production, and the situation in many Southern mills is not much better." Besides, adds the *New*

A MASS MEETING OF RHODE ISLAND STRIKERS.
President McMahon of the United Textile Workers addressing strikers
in front of the State Capitol in Providence.

Haven Journal-Courier, "foreign trade has shrunk of late, and customers will not come forward until prices come down." As New England cotton manufacturers in New Hampshire and Massachusetts declare:

"To operate an industry successfully production cost must be such as to enable it to compete in the markets where its output is disposed of. Business not profitably done can not be continued permanently.

"Two factors—rates of wages and working hours—interfere with the successful production of textile fabrics in New England to-day.

"Working forty-eight hours a week, with wages at last year's level, a company can not turn out goods in competition with Southern mills.

"The factors which make Southern competition so keen are as follows:

- "Cheaper and easier coal transportation.
- "Cheaper and more regular supply of cotton.
- "Cheaper labor.
- "More hours of labor.
- "Less stringent industrial laws.
- "Lower cost of living.
- "Less burdensome taxation.

"The industry in Massachusetts is especially handicapped through the limitation of working hours to 48 per week. Cotton manufacturers in the South are free to operate from fifty-four to sixty hours. In neighboring States the working hours are fifty-four or more a week. As to reduced living costs, according to the figures compiled by the Massachusetts Commission on the Necessities of Life, the average cost of living now is about 56 per cent. above the pre-war level of 1913, whereas the average wage in the cotton-mills, after the proposed cut is made, will be approximately 80 per cent. higher than in 1913."

A NEW KING ON PHARAOH'S THRONE

A NEW FREE STATE—free from outside sovereignty—came into existence on March 15 when Sultan Ahmed Fuad Pasha announced the independence of Egypt and himself assumed the title of King. This last action was taken, according to the new King's proclamation, "to insure the country's dignity and its international status." Great Britain, however, retains control of the lines of communication in the country and of the Suez Canal, but her protective attitude toward the new kingdom, in the opinion of the *Providence Journal*, "does not impair the sovereignty of Egypt in the way that radical leaders would have their followers and the world believe." "A new monarchy seems to be out of touch with the march of world events," remarks the *Providence Bulletin*, "but the land of the Pharaohs is far from being prepared for a democratic constitution."

"The real credit for the solution of the Egyptian situation belongs to General Allenby," declares the *New York Herald*, "and it was, in great measure, a personal triumph for him. It was his presentation of the case to the British Ministry that eventually led to the settlement as it now stands." Due to his influence, notes the *New York Evening Post*, "Egypt now enters the family of independent nations from which she has been absent since the Turkish conquest four centuries ago." Under the new régime it will be self-governing and be represented abroad by its own envoys. And, adds the *New York Tribune*, "Egypt is to be ruled, as of old, by an Egyptian King." Of King Fuad the First the *New York Herald* tells us:

"The new King is the eighth ruler in the dynasty of Mohammed Ali, that shrewd and interesting Albanian who became master of the country in 1805 by force of arms. Fuad is the son of Ismail I, who was compelled to abdicate by pressure from the British and French Governments in 1879. Abbas Hilmi, a grandson of Ismail, was deposed soon after the world war began. Hussein Kamil, who was Fuad's immediate predecessor, died in 1917. Fuad has had little opportunity to prove his ability as a ruler. He has shown, tho, an inclination to surround himself with the ablest and most conservative men of the country."

"But," observes the *Brooklyn Eagle*, "the new constitution of Egypt, which is to follow the formal abolition of the protectorate which Great Britain established in 1914, places limits upon the exercise of kingly prerogatives," and the *Boston Transcript* claims that "the Egyptians receive the name of independence without the reality." As the *Springfield Republican* sees the case:

"King Fuad's proclamation corrects the serious error made early in the war by declaring Egypt a protectorate of Great Britain. That step was unnecessary because the de facto control already exercised by the British was ample. It was wrong because repeated assurances had been given by the British Government that its occupation was only temporary. The effects of this false step became more serious as the war went on and the spirit of nationalism became intensified, in Egypt as elsewhere."

"By the new arrangement, if it pacifies the Egyptian Nationalists, Great Britain will have as much authority in Egypt as it needs, and indeed will continue to exercise a veiled protectorate there, controlling foreign affairs, keeping other countries from

meddling, and taking whatever measures may be necessary for the defense of the Suez Canal. Egypt's position will more closely resemble that of Cuba than that of Porto Rico."

The *Detroit News*, the *Syracuse Post-Standard*, and the *New York Evening Post* believe that the unrest in India "doubtless has helped along the cause of Egypt's independence," as *The News* phrases it. "Still," maintains this paper, "credit is due a Government that can see the wisdom of liberal and enlightened policy." We read further in the *Philadelphia Public Ledger* that—

"England established a policy for the intensive development of Egypt which Fuad and his Government can not do better than to fulfil. She made the lazy waters of the Nile go to work to irrigate the land, and gave employment to multitudes in the arable area created. She developed rail and water routes of transportation. She instituted courts of justice and installed schools and hospitals."

The events which led up to the recent proclamation of independence for Egypt and the relations between Britain and Egypt under the new arrangement are sketched by Frederick Cunliffe-Owen, in a *New York Times* article:

"Away back in the years following the bombardment of Alexandria, in 1882, an influential movement was brought to bear, not only in England, but also among the haute finance of foreign capitals, to induce the British Crown to proclaim a protectorate over Egypt. However, when the question came before the House of Commons as to whether Egypt should be converted into a British protectorate or should retain her *status quo* autonomy under the more or less nominal suzerainty of the Sublime Porte, the protectorate project was defeated."

"When the Great War broke out and Turkey sided with the Kaiser against the Entente, however, Great Britain proclaimed a protectorate, as a war measure, and

raised the late Prince Hussein, the cleverest of all the brothers of Tewfik, to the throne at Cairo as Sultan, the latter being succeeded at his death by his younger brother, Fuad.

"Under the Allenby settlement, England leaves Egypt 'free to work out such national institutions as may best be suited to the aspirations of her people,' and will reduce English interference and the employment of British officials to a minimum. Egypt, in return for the recognition of her independence, agrees to consider Great Britain as possessing certain special rights and interests in Egypt, beyond question by any other foreign Power."

"England undertakes the defense of Egypt against all foreign aggression and proclaims to the world that she will regard as 'an unfriendly act' any attempt at interference in the affairs of Egypt by another power. England accepts the full responsibility for the protection of all foreign interests and minorities in Egypt. She reserves her right to take all the necessary steps for the security of the line of her communications in Egypt (that is to say, through the Suez Canal), between the various portions of her Empire, and, above all, she retains absolute and complete control and possession of the Sudan, on the understanding that as long as the agreement lasts she will never hold up that water supply from the Upper Nile which is so indispensable to agriculture in Egypt proper, as distinct from the Sudan."

"It will naturally be asked what means of pressure Lord Allenby will retain after the departure of the main body of his troops, in the event of the Egyptian Government failing to live up to the terms of the agreement on which it has been granted nominal independence. It is this: That Great Britain retains absolute control and possession of the Sudan, and therefore also of the upper reaches of the Nile, from the southern borders of Egypt proper to the great lakes in Central Africa."

FOREIGN - COMMENT

THE GREAT DEBT AND REPARATIONS "MERGER"

AMERICA IS POWERLESS to deny the "vital interdependence of debts and reparations" for it is a reality that sooner or later must be recognized, says the *London Daily Chronicle*, known as Lloyd George's newspaper, in its editorial comment on the deliberations of the Allied Finance Ministers in Paris. Their program in effect, we read further, "amounts to a contingent cancellation of inter-Allied debts and of the Allied debt of America, with corresponding alleviation of the burden imposed upon Germany." *The Daily Chronicle* recalls that in the recent funding bill passed by Congress, America explicitly refused to accept German bonds in place of Allied payments, and it is the recollection of this fact that inspires it to say frankly to the United States that it must open its eyes and see how Allied debt and German reparations are joined together. A similar remark appears in the *Tokyo Yorodzu*, which says that "if America remains aloof from the Conference of Genoa, its convocation will be meaningless, for German reparations and America's credit to Europe are inseparably associated." According to *The Daily Chronicle's* Diplomatic Correspondent, the British Government's plan for the restoration of the world's economic balance is this:

"Wipe out all debts, and credit the amount so wiped out to the account of German reparations. But necessarily the proposal is contingent. Suppose America does not agree, then this country, which is ready to limit its reparations claim upon Germany to the amount of our debt to America, will look to Germany to make good the amount. Should Germany fail to make good, then we shall have to look to our Allies to pay the obligations which otherwise we are prepared to forget.

"So with France. The amount of her debt to us and to America she will be asked to obliterate from the German reparations, but should America insist on payment or should Germany fail to pay up on the reparations that have been thus reduced, the obligations that have been suspended would automatically come into force.

"To put the matter arithmetically: (1) Germany owes the Allies in reparations £6,600,000,000 or, deducting what she already has paid up to January 1, £5,500,000,000. (2) The total debt owed by the Allies to one another and by the Allies to the United States amounts to £3,250,000,000. By canceling this total debt and reducing Germany's reparations debt to an equal amount Germany would have to pay only £2,250,000,000, an easily manageable amount which would justify the floating of an international loan on the British and American market.

"We would be willing, for such a result, to forego our claims

upon the Allies which amount roughly to £1,000,000,000, but will America be equally willing? The debt owing to America by the Allies is twice as great as that owing to us. While there is very little likelihood of America collecting any of this from the other Allies, there is something more than an off chance of her at least insisting upon the collection of the British share of that debt, for Britain could with a squeeze be made to pay. In that case the contingency spoken of above would happen and the amount of German reparations be correspondingly increased.

"In any event, it is important to note Great Britain insists as a condition of her agreement that the evacuation of the Rhineland shall be carried out at the times determined by the Versailles Treaty."

According to the London correspondent of a New York newspaper, British Treasury officials admit that the success of the plan "depends largely upon American participation," but consider, we are told, that it is the first economically sound plan proposed for the settlement of the interrelated questions of German reparations and Allied war debts involving the economic revival of Europe. This opinion, says the writer, will certainly be voiced by all the Allies if the plan is agreed upon by them, and "America will then be placed in an embarrassing position," for, "if she refuses to agree, she will undoubtedly have to face a storm of united criticism both from the conservative and liberal forces throughout Europe." This

correspondent tells us further that the British Government plan omits all consideration of the Russian war debts, and he adds that "if America demands payment either of interest or part of the principal from its Allied debtors, then the Allies will add any such amounts to the balance of 45,000,000,000 gold marks which Germany must pay."

Germany's promptitude in making her default in the reparations payments gives the Allies a fine chance to take a step that is vital to the economic restoration of Europe, says the *Auckland Weekly News*, which urges first of all that the Allies form a united peace front as they once formed a war front. Then—

"They must insist on Germany putting her finances on a rational basis. Germany is not attempting to pay her debts. She is not even attempting to live within her means. State services are being run at a heavy loss, subsidies are paid with a lavish hand, deficits appear regularly in the Budget, and little attempt is being made to collect the taxation which has been nominally imposed. The German taxpayer is escaping lightly by comparison with the British and French taxpayers, and all the time a fictitious prosperity is maintained by the issue of paper

money. It will be a kindness to Germany, as well as to Europe, to stop practises which can only end in bankruptcy, and this will be the first and obvious duty of the Allies. As the immediate effect of checking inflation will be a depression, the more severe because of the long period of fictitious prosperity, it may be diplomatic to make Germany some concession, either in the time or the method of payment, but any concession must depend strictly upon Germany's willingness to increase taxation and to live within her income. The Allies could do Germany no worse service than to accept her plea of poverty, and tho the reforms which must be enforced will cause temporary hardship they will at least put Germany on the road to recovery."

This New Zealand suggestion hardly reached American eyes before they read in Paris dispatches that the Reparations Commission in arranging German reparations payments for 1922 purposed to demand that the German Government stop its money printing-presses and take steps to reduce its inflated currency. This condition the Allies propose in return for reducing German payments this year, and one Paris correspondent writes:

"Under the plan of payments Germany accepted last May, 2,000,000,000 gold marks in cash are due this year. But the Allies will fix the total at 720,000,000 gold marks cash and call on Germany to pay in kind this year's goods to the value of 1,450,000,000 gold marks. The other side of the bargain is that Germany, as, indeed, the Treaty of Versailles stipulates, put into effect interior reforms and give the Allied committee guaranties and the right to supervise their execution.

"In addition to the control of fiduciary circulation, the conditions to be laid on Germany are understood to be: Autonomy of the Reichsbank; budgetary equilibrium by means of an interior loan of 1,000,000,000 gold marks; cessation of keeping out of Germany capital and receipts from exports belonging to Germans and measures to get back into Germany assets held abroad in this way; publication of financial and commercial statistics in the same honest fashion as prevailed in Germany before the war.

"In addition to the 720,000,000 gold marks, 217,000,000 of which have been paid, and 1,450,000,000 gold marks in kind the Allies will call on Germany to pay in goods the equivalent of 220,000,000 gold marks for the cost of the armies of occupation of England, France and Belgium."

We read further that the French assert French paper circulation has been reduced several billions in the last twelve months, whereas in that time German paper money circulation has about doubled. It is pointed out also that—

"The cash to be handed over by Germany this year goes to Belgium on account of her priority. Of payments in kind which will be made under the terms of the Wiesbaden and similar arrangements, France will get 65 per cent., all of which it is planned to devote to reconstruction work.

A STRAIGHT TIP.

HANS: "Guess what I'm playing?"

JOHN: "The Fool!"

—Sunday Chronicle (Manchester).

"It is generally believed Chancellor Wirth will accept the conditions the Reparations Commission will lay down. Both the amounts and conditions of the Reparations Commission have been subjects of much prior and unofficial negotiations."

A sharp warning against Germany's "whining beggar policy" is issued by the Toulouse *Dépêche*, which says that Germany has been trying to wheedle France to go to Genoa in order to bring up the problem of reparations and of treaties, and that she has "her tear-sacs in perfect working order," and it adds:

"Germany has been encouraged by that international finance system, which ruins states, and which, having bought the mark at a low figure, now has only one idea, which is to make the mark rise by improving Germany's situation, even if France should perish in the operation. This international finance organization, which Stinnes and the other bandits maneuver, is much in evidence in America and in England. Its work is dangerous, and we should be fools not to oppose it."

A German official view of America's position with regard to Europe is exprest in an interview given to an American correspondent at Berlin by Dr. Otto Wiedfeldt, newly appointed German Ambassador to Washington, in which he is quoted as saying:

"I was opposed to Germany's acceptance of the Versailles Treaty and also the London ultimatum. Once accepted, however, I saw that the only course was to fulfil the conditions imposed upon us to the utmost of our ability. But our honest attempts at fulfilment showed their impossibility. For this reason I supported Chancellor Wirth in the recent crisis provoked by an attempt to remove him because of his supposed acceptance of all the Entente demands. There may have been doubts as to the wisdom of his course when he originally entered upon it, but there is no turning back now. For Germany to-day the only possible policy is the Wirth policy of fulfilment. . . .

"America first interested herself in European affairs of her own volition and it is difficult to see how she can keep out of them permanently. American assistance can be direct and indirect. The United States can suggest remedies to the Allies that would certainly be rejected if they came from any other source, since they would be regarded as prejudiced.

"America has a direct interest in the matter of reparations, in which she will have to express herself sooner or later in concrete form. My own position is that Germany would be more than delighted to lay the entire debt of 132 billion gold marks on the table to-day. The result would be disastrous to the Allies, and I think it will be just as disastrous if the debt is paid in the prescribed instalments."

A KITCHEN CABINET.

JOHN BULL: "No! Don't kill it, Marianne. Let's fatten it, and gather the eggs as we may."

—De Amsterdammer (Amsterdam).

HUNGARY AT THE DANGER POINT

RENEWED FAILURE of Karl of Hapsburg's attempts to mount the throne of Hungary has provided amusement to an onlooking world, but the situation resultant from them, we are told, deserves far closer attention than it has received. Numerous Hungarian newspapers assert that under Admiral Horthy the country has "agonized through one continuous White Terror, which is now at its worst." Imprisonment and assassination, it is asserted, are the twin forces of the Military Detachments operating with his connivance in defiance of the police and all other putative forces of restraint in the Government. Meanwhile, some writers outside this "little hell of Hungary" urge the necessity that the Allied Powers do not overlook the possible serious effects conditions there may have on the reconstruction of Central Europe. We are reminded by a contributor to *The Contemporary Review* (London) that the Regent, Admiral Horthy, established the present Government in 1919 on the ruins of Communist misrule, and to understand the development to the present status, this informant points out that—

"Throughout the vast area that lies between the German Republic, Red Russia, and the last fragment of European Turkey, there has been a collapse of autocracy and aristocratic privilege, the advent to power of hitherto submerged classes and nationalities, the adoption of far-reaching democratic reforms, such as parliamentary and municipal universal suffrage (sometimes for both sexes), proportional representation, a radical revision of the whole educational and ecclesiastical system, and, above all, the transfer of land to the peasantry on a vast scale. Of the eleven states affected, one alone, Hungary, is in frank opposition to this historic process, and is clinging desperately to the social and political standards which the war has undermined. After an initial period of democratic reform comparable to the Revolution of 1848 [Károlyi's People's Republic, Oct. 31, 1918—March, 1919], it soon passed, under external influences, to an extreme communist experiment [Béla Kun's Soviet Republic, March—August, 1919], whose ignominious collapse was followed by a scarcely less virulent form of reaction. Power passed back into the hands of the very class which by its restrictions upon the parliamentary and county franchise had kept the peasantry and town proletariat unrepresented, and whose Magyarizing tendencies, coupled with a semifeudal land tenure and aggressive agrarian tariffs, had kept all the non-Magyar nationalities in a ferment, and envenomed the Southern Slav question to such a point as eventually to produce war between Austria-Hungary and Serbia."

Charles's failure, says this writer, was due to defects of character, tactical blunders, and misconception of the foreign situation, but also to "a very honorable refusal to permit bloodshed, to very definite treachery, and to the apathy of the masses." The man in the street would have welcomed Charles as a substitute for the Horthy régime, we are told, but "not for

love of the Hapsburgs or the dynastic idea." The true-blue Magyar peasant is anti-dynastic and republican, according to this informant, who tells us further that "only the privileged classes are Legitimist, because to-day the Legitimist principle is identified with the idea of territorial integrity." We read then:

"Hungary has reached a deadlock, from which Legitimacy and Irredentism can not save her. Horthy was always hated by the middle class and the proletariat: to-day he has lost the respect and confidence of the Legitimists. But, apart from individual outbursts, they deliberately refrain from criticism, knowing that he is the last dam and might bring down much else in his fall. For the moment they must bear with him and with the sinister figures that lurk in the background; and Count Bethlen, the convinced mouthpiece of fental reaction, has no course save to rally his forces in an effort to stem back the floodtide. His new program is the restoration of the House of Magnates, the restriction of the parliamentary franchise, and a revision of the county administrative system, such as will still further entrench the decaying 'Gentry' control and render radical land reform more difficult. All this appears perfectly logical, if we remember that at present the innermost political ring consists of the three families of Bethlen, Banffy, and Teleki, who were intimately associated with the late Count Tisza in his opposition to franchise reform and to equal rights for the working class and the non-Magyars, and who between them own about 400,000 acres of land in Transylvania (now about to be assigned to the Roumanian peasantry)."

Meanwhile the White Terror in Hungary goes on undiminished, according to Budapest newspapers, and they tell us that it is conducted chiefly by the organization known as "Awakening Magyars" which boasts a membership of more than a million and a half, and is said to be "practically in control of all government and political machinery in the country." This society, we are told, is made up of "the lowest classes of the population, led by some military officers and members of Parliament, who use these people as their tools in terrorizing all opposition." Their platform is said to be the "suppression of all Liberal opinion and the exclusion of Jews from public and business life." A Budapest Liberal newspaper, *Pesti Naplo*, quotes a Hungarian

Copyright Keystone View Company.

HUNGARY'S REGENT.

Admiral Nicholas von Horthy, who on the ruins of Communist misrule established the Hungarian "kingless kingdom" in 1919, of which he is the supreme authority, supported chiefly, it is said, by a million and a half White Terrorists known as the "Awakening Magyars."

A PRACTICAL INVENTION.

Karl has invented a motor throne that moves backward and forward.

THE END OF A PERFECT DAY.

When Charlie comes marching home.

—*Evening News* (London).

BRITISH CARTOON FUN WITH THE HAPSBURG MAN WHO WOULD BE KING.

Representative as asserting that "self-styled Military Detachments" are "daily arresting people and torturing them, in many cases merely to extort money" and it adds that "these are the authorities who fill the internment camp of Zalaegerszeg with men, women, and even children, where they are being murdered by the soldiery on the least pretext." The Budapest *Az Est* gives the names of some of the interned who were murdered, and a Vienna Hungarian daily, *Becsi Magyar Ujsag*, relates that:

"Hardly a day passes without a body being fished out of the Danube at Budapest, and in every case the body shows wounds by shooting or other means, while the hands usually are found tied with thick rope behind the back of the victim. Other bodies have been found with heavy stones tied to the neck, and it required the strong winter current to cast the bodies ashore."

This newspaper goes on to say that the usual method of the Detachments is to appear at the victim's house at night, kidnap him, and after murdering him, throw the body into the Danube. Altho no newspaper in Hungary can be found to defend the White Terrorists in their murder enterprises, some Budapest correspondents report that there are journals which "do not defend, tho silently approving the baiting and murder of Jews perpetrated by the Detachments under the very eyes of the police and the government." But the Budapest *Nemzeti Ujsag* observes:

"Those newspapers which spread the tales of occasional excesses by irresponsible persons are doing ill service to Hungary, for they will bring about a still more displeased attitude toward us on the part of foreign countries, and they are increasing our enemies instead of trying to add to our very few friends abroad."

The Vienna *Joro* says:

"It is quite clear that neither the police nor the gendarmerie has any hand in the murders. They are committed by the Military Detachments alone; nor are the police or gendarmerie in a position to bring the perpetrators to justice, for their protector is the Regent himself, and any government bureau would risk its existence if it dared to interfere with the practices of these criminals. The police and even the members of parliament are living under the dread of these Detachments, and as they are Horthy's sole military support, he will not tolerate that they be molested. If a murder is discovered that bears the stamp of the Detachments, the police do not even start an investigation. It is useless. They know who the murderers

are, and could point them out without investigation, but they dare not for fear of the Regent's wrath."

FRANCE AND FEMINISM

THERE IS NO SUCH THING as feminism in France, writes the French correspondent of the London *Saturday Review*, who tells us further that tho sooner or later French women will be allowed to vote, "this apparently tremendous step forward will not be a feminist victory." Women are nowhere in France rivals of men, except in positions which the men themselves are gradually deserting, and among these the writer mentions educational posts. The remark frequent in America, "Meet men on their own ground"—would not be "even funny" in France, according to this informant, who proceeds:

"Alcoholism, thanks to wine, hardly exists, either. Finally, no scarcity of women gives the woman an idea that she is a unique prize and has a right to dictate her own terms. French women do not like being old maids; many of them in religious families gladly join convents, but all the others think of marriage as their natural object. When they reach it they are apt to imagine that they have secured stability, which is the chief condition of happiness. In other countries a woman marries for love and according to her own choice, but this apparently admirable beginning is so often followed by failure that some women do not seem to believe in stability any more, and every now and then refuse even to change their names when they marry. The danger in feminist countries lies in the fact that women expect too much. The American husband is undoubtedly happier than his consort, because he expects so little, and for what he receives the Lord makes him truly thankful. French women do the same, and bring moreover to their trial the provision of patience, which is the result of a religious bringing up and even in unbelieving families seems a valuable part of a girl's dowry. So the married woman in France is pretty generally happy. If you wonder at her not seeming to mind her legal inferiority and incapacity, I will ask you to visit a French farm or a Parisian shop, noticing the part played by the woman in it. She can not sign or cash a check, but why should she care when she sends her husband to the bank all the time, and knows that she makes the money quite as much as he does? There is no doubt that French women, like all others, will be less happy if they are made to believe that they ought to be happier, but in the meantime they are tolerably contented and feminism is only a name to them."

SMITHEREENS OF THE SEVRES TREATY

THAT OBJECT OF ART, not of diplomacy, known as the Sèvres Treaty, say some satiric observers of the Near East Conference in Paris, will be smashed into smithereens if the Turks have their way, and so will come to the natural end of all "porcelain agreements in this rough world of peace." Their remarks are based on demands which the Turks say the Allied Powers must accede to in order to

are justly entitled to. Now we must remember also that we are stronger than ever before, yet we have not increased our demands in proportion to our increase of strength. But we consider it our duty to exact an indemnity from Greece for the relief of the population in invaded territories."

Much less ruthless is the tone of the Constantinople *Tevhid Efkiar*, which concedes that the Turkish Government will not be "uncompromising on all the above demands," and adds:

"The Nationalists make the main point of their program the recognition by the Allies of our national frontiers. This is practically the basic principle of their policy, and indicates their firm resolution to have our political independence assured. There is, however, a question on which there is room for discussion. Thus the Kemalist pact, tho peremptorily worded in some of the demands, admits to a certain extent the possibility of compromise in the matter of the Straits. In so far as the recognition of our economic independence is concerned, this very delicate subject also can be easily settled, provided the Allies respect our fundamental rights."

Meanwhile Constantinople dispatches inform us that Lord Curzon, British Foreign Secretary, has made Turkey the following proposals for the settlement of the Turkish question:

"That the Greeks withdraw from Anatolia.

"That the Allies protect the Christian minorities in Ionia, since the Turks have proved incompetent administrators.

"That the Thracian frontier be adjusted, starting at Midia, and that a special régime at Adrianople be created.

"That the Turks accept unreservedly the British solution of the problem of the Dardanelles Straits.

"That the British frontier in Mesopotamia include the town of Mosul, which has been disputed by the Turks.

restore harmony in the Near East, and which Constantinople and Angora newspapers summarize as follows:

"1. The pre-war status must be restored in Constantinople and the Allied occupation of this city must be immediately discontinued.

"2. Smyrna, as well as other territories occupied by Greece, must be unconditionally restored to Turkey.

"3. No special privileges can be granted to the Christian minorities in territory of the Ottoman Empire, except those compatible with the Kemalist pact, as formulated by the National Assembly. Furthermore, the Allies must refrain from any intervention in favor of Armenians.

"4. The Allies must recognize all the international treaties concluded by the Government of Angora.

"5. Complete independence must be assured to Turkey in military, economic and financial questions.

"6. The autonomous régime must be set up in Western Thrace, while Eastern Thrace must be restored to Turkey.

"7. Turkey will have the right to have the army and navy she needs to protect herself from an eventual aggression.

"8. The future status for the Straits will be agreed to by Turkey and Russia."

Greek editors, of course, look upon these stipulations as prepared chiefly for effect and subject to considerable curtailment, but they rather smile at the news that Turkey will also demand an indemnity from Greece as compensation for the "ravages wrought by the Greek army in Asia Minor." To the Greek mind, it seems distinctly Oriental that the "vanquished should seek indemnity" and some Greek writers "hope Turkey will not also insist that Greece apologize for having whipt her." Meanwhile the leading Kemalist newspaper of Angora, the *Yenigun*, observes:

"We shall accept such a peace only as fully realizes our sworn program. We are not going to stop fighting until the last Greek soldier has left Asia Minor; and on this point we are immovable. The Angora Government's Foreign Minister, Yousouf Kemal Bey, said that Turkey will not only make no concessions to Greece, but will insist upon the indemnity the Turks

"That a special Turco-British convention be completed, to run twenty-five years.

"That the Turks abandon anti-British propaganda in India, Persia and Afghanistan.

"That Anatolia recognize the Porte as the legitimate Government in Turkey and the reestablishment of the Sultan's authority over Anatolia."

SCIENCE - AND - INVENTION

WHAT ORANGS KNOW

THE ALMOST HUMAN INTELLIGENCE of the orang-utan is illustrated by anecdotes in an article by W. Henry Sheak, contributed to *The Journal of Mammalogy* (Baltimore). The orang, he tells us, is much quieter and less obtrusive than the chimpanzee. He quotes Doctor Hornaday as saying that while he was in their native forests, he never saw one on the ground, unless wounded or driven down by man. Even when thirsty he climbs out on a limb overhanging a pool, until his weight bends it so that he may reach the water. In captivity this great ape is much inclined to sit in a corner of his cage, motionless and voiceless. But when captured young he takes fairly well to captivity, becomes friendly and attached to those who feed and care for him, and seems to enjoy human society. Mr. Sheak goes on:

"About fifteen years ago I was traveling with the Gus Lambrigger Animal Show as naturalist and lecturer. At the time of which I speak, we had a young orang which had come to us only about three weeks earlier. One afternoon, having finished a lecture, I sat down in a chair with my back to the stage, or platform, on which the small portable cages were arranged. I was some little distance from the orang's cage. But presently I felt two long hairy arms encircle my neck and a strawberry-blond youngster climbed down into my lap and proceeded to make himself at home. He had himself opened his cage door and walked along the stage in front of the other cages until he could climb over on my back.

"I have seen the orangs in the New York Zoological Park follow their keeper about on the lawn, and when he would attempt to run away from them, they would hurry after him, using their long arms as a man would use a pair of crutches, but often putting their heads to the ground and turning a somersault in their efforts to overtake their human friend. I have also seen them sit at table and use knife, fork and spoon in eating, and drink out of an opaque bottle, looking repeatedly down the neck to see how much of the delectable fluid might be left.

"A two-year-old baby orang which the Edwards Brothers had on exhibition in New York City in 1908 was very timid and much afraid of our large chimpanzee. The chimpanzee liked to tease the little fellow, because she saw he was afraid of her. When she would stamp her foot and threaten him, he would run to me and throw his arms about my neck, plainly imploring my protection from the great black, ugly beast, which he doubtless thought her to be.

"Tho the orang may sit quietly in a corner of his cage, his beautiful brown eyes see everything about him. Indeed I have found him a very keen observer. One day I was standing in front of the cage of the orang with the Lambrigger Zoo, already re-

ferred to, when he came over near me, put his arm out between the bars, and went to examining something on my shoulder. On investigation I found there was a tiny knot, not larger than the head of a small pin, in the thread of the seam in my coat. I had not noticed it previously, but his eyes had caught it from the back of the cage and he was trying to get it.

"The orang-utan does not laugh aloud as often as the chimpanzee, but he has a smile that is strikingly human-like. When two young orangs are kept together, they become quite playful, romp and chase each other about, but in a more sedate and deliberate way, and not with the frantic haste and daring so characteristic of the chimpanzee. When thus engaged at play there is often a pronounced and joyous smile on their beaming faces. Now and then there may be a low chuckle, but not often.

"As already noted, they often become much attached to their keeper. They are also devoted to their own kind, and will often fight for each other, and especially for their young. They will sometimes make pets of other animals, as cats, dogs, and rabbits. I once knew an orang that became much attached to a young pig-tail monkey. They spent much time together, the pig-tail usually sleeping in the ape's arms. The orang was very affectionate, often fondling and caressing his little pet, and showing great patience, for the pig-tail was quarrelsome and vindictive, and often resented the familiarity of his fond foster father.

"While the orang-utan is quiet and unobtrusive, and not as good an animal for exhibition purposes as the chimpanzee, I believe him to be almost, if not altogether, as intelligent. He is not always inventing countless new ways of amusing himself and working off a superabundant store of physical and mental energy, as does his African cousin, but when it comes to solving problems to satisfy his own needs or desires, and to doing things that are really worth while, he manifests wonderful intellectual power.

"A few years ago the Edwards Brothers owned a large orang-utan which they called Joe. He was remarkably intelligent and learned the meaning of about seventy words and expressions. He knew all the coins from the silver dollar down to the copper cent, and would invariably pick out the one asked for. One day the janitor made a mistake in filling a lamp, using gasoline instead of coal oil. When lighted, the lamp, which was directly in front of Joe's cage, took fire all over and exploded, burning Joe severely. After that he was always afraid of a lamp. If he wanted anything, he gave a peculiar call, and then when one of the proprietors or one of his keepers came to the cage, he gave him a push to send him off in the direction of the object desired. One night he

"I AM WELL AND HOPE YOU ARE THE SAME."

had thus called up Solomon Edwards, father of the two Edwards brothers. He kept sending Mr. Edwards off to the back of the room, but nothing the old gentleman brought seemed to satisfy him. Now it chanced there was a lantern, belonging to the

watchman, which was hanging in the back of the room, invisible to Mr. Edwards, but where Joe could see it from his cage, and this lantern having been turned too high, was blazing up and smoking. When Mr. Edwards discovered it and turned down the wick, the orang was satisfied. It was plain that he recognized the flame was blazing too high and that he feared another explosion.

"On another occasion Joe exhibited what is, to my mind, one of the keenest and most complicated mental processes ever displayed by an animal. On the day in question, there chanced to be an English walnut lying near the cage, but just beyond his reach. He made several ineffectual attempts to secure it by stretching out his long arms. Then he tried to twist some of the straw on the floor of his cage into a rope or wand, but the straw was too brittle and too much broken. It is no uncommon thing for the apes, and even some of the lower monkeys, and especially the spider monkeys, to twist straw into a rope or wand to serve some of their needs. At length the orang began to take off his 'sweater,' a knit woollen jacket which he was wearing. We wondered why he was doing this, as he was not in the habit of taking off his clothes without permission. With the slow and deliberate movements so characteristic of this ape, he carefully removed the garment, poked it through the bars of the cage, swung it out till it dropped over the walnut, rolled the nut to within reach, secured it with his hand, then after he had cracked the shell with his teeth and eaten the kernel, he just as deliberately and carefully put the sweater on again.

"Joe did not like to take medicine. Mr. Joseph Edwards tried to give him some pills by putting them into the tip end of a banana. But he discovered them in his mouth and picked them out. He looked at the pills, and then he looked at Mr. Edwards, with an expression of reproach and incredulity upon his face, as if he could not believe that his loving master could serve him such a scurvy trick. For a considerable time after that, whenever he was given a banana, he broke off the tip and threw it away or gave it to one of the little monkeys. In his final sickness he was treated by a skilled physician.

It was necessary to give him an injection. On the third visit he amazed the man of medicine by getting ready for the treatment just as soon as he saw the syringe. The doctor declared that this was more than he could expect from his human patients."

A RESERVOIR OF RAILWAY EQUIPMENT

A GENERAL STOCK of engines and cars, to be drawn upon as needed by any railroad in the United States, is advocated by an editorial writer in *The Iron Age* (New York). Such a disaster as a collapse of the railroads may seem remote, this writer says, yet close students of transportation do contend that it will not take a great expansion of shipments to produce paralysis, more or less partial. The way out suggested will interest business in general, as it involves buying of equipment, but it is not clear that the power to help the situation will be exercised. To quote:

"The proposal is to establish what may be called a national reserve of rolling stock and motive power to carry any or all of the railroads over a peak demand. The Esch-Cummins Act provides the finances, as it is believed that the excess earnings over the $5\frac{1}{2}$ per cent. belonging to each road could be diverted toward establishing the reserve. It is estimated that on the 1921 account \$12,000,000 of excess earnings will accrue to the Government, as even under the adverse condition of 1921 some railroads were capable of surpassing the $5\frac{1}{2}$ per cent. minimum.

"The argument for the national reserve is, of course, that providing for the peak load burden should not be the concern of a few of the large railroads, and it follows that none of the large 100 nor of the 3000 large and small railroads is expected

to provide the emergency capacity. It remains for railroad executives to ascertain just how under the Transportation Act they may establish, if they choose, railroad equipment to be used for the common good, so to speak; it seems clear that government agencies are not likely to take the initiative.

"If the railroads are left to drift, a car shortage will by that fact be surer. There will then be the renewed cry for government ownership. Should the shippers put the onus on the private managements and should they turn an ear to the government ownership propagandists, it would be difficult to save the railroads. The national reservoir of transportation facilities certainly looks theoretically attractive; indeed it appears as essential."

DO CITY DWELLERS DIE EARLY?

SHORTER LIFE FOR CITY DWELLERS is the sentence pronounced by Dr. John Brownlee of the British Medical Research Council, in a recent report to that body summarized in *The Lancet* (London). His evidence lies in the latest government tables of the expectation of life, but he can give no

reason for the earlier demise of the urban dweller except that he ages earlier, which the reviewer in *The Lancet* thinks is begging the question. After giving his opinion that the use of death-rates as a guide to hygienic conditions in a community is very practical, the reviewer goes on:

"At the age of 15 the rural male's expectation of life is nearly two and a half years higher than that of the inhabitant of county boroughs at the same age. At the age of 40 the corresponding expectations are 25.80 and 30.35 years; at 55 they are 15.48 and 18.36 years respectively, and so on. That is, life on the average is shorter in town than in country; and this fact may, perhaps,

be put justifiably in Dr. Brownlee's words: 'It has been rendered probable that the inhabitant of the country is at these ages' [between 55 and 65] 'biologically about six to seven years younger than the inhabitant of the town.' But the question remains as to the cause of the greater incidence of premature death in towns. Dr. Brownlee gives an unhesitating opinion on this point. Thus dealing with valvular disease of the heart, which has a higher standardized death-rate in county boroughs than in rural districts in the proportion of 85 to 62, he concludes that the amount of this disease is much the same in all districts when judged by the life-table death-rate; and that it 'is not a matter of more of the disease being present in a city, it is rather a matter of the disease developing at earlier ages.' Dr. Brownlee's view is that premature aging of the tissues is an important factor in the earlier age at death in towns. Does this statement help us much? The fact is obvious that if death is preceded by senescence, senescence is earlier in urban than in rural communities. But by the term senescence we are led to think of processes which are approximately normal as age advances. Some of these may in reality belong to the same categories as the injuries—pathological invasion by microbes, mechanical injury, or toxins—which shorten life before old age. But to rest content with the proposition that urban life means premature old age stops short of investigation which may lead to the discovery of the maleficent agents producing premature old age. In cancer it may be a dietetic error. An excessive meat diet and the influence of alcoholic or nicotine excess have been suggested in this connection. Rupture of a cerebral artery in a man aged 45 is commonly caused by syphilis; but no help is given by describing it as early senescence. Scientific knowledge is extended by increasing differentiation of causes, not by being contented with any readily acquired generalization, whether it is senescence, or ascites, or marasmus, or malnutrition, or poverty, or any other medical or social complex."

"FINGERS WERE MADE BEFORE FORKS, BUT—"

HAIR OF A DEER.

HAIR OF A MOUSE.

HAIR OF A RAT.

Illustrations by courtesy of "Popular Mechanics," Chicago.

THE DIFFERENCES BETWEEN HUMAN AND ANIMAL HAIR COME OUT CLEARLY UNDER THE MICROSCOPE.

HAIR AS A DETECTIVE

A MICROSCOPIC STUDY OF HAIR for use in detective work has been made by the police department of Berkeley, Cal. According to John Anson Ford, who writes in *Popular Mechanics* (Chicago), material of this sort is being used by the Berkeley police, in solving crime mysteries, more extensively than in any other police department in America. With the possible exception of an investigator in continental Europe, no agency, says Mr. Ford, has undertaken in so

comprehensive a manner to make data regarding hair an adjunct in identifying criminals and others connected with crimes. What the Department has undertaken is to make microscopic studies of hundreds of different kinds of hair and determine, so far as it is possible, the distinctive characteristics of each. We read:

"Data already gathered are of immense value in helping determine the age, state of health, race, as well as something of the personal habits of the individual. Microscopic study of hair which has been uncut for a long period shows the ends slightly frayed, whereas the ends of hair that is frequently barbered are more smooth and less broken. "The photographic files of the Berkeley police include one of the largest collections of photomicrographs of animal hairs to be found in this country. Not infrequently these data are of great importance in apprehending murderers where the crime has been committed with a razor or other sharp blade. A hypothetical case will illustrate the point: An old man is found with his skull crushed by some blunt instrument, probably an ax. His hair is suspected. An ax, the property of the heir, is found, and on it is a dried drop of blood to which a gray hair adheres. The suspected person, confronted with this evidence, declares that he recently used the ax in killing a rabbit, and that the blood and hair undoubtedly are from that animal. Examination by the police at once reveals

that the hair and blood are of human origin. While such an instance may seem somewhat overdrawn, the Berkeley police declare that several years of experience in dealing with criminals of many races and of various degrees of intelligence show that such an example is typical of actual crime problems. Their records show cases in which scientific data regarding hair presented as evidence were a determining factor in securing conviction.

"Human hair, these files of hundreds of photomicrographs show, is differentiated from other hair by its size, relative width of pith, or medulla, and cortex, or outer layer beneath the scales. The coarseness of a hair may indicate the region of the body from which it was taken, the coarsest coming from the beard, eyebrows, etc. These measure from $\frac{1}{230}$ to $\frac{1}{160}$ inches in diameter. Hair from the nostrils, backs of hands, scalp and eyelashes, the police find, measures from $\frac{1}{660}$ to $\frac{1}{330}$ inches in diameter. Fine downy hair measures $\frac{1}{1500}$ to $\frac{1}{3000}$ inches in diameter. Women and children usually have finer hair than men.

"The condition of the pith, as revealed in these microscopic study records, is often a determining factor in evidence. The pith of human hair does not appear to be continuous or to reach full width until maturity of the individual. Another factor used by these investigators in determining the age of the individual from which hair is taken is the amount of pigment, the color-determining substance. Ordinarily this does not reach its maximum until maturity has been reached. In other words, study of a child's hair under the microscope reveals fewer pigment granules than does hair from an adult. With the approach of advanced years, the pigment begins to disappear, giving the hair its grayish color. Likewise, in old age, the continuity of the pith of the hair is broken. On the outer surface of the hair are often found deposits of fatty matter, which may serve as an index to the robustness of the individual in question.

"In the past two years the experts in the Berkeley Police Department have made several hundred photomicrographs of hair, and are now carrying the investigation still farther. One question to which they are giving special attention is what differences are to be found in hair from persons of different races and what distinguishing characteristics obtain for each

A CASE OF HAIR-SPLITTING.

race. Once such a set of characteristics can be determined they will be of much value in criminal investigation."

It seems that the capillary detection of crime in Berkeley had its start in this way:

"It was in solving the mystery of repeated thefts on Berkeley's water-front, a few years ago, that the attention of the police department was first turned to a comprehensive study of hair with the microscope. Careful search by the police assigned to catch the thief in this case revealed some of the loot in a launch anchored in the bay. In the launch were also found a comb and razor, each bearing a fragment or two of hair. With the aid of the State University, a microscopic study of these tiny bits of evidence was made. It was found that one hair apparently was from the head, and very light, while the other was evidently from the beard, being much coarser. Its color was light sandy.

As the owner of the launch was not known, a watch was set. For days no one approached the launch, until finally the police observed a man on shore who loitered for a time not far from the launch but failed by word or act to reveal any interest in the boat. However, the suspicions of the police were aroused because of his very light hair and light sandy beard. On the strength of that suspicion they arrested the man and he later confessed to the thefts. The incident opened the eyes of Chief of Police August Vollmer to the value of microscopic study of hairs, and since then Officer C. D. Lee has been placed in charge of the work and probably has gathered more scientific data on the subject than any other police authority in the country."

A PLEA TO KEEP UP RAIL RATES

A SHARP REBUKE for our "interminable and never-ending investigations" of railroads is uttered by Howard Elliott, chairman of the board of the Northern Pacific, writing in *The Nation's Business* (Washington) under the heading, "Give Management a Chance." Instead of being called upon to appear constantly before various bodies, sometimes about matters which have been investigated before, the managers of these great industrial properties, Mr. Elliott believes, should be given an opportunity to devote their entire time to serving the public and building up their business. Just now, he says, there is a good deal of excitement in the country. Business is depressed. The farmer is in distress and he turns first to one person and then to another for help. He sees the railroads. He says: "Why, there is the fellow. Let us reduce all the rates. That will fix things." Mr. Elliott comments:

"That would be fine if it could be done without putting all the roads into bankruptcy. The railroads have already reduced the rates on agricultural products voluntarily 10 per cent. which probably takes fifty or sixty million dollars a year away from their revenues. When I appeared recently before the Interstate Commerce Commission, I happened to have a bundle of papers in my hand showing more than one hundred pages of reductions in rates made by one railroad in a little more than a year. And every railroad has been doing the same thing.

"And these reductions were made despite the fact that the railroads are not earning a fair return. Let me give you the figures for the last few years: 1911, 5 per cent.; 1912, 4.8; 1913, 5.15; 1914, 4.17; 1915, 4.20; the year ended December 31, 1916, the last year before the Government put its very heavy hand on us with the Adamson law, 6.16. And in that year the country generally was prosperous. In 1917, 5.26; 1918, 3.51; 1919, 2.46; 1920, .11—one-tenth of 1 per cent. In 1921 the net railway operative income will be, as near as we can figure it to-day, about six hundred millions of dollars. I doubt if the real net

"GIVE US A CHANCE."

Mr. Howard Elliott of the Northern Pacific asks a ten-year holiday from harrassing the railroads in order to "give transportation courage and management a chance once more."

income of this great transportation machine, if we had spent all that it is to your interest that we should have spent, would have been over three hundred millions of dollars, or less than 2 per cent.

"So we have had during the last twelve years no opportunity for large and great earnings and great accumulations.

"The great manufacturing enterprises, great jobbing enterprises, distributing business, and the farmers themselves had a chance during the war, if they availed themselves of it, of making large profits; and large additions to their plants. Many of them did avail themselves of that opportunity. The railroads had no such chance. They barely kept alive.

"Railroad labor must share in the deflation that is now in process. What is generally described as labor has already been hurt by unemployment and by some reductions in wages. That does not, however, yet affect the great transportation industry to the extent it should if what you want and what I want and what nearly every economist wants, a lower transportation charge, is to be obtained.

"The last figures, arrived at by corrections and readjustments with the Government and so on, show for the year 1920 that out of the operations of the railroads the owners had \$21,000,000 and the pay-roll was \$3,698,000, or more than 176 times more than the owners got.

"On the rate question itself, some of the rates may be higher than they ought to be and the total payment for transportation is

very large, but the amount of transportation is very large. The production of that transportation is extremely costly and there is no adequate return on the plant, as I have shown. You should also remember that prior to the war the general level of rates was not sufficiently high to protect this national industry and there was danger to everybody, which danger exists to-day, that the supply of transportation would not be adequate for the needs of the country.

"As the result of continued discussion of the railroad question by the railway executives, and many other business organizations, there was developed and passed in the last two years what is known as the transportation act of 1920. It is not perfect. There are some features about it that I do not like, but every argument that could be presented was put up to the House and Senate committees day after day. They weighed them. They passed a bill and it is now the law. It has operated only about 23 months. It has operated at a time when industry was very much depressed, when the railroad business was perhaps 50 to 60 per cent. of normal.

"We do not know yet how successful it is going to be. We set up that guide-post, after this prolonged debate of three, four, five, six years, a debate all over the country. The guide-post has been put up. We are trying to go by it.

"Now is it wise, is it to the best interests of business men who use the railroads, is it to the best interests of those who are charged with managing the railroads, is it to the best interests of those who own the securities of the railroads—and those securities are the foundations of our savings banks deposits, of our fire and life insurance deposits, of hundreds of our colleges and eleemosynary institutions—is it a good plan in a hurry to say we don't like that guide-post and we want to change it?

"Bear in mind that the railroads are common carriers of people and property.

"They are not common carriers of all the economic troubles of this country.

"These can not be cured by reducing rates, by ruining the railroads and perhaps forcing government ownership to which this country is opposed.

"Give transportation courage and management a chance once more.

"Declare a ten-year holiday in the peaceless investigations of the transportation question and let the undivided attention and energy of owners, managers and employers be devoted to maintaining, operating and perfecting this engine of civilization—the wonderful railroad system of the United States."

RADIO • DEPARTMENT

RADIO AMATEURS SPAN THE ATLANTIC

THE AVERAGE RADIO AMATEUR may wisely be admonished to content himself with a limited range of transmission; but this is by no means to say that the exceptional amateur may not properly have long-distance ambitions. In an article in *The Wireless Age* (New York) which bears the suggestive title of "The Far Call," Mr. Paul F. Godley tells us that there are in America 20,000 radio amateurs whose interest in the transmission of small radio signals over greater and greater distances "transcends all else."

Mr. Godley should know, for it was he who was selected last autumn by a group of these amateurs constituting themselves "The First National Convention of the American Radio Relay

the strange commercial calls up and down the European shores," and was distracted on settling down to 200-meters by "gobs and gobs of static and whole orchestras of harmonics"—these furnished interesting preliminary experiences, but the main adventure began at Androssan, Scotland, at an improvised station with headquarters in a tent pitched on a rather forlorn coast. Mr. Godley thus describes the final preparations and the moment of his triumph:

"On Wednesday, December 7th, the 1300 foot stretch of line was completed, the wire being supported by 2x4 inch posts 12 feet high, and laid out to point directly toward

From "The Wireless Age" New York.

League" to go to England as their representative and demonstrate to a skeptical public that American amateur signals could be regis-

tered across the Atlantic. Mr. Godley's task—which had for him "the romance of strange, fascinating, delightful adventure; a vision of the spirit of youth, vital eagerness, far-darting imagination"—began with the selection of the amateurs who were to send the signals from America that he purposed to catch up over there in Scotland.

"On November 1 (1921), the preliminary tests, which all were invited to enter, began, and the entrants transmitted on schedule each night up to November 5 in an effort to cover the distance of 1000 miles overland, failing which they were to be disqualified for participation in the main event. All my equipment was set for action, the super-heterodyne receiver being fed by a three-foot loop antenna. And what interest there was! Seventy-eight star stations scattered through every radio district worked to schedule with clock-like precision. Station 5ZA in Rosewell, New Mexico, consistently pounded in night after night on a four-ohm telegraph sounder by virtue of relays in the circuit. Those were the first thrills.

"Then came the night of November 14 with a farewell dinner, and with all arrangements completed, I sailed for England. Twenty-five contestants had qualified—two more were added later. At noon the following day the *Aquitania* slid down the North River, and I was off."

The ocean voyage with its "occasional snatches of 200-meter stuff"; the brief stop in London, where he "listened in on all

Chicago. The wire was grounded at the distant end through a non-inductive resistance (250 to 400 ohms) and at the home end through a variable inductance.

"Within the tent the regenerative receiver and super-heterodyne receiver were set up together with all accessories, which were found to be in first-class condition.

"At 11.30 P. M. all outside work had been completed and equipment arranged inside, whereupon the apparatus was gone over and put into operation. First the radio-frequency amplifier used with the super-heterodyne receiver was started up and time signals heard, without antenna, from FL, Eiffel Tower, Paris, and POZ, Nauen, Germany. Next, the tuning equipment, which formed the super-heterodyne, was gone over in connection with a short wire which had been thrown into a near-by tree, and all circuits were adjusted while working on the multitude of 600 meter signals which were coming through. VCE, Cape Race, was there, and most as strong as any of them, and I took this as a good omen.

"Finally the beverage wire was thrown in, preliminary adjustments made at both ends of the wire, and tuning started, the first signals recorded being the host of harmonics from the high-power stations, altho these were not as bothersome as was the case near London. Search for short-wave amateur signals began at 1 A. M.

"At exactly 33 minutes later the universe cracked wide open! In one magic moment Scotland's erstwhile gloomy shores became a haven of rest! Muscle soreness, soul sourness, fatigue and doubt vanished, and my unexpectedly difficult but insistent duty became a joy forever!

"Cold rains then were as liquid sunshine; boisterous cutting winds as balmy, heaven-sent breezes. Nothing in the whole sad world could possibly be wrong—nothing, for an American amateur signal was piling in on us and rising in strength until at 1:42 in a very positive manner, his 60-cycle synchronous spark spelled out a message to some one that he would 'see him later' and plastered the call letters 1AAW where the whole world might read!

"On the night of December 9 the weather had again gone very wet, and the winds had grown considerably heavier. Atmospherics were also heavier than the night before, being of about the same order as on the night when 1AAW was heard. At 12:50 A. M. on the morning of the 10th, after listening for sparks, we switched for continuous wave reception and immediately picked up station 1BCG (Greenwich, Conn.) on 230 meters. We had some difficulty with him due to atmospherics and a

very bothersome harmonic from the station at Clifden, Ireland, 150 miles away. Both these were nullified to a great extent by various adjustments of both the apparatus and the line wire.

"On the night of December 10-11, 18 different stations were logged, the secret code words being gotten from three of them, while dozens more were heard but not logged, either due to our inability to make out their weak signals through static—because of the number of stations working at one time and the resultant jamming—or because of the failure of stations, working locally, to use their station calls when transmission was ended.

On the 19th Mr. Godley was back in London, and found that great enthusiasm was being shown as a result of the tests. "Station 1BCG had been heard by five British amateurs, by a Dutch amateur in Amsterdam, and by an American ship operator in the harbor at Hamburg, Germany, and all the newspapers in Belgium, France, and the British Isles were featuring the story."

Mr. Godley goes on to say that British Amateurs had heard signals from Salem, Cambridge, and Marion, Massachusetts; from Hartford, Connecticut; from Brooklyn, New York, and Valley Stream, Long Island; and from unidentified stations. He gives the complete list of stations heard by him at Adrossan to the number of about thirty, mostly located along the Atlantic seaboard, but including such interior stations as Burlington, Vermont; Cleveland, Ohio; Pittsburgh, Pennsylvania; and Indianapolis, Indiana.

Notwithstanding the fact that two of the most distant stations, Cleveland and Indianapolis, used spark-wave transmission, Mr. Godley has very pronounced opinion as to the superiority of continuous-wave transmission, as will appear from his concluding words:

"In glancing over the above list one is struck by the preponderance of the continuous-wave stations, and by the fact that the British heard C. W. stations only. That can mean only one thing, that C.W. is far superior, and I should like nothing better than to see all amateurs change over to continuous wave at once. Spark methods are horribly out of date, and are so inefficient, comparatively, as to be ridiculous, were it not that many have invested good money in spark equipment. Station 1AFV (Salem, Mass.), since the tests, has gotten three messages across to England (London) on 200-watts of C. W. Many stations of the Atlantic seaboard are reaching to the California coast with similar powers, while the west coast stations have been shoving signals into the Hawaiian Islands. The day is not far distant when amateurs the world over will be exchanging greetings in many languages, and by the same token, the day is almost

here when the spark stations will be of interest as having to do with history only."

PACIFIC COAST RADIO

IF THERE WERE ANY QUESTION that the interest in radio is country-wide, an editorial comment in *Radio*, the San Francisco periodical (which began life about four years ago as *The Pacific Radio News*), would put to rest all doubts. Evidently the Pacific coast amateur is quite as well served as he of the Atlantic seaboard. Witness this comment:

"There is radio music in the air, every night, everywhere. Anybody can hear it at home on a receiving set, which any boy can put up in an hour. One of these sets costs less than a phonograph. With it can be heard grand operas, orchestras, phonographs' music, market reports, press summary, sermons, and speeches. All that is needed is a hundred-foot clear-span of copper wire, a couple of batteries and a cabinet set that can be bought from a radio dealer in every town.

"No better investment can be made as to a means for making a home more attractive to the entire family. Radio brings fathers and sons together on a common basis of mutual interest. The women can easily run in during the afternoon and have a constant source of entertainment for their guests. Any phonograph selection will be played by request to the operator in charge of the sending station. No home is complete without radio."

Courtesy of the Radio Corporation of America.

THEIR STATION WAS HEARD IN SCOTLAND.

Here are the men who sent the message that was heard in Scotland. Behind them is their station. From left to right they are: Amy, Grinan, Burghard, Armstrong and Cronkhite. Their call and a complete message were the first to be received in Scotland from America.

"The most remarkable feature was the strength of some of these signals, 1 BCG's signals could have been heard easily 400 feet from the tent. Altho we started out to see how far away he could be heard, we gave the idea up because of the rain which was coming down, and because of the time which would have been taken. 1ARY and 2FD (and later 2FP) (Burlington, Vermont; Flushing, N. Y.; and Brooklyn, N. Y., respectively) almost equaled 1 BCG as to strength, during one or two very short intervals. 1BDT (Atlantic, Mass.), a spark station, altho by no means as strong, almost equaled 1 BCG in steadiness of signals during a long period. Two of the continuous wave stations were using powers of less than 30 watts!"

The climax came on the morning of December 12, when, after hearing signals from dozens of stations at the same time, the eager listener caught a worded message, assuring him "heartly congratulations" from the Greenwich, Conn. station, 1BCG, signed with the names of its owners and operators: "Burghard, Inman, Grinan, Armstrong, Amy, Cronkhite." That was the first message ever sent across the Atlantic with amateur radio; and no readable signals from American amateurs were heard during the remainder of the tests. Presently atmospheric conditions ceased to be propitious, and the coming of a cyclone made it necessary to dismantle the tent on the afternoon of the 16th.

MR. GLAVIN'S RADIO CAR

UNDER THE PICTURESQUE TITLE "The Wireless Hound—An Interesting Case of Radio Control," the *Scientific American* (New York) some months ago described a curious little vehicle which more recently has been exhibited at the Radio Conventions at the Hotel Pennsylvania, New York, where it excited the wonderment of thousands of observers. After stating that ever since Marconi succeeded in getting a coherer to work by means of wireless waves, so that distant circles might be controlled as desired, men in various countries have been planning and experimenting with radio-controlled craft of all kinds; and, referring to the radio-controlled motor boats of John Hays Hammond, Jr., and to Herr Fokker's plan for crewless airplanes, the account continues:

"Now comes Edward F. Glavin of Yonkers, N. Y., with a radio-controlled vehicle which represents nine years of persistent effort and experimentation and numerous disappointments, all blended into the practical working model which is shown in the accompanying illustration. Mr. Glavin has succeeded in applying the principle of radio control to a land vehicle, which is considerably more difficult than that of aquatic craft.

"The 'wireless hound,' as this bizarre vehicle has been termed by those who have seen it going through its antics, is driven by an electric motor. The vehicle has four wheels—one in front which does the steering, two wheels which turn freely on a fixed axle, and a center driving wheel. The electric motor is mounted on a pivoted frame in such a manner that its weight is brought to bear on its rubber-faced pulley pressing down on the driving wheel. Storage batteries furnish the current for the motor as well as for other purposes.

"The control station consists of the usual tuned transmitter—a spark coil, telegraph key, oscillating circuit, and aerial. Each time the key is depressed, a train of signals is sent out to the aerial of the wireless hound. Each train of signals causes the detector to respond, operating a relay and closing a secondary circuit in conventional way. The secondary circuit makes use of a control or contact drum carrying various brass strips which, when turned, make various combinations of circuits in conjunction with the brushes or fingers pressing down on them. Thus in the first position the contact or control drum may make the necessary connections for starting the motor. The next position operates part of the electromagnets controlling the steering-wheel, so as to turn the vehicle to the left, while the next position restores the steering-wheel to the normal position and the vehicle straightens its course. The next two positions turn the vehicle to the right and straighten it out. Perhaps the next position stops the vehicle. At any rate that is the way the control operates."

Details of operation aside, the little car rolls about in any desired direction in response to signals given by the hand of its inventor and translated into electromagnetic radio waves by an assistant who presses the telegraph key. The performance is in a sense simple when explained, yet it always seems mysterious. It may reasonably be expected that before long the principle will be applied to some types of commercial vehicles, though the limitations of the method are obvious, in as much as the operator must keep the controlled mechanism within view. It has been suggested by Mr. Glavin that wheeled apparatus on farms—

including motor-drawn plows, reapers, and the like—may perhaps be operated by radio. Meantime the writers of fiction have taken slight liberties with the future, as when Mr. Stoddard Goodhue, in his story called "The Phantom Auto" in *Everybody's Magazine* makes Mr. Glavin's invention the background of a series of episodes in which automobiles are controlled by radio operated from an airplane. Almost any day we may see that feat accomplished in the world of fact.

RADIO BELOW 275 METERS

NOW THAT THE AMATEUR KNOWS just where he stands, it obviously behooves him to inform himself fully on the subject of waves between 275 and 150 meters. In an article in *Q S T* (Hartford, Conn.), the official organ of The American Radio Relay League, Inc., Mr. Boyd Phelps, 9ZT,

has things to say that should interest all amateurs who are not already proficient in the art of sending short waves. Mr. Phelps makes a plea for diversity of wave-lengths, regarding it as "ridiculous that out of the immense number of possible adjustments we should all strive for the same one." And he gives some very practical details as to the way in which the "crowding on and just above 200 meters" may be avoided:

"The chief difficulty in the minds of many is the thought of having to use an antenna only a few feet long and perhaps not extending up high enough to clear surrounding objects. The following methods worked out by the writer obviates this great disadvantage.

"An antenna with a fundamental of 300 meters when excited by a straight gap was found to emit waves on 300, 100, 43, and 33 meters. It was only necessary to excite the aerial at one of its harmonic frequencies to have it absorb

and radiate energy on that wave. It was found that the ratio of one to three does not hold between the harmonic and the fundamental when the antenna is loaded. At 9FO with the large antenna having a fundamental of 350 meters the use of a series condenser was impractical for 200 meters. All of the secondary of the oscillation transformer was inserted, bringing the wave up to 525 meters; the first harmonic then increasing to 169 meters as determined with a spark gap in the ground lead and a spark coil connected across this gap. With the closed circuit carefully tuned to 169 meters and coupled to the antenna circuit good radiation was obtained on this wave-length. Moving any clips on the oscillation transformer caused a falling off of antenna current. With the wave meter coupled to the ground a sharp wave was found at 169 meters, but no matter how close the wave meter was coupled to the aerial circuit no wave could be found around 525, which was the normal wave-length of the open or aerial circuit. This new method permits easy working on 200 meters and below with a large aerial.

"It is perhaps not well to encourage the above experiments too much, especially in coastal cities, as inaccurate adjustments may cause a strong wave to be emitted at about 600 meters. The real value of this method of tuning comes in the use of continuous wave. A vacuum tube, we are told by many eminent experimenters, will in laboratory circuits oscillate at wave-lengths of five meters or less. Tuning is extremely sharp at low wave-lengths so that more stations may be accommodated at wave-lengths differing but few meters."

HOW SHAW BAGS THE UNIVERSE

SHAW CAN SURELY RISE NO HIGHER as an entertainer. The final episode in "Back to Methuselah," which he calls "As Far as Thought Can Reach," is, according to Heywood Broun, "as much fun as any of the Ziegfeld Follies and has the added advantage of possessing rather more philosophy." So far as color and draped figures go the comparison is not inapt. The undertaking of giving

Happens A. D. 2170," "Tragedy of an Elderly Gentleman, A. D. 3000," "As Far Thought Can Reach, A. D. 31920." Of this apparently bewildering farrago, Mr. Towse writes:

"It is sufficient to declare that it is characteristically Shaw, at his most voluminous, most presumptive, and disputatious, but, by no means, always at his best. Clever? Most indisputably—or it would not be he—in many passages, brilliantly so; elsewhere over-labored, extravagant, specious, irrelevant, shallow, and, to some hearers at least, both tiresome and exasperating. The man who takes omniscience for his foible and license for his privilege must sometimes appear a charlatan. But he, there is reason to suspect, occasionally dons the cap and bells with set purpose, in sheer impish mischief. How much then of this portentous fantasy, with its queer amalgam of Scriptural legend and scientific pretense, its exploitation of all his pet political, social, and clerical grievances, is to be taken in any way seriously? How much of it did he write with his tongue in his cheek and his eye on the main chance? If the answers are not set down, it is not because the present writer has any doubt concerning them. But perhaps after all Mr. Shaw has learned to believe in the promise 'By faith ye shall move mountains,' and has based his own belated theories, if he ever entertained them, upon it.

"Of course, there is nothing new in the 'will to create,' upon which his whole bewildering parable is founded, notwithstanding his treatment of it as a personal discovery. This is simply his adaptation from the perfectly orthodox belief that in all humanity there is an element of the divine and that the evolutionary progress of the race toward higher conditions is due to the perpetual conflict between the aspirations of the spirit and the lust of the flesh. His modification of it seems to imply the revelation of some new principle by which man may raise himself by pulling on his own bootstraps. But this is a ribald suggestion. With faith, or spirit, he will have nothing to do. It is by the exercise of his will, the unflinching determination to be and to achieve, that man is to attain to the quasi-immortality and highly developed scientific (?) conditions herein depicted. Those who are beguiled into looking for something pregnant, rational, inspiring, or logical in this portrayal, do not know their Shaw, and will be grievously disappointed. Amusing and fairly plausible in the beginning, it assumes more and more the nature of extravaganza the further it plunges into the future, until—30,000 years hence, when children are hatched from the egg at the age of fifteen years and grow a month or two older every minute—it closes in sheer phantasmagorical burlesque, a sort of ultra-modern midnight classical 'revue,' in which *Lilith*, the ghosts of the Serpent (so the Devil is dead, after all) and of *Adam* and *Eve*, hoary, mummified ancients, young men and maidens, and animated puppets, all talking with the tongue and indomitable loquacity of their intellectual progenitor, contribute to the desired end of Delphic mystification. Can, then, no meaning be attached to these oracular utterances? Most emphatically yes. Almost any meaning that the student of them may prefer. Is it worth the trouble of search? Ah, that is a different question. It is wiser, perhaps, to laugh—not to think—and grow fat. But the cleverness of it all, the play of humor, wit, and satire, the range and power of the two often misapplied thoughts, are amazing and not a little pitiful."

The second evening proved the most trying to Mr. Shaw's audiences, the piece ran from half-past seven till near midnight, and people left it gasping for breath, with splitting headaches. Mr. Towse, again, furnishes us a reason for not analyzing it:

"With 'The Tragedy of an Elderly Gentleman' (3000 A. D.) Mr. Shaw enters definitely into the realm of burlesque and fantasy, going to the limits of whimsical extravagance, with a constant explosion of witty little firecrackers, the usual assumption of supernal wisdom, and the freest indulgence of a

ADAM AND EVE WITH THE SERPENT.

The opening scene in Shaw's "Back to Methuselah," which was devised by Lee Simonson.

this Shaw production on a stage without cuts has been achieved with success so far as the Theater Guild is concerned; but the audience have not always been equal to the strain. Three nights of talk without the alleviation of music, such as Wagner's Ring provides, was a test that only the old Chinese theater has ventured to impose. But Mr. Shaw required so much to put his thoughts on creative evolution before an audience and he would tolerate no abridgment of his text. The Theater Guild seemed to adopt some of his tactics and required its patrons to take all or none, or at least to buy all or none. The play starts in the Garden of Eden with the Serpent instructing Adam and Eve in the secrets of life, and it stretches "as far as human thought can reach." "Never before," says Mr. Towse in the *New York Evening Post*, "has anybody had the chance of hearing a play—for this is largely a matter of hearing—whose actions, ramifications, and divagations are supposed to cover a period of some thirty or forty thousand years." The five sections of the piece are labeled: "In the Beginning," "The Gospel of the Brothers Barnabas; Present Day," "The Thing

mockery, often broadly comic, but sometimes offensive both to common sense and good taste. Here and there, as usual, is a passage embodying some shrewd reflection or weighty but platitudinous truth, quickly neutralized by a display of cynical quips and bitter gibes. It is clever, sometimes astonishingly clever, but insincere and insignificant stuff, which tickles the risibilities for the passing minute, but when the effervescence has subsided is too often as flat as stale soda-water. If there be in it a residuum of appreciable philosophic or social value, it is not enough to justify the trouble of analysis or description."

Both as Shavian satire and as acted comedy we find the second section of the first night's performance giving the most satisfaction. Mr. Towse writes:

"In 'The Gospel of the Brothers Barnabas' this theory of human will as the creative power is adroitly made the motive of contemporary satirical and exclusively English comedy in which Lloyd George and Herbert Asquith, under the transparent aliases of *Burge* and *Lubin*, are made the targets of Mr. Shaw's keen shafts of reckless ridicule. They are sketched with that semblance of verisimilitude which is the essence of the best caricature and with an exuberant humor which does not dull the edge of the satire. This, tho characteristically disingenuous, is of delightful quality, and none the less enjoyable because directed mainly against dead issues. How longevity is made a political issue may be briefly explained. Civilization is a failure because statesmen die before they have acquired either wisdom or experience. *Conrad Barnabas*, the biologist, has proved to his own satisfaction that, by the exercise of will, men may prolong their years into centuries, and *Franklyn Barnabas*, the preacher and politician, is promulgating the theory. Both *Burge* and *Lubin* are brought to see how political capital might be made out of it in a general election, and vie with each other in an effort to secure the Barnabases and their battle-cry for their respective parties. In the controversy Mr. Shaw is able to discourse with brilliant fluency on every phase of national and international society and politics. . . .

"It was in 'The Gospel of the Brothers Barnabas' that the performers found themselves on their own ground. This was admirably done in the best style of modern comedy. It is to be feared that many of the shrewdest hits in the very artful dialog were not appreciated by an audience unfamiliar with English political personalities and details, but the brisk Shavian exchanges were delivered by all the actors with humorous intelligence and great dialectical skill. The impersonations of *Joyce Burge* (Lloyd George) and *Lubin* (H. Asquith) were both surprizingly felicitous. A. P. Kaye, almost a physical double of the first, mimicked him in voice and manner with an astonishing accuracy, and suggested with notable effect his intellectual alertness, instant adaptability and emotionalism. And Claude King also succeeded not only in looking like Asquith, but in reflecting both his Oxford and House of Commons style. The *Franklyn Barnabas* of Albert Bruning, one of the very best of living all-round actors, was quite a masterpiece in its way, in its snavity, keenness, flexibility, and high polish, while Moffat Johnston, as the curt, matter-of-fact scientist, was an excellent foil to him. This act was a really first rate bit of cooperative comedy, and was greatly enjoyed until by its excessive length it began to pall."

Says Mr. Heywood Broun in *The World*:

"The piece is far more fantastic and imaginative than anything which has come from the men of our generation, who know only fairy-stories.

"Our admiration for Shaw's play is uncomplicated by belief in his philosophy. He has attempted to make Puritanism glamorous by lifting it to transcendentalism. Milton, another Puritan of ability, worked the same trick. In other words, Shaw pretends his quarrel with art is not that it affords people too much fun but that it yields only puny joys in comparison with the ecstasies of pure intellect.

"He would not deny art a right to existence. In the year 31,920 A. D. human beings will maintain an interest in art, sports and pleasure through the first four years of their life. During the next nine centuries, or thereabouts, the average individual will have outgrown this interest in toys."

A DOUBLE-KEYBOARD PIANO

A PIANO WITH A DOUBLE KEYBOARD, each note on the upper board being the octave of the one just under it on the lower board, has been invented by a Swiss, Emmanuel Moor. Great enthusiasm has been aroused over this instrument, not only in Switzerland, but in Paris and more recently in London. To play upon it requires study

ASQUITH AND LLOYD GEORGE

seem to come to life as *Burge* and *Lubin* on the stage of the Garrick Theater and discuss Shavian politics with immense gusto.

even on the part of skilled performers, but this is well rewarded by the increased brilliance and variety of the effects. It has been asserted that this instrument represents as great an advance over the piano as the latter did over the harpsichord. In an article by the inventor published in the *Bibliothèque Universelle* (Lausanne) he says:

"The piano which I present to the public does not modify for the moment the system in use at present; the number of strings and of hammers is the same and the position of the hands is the same; but my instrument facilitates in a notable degree the execution of all pieces of music by lessening the distances, by permitting the hands to perform evolutions in the same direction and by lending itself to the performance an infinite number of new and unforeseen combinations. This new mechanism, for which I have applied for a patent, requires, for the present at least, no change in the fingering nor in the writing of music, altho a change in writing will be indispensable eventually, to insure clearness in execution. My invention consists of an ordinary piano to which I have adapted a second keyboard placed a little above the usual one. The keys of the same note are opposite each other but with the essential difference that they give the higher octave throughout the whole extent of the piano. This simple process not only constitutes an auxiliary means of facilitating the execution of all music which has been written up to the present time, but it opens new vistas with respect to future music with regard to sonority and virtuosity.

"All the octaves can be played with the thumb and forefinger within a very narrow space. The most extended chords can be struck simultaneously with perfect resonance. This makes it unnecessary to cross the arms in order to reach the more distant notes, and it becomes superfluous, at least up to a certain point, to arpeggio the large chords in order to reach notes beyond the stretch of the ten fingers."

Gustave Rollin, writing in a later number of the same magazine, observes that the most important feature of the instrument is the brilliant device of making use of a coupling pedal, by means of which the new piano is made "incontestably superior

to the old one, not only by its superb sonority but by the diverse and incalculable new combinations which it may afford in the future both to the composer and to the performer." He writes:

"This pedal makes the upper keyboard sound automatically with the lower, and makes it possible to double, triple or quadruple the sonority according to the number of notes which the performer strikes simultaneously, enabling him to obtain marvelous effects resembling those yielded by the organ. Thus,

NAPOLEON MEETS A SHAW WATERLOO.

In the Garrick Theater the *Napoleonic* embodiment of the war spirit falls in a wordy Waterloo with a "180-year-old priestess, whom he interrogates in ultra-imperial fashion.

the works of Bach and Handel, and of the great classic masters, gain a fresh interest when played upon this new piano. This method of coupling yields peculiarly poetic effects in the case of fugues, such as those of Bach."

This new duplex coupler facilitates the playing of octaves with surprising velocity, perfect precision and an absolute *legato*. By an arrangement of the first keyboard a very beautiful chromatic *glissando* can be obtained. Furthermore, it is possible to imitate the harpsichord by a special method, concerning which Mr. Rollin remarks:

"I have had the pleasure of hearing Mr. Moor play several pieces arranged for the harpsichord, and I could not sufficiently admire the archaic charm, the deeply affecting poetry, the fine and delicate sentiment, the brilliant intellectuality which animate and vivify these compositions. It is a magnificent evocation of the past."

The new instrument has also aroused great interest in London during the last few months and will doubtless do so here, not only from its novelty but from the fact that the inventor once lived in New York and was the accompanist of Madame Lili Lehmann in her concert singing. The musical critic of *The London Times* makes the following remarks, which, as will be noted, are not altogether favorable:

"The main acquisition is the capacity to produce 4-foot and 16-foot tone effects equal in strength with, and of the same quality as the 8-foot tone of the single keyboard. These effects can be very beautiful—the first scale in octaves which he played with the coupler produced an audible sensation through the hall.

"There are two points of view from which this program could be discussed, the revelation of what the instrument can do and can not do, and one's satisfaction or otherwise with what Professor Tovey made it do. The latter is only important at this stage because it illustrates the diversity of the problems which

assail the pianist. We found the prolonged use of 4-foot tone in the Toccata in D minor rather wearisome and the 16-foot tone in the chorale 'Nun Komm, der Heiden Heiland' too thick. On the other hand, 'Nun freut euch' was quite exquisite, and the cantata prelude brought out the player's intimate knowledge of Bach's orchestration wonderfully.

"We are not yet convinced that the harpsichord stop offers a very real acquisition to the interpretation of the older music except in such realistic pieces as 'La Poule,' tho toward the end of the Italian Concerto we began to feel that the thing was distinctly more like a harpsichord than like a spoiled piano.

"But the recital emphasized very strongly the basic fact that here is a wonderful instrument which musicians must learn to use and will delight in using."

The musical critic of the *New York Times*, Richard Aldrich, makes the following comments upon these London reports:

"If the new keyboard of Mr. Moor, which has won so much approval from men whose opinions must be considered, gains general adoption, it will involve considerable alterations, apparently, in piano technique. It is possible, we are told, to use the new invention in the old way. But its essential improvements, if they are improvements, can be exploited only by a new technique, which must be learned and mastered as the old one always has been. This will be a dismaying task for those who teach it and put a very heavy responsibility on those who are engaged in inducting young people into a way of making themselves musicians that must be certain of unquestioned acceptance if their life work is not to be thrown away. These are serious questions for those who advocate the new idea. It will be a wonder if the inertia of a very considerable conservatism is not found to operate against any speedy adoption of it."

BANNING THE "PRECIOUS" WRITERS—The "burnished and jeweled writing" which came in with the "fin-de-siècle" movement of the last century is giving way to a robust form of expression. Wilde, Pater and Stevenson are wearing out, according to Professor Oliver Elton of the University of Liverpool, upon whose remark the *New York Evening Post* comments:

"Professor Elton's statement might not be applauded by many who admire the styles of Conrad and the minor Conradians, of authors like W. H. Hudson and Arthur Symonds, and of a number of younger men who write criticism all the time and travels or essays part of the time. But there is much evidence that Mr. Elton is right. In the life of nearly every book-loving young man there is a period when he thinks that the greatest of all pursuits is of the *mot juste*, that there is no triumph like expressing the fluttering of a leaf or whinny of a horse in a phrase more precise and imaginative than others have used. Such young men alone will always furnish an army to defend the virtues of Stevenson's style. But the great body of readers must in the long run prefer the prose in which the workmanship is broader and less elaborately elegant.

"This is in part because the great body of modern readers must be rapid readers; particularly if they read with gusto. A style which presents fine mass effects, as Carlyle's or Ruskin's does, is for them superior to a style in which every ten words an expression demands, 'Stop and admire me!' and in which every paragraph asks to be rolled under the tongue."

"No reaction against the highly studied style need carry writers into slovenliness. It would be a great misfortune if it encouraged our too many careless American authors to become more careless still. Nor need the finest qualities of style, felicity, glow, eloquence be sacrificed. The old masters—Macaulay, Hazlitt, Carlyle, Thackeray—who wrote with full-charged minds and fast-moving pens, simply wrought their stylistic effects in the large, not in miniature."

AN EXPONENT OF THE NEW PSYCHOLOGY

IF THE OPINION OF FOREIGNERS is the judgment of posterity Mr. Sherwood Anderson should be happy in having his ticket for immortality. Lately discussed in *The New Statesman* (London), by that rigorous young Englishwoman, Miss Rebecca West, he is put down as "one of the most interesting personalities writing in English to-day." The reason he finds so much favor with Miss West is because "his excessive preoccupation with the new psychology strikes deeply at the root of his talent." In analyzing him his virtues are set off against what Miss West regards as the shortcomings of others who think "the obvious way to treat a situation is to record what people say and do," and that "the meaning at the core of life is exhaustively and directly, without the intervention of any symbolism, expressed by its superficies." For the sake of showing what Mr. Anderson is not, Miss West first analyzes an American writer—Mr. Stephen Hudson, whose novel, "Elinor Colhouse," is conceived and executed without "the slightest sign of any psychic life of which speech and action are only the reserved and indirect expressions." Mr. Anderson, on the other hand, "is saturated with the new psychology to an extraordinary degree." In fact:

"It dictates his subjects. His stories are monotonously full of young girls coming back to their home towns with a suitcase and a psychosis, of middle-aged men corked by inhibitions. It determines his way of looking at his subjects, which is amusingly antithetical to that of Mr. Hudson. If one gave Mr. Hudson a pattern book of velvets, he could pick out the very shade that *Elinor* wore at the dance; the clothes of the characters in 'The Triumph of the Egg' are matters which are not touched by Mr. Anderson's invention, but have to be supplied (as Andrew Lang pointed out must be the case with the clothes of ghosts) by the imagination of those who see them in order to satisfy their sense of the fitness of things. Mr. Hudson believes that the whole of *Elinor Colhouse* went into her schemings to trap *Richard Kurt* into marriage; if Mr. Anderson had been writing of *Elinor* he would have seen those schemes as just the tip of one of the tentacles that the vast and complex organism which was her inner being lifted towards the light of the promise of more life. Now this means that all Mr. Anderson's stories are profound, and that they are all in some measure true, since memories of the process of life in his own heart enable him to check his imaginations of its process in the hearts of others. Nevertheless, he goes nearly as far wrong in his indifference to the superficies of existence as Mr. Hudson does in his absorption in them. His characters are too often mere types of desire, unincarnated souls. When *Rosalind Westcott* runs along the road at the end of 'Out of Nowhere into Nothing' one believes absolutely in the joy that drove her forth; but her feet seem to leave no prints on the dust of that road. She is a name, and a disembodied joy; and that is all. The story is not quite achieved, has not been pulled right across the threshold of creation, is not completely a work of art. One measures the failure that attends most of Mr. Anderson's stories for this reason, by the success that attends him in the two stories, the one that gives the volume its title and 'I Want to Know Why,' where he has succeeded in incarnating his ideas. 'I Want to Know Why' is startlingly a momentarily good short story. It affords a compelling reason why, if Mr. Cape brings this volume within the reach of the English reader, as he has benevolently brought other examples of *les jeunes* of America, it should be acquired by the intelligent. 'I Want to Know Why' is a sound study of adolescence, of virginity, and its aching disappointment at its first glimpse of the dark, base quality of life; but it is far more than that. It is lifted right across the threshold of creation, it is an achieved work of art,

because Mr. Anderson has completely visualized the Kentucky boy who loved horses and beat it to Saratoga to see the race-track, and had his ecstasy over *Sunstreak* (a horse in whose genius one believes as one believes in the genius of the mare, *Ophelia*, of whom Mr. James Agate writes in 'Alarums and Excursions') and had his terrible disillusionment about mankind. And 'The Triumph of the Egg' succeeds as prodigiously because again Mr. Anderson has permitted himself to use the eyes of the flesh, and has seen the adorable, incompetent father as a real person. It is a tribute to Mr. Anderson's art that one can not be explicit as to the nature of his success. The theme is such an exquisitely comic and pathetic invention, and its execution adds so much of comedy and pathos to it, that one hesitates to breathe of it, lest one's blundering description should discredit it. These two stories make it plain that of all the younger American writers, Mr. Sherwood Anderson is the one we have most reason to envy."

SHERWOOD ANDERSON,

who is "saturated with the new psychology to an extraordinary degree."

CHARACTER BONDS FOR MOVIE ACTORS

BINDING THEM OVER to keep to decency is a proposal made by *Camera* (Los Angeles) for treating actors for the film. "There are few departments of the motion-picture industry that have not suffered keenly from the two most recent film tragedies," it declares, going on to maintain that this is "largely as a direct result of the deplorable angles taken by the press upon the situation." *Camera* asserts that for every picture person who goes wrong there are half a dozen bank clerks and commercially engaged citizens in the same boat. "But when has the banking business been ostracized from decent society because of the errors of its various attachés?" *Camera* enlarges on the grievance of being singled out for special reprobation:

"Besides being subjected as a class to the indignities crowded upon us by hundreds of highly imaginative, scandal-scattering, sob

writers and the inevitable detrimental effect upon public opinion, which always follows in the wake of such attacks, several producing companies have had to endure huge financial losses when exhibitors, through various censor board regulations, have found it necessary to cancel the runs of elaborate productions presenting individuals concerned in the cases, or sometimes merely suspected of being concerned. It is, therefore, easy to perceive that being much in the public eye, we are not only doomed to sustain the unhappy consequences of our professional brother's indiscretions but of their alleged missteps as well. That is, we are doomed to such a fate if we tolerate it."

What *Camera* regards as "an invaluable solution of the problem" is "the character bond," which it suggested some months ago; and, so it thinks, "had it been adopted at that time by the Producers Associations, would have eliminated seventy-five per cent. of the moral and monetary difficulties which have fairly seethed about us since the first newspaper report upon the Arbuckle Affair." Thus:

"Not only would a demand upon the part of the producing company for a character bond from each and every artist in its employ diminish the chances taken by that organization upon irresponsible people and protect it against any financial loss from the acts of its employees, but it would also render impossible the condemnation of a studio, not to mention an entire industry, for the mistakes of an individual."

This seems as good a place as any for the editor of the *Digest* to acknowledge the receipt of a letter from Hollywood asking us to publish material for the use of a foreign mission study class.

RELIGION-AND-SOCIAL-SERVICE

CALLING IN A MINISTER TO HELP THE CHICAGO POLICE

THE DARING EXPERIMENT of Chicago's Mayor in appointing a minister as Law Enforcement Commissioner may be watched with sympathetic interest by other municipal governments confronted with similar problems of evil. Whether it is a confession of weakness on the part of the authorities already constituted, or mere camouflage, as is variously charged, or a sincere effort to "clean up" the city, as the new Commissioner evidently believes it to be, the step taken by Mayor William Hale Thompson involves, it is generally agreed, a "colossal task" for his appointee. The Rev. John H. Williamson, pastor of a Methodist church, who received the appointment, has said that he will conduct his office "in accordance with the teachings of Christ," and he has called on all religious organizations, regardless of race, color and creed, to join him in a crime drive which will rid Chicago of crooks, in whatever strata of life they may be found. He was especially enjoined by the Mayor, according to press reports, to seek out any corruption that may exist among officials, and was informed that his decisions would be final, whether they affected the highest city official or the lowest crook on the streets. "Any who seek to compromise, hinder or thwart the purpose of the Law Enforcement Commissioner will have their attention directed to a motto which will be placed on my desk," says Mr. Williamson in a published statement. "The motto runs: 'Respect for the law is of more value than respect for the violator,' and such will be the end of the argument."

Turning to a local view of the innovation, the Mayor's creation of the office of "Law Enforcement Commissioner," thinks the *Chicago Tribune*, is one of two things: bunk, or a confession by the Mayor that the men now in office by his appointment charged with the duty of law enforcement and paid by the taxpayers for the performance of that duty can not be trusted to enforce the laws. This paper asks, then:

"What is the need for a Law Enforcement Commissioner if Mr. Thompson's cabinet officials are doing their duty?"

"What is the Mayor's duty if his appointees are not doing their duty?"

"Who is the lawful, official Law Enforcement Commissioner of Chicago, if it is not the Mayor himself?"

"If members of the Thompson cabinet are not enforcing the laws, or if the Mayor suspects they are not, what is to prevent the Mayor from removing them from office or from seeing to it himself that they enforce the laws?"

"If that is not the Mayor's job, what are the taxpayers paying him for?"

"The creation of the office of Law Enforcement Commissioner by Thompson is a confession that he can not trust his own cabinet, or it is political bunk."

"Which is it, a confession or a grandstand play—or is it both?"

It is a "calculated appeal to reform sentiment," thinks the *New York World*. Waxing sarcastic, this observer asks: "With an official custodian of municipal morals selected from among the clergy, what chance can there be for wickedness to thrive? The reverend gentleman chosen for the post is expected to rid Chicago of vice, close up the breeding-places of crime where liquor is sold, deal mercilessly with criminals, and drive dishonest municipal employees out of office." This is—

"Surely a comprehensive program of reform, one that might rationally require the combined efforts of every civic agency to accomplish, and then with grave doubt of its success. Is there the slightest reason to suppose that a ministerial moral censor can effect it? Will there be any intelligent belief that Mayor Thompson really thinks he can?"

"What the spectacular Mayor of Chicago has done in commissioning a clergyman for a task which the city authorities seem impotent to perform is to make a grandstand play for public support. He is camouflaging municipal politics with moral reform in the old familiar way, with only the difference of making the performance a little more sensational than usual. This is not to say that the moral welfare of Chicago can not be improved by ministerial supervision. But any fundamental reform of conditions of vice and crime will require the consent and cooperation of the police and the politicians who are responsible for existing conditions."

It all sounds simple enough, "but like most short-cuts," says the *Baltimore News*, "it is doubtful that it is likely to accomplish the end intended. In the first place such an appointment is a confession that the ordinary machinery of law is powerless to enforce the law. And it surely is a mat-

ter of tried and proved observation that the law-abiding habit is not something which can be speedily acquired like some mechanical knack or superficial sleight-of-hand trick." It is obvious, believes the *Brooklyn Eagle*, "that law enforcement in a city of 3,000,000 is a pretty big job and one at which almost any clergyman is likely to fail, not from lack of good intentions but from unfamiliarity with the ways and resources of criminals and with methods of criminal prosecution." The Enforcement Commissioner's appeal to religious bodies to assist him will bring some responses, but not many, thinks the *Dayton Daily News*, declaring:—

"The outstanding defect in the religious world to-day is that it does not present a solid front against evil, tho of course the Church as an institution is an avowed foe of vice. Some interesting facts will be faced by the preacher before he goes along very far with his job. He will find many hindrances. It is being freely predicted that eventually he will quit because he will find that ridding a community of vice is not the task of any one person or any one group. Vice exists only when there is almost universal disregard of its existence. Vice generally wins its point because it is fought either by a divided or disinterested antagonist."

TO HELP PURIFY CHICAGO.

Rev. John H. Williamson, who takes up what is called the "colossal" task of enforcing law in the Midwest Metropolis.

JEWISH INCREASE IN AMERICA

POGROMS and other less violent forms of anti-Semitism in Eastern Europe have resulted in a progressively large Jewish immigration to our shores, and this influx, combined with a natural increase, has brought the Jewish population in the United States up from 1,777,185 (estimated) in 1907 to 3,390,301 (estimated) in 1918, an increase of 1,613,116, or nearly double, in eleven years. The total given on the map is for continental United States only. The Jews now constitute 3.22 per cent. of the entire population of the country. Intermarrying but little with other stock, and rarely leaving the faith of their fathers, the Jews in the United States have preserved their racial homogeneity, as they have done in all countries since the great dispersion early in our era, and are found clustered mainly in the great centers of population. Approximately three-fourths of the Jews here are found in ten cities, according to the American Jewish Year Book, whose figures form the basis of this article and map, and about half of the entire number live in New York, where they constitute about 25 per cent. of the total population. The other nine cities leading in the number of Jewish inhabitants are Chicago, with 225,000; Philadelphia, 200,000; Cleveland, 100,000; Boston, 77,500; Baltimore, 60,000; St. Louis, 60,000; Pittsburgh, 60,000; Newark, 55,000, and Detroit, 50,000. It is interesting to note, however, we read in the Year Book, that while New York contains such a large quota of the Jews of the United States, it is not proportionately the most Jewish city. Chelsea, Mass., has a Jewish population of 13,000, or 28 per cent. of its general population.

While New York State contains the largest number of Jews—1,603,923—Wyoming, in continental United States, contains the smallest quota, 498, and Alaska has only two more. Looking seaward, we find that there are 150 Jews in the Hawaiian Islands;

500 in the Philippines, and 200 in Porto Rico. Pennsylvania comes second to New York in its Jewish population, with 322,406, and then, in their order among the twelve States which contain 90 per cent. of the Jews in this country, are: Illinois, 246,637; Massachusetts, 189,671; Ohio, 166,361; New Jersey, 149,476; Missouri, 80,807; Connecticut, 66,862; California, 63,652; Maryland, 62,642; Michigan, 63,254; and Indiana, 25,833.

THE GOOD IN "WILD YOUNG PEOPLE"—Youth will have its fling, and some 2,000 years ago that wise old Roman, Cicero, remarked that "rashness attends youth as prudence does age," and this, we are told, is about as far as just criticism can go against the youth of to-day. No child, it is said, is really bad, and the "wild young people of to-day" against whom so much stern criticism has been directed in recent months are all right at heart and no worse than their parents were a generation ago. It is no new topic, this talk of the folly of youth, says the *St. Louis Globe-Democrat*, remarking that—

"The world has been wild and youth could not help but take on the aspects and the manner of wildness. It is a symptom, not a disease. And it is passing. Has it worked a moral degeneration of youth? It has not. The average youth of to-day, girl or boy, is sound. The flamboyances of the day are superficial. They have touched the surface of youth with garish pigments, but they have not marred its soul. For somehow, the soul of youth is commonly steered safely through the perils that beset it. Much that we think is corrupting somehow does not corrupt. The world is filled with men and women, staid and respectable, who were wild things in their youth, and by far the greater part of the wild youngsters of to-day will be the respectable fathers and mothers of to-morrow. Most assuredly we need better homes and a number of other bettered influences, but after all 'there is a divinity that shapes our ends, rough hew them how we will,' and youth in particular is never without its guardianship."

THE PAPACY'S PROGRAM

PEACE WITH ITALY, reunion of the Roman Catholic Church with the Greek and Russian Orthodox Churches and a return of the Anglican Church to Rome are among the possibilities envisioned by some observers in the new accession to the Papacy. Whatever the general view may be, at least one Anglican paper thinks that the road to Rome may be opened

AN ADVOCATE OF RELIGIOUS PEACE.

Pope Pius XI, who, as a member of the "liberal school," is said to hope for reconciliation with Italy and with the Greek, Russian and Anglican Churches.

under Pope Pius XI, and at least one Russian Patriarch is said to be sympathetic toward a similar step to be taken by the Russian Orthodox Church. The new Pope stands for the liberal school, tho conciliatingly he has assumed the name of the Pian, writes a correspondent of the *Westminster Gazette* (London), and the Pope's own view of the Papacy, says this writer, "has been exprest in the words, 'not national, not international, but supernatural.'" Furthermore, "it is known that Benedict's last thoughts were for that reconciliation which time has shown is more important to Italy than to the Church. . . . Under the new Pope the feud, tho complicated by the popular or Catholic party, promises to work itself out."

Speaking of the possibility of reunion with Rome, *The Church Times* (London), an Anglican Church organ, admits that there is a serious division between the Church of England and the Church of Rome, but believes the gulf is neither so serious nor so deep as some on both sides would make out. Suggesting that conferences looking to reunion be held, the Anglican journal asks:

"Is it allowable to hope anything from the election of Cardinal Ratti to the see of Peter? We can not but think it is, tho it may be that the wish is father to the thought. But we are told that he chose the name Pius because 'Pius is a name which is an omen of peace,' and that he declared the blessing given outside St. Peter's, immediately after his election, was intended to extend not only to those actually present, or to those in Rome alone or in Italy, but to all nations and all races as 'a pledge and a message of that universal pacification which we all so ardently desire.' There is more, however, than this to make us hope. Pius XI belongs to the freemasonry of scholars, and that is always a bond of union. It is rare that religious animosities are so fierce among them as among others. Mabillon, the great French Benedictine scholar of the seventeenth century—a time of bitter religious hatred between Catholic and Protestant—always spoke of Protestants as 'our separated brethren.' And there are many friendships among separated brethren in the world of learning to-day. We must not, of course, expect too much or form hopes that are certain to be disappointed, but to assume, as some do, that reunion with Rome is out of the question, is to go far to make it so."

Turning to the question of temporal power, it was not well understood outside of Catholic circles, writes Maurice Francis Egan in the *American Review of Reviews*, "that the temporal power was never looked on as a necessity to the permanence and growth of a church whose essential existence depended entirely on its spiritual qualities," and he holds that "Catholics have no intention whatever of proposing or of demanding that the city of Rome should be returned to the Pope." While the question of temporal power seems to be moving toward settlement, Mr. Egan thinks that—

"Another great question which will probably occupy Pius XI is the understanding as to a reunion with the Greek Orthodox Church. Russia has hitherto been the implacable enemy of Rome; the Russian Church was essentially a state church; but now that state and Church have separated, there is a party in Russia, including one of the most important of the Patriarchs, anxious to join the Roman Catholic Church, as the most stable organization ecclesiastically in the world. The question of the celibacy of the clergy would not be an invincible barrier. It did not prove to be so in the case of the Lithuanians and other schismatics; and the monastic orders, in the Russian Church, are solemnly vowed to celibacy. . . .

"Pius X was purely an ecclesiastical Pope. He is looked on to-day by Catholics as having greatly increased spiritual fervor in the Church; Benedict XV saw the opportunity for the restoration of Roman diplomacy, which had for a time failed in nearly every respect; and Pius XI, in accepting so cordially the results of the Conference at Washington, has ranged himself, as Beaconsfield once put it, 'on the side of the angels,' where every Pope ought to be.

"As to diplomatic relations with the United States there is no indication that the Vatican desires them; and there is no sign on the part of either the Catholics or non-Catholics in the United States that they would be considered desirable, for, since the Philippine matter has been settled, there is no religious-political question in which the Vatican is concerned of any domestic interest to us."

Viewing him as a "moderate, constructively conservative, and highly enlightened man," *The Christian Century* (Un denominational) considers the election of Pope Pius XI as "the most daring challenge to Protestantism since the Reformation," and thinks that Protestantism must marshal its forces, "organizing the religion of freedom as the Roman Church has organized the religion of authority, or the future will be dark for the faith that has made the modern world."

WINCHESTER

TRADE MARK

TACKLE

1866

1922

ANNOUNCEMENT

SPORTSMEN will be glad to know that there is now a complete line of Winchester fishing tackle.

There are 140 styles and sizes of Winchester rods, including bamboo and steel fly rods, bait rods, and bait casting rods.

Winchester reels, including single, double and quadruple action, from the highest grade jeweled-bearing types to the simpler, less expensive ones, offer a complete range for all fresh water fishing.

A good assortment of spoon and plug baits, lines, sinkers, and other accessories, rounds out Winchester fishermen's equipment.

It is sufficient to say of the quality of these products that they bear the name "Winchester", and are made by the same organization which for half a century has studied and satisfied the requirements of sportsmen.

There are 4000 Winchester Stores in the United States which sell Winchester tackle and other new products. Look for this sign on the window: *The Winchester Store*.

Ask at *The Winchester Store* in your neighborhood for a pocket catalog on Winchester tackle.

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

IT TAKES Shaw much longer to tell the drama of Adam and Eve in his now current serial, "Back to Methuselah." One must admit he's much clumsier, too, than Mrs. Nicholl here in the Literary Supplement of the New York *Evening Post*:

EVE

BY LOUISE TOWNSEND NICHOLL

Did no one see her beautifully stand,
Holding an apple in her upturned hand?

It was a large, pale, yellow one, I think,
Burned on its sun-side to a dusky pink,
Still faintly green and young, like Eve's own
thought,

Deep in the hollows where its stem was caught
Her brown hand curved in eagerly to hold
Its pale and luminous pink and green and gold.
Her fingers were the petals of a flower
Come to its opening within the hour
And resting on its stalk of slender wrist
To clasp a drop of iridescent mist.
Her so-long empty hand had found its mate

In her left hand she held its lovely weight,
Its satisfying shape—and then in both
She pressed and cradled it, being so loath
To lose this perfect thing which she had found,
Colorful, living, fair, and smooth, and round,
To fit and fill her empty, hollowed palm
And bring her restless seeking into calm.
This apple she would keep her very own
In Eden, where she had been so alone.

Even with Adam, who could never meet
Her friendliness nor comprehend how sweet
Was that dim yearning which she had for him.

Her eyes went from her hands up to the limb
Which had been lightened by the apple's fall
With her right hand she touched it—Eve was
tall—
Holding the apple meanwhile to her breast.
"Being a tree with fruit," she said, "is best."
Then she remembered Adam—he must know
The warmth and rapture of the things that grow!
Adam was different—would he understand?
Trembling, she laid the apple in his hand.

PESSIMISM lingers in the pages of *The Liberator* (New York), where we ought to look for forward leading battle-cries. The battle went too much against us in the view of this one:

NOVEMBER 11TH

BY FRANCIS X. BIDDLE

I

Was all of it then nought? Nought the swift leap
Of each young heart; the vision over again—
A cause to die for—so our dreams might keep
Their bright delusion of immortal gain?
And what of all the simple-hearted dead?

Poor ghosts! If living, would they also reap
The weakness and dishonor war has bred?

Or being dead, some subtler sense may keep
Their hearts as wise as once their dreams were
fresh.

And if their spirits, having left the flesh,
Have come to understanding of the past,

The miserable past, and where it led,
Death—and then disillusionment at last—

How those dear dead must clasp their hands and
weep!

II

Blindly they rushed to battle. War would save
The tyrannous, selfish, dull old world once more,

And knowing only how to die, they gave
Young lives as countless striplings had before,
Only to prove that youth was still as brave.

And with a passionate hope we turned to war
And sank our greedy love and dreary hate
Into the brief forgetful sacrifice;

And while the war days lasted learned to prate
About the blood and lust, as "a small price
To set against the deep religious gain" . . .

And for a time we managed to forget
That we must live our little lives again,
With all the added burden wars beget.

III

The dead have stepped in silence to their fate,
And joined the mute and the remorseless past,
Which death has filled but can not consecrate.

The longed-for victory is ours at last,
And all the earth is sick and desolate.

The dear belief to which we clung so fast,
That war would cleanse our spirits of their dross
Sinks in our hearts to some forgotten place.

Not only by the dead we count our loss,
But by our failures; easier than to face
Ourselves, to die; and death can bring no peace

Save to the dead. And, if in infinite space
The spirits of the dead have found release,
Not death, but splendid living made them great.

SHELLEYAN is the note of this modern
Englishman, and real is the music he
evokes. The *Yale Review* prints this:

BREAK OF MORNING

BY WALTER DE LA MARÉ

Sound the invisible trumps. In circuit vast
The passive earth like scene of dream is set.
The small birds flit and sing, their dark hours past,
And their green sojournings with dewdrops wet.

With giant boughs outspread, the oaks on high
Brood on in slumbrous quiet in the air.
Sole in remote inane of vacant sky
Paling Arcturus sparkles wildly fair.

Sound the invisible trumps. The waters weep.
A stealing wind breathes in the meads, is gone.
Into their earthen burrows the wild things creep;
Cockerow to thinning cockerow echoes on. . . .

Avert thine eyes, sleep-ridden face! Nor scan
Those seraph hosts that in divine array
Girdle the mortal-masked empyrean:
Their sovran beauty is this break of day.

Theirs is the music men call Silence here;
What wonder grief distorts thy burning eyes?
Turn to thy pillow again—in love and fear;
Not thine to see the Son of Morning rise.

FITTING for the approaching season,
Easter, is this from the *Saturday Review*
(London):

SECOND SEEING

BY LOUIS GOLDING

If He be truly Christ
The Sacrificed.

Then I am deaf and blind as they
Who hung Him up between
The two thieves mean.

In Calvary upon a moaning day.

If I not recognize

Within His eyes

The slow bloodfall down pools of pain.

Nor on contracted brows

The thorns that house

Their swords about the anguish of His brain

If I do not perceive

His mother grieve

Below the rood where He hangs crossed,

Nor hear the sea and wind

Cry, "Thou has sinned!"

Then woe is me that I am doubly lost.

This is not He alone

Whom I have known.

This is all Christs since Time began.

The blood of all the dead

His veins have shed.

For He is God and Ghost and Everyman.

ENGLAND takes over much of America's slang, but finding this in the *Westminster Gazette* (London) is like seeing New York overlaid on the map of London:

THE ELEVATOR GIRL

(A Monologue)

BY GEOFFREY DEARMER

Fourth floor, going down—
Hardware, underwear, and hose.
Third floor, going down—
Toys, tobacco, children's clo'es.
Second floor, going down—
Linen, perfume, sports, and shoes.
First floor, going down—
Gramophones, pianos, news.
Ground floor, going down—
Hats, books, dresses, furs, and frocks.
Basement floor, bargain store—
Fish, fruit, art, hair-cutting, clocks.
Ground floor, going up—
Hats, books, dresses—read the rhyme,
Upwards, downwards,
Upwards, downwards,
Stop at six—
It's closing-time.

The Chapbook (London) has resumed publication after a brief suspension and the first issue contains such remarkable things as this, which scarcely seems the work of a feminine mind:

THE RAMBLING SAILOR

BY CHARLOTTE MEW

In the old back streets o' Pimlico
On the docks at Monte Video
At the Ring o' Bells on Plymouth Hoe
He'm arter me now wherever I go.
An' dirty nights when the wind do blow
I can hear him sing-songin' up from sea:—
Oh! no man nor woman's bin friend to me
An' to-day I'm feared wheer to-morrow I'll be,
Sin' the night the moon lay whist and white
On the road goin' down to the Lizard Light
When I heard him hummin' behind me.

"Oh! look, boy, look in your sweetheart's eyes
So deep as sea an' so blue as skies;
An' 'tis better to kiss than to chide her,
If they tell 'ee no tales, they'll tell 'ee no lies
Of the little brown mouse
That creeps into the house
To lie sleepin' so quiet beside her.

"Oh! hold 'ee long, but hold 'ee tight
Your true man's hand when you find him,
He'll help 'ee home on a darksome night
Wi' a somethin' bright
That he'm holdin' tight
In the hand that he keeps behind him.

"Oh! sit 'ee down to your whack o' pies
So hot's the stew and the brew likewise
But whiles you'm scrapin' the plates and dishes,
A'gapin' down in the shiversome sea
For the delicate mossels inside o' we
Theer's a passel o' hungry fishes."

At the *Halte des Marins* at Saint Nazaire
I cussed him, sittin' astride his chair;
An' Christmas Eve on the Mary Clare
I pitched him a'down the hatch-way stair.
But "Shoutin' and clontin's nothin' to me,
Nor the hop nor the skip nor the jump," says he,
"For I be walkin' on every quay—"

"So look, boy, look in the dear maid's eyes
And take the true man's hand
And eat your fill o' your whack o' pies
Till you'm starin' up wheer the sea-crow flies
Wi' your head lyin' soft in the sand."

Ask— your fire-chief your building inspector your conscience

Do you dare to be without an Asbestos Roof?

EVEN if you must think about price it has small bearing on this question. Asbestos Roofing is not expensive. For instance, our Flexstone Asbestos Shingles (slate surfaced) which are designed for the average home, cost but a fraction of a cent more per shingle than the ordinary rag-felt composition shingles.

And see what you get for this slight extra cost. A fire-chief will tell you that you get fire-safety—a virtue that is common to all Johns-Manville Asbestos Roofings, either in shingle or roll form. Thousands of doubters on this point have been convinced by the famous Johns-Manville blow-torch test and by the fact that

these roofings are given highest ratings by Underwriters' Laboratories, Inc.

A building inspector will tell you that you get permanence, for Asbestos is not only fire-proof, but also rot-proof. Asbestos Roofings never need painting or refinishing or any other protective measures.

Finally, if you let your conscience decide, it will surely agree that you cannot give less than the protection of Asbestos to your home or to any structure on which your welfare or prosperity depends.

There is a Johns-Manville Asbestos Roofing either in shingle or roll form, for every type of building. (See chart on right.)

JOHNS-MANVILLE Inc., Madison Avenue at 41st Street, N. Y. C.

Branches in 59 Large Cities

WHEN MARY MARRIED 'ARRY

IT WAS A WEDDING OF POMP, circumstance and general regal magnificence, but the spirit of the times cropped out in democratic references to "Mary and 'Arry," and the crowds mixed a few "joshes" with their cheers. The general tone, of course, of this epoch-making marriage was quite different. "Devotional" and "affectionate" are the adjectives most often suggested by the great mass of English comment. The English Poet Laureate was strangely silent, and that may have been one of the reasons why nearly every journalist in London felt called upon to become a Poet Laureate for the occasion, with the nuptials of Princess Mary and Viscount Lascelles as his theme. Pages of pictures and columns of superlatives are devoted to the great event. "The whole country scintillates with feeling," proclaims one prose poet who writes of "Emotions in the Abbey," during the wedding. "Romance sprang to life yesterday in the streets of London," rhapsodizes an editorial in the staid *Westminster Gazette*, "transforming for a few hours their drab realities into a world colored by dreams of the brightest and happiest future for the young Princess and her chosen mate." In the enthusiastic words of *The British Weekly*, "Shrove Tuesday, 1922, will be remembered in history as the first date since Peace was signed on which the people in London gave themselves up to unreserved enjoyment."

Taking up "The Scene in the Abbey" during the ceremony, P. Macer-Wright of *The Westminster Gazette*, prefaces his remarks with the observation that "It is no light matter, the marrying of a King's daughter." He proceeds:

There must have been nearly a score of clergy in the Sacrament of Westminster Abbey. The Primate, with his great gold cross, was the most important figure. The Precentor was the most picturesque, thanks to the privilege which he enjoyed of carrying a staff on the top of which sat a wooden bird, presumably a dove.

The Primate, the Archbishop of York, the Dean, and the Precentor may be said to have married the Princess to Lord Lascelles. The rest played a purely ornamental part, in golden copes and crimson copes. Their ceremonial functions were almost as limited as those of the best man, who merely produced the ring when it was required, and without fumbling.

Even the congregation was ornamental. This was one of the few occasions on which men were permitted to shine with a superior splendor. The blaze of scarlet came from their coats; the heavy gold epaulettes, the gold lace, the silver braid, the medals and ribbons, the velvet and chains—with these did the men contribute to the parade of "fine feathers."

It was interesting to discover that gold when embroidered on coats has a certain leveling effect; the Lord Chancellor, externally, was the equal of his most junior colleague in the Cabinet. The Prime Minister's breast was thick with gold, and his face beamed. Mr. Asquith, like Mr. Balfour, elected to wear the Trinity House uniform, which is less ornate; has, in fact, a sort of seaworthy breeziness. Many well-known public men shone in the garb of Lords-Lieutenant. There was, indeed, a great variety of costume, and here and there was a cropping-up of khaki.

One of the first of the royalties to come into the church was Don James of Spain, a small boy in a military uniform of black and red, carrying a shako. He was quite alone on the south side

of the Sacrament until the bridegroom arrived, and him he surveyed with immense and unaffected interest. The bridegroom and the best man wore the heavy scarlet of the Guards, and carried the lofty bearskin headgear. The groom wore also, across the scarlet of his tunic, the blue sash of the Garter. He sat just inside the railings, turning his shoulder away from the congregation, until curiosity—or nervousness—led him to glance into the body of the church. Later he looked through the choir and down the nave to see the bride approaching, and a charming spectacle it must have been.

When our royal family arrived in great force, the isolation of the little Spanish prince was at an end, and so was the comfort of Lord Lascelles, who now had to stand. The Sacrament filled with men and women magnificently appressed. The Queen was stately in gold, and whenever she moved there was a sparkle of diamonds. Queen Alexandra was graceful and appealing in violet and gold. Both wore the rich blue Garter sash. There were princes in various uniforms and princesses in many colors, and clergy in embroidered copes, at the head of whom had walked the Abbey crossbearer, most beautifully robed of all, in lacquer blue. And all sat down—except the bridegroom and his best man.

Very soon after this the bride came into the body of the church, her "friends and neighbors" being thus duly assembled. The King, dressed as a field marshal, accompanied her. It was he who answered the Primate's question: "Who giveth this woman to be married to this man?"

Happily there is no need to describe the bride, for a bride is indescribable. Suffice it to declare that as she stood at the gate of the Sacrament, as the groom stepped out and stood beside her, while the voices of the choristers were heard in

the closing lines of the hymn, she looked a very sweet figure—white, virginal, veiled, mysterious, charming.

Behind her stood the bridesmaids, equally indescribable. I am told that their dresses were silver-hued, and at times they appeared silvery to me; but at other times they seemed lilac, and at other times mistily pink. They wore veils like the bride, and carried bunches of sweet peas, and were altogether of the filmy texture which properly belongs to bridesmaids. The first pair were tall, and the third pair wore their hair down their backs.

We listened to the words of the old familiar service, except those allotted to Henry George Charles and Victoria Alexandra Alice Mary, which were too softly spoken for the most of us to hear. We listened to the Primate as he delivered his homily to the newly wedded pair. He addressed the bride as "my child." He wished her and her husband "God-speed upon life's pathway."

And when the blessing had been pronounced, the bride and bridegroom, with the King and Queen, the Primate and Dean, and a few others, went through the door at the north of the altar into St. Edward's Chapel, where the register was signed. We, having nothing else to do, listened to the singing of the anthem, especially written for the wedding, the words of which included these phrases:

"Love is strong as Death; many waters can not quench love, neither can the floods drown it."

"Follow after love."

Only when the register had been signed and this anthem had been sung, did we see the face of the bride. It was composed, and the expression was serious. She came down the church, her hand resting on that of her husband, and the bridesmaids followed, as serious-faced as the bride.

In the north transept were half a dozen Gentlemen-at-Arms,

"HOO-BLOOMING-RAY!"

A sketch artist in the *London Star* thus pictures his own emotions and equipment when the procession hove in sight. He mentions that he wore some "Mary Blue ribbon" around his hat, a "Mary horseshoe" dangling from a ribbon around his neck "to bring 'em luck," some assorted "Mary rosettes" and "Mary medals" and carried "Mary and Harry flags" in his hands.

700 letters

from those who are eating Fleischmann's Yeast

Doctors, mechanics, stenographers, housewives—teachers, nurses, clergymen — farmers, policemen, architects — in all, men and women in 113 different occupations recently wrote about their experiences with eating fresh yeast.

THE reports came from all parts of the United States. Lawyers, artists, lumbermen, wrote in. Housemaids and private secretaries. Dressmakers. Even a boxer told how he had added Fleischmann's Yeast to his daily diet. These 700 letters reflect the growing realization of men and women all over the country that American meals are often lacking in certain essential food factors.

"We now know definitely," writes one of our greatest authorities, "that the regular diet of a large portion of the people of the United States is falling short of maintaining satisfactory nutrition."

This is what has caused fresh yeast to assume such a new and startling importance in our food. Today men and women are getting from Fleischmann's Yeast exactly the food factors they need. For yeast is the richest known source of the necessary vitamin-B.

Fleischmann's Yeast contains elements which build up the body tissues, keep the body more resistant to disease. Also, because of its freshness, it helps in eliminating poisonous waste matter.

It is well known that many of the things we eat have lost their valuable food properties through refining and other such commercial preparation. Fresh yeast has not been subjected to any such process. Fresh yeast gives you the health essential food factors in all the potency of their fresh form. This is what your body tissues crave.

What laxatives can never do

Doctors are agreed that laxatives never remove the cause of the trouble. Indeed one physician says that one of its chief causes is probably the indiscriminate use of cathartics. Fleischmann's Yeast as a fresh food

is just the natural corrective you need. Fresh yeast, says a noted doctor, should be much more frequently given in intestinal disturbance, especially if it requires the constant use of laxatives.

Hundreds of men and women who have long been in bondage to laxatives are now free. The addition of Fleischmann's Yeast to their daily diet has restored normal action of the intestines.

The natural way to improve digestion

More and more science is coming to look on digestive disturbance not as a separate ailment for which one takes a drug but as a danger signal that something is fundamentally wrong with the habits of eating. The food factors which Fleischmann's Yeast contains in fresh form improve the appetite, stimulate the digestion, and strengthen the entire digestive process.

The ways they liked to eat it best

Some of these 700 men and women did not like the taste of yeast at first. Almost all grew to like it. Most people took it in water. A number liked it in milk. It tastes something like an egg-nog. Many of the men liked it plain. Women liked to make sandwiches with it, or they took it in fruit juices. Two or three liked it in ice cream. One took it in soup. Several liked it in coffee.

Add 2 or 3 cakes of Fleischmann's Yeast to your own daily diet and notice the difference. Place a standing order with your grocer. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will supply you. Send for free booklet telling what yeast can do for you.

Fleischmann's Yeast is a fresh food which builds up the system naturally

cheerful and orderly. Overhead the wild, moving sky of spring, and the brisk wind bringing the clangor of bells. Thousands and thousands of people delightedly suffering toil and discomfort and fatigue. For what?

This mighty mass of people—workingmen, clerks, women with babies, girls, ladies in furs, men in silk hats—these were the spectators of the fringes of a solemn and a splendid ceremonial. Within the hushed and dim spaces of the Abbey are gathered together the makers and the rulers of England: prelates of the Church, heads of the Navy and of the Army, men grown old in counsel, statesmen, peers and peeresses, Red Cross sisters, soldiers in full panoply, glimmer of scarlet, bright hues of ladies' attire, orders, insignias, jewels, gold. The floor of the Abbey gleams as bright as the painted windows shine high uplifted in the brown twilight, with here and there a tincture so rich and luminous that it is significant, like a note of music.

To survey that assembly is insensibly to let the eye dwell upon a single countenance, now here, now there, as one and then another emerges upon the attention: the ruddy face of a portly old general; the outline of a sister's face framed in a white coif; the still features of a fine lady, above her high embroidered collar; the Egyptian immobility of the helmeted soldier's profile, as he stands holding his halberd upright; and then there rises into consciousness a strange sense of a common likeness among them all; an impression of a certain careless gravity, as of a people who are so strong they have ceased to think about it.

Perhaps an idle fancy. But, beyond that brilliant company yawns an empty aisle, where hang motionless the tattered flags of old battles, moldering to dust amid the shadows and the silence. Those battles were victories won by the forefathers of the men and women who are smiling and talking low among themselves, waiting for the Princess.

The organ rolls and thunders. First come the ecclesiastics, gorgeously robed, entering the white and gold of the sanctuary, where the tapers burn with moveless flame upon the altar. Then come the Queen and the royal family; and now is presented a pageant of sumptuous splendor such as the old chroniclers loved to limn in colored words. It is all there, scarce changed save in the fashion of the dress, and the robes of the clergy have changed not at all. Queen Elizabeth in all her glory would not have outshone Queen Mary. Here is a tradition which runs back through the centuries, because the people love to have it so. They love the pageant and the splendor and the magnificence, both as fine things in themselves, and because they mean something. They mean what the struggling happy perspiring thousands outside the Abbey mean, when they throng the streets.

The sacred words are spoken, the music swells, and the boys' voices lift in their incomparable beauty, and then the music rises again. In that brief ceremony the whole might of England has been quietly revealed, as when an athlete suddenly steps into the light. And what is it all for?

It is all for the little lady clothed in white and silver, whose husband is leading her down the altar steps. England greets her because she is England's Princess; and also because the Princess Mary, in that her ceremonial sacrament of marriage,

stands for something hidden deep in the heart of England, which yet glows like the rose-red of the painted window yonder, and is bodied forth in the melody that peals about the high arches.

Without the Abbey every window and roof is alive with people, and the cheering sounds, and the huge carved coaches roll by, and the festoons of white flowers swing, and the bells are pealing high. And it is all for the little girl in white, the Princess of England whom all England loves and honors.

A woman reporter for *The Westminster Gazette*, gives this close view, with a special attention to sartorial effects, of the Princess, the bridesmaids and the two queens:

Princess Mary's bridal dress was of snow-white marquisette, embroidered in a rose design with thousands of seed pearls and tiny diamonds, veils and underdress of cloth of silver, and a double girdle of silver and pearls. The Court train of duchesse satin had tracery embroideries in silver and a border of silver roses, each centered with blue. Cascades of lace softened the train at the sides.

Princess Mary's eight bridesmaids were dressed in finest silver lame with side panels of lace to match the elbow sleeves. The broad waist belt was caught at one side with a silver tissue rose entwined with a true lovers' knot in "Princess Mary" blue, and there was also a girdle of silver cord. A wreath of silver leaves and a plain tulle veil formed the head-dress.

After the bride and her retinue of silvery clad attendants, the Queen was the most remarked figure. In her gown of gold tissue, brocaded with ivory velvet blossoms, and with the blue Riband of the Garter worn diagonally across the corsage, her Majesty radiated beauty. Her toque of gold tissue mounted on Garter blue chiffon velvet was finished with a full panache of white ostrich feathers tipped with gold.

Queen Alexandra was in her favorite shade of violet, the fabric a rich supple velvet, trimmed with gold, and her hat was a blend of gold and violet. Princess Victoria wore a light gray and silver toilette. The Princess Royal's gown of mole charmeuse was draped with lace of the same color, and her small round hat was of lace and tulle.

The bridegroom, notoriously an almost unnecessary part of a celebration of this sort, comes in for a few kind words. The *Daily Chronicle* presents this tribute, both to himself and to his ancestors:

He is as English as the English Army. Yes, that is another reason for the great popularity of this marriage. It is not that the war has left English people with any dislike of foreigners as such, but they are delighted that the tradition that royalty should marry royalty has been broken. It was a tradition that gave Germany an excessive and dangerous importance in the courts of Europe, and exercised an unwholesome influence in our politics.

Moreover, it impaired the beauty of marriage by tainting the sacrament of love with that of politics. By adopting the name of Windsor and by giving away his only daughter to one of the great

Photo by Kadel & Herbert.

"REGAL GRANDEUR COMBINED WITH SWEET SIMPLICITY."

England's beauty and chivalry attended the wedding, arrayed like Solomon in all his glory, but the keynote of it all, the English observers agree, was the "small, girlish, white-gowned, slightly pathetic figure of the Princess."

Valspar—the Varnish of countless uses—

DUKE KAHANAMOKU of Hawaii, famous athlete, expert on the surf-board and world champion 100-metre swimmer has discovered still another use for Valspar. Duke Kahanamoku writes:

Honolulu, T. H., May 3, 1921
 "Have used Valspar on my surf-boards for several years, and find that it preserves the wood, because it is waterproof and prevents the water from soaking in. No matter how long the board is used in the water, the Valspar is not affected and does not change color."
 DUKE KAHANAMOKU.

Valspar is durable, easy to apply, weatherproof and *waterproof*—“the Varnish that won’t turn white.”

Valspar’s well-known uses—on floors, furniture, woodwork, linoleum, airplanes, boats and railroad trains—are supplemented by countless others such as

Baby Carriages	Golf Clubs
Window Screens	Tents
Trunks	Fishing Rods
Hand Luggage	Tennis Rackets
Wicker Furniture	Oilskins
Refrigerators	Gun Stocks
Fireless Cookers	Snow Shoes
Draining Boards	and Skis
Boots and Shoes	Etc., etc.

In fact, anything that’s worth varnishing is worth Valsparring.

Don’t overlook the coupon below.

Lit. Dig. 4-1-22

noble families of the North, the King has symbolized a great change in the spirit of our monarchical institutions.

Throughout the country, says *The Morning Post*, there were echoes of the rejoicings of London. The general whole holiday in the schools, given by the King's special desire, was immensely popular with the juvenile members of the population. At all sorts of gatherings—

Kindly wishes were expressed for the happiness of the Princess and her husband. Wedding-bells were rung and flags were flown.

Formal rejoicings were rather focussed in particular spots. For instance, localities which have a close association with the royal family or the family of Viscount Lascelles felt a more immediate impulse to give a definite shape to their sentiments of goodwill toward the newly wedded pair. At Windsor the atmosphere was one of public rejoicing, altho no special program of festivities was arranged. The royal invitation to attend the ceremony in Westminster Abbey was accorded to the Mayor of Windsor and several of the leading officials at the Castle. The Eton boys, moreover, enjoyed a high holiday at his Majesty's command.

At Balmoral, the highland home of the King, the event was celebrated with a picturesque touch in keeping with tradition. The royal tenantry and residents, headed by clansmen and pipers, marched from the Castle to the top of Craiggowan, where a huge bonfire was lighted. Not for the first time did a joyful blaze illumine this height to celebrate an occasion of national rejoicing. It was on Craiggowan that Queen Victoria ordered the bonfires to be lighted when the tidings of the fall of Sebastopol came.

Last night a merry company of Highlanders formed a circle round the blaze, and pledged the health of bride and bridegroom in lusty Highland fashion. Several octogenarians were among the merry-makers. There was quite a personal note about this celebration, as Princess Mary from her early days has been known and loved by these Highland people who live round Balmoral.

On the Harewood estates also there were celebrations. Harewood, the home of Viscount Lascelles, was *en fête*, and tho the weather was cloudy, the sun broke through about the time the wedding was in progress. The villagers took this as a happy omen. In the afternoon about one hundred school children were entertained to tea in the village schoolroom, and were presented with souvenir medals.

On Thursday the tenantry and employees on the Harewood estate are to be entertained by Viscount Lascelles to tea and supper in Leeds Town Hall. More than 500 guests will be present, and will come into the city by charabanc. Between the two meals they will visit a picture-house to see a film of the royal wedding procession.

"A remarkable tribute," notes this writer, was received in the form of a telegram to the Princess Mary, which ran:

"The Birkenhead unemployed, as loyal citizens, tender hearty congratulations on your wedding with best wishes."

A "unit in the London crowd" that saw the procession is thus significantly described in *The Manchester Guardian Weekly*:

Typical of many thousands of London women of poor but not poverty-stricken circumstances who had come many miles to see the wedding procession, and intended that they should enjoy themselves, believing that the pageant was all part of their lawful rights as Londoners, was a mother with two children and three female friends from East Ham. She wore (as she mentioned in conversation) four skirts and two petticoats, and her children had each an additional layer of clothes.

It had not rained; the February sun was bright and almost warm, and life for the moment was in flower. It soon became clear by what she said, and by what her friends said about her, that she was a social leader in her district, and she deserved to be, having wit, audacity, and an intense sense of human contact. Of course she had also the traditional old London lore. "When the soldier goes *so*, sharp, it means that rialty is coming, and when you see a hunting party in a red coat with a top 'at by himself its rialty again. Why ain't the police put down the sand?"

She wore a faded velvet long coat with big buttons, but some fastenings tied by tape, and a rabbit-skin muff. Her test of worth was whether people could smile or not. "Coo-ee," she cried to a hard-faced old lord as his carriage pushed past; "ere we are, Henery—smile at your Susie. Not him! He don't smile once a month, for all his money."

She and her friends cheered most of the guests in a gay, friendly and cynical sort of way. "There y'are. 'Oorah! I do like to see a kerrage and pair after all them motors. Put on your gloves, dear; you'll be there in a minute. Nice, ain't you?" she approved, but critically.

Once she was really shocked, declaring that the footman had wiped his nose on his glove, and that wasn't manners.

It was extraordinary to see how her chaffing broke down before Queen Alexandra. "Ow, you dear old dear!" she cried as the coach went slowly past. "That's her—always goes slow so you can see her. She'd stick her head out of the carriage window if she got half a chance." About Queen Mary she said: "Naice, sitting there with her two sons."

She had some sharp things to say about many of the eminent people who went past, but she cheered "Lord George" (as she called the Premier) and wondered what the funny coat all gold that he was wearing was given to him for. "Hallo," she shouted to a very grand lady in a carriage; "who's that with you? That ain't your husband, Flossie! Nice carry-on at a royal procession! I'm going to put a lot to-dy down in my dictionary. I'm keeping a dictionary, you know—same as Margot."

"You mean a diary, mother," corrected her son.

"Dictionary or diary is all one to me. It won't half make a sensation in East Ham when it's published, I tell you."

This was greeted with great joy by her friends, who now numbered the whole of the ledge on which she was seated and all the railings and a good bit of the pavement. She got a little out of hand when she elaborated the possible consequences of this wedding and other weddings that she knew about, but the crowd somehow indicated when she was too Hogarthian and she said, "Well, I'm going to talk genteel now, just like I did before. There he is! Al-fred, wiv your fevvered hat and jewels, here we are. We're all here. Smile a bit, can't you?"

She prophesied what she was going to say when the Princess would pass. "'Princess—Princess Mary. You'll be Mrs. Lascelles, my love, in a minute,' and when she hears me shouting out she'll stick her head out of the window thinking it's a bomb going off. You'll see." But when the Princess came along, her glittering escort and grand coach collecting all the sunshine out of the dark lavender sky, and we had a glimpse of the delicate costume and the bright face with a wavering smile, the lady from East Ham just said, as all the rest of the people there, "O-o-o—lully!"

WORKMEN WHO BECAME STOCKHOLDERS TO VOTE FOR THEIR BOSS

THERE IS A STREET RAILWAY PRESIDENT in Philadelphia whose fairness so appealed to the men under him that they bought 10,000 shares of transit stock so that their votes might keep him from being "fired." He is T. E. Mitten, President and General Manager of the Philadelphia Rapid Transit Company, and it seems to be the idea of the men who work for him that he is a first-rate man for the job. When the stockholders of the Company met on March 15th, telegraphs a correspondent of the *New York World*, they faced a situation perhaps unique both in the history of street railroading in America, and in the history of corporation business. It was the chief task of the stockholders to choose a directorate that would either retain or oust Mr. Mitten, and the verdict was to retain. It seemed not so long ago, we are told, that the new directorate would be chosen for the express purpose of removing President Mitten. Then, on March 15, the banker, the merchant and the business man, figuratively at least, met around the ballot-box and swapped votes with the conductor, the track-walker and the venerable colored gentleman whose job it is to scrub the floors of the railway cars, with the result that Mr. Mitten stays. These workers controlled 10,000 shares of stock, writes J. E. Craig, in the *New York Evening Mail*. And, as he observes:

That's a good many shares—10,000. Small enough in comparison with the total of 600,000, but a bigger single holding than anybody else can muster at the moment. It represents every man, woman and child in the company's employ. It was paid for out of wages earned in the company's service. And every last share of it was voted for Mitten.

Somehow or other the word got out among the "boys" the other day that a scheme was on to fire the boss. And the "boys" decided they were going to be at the firing. So they dug out the Liberty Bonds and the treasury notes and the gold certificates and the cash in the fund they had saved up against sickness and death and bought stock.

"And when folks get to talking about stockholders," they said grimly, "why, that means us!"

Unprecedented! Unheard of! Here are organized labor and

SEIBERLING CORDS

**Dealers'
Opening Week
April 3rd to 10th**

Seiberling Cords and Seiberling Tubes will be offered for sale through selected dealers and completely demonstrated and explained in all principal cities during next week.

Look for local announcements by the Seiberling dealer in your community. You can identify his place of business by prominent display of the red and black Seiberling trademark on his sign and in his window.

*"A Tire that Will be
Known Everywhere"*

Seiberling Clincher Cord - 30 x 3½ - \$12⁵⁰

This clincher cord is identical in grade of materials and in excellence of design and workmanship, with the straight side Seiberling Cords for larger cars. There is only one grade of Seiberling Cords and Tubes—"as good as we know how to build them."

Tread stock extends from bead to bead, preventing tread-separation and giving protection against abrasion from ruts and curbs, with unusual strength at the shoulder, which has been a point of weakness in many clincher cords.

"CORDS ONLY"—Seiberling Tires are Cords only. All Tires, Tubes and other products carrying the Seiberling name and trade-mark are of one grade only—as good as we can make it.

The On-Air cure process gives uniform tension throughout (no wrinkles or buckles from pinching in the mold) and better distribution of tension in the finished tire.

One tread design (anti-skid) for all wheels, making tires interchangeable. Semi-flat, giving better traction and longer wearing qualities.

If no Seiberling dealer has yet been established in your community, write us for interesting description of Seiberling Cords and Tubes and nearest address where you can obtain them.

TO TIRE DEALERS:
Seiberling Cords and Tubes are distributed through regular retail channels. We desire to establish connections with good business men who agree with us that high-grade products, a policy of selected and not closely competitive distribution, and service to the user form the right basis for a lasting and mutually profitable relationship. Write or wire Seiberling Rubber Co., Akron, Ohio.

SEIBERLING RUBBER COMPANY · AKRON, OHIO

unorganized labor working side by side in a public service concern lining up for a fight to the finish on the side of the boss!

The reaction of the small investing public to this dramatic gesture was instantaneous. Most of the stock was scattered about the city. The greater part of it was voted with the men's in behalf of Mr. Mitten. He was backed by a total of 450,000 shares out of 600,000.

The reasons are not hard to find. For ten years Philadelphia has enjoyed a traction service uninterrupted by strikes or labor difficulties. It has steadily improved in equipment and efficiency. Ten years ago it was in financial straits, and the \$30,000,000 invested in its paid-up stock threatened to become almost a total loss. To-day it has a handsome surplus, the men are well paid, the stockholders are assured of substantial dividends and the system is held up to the world as a model of efficiency in management.

These are advantages which the small investor is likely to see quicker than the more conservative banker. He was inclined to regard the fight for control of the directorate as a struggle between the banker's innate conservatism and the liberalism of Mr. Mitten. And, as between the two, he favored Mitten liberalism on the sole ground that it got results where old, conservative methods have brought disturbance and traction chaos to other cities—brought them to Philadelphia until Mitten came.

The voluntary decision of the men to come to the support of their chief in a practical way is not the first evidence of their unusual interest in the affairs of the company. Two years ago, when it needed a large sum of money, they offered to lend the amount out of their own savings fund, an offer which was declined by the company for prudential reasons.

They offered to buy the 10,000 shares of stock out of this same fund, but Mr. Mitten dissuaded them, so they drew on another account, their sick relief fund, for the money. Mr. Craig adds:

While these are extraordinary evidences of a fine morale among the workers they are not the only ones, or even the most significant. The visitor from other cities is impressed with the alertness, the courtesy and the unflagging cheerfulness of the trainmen. Perhaps it can be illustrated best by the story of the motorman and the driver of a coal truck.

Instead of "bawling out" the driver for blocking the track, the motorman stuck his head out of a window and yelled to him:

"Say, Bo, there are sixty-one people in this car, and if you don't give 'em a chance they'll all be late to work."

The teamster grinned, turned to one side and let the car pass.

Or perhaps better to the point is the story of "Old Andy," who at sixty-one was always on the job as a crossing watchman and who never was known to loaf. When somebody asked him why he was so punctual, he replied:

"Maybe you don't know, laddie buck, that I'm a stockholder in this she-bang. I gotta look out for my dividends."

"You boys seem to think a whole lot of this chap Mitten," a stranger said to-day to a motorman on a North Eighth Street surface car. "How does it happen?"

"Well," was the instantaneous answer, "he always done the square thing by us and we're going to do the square thing by him."

It wasn't always so. Up to 1910 the service frequently was disrupted by strikes. The company was a football of local politics and it was on the verge of bankruptcy. In desperation the directors invited E. T. Stotesbury to take charge. He made his acceptance contingent upon the employment of Mr. Mitten as manager. He had become attracted to Mr. Mitten because of his successes in the West.

Before taking hold Mr. Mitten insisted that the road must be divorced from politics, and made three promises: (1) to give the public adequate transportation; (2) to recognize the efforts of motormen and conductors with increased wages as increased efficiency made it possible; (3) to build up the property and insure the investors a return upon the \$30,000,000 of capital actually paid in.

All these conditions were made a matter of city record as con-

ditions upon which a \$10,000,000 bond issue was approved. Large stock holdings of politicians were broken up and purchased by small investors, so that ownership passed substantially into the hands of the public.

The cooperative plan was extended to all employees. An agreement was reached whereby the basis of pay was to be built upon the average wages of all classes of similar labor in Chicago, Detroit, Cleveland and Buffalo. The company's books were thrown open to show the men that they were being fairly treated.

Wages grew from 23 cents an hour for trainmen to 72 cents an hour at the peak of war prices. And then, to show how substantial the system was and how satisfactory, they were reduced until they are now 64 cents, without a struggle or an evidence of bitterness.

Realizing that wages in the four cities must fall and yet that Philadelphia workers' super-efficiency ought to be compensated, Mr. Mitten went before the men with a new proposition:

He told them it was no more than right that the stockholders should receive a fair dividend upon their investment, after all the fixt charges, operating expense, depreciation, sinking fund and similar obligations had been met.

Then he proposed that by their own increased efficiency, making possible a decreased operating cost of approximately \$1,000,000, they should earn a greater net income for the company. In return he would ask the company to give them a "cooperative wage dividend" that should not for this year exceed 10 per cent. of the payroll.

The men unanimously accepted. They pledged themselves to try to make the great saving required. The next question, and the one which hangs upon the stockholders' decision on March 15, is largely whether the company will indorse the arrangement.

In the years of the Mitten management the most cordial relations have existed between the workers and the company. The men are free to organize in any way they see fit. Some of them have done so in locals affiliated with the American Federation of Labor. Their main dealings, however, are through shop committees.

Every complaint is handled by a system of conferences between these committees and representatives of the employers. There is a provision that, when these can not agree, the matter will be submitted to arbitration. Not a single dispute, however, has progressed so far as to require an arbiter.

The whole arrangement hinges about the personality of Mr. Mitten. The son of a poor, English immigrant, he knew nothing but poverty as a boy. He worked his way

up from a telegraph operator at an Indiana railroad station to a railroad executive in Chicago, where he succeeded in straightening out some of the most complicated financial and industrial troubles.

Mr. Mitten is a large, powerful, well-groomed man in the middle fifties, but looking much younger. He eats, sleeps, plays and works with his business. He maintains his private apartments on the same floor of a hotel building with the executive offices of the company.

The hardest working man on the P. R. T. is its president and general manager.

A Philadelphia correspondent of the *New York World* reports the recent "show down" that left President Mitten in charge, and adds that—

The election puts an end to a fight against President Mitten which has been waged by five "insurgent" directors who had declared against what they termed "one man" management of the company. They also contended that the company's finances did not warrant Mr. Mitten's recent promise that a 6 per cent. dividend would be declared this year. The five directors were ousted by the vote.

In return for the support tendered President Thomas E. Mitten and his cooperative system of management, the employees of the company were given representation on the board when John W. McElroy, was elected a director. He is President of the Employees' Cooperative Welfare Association, whose members recently bought 10,000 shares of stock from their earnings and turned the proxies over to the President.

MR. MITTEN, WHO
DIDN'T GET IT.

This traction president's cooperative system is so popular with his employees that, largely through their efforts, a recent attempt to "fire" him from the presidency of the Philadelphia Rapid Transit Company was beaten by an overwhelming majority.

LINCOLN MOTORS

Lincoln Guarantees This "Cure" for "Bad Power Factor"

"BAD POWER FACTOR!!"—that fearsome electrical bogey which boosts your power bill and eats up the power company's profits. It is as mysterious as witchcraft and demands the same "cure"—plain, common sense.

"Bad power factor" can only result from putting the *wrong* motor on the machine. Lincoln Engineers are giving the "bad power factor" the common sense treatment by putting the *right* motor on the machine. They go direct to the machinery maker—test his different machines—find out the exact type and size of motor needed for each of his models—and give him a chart showing the result.

That sounds like a simple remedy, but it strikes at the very root of the trouble by removing the cause. Every outfit which the machinery maker ships out under this plan has a Lincoln Motor which is *guaranteed* to do the work with the least possible amount of power and hence to give a "good power factor."

If this Lincoln method had been generally used in applying motors to machinery there would be practically no such thing as "bad power factor." Millions of dollars would be saved to power users and power plants as well, where it is now wasted because of motors which are the wrong size, or the wrong type, or both.

You can start today to improve the power factor in your plant by asking that any new machinery you buy be equipped with Lincoln Motors applied and *guaranteed* by Lincoln Engineers.

MARK

SOME IMMIGRANT "GOATS" WHO CAN'T BE NATURALIZED

ABOUT 19,000 foreign-born residents of the United States were refused American citizenship in 1921. Suppose, in order to find out what that means to the general pursuit of happiness in these United States, that the fortunes of each of these would-be but barred-out Americans are linked up with a family of four. That's 76,000 people—enough to populate a considerable city—disappointed by our Government in the last fiscal year. The total for the last ten years would be 760,000, which is more people than there are in North Dakota. The bearing of all this on our national well-being, observes Paul Lee Ellerbe, formerly Chief Naturalization Examiner at Denver, lies in the fact that "disappointed people are a kind of nuisance, even when they are as voiceless and patient and forgiving as the foreign-born population of America. They are a kind of slow poison." A standard of reasonable efficiency demands that we turn out no more of them than necessary, says Mr. Ellerbe. He proceeds, in the *Outlook* (New York), to present a question, and some answers:

Was it necessary to disappoint these 760,000? If it was, we've got a good thing in our elaborate protective machinery, with its official force of 2,772, its 393,888 documents examined, its million pieces of mail handled, and half a million people interviewed per annum.

We'll, it wasn't.

Of the fifteen reasons for denial enumerated by the Commissioner, two go unequivocally into the merits of the matter. "Immoral Character" and "Ignorance." "Immoral Character" speaks for itself. And "Ignorance" covers those who didn't appear to know enough to exercise the rights of citizenship intelligently. Those are real reasons why we need a naturalization service: to keep out the morally undesirable and those who don't care enough about us to understand our system of government. How many of them did that official force of 2,772 find during 1921? A little more than half a one apiece. One thousand eight hundred and thirty-nine, out of 182,637 who applied. A trifle more than one per cent.

What were the other 17,142 citizenship seekers denied for?

By far the largest number, 5,215, almost one-third, for—what would you suppose? "Want of Prosecution." That is, they paid their money, filed their petitions for naturalization, and then gave up. If there was any way to make Congress realize the poignancy and the volume of deferred hope hidden behind those figures (for one year alone!), things might be changed. It can only be suggested here.

Why did they give up, these 5,215 alien friends who spent their money and their time getting themselves legally on record to the effect that they wanted to be Americans? Out of an intimate and extended personal knowledge I give you the answer for nearly all of them in two words: Red tape. If you had it wound about your neck as tightly as I used to have to help wind it about theirs, you'd give up too.

The whole of the naturalization routine

is printable only in a neat gray pamphlet, but consider the simplest possible statement of the most important parts of it.

Leaving entirely out of consideration the great gaunt West, where some of the naturalization courts hold hearings only once a year, and where I have known homesteaders, too poor to own horses and waiting for citizenship in order to prove up on their land, walk twenty-five miles every time they were called to court—leaving all that out entirely, consider what you'd have to do if you were an alien and applied for citizenship anywhere in the United States.

The actual work of naturalization is done by the courts. The report before me says that there were 2,265 of them attending to it in 1921. The first thing would be to go before the clerk of one within whose jurisdiction you resided, pay a dollar, and file a declaration of intention, or first paper, declaring your intention to renounce your own country and, in due time, to join this one.

Then, not less than two nor more than seven years thereafter, you'd follow that up by paying four dollars and filing in the same or, in case you had moved, in another court a petition stating that you had been in the United States at least five years and in the State of filing at least one year, and that you were attached to the principles of the Constitution, and a good deal more. You'd have to have two witnesses, citizens of the United States, verify your petition by signing affidavits to the effect that they had known you five years in this country and had personal knowledge that you were a person of good moral character, etc.

That done, you and your witnesses—who might very possibly have stood in line for many hours to get to the clerk's desk—would have to go to the office of the Chief Naturalization Examiner and be thoroughly examined all over again. This might be the same or another day. Very frequently it's another day, and takes the whole of it, for you and your witnesses. And often you have to pay the wages your witnesses lose, and their traveling expenses, if a journey is necessary on filing day and then on examination day.

Yes, and then again on hearing day, and if your case happens to be continued, on two hearing days, or more. For the next step is the hearing of your case in open court before the judge, at least three months after you filed your petition.

You'd have to see all that in terms of human beings, says the ex-examiner, to know what it means. But perhaps the foregoing bare outline will give a hint of why 5,215 petitions were denied in 1921 for "want of prosecution" and at the same time serve as a background for explanation of the other causes of denial. The next largest cause is labeled "Miscellaneous":

Four thousand six hundred and fifty-two under that. One thousand seven hundred and thirty-six of these, the Commissioner says, were "reported denied because claimed exemption from military service on account of alienage." The reasons for the denial of the other 2,916 would require an article in themselves. They are akin to those examined here.

Then comes "Incompetent Witnesses." Three thousand and fifty-eight cases denied for that. The witnesses turned out

THEY REDUCE YOUR TRUCK DEPRECIATION

Actual photograph of Goodyear Cord Truck Tires in the service of the National Lead Company of Massachusetts, Boston, Mass.

Copyright 1922, by The Goodyear Tire & Rubber Co., Inc.

"We have used Goodyear Cord Truck Tires on two of our trucks and are thoroughly satisfied with their service and qualities of durability and dependability. There has been less truck depreciation and we believe the equipment will lengthen the life of the trucks considerably. Our trucks haul daily between Salem and Boston, in all conditions of weather, over country roads and through narrow, congested city streets and yards. Goodyear Cord Tires have aided materially in solving our hauling problem."

—A. F. CURTIS, Comptroller, National Lead Company of Massachusetts, Boston, Massachusetts

MANY users of Goodyear Cord Truck Tires have noted what the National Lead Company here reports, that the cushioning action of these buoyant tires prolongs the life of the truck and cuts down bills for replacements and repairs.

They furnish a great measure of protection to the valuable mechanism of the truck, especially in city and interurban hauling, over unequal pavements. They protect the truck and the driver, the load and the road, and their resilience lasts.

They are strong, rugged tires, too. Between them and ordinary pneumatics for motor trucks, there is a world of difference. They are designed to keep their full strength always under the load, and to be strongest where the utmost stress occurs.

The patented Goodyear method by which they are built up, with the cord plies laid in groups alternating in direction and insulated

Goodyear Cord Truck Tire (Pneumatic)

Goodyear All-Weather Tread Solid

Goodyear Hollow-Center Cushion Tire

by layers of pure rubber reduces internal friction and keeps them cool, so that in hard, fast service, they wear and wear and wear.

Their activity is known to hundreds of businesses that credit increased range, prompter deliveries, and more satisfied customers, to the gripping, tractive action of these tires with their Goodyear All-Weather Tread.

Goodyear Cord Tires are recommended for all 'round equipment on trucks up to three-ton capacity, and on the front wheels of heavy-duty trucks where body clearance and load conditions permit.

There are special Goodyear Truck Tires for every hauling need—Goodyear Cords, Goodyear All-Weather Tread Solids, Goodyear Cushion Tires. Call upon your Goodyear Dealer for the benefit of his unbiased judgment in specifying the particular Goodyear Truck Tire that will serve you longest and best.

The New Light-Running Quiet-Running Royal

Like most really great contributions to the administration of Big Business, it has already been ushered in without the rather customary fanfare of trumpets and acclaim.

The improvements which it offers over all existing typewriters are, briefly, these: a speed as swift as thought itself; the most responsive, super-elastic key action ever devised; the noise of operation muffled down to below the point of distraction. The results: entirely new standards of typing and typewriting proficiency.

There is a revelation in store for you if you haven't yet seen it demonstrated.

Our fifty-six page book, "The Evolution of the Typewriter," beautifully illustrated in color, will be mailed free on request. Address Department D

not to have the personal knowledge of the applicants required by the statute. Nearly all of them thought they had it; swore they had it; acted in good faith. I have examined thousands of them, and I know that to be true. Wouldn't you think that when it was discovered that they were honestly mistaken the men whose petitions they verified would be allowed to go out and get other, competent witnesses to take their places and go on and complete the process begun so often at the cost of so much time and money and inconvenience? How would the great Republic suffer? But not a bit of it. The 3,058 petitions so verified all had to be denied, the time spent wasted, and the (at least) \$12,232 paid in lost. (Heaven only knows what the amount really was—it might easily have run to \$100,000 with wages what they were.)

And the only thing the applicants could do was to begin again by filing new petitions. And in the meantime of course the declarations of intention of many of them had expired and had to be renewed, and that meant an additional delay of just two years. No wonder some of them feel that they are caught in a vicious circle of alienage, from which there is no escape.

Perhaps you will turn hopefully to the next most important heading in the Commissioner's table of figures. You will not find sustenance there for our American quality of optimism. You will learn from it that during the fiscal year ended June 30, 1921, 1,848 petitions for naturalization were denied on account of "Declaration Invalid." "Declaration" is declaration of intention, or first paper. Most of these 1,848, and all other invalid declarations, were either invalid the day they were made, on account of the mistakes of the clerks who issued them, or became invalid by the lapse of the statutory seven years, and in either event should not have been accepted by the clerks, who subsequently permitted their holders to use them as bases for petitions for naturalization. But just the same this whole army of people had to go through all the process I have outlined and get an official order of denial over the hand of the Court before they could find that out.

Six hundred and twenty-five cases were denied because of "Petitioners' Motion"; that is, the people who filed them asked that they be denied—for some reason or other gave up hope and withdrew.

"Deceased." Five hundred and thirty-three of those in 1921. One would like to know how long their petitions had been pending when they died.

Then comes "Insufficient Residence," with 313 turned back for that. They had not "resided continuously within the United States for five years and within the State for one year immediately preceding the dates of their petitions." Some of them went back to the old countries for visits, some of them left the States in which their petitions were filed on business trips and for other reasons. But they didn't conceal it. If they couldn't be naturalized, why not tell them so and save them all that journeying and standing in line and filing and paying and oath taking?

I suppose it's because they aren't Americans and rarely protest, and the rest of us are too concerned with other matters to protest for them.

"Already a Citizen." Doesn't it seem

that we could devise some way whereby a man who was already a citizen of a nation as intelligent as this one could establish his title to that status without going through the complicated process of applying for what he already had and setting in motion the whole machinery of a court? Yet 274 citizens of the United States, in order to prove themselves such, had to do just that during the year under consideration. They were people the record of whose naturalization had been destroyed, who came into citizenship through the operation of some obscure or ambiguous statute, etc., etc. The Naturalization Service investigated the facts in the case of every one of them. Why not confer upon that service the power to issue immediately at the close of such investigations satisfactory proofs of citizenship? It is very much better equipped to pass upon points of this kind than are the courts, which in 99 per cent. of such cases only follow its recommendations, anyhow.

To carry on the story, 261 of them were denied without protest in 1921 for "No Jurisdiction." Which simply means that careless clerks let them file (and pay!) in the wrong courts, or else that they had to move to other parts of the country after filing and were penalized for it.

A CLOSE-MOUTHED TELEPHONE

NO TALES are told by the form of telephone-attachment devised by Gen. Geo. O. Squier, of the U. S. Army. Confidential secrets and intimate business matters can be discusst freely over the telephone henceforward—and no one except the persons concerned will be the wiser, we are told by a writer in *Popular Mechanics* (Chicago). This appliance will be of importance as a means of secret communication in warfare, but it will be of equal value to the butcher, the baker, and the candlestick-maker who desire to talk over business affairs with their bankers or brokers without danger of eavesdropping. We read:

The apparatus is incased in a small wooden box and hooks directly to the bell box of the telephone. Once adjusted and in place, the superphone is ready for constant service. It does not require any readjustment at regular intervals. It occasions no more bother than the ordinary telephone so far as upkeep is concerned. All the user has to do is to close a switch or press a button to connect in the superphone in place of the ordinary phone. A special advantage is that it permits a number of secret telephone conversations to be carried on simultaneously over the same line without interfering with each other.

The mechanism is operated according to the principles of wired wireless, by which high-frequency alternating currents are employed that are modulated at the transmitting end by speaking into an ordinary microphone, and are detected at the other end of the communication system by the ordinary radio instruments which ultimately transmit the sounds to an ordinary telephone receiver. Speech is transmitted by this new invention even more distinctly and clearly than by the ordinary telephone. Long-distance conversations can be carried on where the speakers are several hundred miles apart by the use of a very small amount of electrical energy.

The New Shoe with 25 years history

IMAGINE a shoe with moccasin comfort and metropolitan smartness :: *IMAGINE* a shoe with all the beauty which fashion demands and every feature which the most exacting medical and surgical authority can suggest :: *IMAGINE* a shoe that you will be proud to wear—a shoe that makes your feet and ankles slender and shapely :: *IMAGINE* a shoe that can be worn all day long, which leaves your feet rested and ready for dainty and elegant *Sorosis* Evening Slippers. There you have

THE A. E. LITTLE SHOE

TWENTY-FIVE years ago, a shoe was introduced, that met with favor in this country and in Europe. It was the first woman's shoe to be branded with a trade-mark, as proof of the maker's confidence in his product. Because of its popularity, imitations appeared. The courts soon decided that the name *Sorosis* on a shoe was for the protection of the public, and the use of any name resembling it was a violation of the law.

Because the A. E. Little Company—makers of *Sorosis* Shoes—were the only shoe manufacturers who maintained an experimental laboratory and made their own lasts, America's most eminent surgeons requested this company to collaborate with them in designing a shoe for suffering feet. Their united efforts resulted in the development of the *Sorosis Orthopedic*. In a period of less than two years, twenty-two thousand prescriptions for this shoe were written by New York physicians and filled at the New York store, alone.

The orthopedic *Sorosis* is not beautiful, as are the other *Sorosis* shoes and slippers. But out of the A. E. Little Company's 25 years of shoe study, experiment, and manufacture, has now grown a new kind of shoe, for work and play—the A. E. LITTLE SHOE. It not only satisfies the prescription of the most conscientious surgeon—but it also is beautiful.

With the purpose of bestowing the greatest good among the greatest number, the sale of the A. E. LITTLE SHOE will not be limited to *Sorosis* stores or departments, but will be opened to all reputable shoe merchants who will carry a full range of sizes and widths to insure proper fitting; and the price is only \$12.50. Consult your dealer or send for information direct to us.

NOTE ONE :: The A. E. LITTLE laced boot is recommended for morning or all day wear. This not only gives proper support to the foot in work or play, but also sustains the ankle and keeps it from swelling. For afternoons, the oxfords may well be chosen.

NOTE TWO :: If your family physician has not heard or read about the A. E. LITTLE SHOE in the advertising pages of the Journal of the American Medical Association, please refer him to us for full information.

SPORTS - AND - ATHLETICS

PUTTING THE "GO" IN GOLF-BALLS

THE light and slender club swings through the air, without much more force, it might seem, than when a man switches off grass-tops with a walking-stick but the little white ball is lifted from the ground and sails away, easily, further than Babe Ruth can pound a baseball with his big, heavy club. The secret of the golf-

inside. The leather coverings were then tightly compacted with feathers. The size of the old feather ball was approximately $1\frac{11}{16}$ inches in diameter.

In 1848, gutta-percha balls were first introduced into Europe, Sir Thomas Moncrieff, an English enthusiast, being generally credited with having conceived the idea of making golf-balls of that material. It is claimed that the Rev. Robert A. Pater-

COMPRESSING THE CORES.

THE OUTER SHELLS.

ball's flight depends somewhat upon the skill of the wielder of the driver, but far more upon the construction of the small white ball, that sometimes seems fairly to have a life of its own. Golf, according to recent statistics, bids fair to become the most generally played American game, next to baseball, and the reason for its popularity, we are assured, lies in the ability to manufacture cheap and good golf-balls. The game of golf antedates any records of

son, in 1845, rolled gutta-percha clippings into a ball, which he painted and used on the links. Gutta-percha balls soon became popular, as their price was about one-fifth that of the original feather balls. Golf thus was brought within the reach of many, and the number of devotees increased. In making the gutta-percha ball, the gutta was boiled until soft, and then rolled by hand until smooth and round. Its flight, however, was never true and, strange to relate, the more it was knocked and hacked about, the more the flight seemed to improve.

A CLEVER MACHINE FOR WINDING.

FITTING SHELL AND BALL IN MOLD.

its origin, says an authority who writes in *The India Rubber World* (New York). For centuries the game's popularity was limited by the expense of the balls used, which only wealthy players could afford. For hundreds of years before the middle of the last century, says the writer, as quoted in *The Sporting Goods Dealer* (St. Louis):

Golf-balls were made of hand-sewed bull's hide, with seams turned toward the

This suggested to some one that the surface of the ball be nicked into lines, and this was done with good results. The flight of the "handhammered" ball was all that could be desired, and the feather ball was superseded.

In the long course of manufacturing development that has produced the modern golf-ball, many interesting processes have been perfected. The patents on some of the more important have expired, notably the Haskell patent. The structural feature

Go to the bottom of your roof

Roll roofings look alike—on the surface. That's why you must go to the bottom—find out what a roofing is made of—to know its real value.

And the time to find out is BEFORE you buy—not after the weather gets through and the damage is done.

There's nothing secret about GENASCO Roll Roofing. It's water-proofed with Trinidad Lake Asphalt Cement—a product of the ages. And its backbone is Asphalt Felt—*super-saturated and selected*.

Ask your dealer for a sample. Bend it—twist it—try to pull it apart. You'll then know why it LASTS—why it stands years of hammering by the elements.

And the Kant-Leak Kleets—supplied only with GENASCO—make seams absolutely water and wind-tight, do away with nail leaks and give an artistic finish to the roof.

The GENASCO Line of ready roofings provides a sturdy, attractive, economical covering for any type of building—home, industrial or farm.

Leading roofers and dealers all over the world supply GENASCO Roofings. Write to us for illustrated booklets.

Continued

of the Haskell ball, as described in the patent was "a golf-ball comprising a core composed wholly or in part of rubber thread wound under high tension, and a gutta-percha inclosing shell for the core, of such thickness as to give it the required rigidity." Specifications also included "a golf-ball comprising a central core section of relatively nonelastic material, rubber thread wound thereon under tension," etc. The Haskell ball, when first made, was produced laboriously by winding rubber threads on the core by hand, and the total output for one man was three balls a day. After experimenting, a prominent rubber manufacturer devised a machine that made a ball a minute.

The principal stages in the manufacture of a golf-ball are shown in the accompanying illustrations. The first stage consists in hand-wrapping a core of soft rubber with friction tape, to serve as a center upon which to wind vulcanized rubber thread

MOLDED BALL, SHOWING MARKINGS.

under tension. This is done by a power-driven device, in which the ball center is revolved rapidly on a variable axis as it is held between three rolls, one of which transmits the power required, while the operator regulates the tension on the thread. This winding constitutes the body of the ball, and imparts to it great resiliency.

The outer covering of the ball consists of two hemispherical shells of tough gutta-percha stock, formed up cold in a power press from sheet stock about one-tenth of an inch thick. These halves are trimmed and fitted together over the thread-wound ball, united to it and around their juncture by mild heat and heavy pressure. The molds are of steel, each cavity engraved with markings that the ball is to bear. The next and final operation is that of painting, the paint being very evenly distributed over the surface of the ball by rolling it between the palms of the hands.

A machine for thread-winding golf-ball cores is used. Elastic thread is wound in different great circles around the core, at the same time being evenly distributed over the entire body of the ball by the automatic action of the machine. Due to the different pitch of the driving pinions, the inside upper disk revolves at the same rate of speed as the lower outside disk, and the upper outside disk revolves at the same speed as the lower inside disk, the former pair rotating slightly faster than the latter pair. A ball retained between these disks will be rotated slowly about an axis, which

passes through the axis of the two shafts, thus winding the elastic thread in different circles around the core. The ball is held in position by rollers mounted on the ends of two pivoted arms provided with spring tension. For removing the ball, the upper bearing, being pivoted to the main shaft is raised and lowered by a handle provided for that purpose.

Eight or ten years ago, says the writer, there was made in the United States a golf-ball, with a liquid center, the liquid being a concentrated solution of zinc chloride under heavy pressure. On being

PAINTING THE FINISHED BALLS.

cut apart, the ball would spring open, exposing a mass of rubber bands under high tension holding an inside ball, formed of a large number of laminated sheets. Serious accidents to players occurred in the use of this ball, resulting finally in its being withdrawn from sale. However, there is still on the market a somewhat similar product. To quote:

Another patented ball embodying the liquid center idea, contains also a miniature ball having a greater specific gravity than the liquid, and is free to move about, with the object of aiding flight and insuring better control of the ball. This golf-ball comprises a container made of double texture fabric, and filled with liquid. Rubber tape is wound under high tension around the tape windings. Finally, the cover is applied, which may be of any wear-resisting material such as gutta-percha. The small interior ball is made of hard composition or hardened steel, with a smooth surface to prevent puncturing the container. While only one inner ball is mostly used, more than one can be used, if desired. Another patented liquid-center golf-ball provides an inner rubber bag or container, filled with liquids of different specific gravities, one of which is mercury.

There is a metal-cored golf-ball which is a solid metal ball or core, around which is molded and vulcanized a rubber ball core, provided with 14 pockets, six of which extend to the central metal core, formed on pins that accurately hold the core in the mold, while four pockets are provided on the equatorial and five on the hemispherical circumference of the rubber core. A thin vulcanized rubber coating is then applied, to which a thin rubber cap is cemented, when the ball is wound with rubber thread, and the outer cover, preferably of balata, is molded on the sphere.

An illustration of theory applied to golf-ball construction is that found in British patent No. 160625, granted to an American

The World's Violin Treasury Is Available to You—Anywhere

NOT to know the Lyon & Healy collection of rare old violins is to be unfamiliar with one of the most interesting features in the musical life of America. Every violin lover should make its acquaintance. You can do this easily. You can secure a celebrated instrument for your own use. This advertisement tells how.

Mecca of Violin Lovers

Scarcely has a prominent artist come to Chicago in many years without spending hours of enjoyment in the treasure vaults of Lyon & Healy. For here are choice examples of the work of practically every great master of violin-making. Among them some of the finest known.

For more than thirty years, Lyon & Healy representatives have searched the Old World and the New. Not merely for instruments interesting for their historic associations, but pure-toned violins in the best of condition. They have assembled a collection without a peer.

From \$75 to \$15,000

A single violin in this collection, the Antonio Stradivarius, Cremona 1716, known as "The Colossus," is valued at \$15,000. At the right are listed a few of the many magnificent specimens. *Their authenticity is guaranteed.* Their state of preservation is unusually fine.

But this collection is not known alone for its famous individual instruments. It is perhaps even more remarkable for its comprehensiveness. For it embraces examples from the many lesser masters as well. Every earnest student, even of modest means, may secure here a violin of true musical worth. As little as \$75 will buy one! Convenient monthly payments may be arranged, if you wish.

Send for Free Brochure

In our brochure, "Rare Old Violins," are the interesting stories of the individual instruments.

Every violin lover should have this book. Send for it today. Mail the coupon!

LYON & HEALY

Rare Old Violins

EVERYTHING KNOWN IN MUSIC

FOUNDED 1864 • CHICAGO

Among the Famous Violins in this collection are:

Perhaps the most interesting, historically, in existence—that made by the Brothers Amati in 1595 for King Henri IV of France.

Gio. Paolo Maggini, Brescia, about 1620—formerly owned by the violinist and composer, Mazas, 1782-1849.

Carlo Bergonzi, 1737—magnificent preservation; glorious tone.

Dominicus Montagnani, 1737—the most beautiful known of the creations of "The Mighty Venetian."

A Nicolas Amati of the Grand Pattern, 1674—one of the choicest by this master we have ever had. Also a very fine example of his smaller type, of the year 1655.

Laurentius Guadagnini Placentiae, 1740—very unusual; not a crack or blemish.

Andreas Guarnerius, Cremona, 1717—wonderful specimen; formerly owned by Charles Dancla, Paris Conservatory.

Nicolas Lupot, Paris, 1810—one of his finest examples; truly Stradivarius in outline.

An exceptionally fine 'cello is by Carlo Ferdinando Landolphus, Milano, 1760.

A *viola* by Gasparo Da Salo of Brescia dates from about 1550.

Our large selection of rare old *boxes* includes some of the finest work of Francois Tourte.

If you are especially interested in any of these, we shall be glad to send you its full history.

Our brochure, "Rare Old Violins," describes and prices these and hundreds of other instruments, ranging from the \$15,000 Stradivarius down as low as \$75. The coupon below will bring you a copy. Mail it today!

It is Thirsty Fibre (millions of him in each ScotTissue Towel) who absorbs four times his weight in water and is responsible for that essential, thirsty, absorbing quality found only in ScotTissue Towels.

"Clean Hands in Business"

"CLEAN Hands in Business"—What does that mean to you? What a wonderful thing it is that Thirsty Fibre stands for clean hands in business—both physically and morally. We are trying to make Thirsty Fibre and Clean Hands in Business mean the same to you and all who use ScotTissue Towels.

Thirsty Fibre personifies the spirit of Clean Hands in Business efficiency in your washroom.

A ScotTissue Towel is not inanimate paper. Thirsty Fibre makes it a living impulse of absorbency—thirsty at the slightest contact with water.

ScotTissue is a real towel that really dries. Soft, white, comfortable—it is so different from all others that the imprinted ScotTissue on every ScotTissue Towel is really an unnecessary identification to the person who has once used them.

Thirsty Fibre—His Biography is a most delightful little book. It is sent free upon request.

inventor. This invention relates to the construction of a golf-ball comprising a resilient core and a core-enveloping shell having a surface with smooth portions, the smooth portions in some instances being rendered relatively elastic. This ball has an elastic center surrounded by a shell with perforations, in which are embedded plugs of metal or hard rubber containing carborundum.

FRAMING UP A NEW SET OF BASEBALL SIGNALS

THE scene is the Southern camp of a big league team—any big league team will do. A most important matter of baseball strategy is under discussion. The various characters are introduced by W. A. Phelon, the sports writer, who quotes their discussion in *Baseball* (New York), as follows:

Manager McZogg—Now that we're all here, and some of the soreness has worked out of your arms—

Kid Oldsby (the veteran coach)—Their arms are all right, Mac. If you could work some of the ivory out of their heads—

Mgr. McZogg—We are not undertakin' the impossible, Kid. As I was sayin' before the venerable piece of tripe horned in, we are here all together and perfectly sociable. What I want to tell you all is this: There's been a lotta changes in this ball club; several new men have come in, some of last year's men are gone; we gotta build a new machine, and, to be course, we gotta frame a new set of signs.

Catcher Maskwell—Aw, say, Mac, what's the use of all that bother? The old signs was all right, wasn't they?

Mgr. McZogg—They was all right for last season, but they gotta be all changed for this year! D'yuh want every club that has one of our last year's players to know all our signs by heart?

Catcher Maskwell—There ain't a chance on earth for 'em to know 'em, Mac.

Mgr. McZogg—And why not, may I ask?

Catcher Maskwell—Why, because there wasn't a guy on this ball club ever understood 'em! And if they didn't understand 'em, how could they teach 'em to any other people?

Mgr. McZogg—Just because you never learnt the signs ain't no reason why human beings couldn't understand 'em. So, as I was sayin' we gotta have a new set, all the way through. I'm open to suggestions. How about the battery signs, to begin with?

Pitcher Speedette—I think the pitcher ought to give the signs to the catcher, because the pitcher knows best what he can throw.

Catcher O'Paddon—Naw. Can't see it that way. O' course, I'm new to this ball club, but on my team, last season, we took it for granted that pitchers was there to pitch, and catchers was there to show the pitchers the light of sense and understanding. I think the catcher, who knows the batsmen, ought to give the signs.

Pitcher Whizzem—Can yuh imagine any catcher showing Walter Johnson, or Ed Walsh, or Christy Mathewson how to pitch?

Mgr. McZogg—That's quite correct, Whizzy. Any time you show me that

you're Mathewson, or Walsh, or Johnson. you can run the works to suit yourself. In the meanwhile, let's agree on those signs.

Catcher Maskwell—I think the sign for a fast ball should be rubbing the meat-hand on the palm of the glove. And for a curve ball, rubbing the glove on the palm of the meat-hand.

Mgr. McZogg—Sounds O. K. We'll work out on that line to-morrow. Now, then, how about a sign to catch the runner off 'n first base?

Pitcher Speedette—That oughta interest Whizzem. There's always plenty of runners on bases when he's pitchin'!

Pitcher Whizzem—There ain't none on bases on you, because they all hit over the fence when you're in there.

Catcher O'Paddon—If I see the runner leadin' off too far, how about me sayin' "Yoo hoo!" sorta cheery and social-like, as if I was talkin' to the umpire? Then the pitcher can turn an' make the throw.

First Base Zipp—I got a better one than that. I'll talk to the runner, and when I say to the runner, "Did your mother make apple pies?" that'll be the sign to turn and peg.

Mgr. McZogg—We'll think those suggestions over. Now, then, how about the sign to sacrifice? Last year, I held up three fingers—

Sluggo Buffick—I'll say that's one sign that needs changin'. Five times last season when I seen you hold up them three fingers, I misunderstood yuh and hit into a triple play.

Mgr. McZogg—Some guys on this ball-club always did have the intelligence of a new-plucked egg-plant—but we'll have a new sign for sacrificin' since it seems necessary. Suppose I have a piece of red flannel in my hand, and wave it when it's the play to lay one down?

Shortstop Gupf—But supposing you should accidentally stick out your tongue? And it wasn't the right play to bunt just then?

Mgr. McZogg—Whadda you tryin' to insinuate? If there's any flannel-mouth guys on this club I can name 'em—

Outfielder Brush—While we're about it, we oughta have an entirely new sign for stealing bases. Last year, you gave the sign for a double steal by slappin' yourself on the head with a folded newspaper. And that day in New York when we had 'em tied in the ninth a fly bit you on the bean, and I followed the signal. Stole home while Frank Snyder had the ball and all he did was to welcome me with a glad smile and the hard side of the leather!

Mgr. McZogg—I got somethin' absolutely new!

Kid Oldsby—Providence has sent the boss a brain!

Mgr. McZogg—I'll have two of the kid players start a game of cards on the bench. Then I'll get interested and join 'em. Then, if it's the play to steal second, I'll say "A pair of jacks!" And if it's the play to steal third, I'll say "Three aces!"

Pitcher Dudeleigh (the new Collegian)—If you will pardon my apparent impertinence in presuming to intrude upon the conversation of my elders, Mr. McZogg—

Mgr. McZogg—If I will what—the which—what it is, is it, young feller?

Pitcher Dudeleigh—I might suggest that a series of educational terms, adjectives and derivatives, which we utilized with enthralling success at Yalevard last season, might prove extremely efficacious in baffling the craftiest and most intellectual of our adversaries.

—for more delicious cooking —for a comfortable kitchen

Madam, your cooking perplexities will be over when you discard the old-fashioned stove or range and install the wonderful Duplex-Alcazar.

It's just like having two ranges—for the Duplex-Alcazar

THE DUPLEX ALCAZAR
TWO RANGES IN ONE

burns gas and coal or wood, singly or together. Change from fuel to fuel in an instant. Having one fuel or two to use you can get the exact degree of heat that you want at any time.

Perfect control of heat makes cooking results certain—gives you the most delicious dishes and saves time and fuel.

And comfort also—on hot summer days burn gas. In cold winter weather keep the kitchen warm with coal or wood.

Sold by best dealers everywhere who are glad to demonstrate any time. Ask to see the Duplex-Alcazar. There is a type and style to please you. Write for booklet.

For districts where gas is not available there is an Oil Duplex-Alcazar made for Kerosene Oil and Coal or Wood.

A better home for less money by the Lewis Method

You can buy the materials for your home at wholesale prices and at the same time save many dollars on labor by the Lewis ready cut method.

For Lewis Homes we furnish lumber logged in our own forests and cut and finished in our own mills. There is a big economy in labor cost because Lewis Homes are cut ready to put together. Weeks of costly time are saved. Yet they are built just as solidly as by old-fashioned methods. They comply with all building laws.

The high grade quality of every bit of material is covered by our binding guarantee of satisfaction. In one shipment you receive all the necessary lumber, shingles, nails, paint, hardware, etc. You need pay no money until you inspect the materials.

You know in advance exactly what your Lewis Home will look like. Instead of a mass of blue prints you see an actual photograph of the finished house. And you save the architect's fee. Lewis plans are based on a study of thousands of the most artistic and livable homes throughout the country.

Our Personal Service Bureau will give you information concerning excavation, foundation costs, plastering—every possible item. There will be no extras coming up at the last minute.

Send for 160 page book "Lewis Homes of Character"

IT CONTAINS photographs, floor plans and descriptions of 96 homes—colonial or modified colonial designs, bungalows and semi-bungalows, Swiss chalets, Old English half-timbered designs, two family houses, summer cottages, etc. Answers every point you want to know about the Lewis Method of Home Building. 160 pages, 7 1/2 x 11 inches, fine paper, beautifully bound. Mailed for 25 cents (coin or stamps). Lewis Manufacturing Company, 1528 Michigan Ave., Bay City, Mich.

SPORTS AND ATHLETICS Continued

Mgr. McZogg—What the—! Gimme a shot of hooch! Anybody got some ammonia? Proceed, young feller!

Pitcher Dudeleigh—Well, we proceeded after this intricate yet easily comprehensible fashion: When the appropriate performance was the purloining of second base, our captain called "Differential calculus!" When the necessary action involved a sacrifice, the accompanying, or, rather, immediately preceding adjuration was "International psychology!" And for the elaborated stratagem known as the squeeze play, the motif was supplied by the words "Protoplasmic convolutions!" I have these signals written down, and it would give me entraneing satisfaction—

Catcher O'Paddon—I didn't get all them things, but if you're callin' anybody names, I can lick any college Percy that ever butted in where he didn't belong—

Pitcher Dudeleigh—G'wan, yuh big tramp! Who yuh makin' cracks at?

Catcher O'Paddon—For the love of Mike! I see a play called "Jekyll and Hyde" once, and that guy wasn't in it with you! Shake hands, boy!

Shortstop Gupf—Babe Ruth ain't in this league. Why not ask Babe—he's an awful good feller—what's his sign for a home run?

WHEN IS AN AMATEUR NOT AN AMATEUR—AND WHY?

IF AN athlete employs a professional trainer to put him into condition, goes into a contest for the purpose of beating his opponents first and acting the sportsman afterwards, if his chief interest in life is in winning the events in which he is entered—is that man properly to be classed as an "amateur" athlete? Of course, when the question of payment for his services comes in, the distinction is made fairly clear. But, quite aside from the financial aspects of amateur versus professional, there are a number of fine distinctions which more conservative sportsmen make. Mr. Wilf P. Pond, sporting editor of *The Spur*, "chats informally," as he says, on these aspects of the subject, in a recent issue of *The Yale Daily News* (New Haven). Mr. Pond was educated in England, says the *News*, introducing him to its readers, but he has lived for many years in the United States, and is "recognized as one of the foremost authorities on athletics, yachting, horsemanship, and all kinds of sports." His chat runs:

My first recollection of the amateur status is too far back to give exact dates and thus display my age too blatantly; suffice to say it was when the idea of athletic sports first really crystallized in Great Britain, when cricket clubs and the then new lawn tennis coteries began to hold meets in which cups, cake-baskets and other silverware were offered as prizes to those who could run faster, jump further or higher, put weights or throw the cricket ball better than the next fellow.

Any one was welcome to compete, the entrance fee being ridiculously small and

ORIGINATORS!

TO Mullins belongs the honor of originating pressed steel automobile bodies. Today Mullins is one of the largest producers of automobile stampings. Thousands of America's finest cars are equipped with Mullins-made bodies, fenders, mufflers and other parts.

Our big plant, covering acres of ground, has had 40 years' experience in making every kind of stamping for leaders in every industry. Before you place your next order for steel stampings of any kind—for any purpose—send blue prints and get Mullins quotations. Write today for the Mullins story of unusual service.

"SALEM" Elevator Buckets have been made since 1880. Used by the thousands. One of the many popular Mullins pressed steel products.

in many cases free. The first exponents of the new idea were mainly young men of standing, sons of well-to-do tradespeople, those of landed proprietors, those of farmers—remembering the English farmer, as a rule, means men in comfortable circumstances and not at all what the same term implies in the United States. And with this type of gathering all went well for a year or two.

Then certain mechanics, blacksmiths, bricklayers, foundry hands, *et al.*, found they could do some one or perhaps two of these things rather well, and they entered at the meets and were welcomed in good fellowship, especially in weight putting and hammer throwing—it was the veritable blacksmiths' sledge hammer, and a cannon ball in those days. Then came a certain meeting in the eastern counties where the entries were usually representative of the more cultured class and a rather wealthy man, whose people had lived on their land "since time was," won the hundred yards by the proverbial eyelash from a certain blacksmith on whom, it transpired later, considerable money had been bet by those who had surreptitiously developed and trained him.

That is the first instance to his knowledge, says the writer, of any man specially training for any event, other than knocking off beer and tobacco, new bread and sweets, for a month or so and walking, jogging or running several miles a day, according to the competition in which he was entered. In this particular case:

As the tape was breasted, the winner turned quickly round to congratulate the blacksmith on his good race and the latter, exasperated at losing, let forth a stream of dirt to the effect that if his sanguinary and otherwise ill-born foot had not slipped at the pistol he would have done all kinds of things to the unmentionable winner. This, in the hearing of a couple of hundred ladies and young girls seated in the pavilion twenty feet or so away. And remember, manners and habits were very different in those days from now.

When the matter was taken up for consideration it was found that similar incidents had occurred in a number of other places and that there was steadily increasing a number of individuals who were employing professional trainers of running—there had always been the "pro" running races with unpleasant surroundings in the mining and iron districts—individuals who were too anxious to win and to whom the sport of the thing was little or nothing.

So, to protect the well-behaved contestants from repetitions of unseemly language, and from too strenuous competition in which sport was practically a dead letter, it was ruled that any man who worked with his hands, or who received a weekly wage, was not an amateur within the strict meaning of the term. And from that indefinite ruling the later amateur status has evolved.

Super-excellence, attended by too strict training was, strange as it may appear to the modern athlete, discouraged. Athletes who were too good were not smiled upon, and it was a common remark: "Oh, that chap is next door to a 'pro,'" and such a man was soon tacitly avoided by those who were in the game for the sport and, while trying to win, were just as gloriously amateur in defeat.

True amateurism, it seems to me, is largely a matter of latitude and longitude. Nations have the perfect right to make their

The New MULTIGRAPH That Makes Sales for Every Business

Simplified in design, the New Multigraph is offered at the *lowest price* at which the Multigraph has ever been sold. It fits the smallest business needs. It *earns, saves, and sells* for businesses of every kind.

SPEED!

It's faster than twenty typewriters, and costs less to operate than one. Typewrites bulletins, circulars, form letters of all kinds, notices, mailing cards, anything and everything that should be multi-typewritten.

Breaks Down Sales Resistance Read what users say about it:

"With the Multigraph we pave the way for the Salesmen's calls and keep the customers sold afterwards."—"The value of the Multigraph is inestimable. With it we back up our Salesmen, open new accounts, increase sales to present ones, and regain lost business."

Increased
Profits
Pay for it

\$30.00 will place the Multigraph in your office, and payment of the balance of \$120.00 is spread out for 12 months. If you want the printing ink attachment, which equips the New Multigraph to do simple printing jobs, the cost is but \$35.00 additional. Wait no longer for the Multigraph to go to work for you! Sign a check and the coupon below. Mail them now. Learn for yourself just how the Multigraph "pays for itself faster than you pay for it."

American Multigraph Sales Co.
1804 East 40th St., Cleveland, O.

On receipt of the \$30.00 enclosed (\$147.00 if you want to pay cash), please ship me the New Multigraph, complete with the Multigraph Typesetter. I agree to sign your regular contract when presented, which calls for monthly payments of \$10.00 and interest, until the balance of \$120.00 has been paid. (If you want the Two Roll Printing Ink Attachment in addition to the above equipment, enclose \$37.00, initial payment. Your monthly payments will then be \$12.34 and interest until a balance of \$148.00 has been paid). (Above prices in U.S. only).

Send me further complete information about the new Multigraph. (Note: Check this paragraph if you would like to know more about the New Multigraph before ordering. We urge you, however, to order now, as the demand for this New Multigraph makes prompt action desirable).

SPORTS AND ATHLETICS Continued

own rules on the matter, so long as, in international competition, all are willing and ready to agree to definite ratings and to laws carefully laid down. There is little use in holding up one nation against another as being more truly amateur. As I said, it's largely a matter of bringing up, when one is young, and later surroundings. There is no disputing the fact that the athletic world of the United States is much nearer the understanding of true amateur status than it was twenty-five years ago. In fact, if certain of the many transactions of those days were freely ventilated to-day, the modern athlete would stand aghast at the idea that such things could have been possible.

Of course I am hopelessly old-fashioned, but I have never been able to grasp the pleasure of being held like a galley slave to a training table and to a paid professional trainer's whim for months at a stretch, merely to meet my fellows in a sporting contest to see which is the better man. To me that is making a toil and a business of a pleasure, yet I must, perforce, concede that the man who does not so shackle himself would have little chance of winning in these strictly competitive days. I am afraid the true sporting idea has been lost sight of by the majority. The game itself should be held above the prize. There should be no irritation in being beaten in running if one can beat the winner in jumping, swimming or anything else. Better by far be a good all-round athlete than a single-phase specialist. For, as I understand things, sports should be taken up with the desire of developing to the full, rounded extent that marvelous piece of mechanism, the human body, and not with any remote idea of becoming a specialist at the bar, the weights, the hurdles or the sprints—to the utter neglect of all but the one phase chosen. I have no use for the lop-sided man. If one must have commercialism, seek it in commercial circles, but not in sport.

In my day I ran three miles or farther, swam over a mile, rowed better than the average, fair at cricket, rode steeplechases, sailed a ten-ton yacht at sixteen, played golf—on open moors with a single club and a hard rubber ball—attended a gym twice weekly, boxed and wrestled, did setting-up exercises every morning on jumping out of bed—and have continued said exercises to the present day.

With what result?

There is not an over-strained, over-developed muscle in my body; my arteries—so the doctors say—are about twenty years younger than my age should rule; my hand and eye do not coordinate as once they did and that puts me out of fencing and boxing, and "bar" fast work, but otherwise I have no hesitation in saying I am, to-day, better than most men a decade or more my junior at any given sport, and I enjoy life to the limit.

All of this sustained excellence I—rightly or wrongly—attribute to the old-style method and old-style idea of what I was taught to regard as true amateurism—a factor or condition that was not necessarily a path to victory over one's fellows but rather a joyous method of keeping fit, of living a sane life, so that there was no "breaking training" at the "end of the season." Merely because the so-called training was a code of rational life, and the "season" never ended, but swung

OAK FLOORS (for Everlasting Economy)

Now Cost 71% Less Than a Year Ago

The *highest* plain grade of oak flooring for a room 14 x 14 feet may be purchased in most localities for \$20 to \$30. You often pay more for a lamp or a chair. But no amount of costly furnishings can give the effect of quiet elegance that goes with an Oak Floor. Dustless, sanitary, easy to clean, with a beauty that improves with the years—Oak Flooring is almost demanded by modern standards of living.

New Floors Over Old

A 3/8 of an inch thickness is made especially for laying over old floors. Costs even less, as the old floor makes the sub-floor.

Ask any dealer for figures,
and write for three FREE
booklets, in colors.

89-84 Lafayette Street,
New York

along, month after month, to some good sport that could not be fully enjoyed except by those who kept "in trim" by avoiding overindulgence in eating, drinking, smoking, sleeping, or in the laxity that grows on so many when there is no competitive star in sight and the only steadfast light is that of sane competition (as against hot-house competition) tending to evenly develop the individual body in agreeable and harmonious surroundings.

It is up to the individual to choose along which line he will work—that of the over-keyed, high-strung, irritable specialist, or that of the moderate, evenly developed, all-round man to whom age is more or less of a joke. The party of the first instance MAY be an amateur; the party to the second instance, indisputably.

THE MAYFLOWER QUALIFYING FOR THE NORTH ATLANTIC CUP

THE American schooner *Mayflower*, which was debarred from the International Fishermen's Races last summer, is getting herself into condition to contest for the cup this year. She was barred out on the ground that she was not a genuine fishing-vessel. Now she is proving, we are told, that she is capable of setting records in the matter-of-fact but still exciting occupation of collecting fish from the wintry seas. What is more, says the *Springfield Republican*:

She is demonstrating her capability as a practical sea-boat. Her owners, the *Mayflower* association, believe that her model is proving its value and assert that she is the ablest fishing-boat ever constructed in New England waters.

The *Mayflower* has again been entered in the contest for the International cup. After spending a whole winter in fishing, and proving her seaworthiness in all kinds of weather and her commercial feasibility, she can hardly be excluded again on the ground that her model represents too marked a departure from the standard type of fishing-vessel.

At the same time, it does not follow that the Gloucester committee which debarred the *Mayflower* last year, or the Halifax trustees who upheld the decision, are convicted of prejudice, stupidity or undue conservatism. To a certain extent, it is doubtless true that Gloucester fishing interests resented the intrusion of a Boston boat. But the rejection of the *Mayflower* was based on the intelligible argument that the boat's model tended to approximate that of a racing yacht and that development in this direction would evolve a type not suitable for a practical fisherman. Moreover, there was a suspicion that the boat had been built primarily as a sporting proposition.

Under the circumstances, the owners of the *Mayflower* could afford to wait for vindication if vindication was their due. To have admitted the boat last year would have caused ill-feeling both in the United States and Canada—more than was caused by her disqualification. But Gloucester fishing interests would now lose public esteem if they resisted the very proper demand that the American race committee should represent all fishing centers and not Gloucester alone. After the defeat of the Gloucester boat last fall, there is all the stronger reason why American craft from all North Atlantic ports should be encouraged to enter the elimination races.

All the West is vacation land

HOW ESKIMO PIE HELPED REVIVE OUR EXPORT TRADE

ALL the thousands, perhaps millions, of Americans who have been in recent months buying and eating "Eskimo Pie," probably do not realize that they have been stimulating our export trade. But that, writes the editor of *The Grace Log*, house organ of the large export and import firm of W. R. Grace & Company, is exactly what they are doing. He explains:

Eskimo Pie is a small brick of ice-cream covered with chocolate. It is prepared in factories where the temperature is low, wrapt in tinfoil, packed in ice and shipped all over the country. It made its first inroads upon the affections of this, the greatest candy-consuming country of the world, about ninety days ago.

At that time the cocoa bean market was sadly depressed. Those foreign countries such as Ecuador, Santo Domingo, West Coast of Africa, Brazil and Trinidad, which in no small degree depended on their export of cocoa beans from which is manufactured cocoa powder, cocoa butter and chocolate, were in the same condition as the farmers of the United States—there was little or no profit in their crop. Consequently their purchasing power dwindled and they were but small buyers of American manufactured merchandise.

The craze for Eskimo Pie in the United States tremendously helped to revive the entire cocoa market. Other factors contributed including some crop shortage. But the millions of little chocolate-covered ice-cream bars, so delicious to the palate and so easy to eat with the fingers, gave the market its big lift, as indicated by the following average prices per pound of different varieties of cocoa beans on the New York market in November-December, 1921, as compared with the middle of February, 1922:

	November-December 1921	February 15 1922
Guayaquil (Ecuador).....	8¼c	12½c
Sanchez (Santo Domingo).....	7c	10¾c
Accra (Africa).....	7c	10¼c
Bahia (Brazil).....	7¼c	10¾c
Trinidad (B. W. I.).....	7c	12½c

The improvement in the market has been accompanied by an improvement in export, which makes the currency of the producing countries command a greater value in American dollars. For instance in December it required 4.15 Ecuadorian sueres to purchase one United States dollar's worth of American merchandise, but on February 16th, 3.90 sueres sufficed. This was an encouragement for Ecuadorean purchase of American merchandise. While it is yet too early to estimate the full extent of this revival, still it is plain that the cocoa-producing countries have been put on a greatly improved basis within three months.

All of this shows what the immense consuming power of the United States means to international commerce. A slight variation in the habits or tastes of the American people may turn scales between depression and prosperity in those countries producing foodstuffs and raw materials not grown here in sufficient abundance for our needs.

WAR WAGES AS AN AFTER-WAR OPPORTUNITY

NO ONE has denied the assertion that while our service men were receiving from \$30 to \$60 a month in the army camps and the battlefields, their brothers at home were drawing down huge war-wages in shipyards, munition plants and elsewhere. The Cleveland Trust Company, which contains among its officers ex-Secretary of War Baker and Colonel Leonard P. Ayres, points out, however, that "taking the country as a whole the opportunities for securing the highest wages came after the war and not during it. They came, moreover, at a time when there was practically

no unemployment." The Cleveland bank bases this statement upon an interesting diagram which we reproduce herewith and which is explained as follows in the bank's *Business Bulletin*:

It is in reality two diagrams superimposed one upon the other. The upright columns show the number of men in the Army each month during the past seven years. The portions of these columns that are cross-hatched indicate the number of men serving in France. Running across the diagram is a line showing the general course of wages during these seven years. This line is based on a properly weighted average of official data, giving the rates of wages in manufacturing industries, the building trades, railroad transportation, and agriculture. The wages paid in 1914 are taken as equal to 100, and the average wage for every succeeding month is expressed as a percentage of the wage prevailing in 1914.

The average man served in the Army about one year, and for most of them the period of military service began early in 1918 and terminated in the spring of 1919. The great increase in wage rates came after most of the men had left the Army. The peak prices paid for labor were reached in the summer of 1920. The increase that took place in wages during the year after the average soldier or sailor returned home was far greater than that which occurred during the year that he was in the service. Even in shipbuilding, with its high wage rates, more work was done in 1919 and 1920 than in 1917 and 1918.

TO LET THE RAILROADS RUN THE SHIPS

IF we want a great merchant marine, and our ship operators can not run the ships in foreign trade without a subsidy, and Congress objects to a subsidy, what is the answer? The one solution, writes a New York economist specializing in traffic matters, is a coordination of our billion dollars' worth of ships "with our land routes into an American transportation system." Edwin J. Clapp, in one of a series of articles on transportation in *The New Republic*, suggests our railroads as "potential American shipowners capable of so concentrating upon themselves the export traffic of the country that this concentration in itself would serve as a subsidy to offset their higher operating costs." It is argued that "what they have done individually in the building of rail-owned water lines in our coastwise traffic is only an indication of what they could do cooperatively in the establishment of joint lines in overseas trade." We are reminded that—

The Central Railroad of Georgia extends itself from Savannah to New York and Boston by means of the Ocean Steamship Company of Savannah. The Seaboard Air Line extends itself from Norfolk to Baltimore by means of the Old Bay Line. In the same way the Southern and Atlantic Coast Line Railroads operate jointly the Chesapeake Bay Line from Norfolk to Baltimore. The New Haven Railroad delivers most of its Manhattan freight by the so-called Sound lines. The Southern Pacific is our only true transcontinental railroad. Its rails run from San Francisco to Galveston and New Orleans. The railroad's Atlantic Steamship Lines continue it from Galveston and New Orleans to New York. The Southern Pacific has a water line from New Orleans to Havana. American and Canadian transcontinental lines terminating on the Pacific coast have extended themselves north and south along the coast by steamship lines.

There is no reason why the same principle of extending railroads by rail-owned waterlines should not be applied in the overseas trade. The railroads terminating at Savannah or Charleston could jointly operate a steamship service to Liverpool, one to Bremen, one to Antwerp, one to Genoa, one to Cuba, one to Japan, and wherever else they found a market for their products from the southeast. A similar group of lines would be operated from New Orleans, from the Virginia ports, from each of the North Atlantic ports and from our Pacific gateways to the trade of the Orient. Each such service would be the direct extension of a group of rail carriers, whose network of lines reaches every shipping point in the port's entire hinterland. Every local railroad agent would become a steamship representative capable of quoting through rates and giving through bills-of-lading.

The rail-owned steamship lines would enjoy the same superiority over rivals in the foreign trade which they enjoy in the domestic trade. It would require only a slight advantage in load, a slightly heavier cargo to carry, to enable the American steamer to take the same unit rates as its foreign-flag rivals, pay higher operating costs, and yet make money.

A precedent for this sort of thing has been set by the Canadian Pacific Railway

LEE Puncture Proof Tires

Joseph Grondahl, General Manager of Ariel Golf Ball Company, New York, writes this voluntary expression: "For seven years I have used Lee Puncture-proof tires exclusively, on cars weighing over 3,000 pounds, and they have never punctured. Two Lee Tires on my Pierce-Arrow-48 have gone over 12,000 miles and never been off the wheels. Four Lees on my seven passenger Winton have rendered 10,000 miles of service."

NO punctures in seven years. It would seem that the motoring ideal had been reached—and, indeed, it has.

Absolute freedom from punctures is simply a matter of tire equipment selection. Therefore, it is an experience you, too, can enjoy.

Lee Puncture-proof tires are unlike any other, in that they are the only pneumatic tires carrying a cash refund guarantee against puncture.

Lee Puncture-proofs are no new idea. They have been successfully on the market for more than ten years. If you have not yet used them, you are due for a new experience—new non-stop mileage records, new driving comfort, confidence and safety, new tire service and saving.

Lee Puncture-proofs are even better than Lee Regular Fabric and Cord Tires—and that's saying a great deal.

Buying from a Lee Dealer is equivalent to having tires made to order for your particular service.

Look for "Lee Tires" in your Telephone Book.

Company, which "maintains freight and passenger services upon both oceans and carries a large and increasing proportion of Canada's foreign trade, to say nothing of a liberal slice of our own." But in this country we have of late discouraged the building up of such coordination of land and water transportation. The Interstate Commerce Commission ordered all American rail carriers to give up their package freight carriers on the Great Lakes. "The chief railroad ocean lines we possess on the Pacific were driven off the seas by government persecution: the services of the Great Northern and the Southern Pacific Railroads." But now in the presence of an emergency, with this great fleet of ships on our hands, let us coordinate our transportation system "into a harmonious effective whole," pleads Mr. Clapp. Let us encourage our railroads "to go abroad and get business for us"—

Bring forward a plan whereby railroads jointly purchasing Shipping Board vessels shall have the most liberal deferred payment conditions. Herein the Shipping Board has its chance to sell its vessels to Americans who can afford to operate them.

With rail lines thus extended abroad it is not difficult to imagine tariffs with through rates from American interior points to all points of destination, tariffs as simple as those in domestic traffic. Through bills-of-lading would be the rule. Rates would include marine insurance. The division of responsibility now burdening export shipments would disappear. Men could take their freight to the local stations and ship it to Buenos Aires as they now ship it to New York.

UNDEVELOPED RESOURCES IN THE ROCKIES

THE exploitation of the phosphate deposits in Idaho by one of our great copper-mining companies is taken by *The Commercial West* (Minneapolis) as a text for an editorial disquisition on the still undeveloped mineral resources of the great Rocky Mountain region. The work in Idaho is said to be just the beginning of phosphate production in the West, for "in Wyoming there are hundreds of square miles of phosphate rock deposits sufficient to supply the world with fertilizers for centuries to come." This paper believes that for gold, silver and copper, the surface has only been scratched in the Rockies. And,

In Wyoming, in Idaho and in some other States of the West, are vast asbestos deposits. Here is another field awaiting enterprise and judicious development. Throughout the Rocky Mountains are found various other forms of nature's endowments represented in marbles, talc, silica, ochres and the like, all of which, in time, mean vast wealth for those who will convert them into merchantable form.

CURRENT EVENTS

FOREIGN

March 15.—Eamon De Valera, Irish Republican leader, issues a manifesto announcing the formation of an association of Irish republicans whose purpose shall be the repudiation of the Anglo-Irish treaty and the establishment of an internationally recognized Irish Republic.

The last remaining rebel garrison in the Transvaal, South Africa, is subdued, and all organized resistance against the Government has disappeared.

March 16.—Masked raiders break into hospitals in South Ireland and slay four patients, one of whom was already in a dying condition. Bomb outrages perpetrated in Belfast result in twelve casualties.

Sultan Ahmed Fuad Pasha proclaims the independence of Egypt, and announces himself king. He receives the congratulations of Field Marshal Viscount Allenby, hitherto the British High Commissioner.

The Indian legislative assembly at Delhi, India, passes by acclamation a resolution expressing appreciation of the visit of the Prince of Wales.

The miners' strike in South Africa is officially called off, and order is completely restored.

March 17.—Speaking at an election campaign meeting, Eamon de Valera warns that there will be civil war in Ireland if the treaty with England is accepted at the polls.

Military occupation of Fiume has been ordered by the Italian Government, it is reported in a dispatch from Rome.

Twenty African natives were killed and thirty wounded on March 16 at Nairobi, capital of the Kenya colony, British East Africa, when soldiers fired on a mob attempting to release an Indian under arrest, it is reported from London.

The German Government has informed the Allied Reparations Commission that the seventh ten-day payment of 31,000,000 gold marks has been made in the form of approved foreign securities, it is reported from Paris.

Premier Poincaré informs the Finance Committee of the French Senate that France will pay all her debts, as has been her custom.

The British House of Commons votes a grant of £100,000 for Russian famine relief.

March 18.—Seven persons are killed and many are wounded in a renewal of terrorist warfare in Belfast.

Mohandas K. Gandhi, leader of the Non-cooperationist Movement in India, is sentenced to six years' imprisonment, without hard labor, on charges of sedition. Viscount Peel is appointed Secretary for India to succeed Edwin S. Montagu, resigned.

March 19.—Proposals for the placation of Indian Moslems, which involve mutual concessions, are exchanged between the Turkish Foreign Minister and the Marquis of Curzon, British Foreign Secretary, it is reported from Constantinople.

March 20.—Northern and Southern forces are entrenched along the Ulster border

Fortunes Going Begging

Photoplay producers ready to pay big sums for stories but can't get them. One big corporation offers a novel test which is open to anyone without charge. Send for the Van Loan Questionnaire and test yourself in your own home.

A SHORT time ago a Montana housewife received a handsome check for a motion picture scenario. Six months before she had never had the remotest idea of writing for the screen. She did not seek the opportunity. It was thrust on her. She was literally hunted out by a photoplay corporation which is combing the country for men and women with story-telling ability.

This single incident gives some idea of the desperate situation of the motion picture companies. With millions of capital to work with; with magnificent mechanical equipment, the industry is in danger of complete paralysis because the public demands better stories—and the number of people who can write those stories are only a handful. It is no longer a case of inviting new writers; the motion picture industry is literally reaching out in every direction. It offers to every intelligent man and woman—to you—the home test which revealed unsuspected talent in this Montana housewife. And it has a fortune to give you if you succeed.

Send for the Free Van Loan Questionnaire

H. H. Van Loan, the celebrated photoplaywright, is responsible for the invention of the novel questionnaire which has uncovered hidden photodramatists in all walks of life. With Malcolm McLean, formerly Professor of short story writing at Northwestern University, he hit upon the happy idea of adapting the tests which were used in the United States Army, and applying them to this search for story-telling ability.

The results have been phenomenal. In the recent J. Parker Read, Jr., competition all three prizes amounting to \$5,000 were awarded to students of the Palmer Photoplay Corporation, which is conducting this search by means of the Van Loan Questionnaire.

The experiment has gone far enough to prove conclusively (1) that many people who do not at all suspect their ability can write scenarios; and that (2) this free questionnaire does prove to the man or

woman who sends for it whether he or she has ability enough to warrant development.

An evening with this novel device for self-examination is highly fascinating as well as useful. It is a simple test applied in your own home. Its record is held confidential by the Corporation.

The Palmer Photoplay Corporation offers you this free test because

Scores of Screen Stories are needed by producers

Scores of good stories could be sold at once, if they were available. The Palmer Photoplay Corporation exists first of all to sell photoplays to producers. Its Educational Department was organized for one purpose and one only—to develop screen writers whose stories it can sell.

Look over the list of leaders in the motion picture industry who form its advisory council. These leaders realize (1) that the future of the screen drama is absolutely dependent upon the discovery and training of new writers. They realize (2) that writing ability and story telling ability are two entirely different gifts. Only a few can write; many can tell a story, and, with training, can tell it in scenario form. The Palmer Photoplay Corporation is finding these story-tellers in homes and offices all over the land.

You are invited to try; clip the coupon

The whole purpose of this advertisement is to invite readers of LITERARY DIGEST to take the Van Loan Questionnaire test. If you have read this page up to this point, your interest is sufficient to warrant addressing the invitation to you directly. In all sincerity, and with the interests of the motion picture industry at heart, the Palmer Photoplay Corporation extends you its cordial invitation to try. Who can tell what the reward may be in your case?

For your convenience the coupon is printed on this page. The questionnaire is free and your request for it incurs no obligation on your part.

THESE are the leaders behind the search for screen writing talent. They form the Advisory Photoplay Corporation.

CURRENT EVENTS

Continued

following the seizure by Sinn Feiners of a County Derry police barracks, and bridges and buildings are being blown up along the roads as if in preparation for actual warfare.

March 21.—The Allied Reparations Commission grants Germany a moratorium for the instalments due in 1922, on condition that Germany turn over to the Allies about 720,000,000 gold marks in cash, and materials valued at 1,450,000,000 gold marks in lieu of the 2,000,000,000 gold marks called for by the London ultimatum, and that the Reparations Commission have internal financial control of Germany.

Incendiarism spreads in County Tyrone, Ireland, and two men are killed in renewed disorders in Belfast.

Dr. Otto Ludwig Wiedfeldt is appointed German Ambassador to the United States.

Sir Robert Stevenson Horne, Chancellor of the Exchequer, announces in the House of Commons that provision is being made in the next budget for payment to the United States in October of approximately \$100,000,000, six months' interest due on the British war debt to this country.

DOMESTIC

March 16.—The Soldiers' Bonus Bill, estimated to cost the Government \$4,090,719,350, is formally presented to the House of Representatives, with a recommendation from the Ways and Means Committee that it be passed.

The House of Representatives passes a resolution under which approximately 2,400 aliens admitted temporarily to the United States prior to March 7 in excess of the 3 per cent. quota of the restrictive immigration law would be permitted to remain in this country permanently.

March 17.—Retail food costs during February were 6.3 per cent. less than they were in January, according to the United States Department of Labor, this decrease making the total reduction for the year average 11 per cent.

Secretary of Labor Davis announces that coal operators of the central competitive bituminous field have refused to accept his proposals for a conference with the United Mine Workers to consider a new working agreement to replace that expiring March 31.

March 20.—Complete withdrawal of American troops from the Rhine by July 1 is ordered by Secretary of War Weeks.

March 21.—Officials of the United Mine Workers of America order a suspension of mining operations at midnight on March 31 in both the bituminous and anthracite coal mining districts of the country. The order involves 600,000 miners and 6,000 of the nation's 7,500 mines.

It is announced at the White House that this country has not entered into any secret agreement with Great Britain in regard to Pacific matters, and Secretary Hughes issues a formal statement to the same effect.

Careless American.—Before competing in a sprinting race at Doorn, an American journalist asked the ex-Crown Prince to hold his watch. It sounds rather trustful. *Punch* (London).

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. W. T.," Brooke, Va.—"Please decide the following: 'A' claims that the name of the daughter of Herodias, who asked of Herod that the head of John the Baptist be given her in a charger, was Salome. 'B' denies that her name was Salome, declaring there is nothing in the Scriptures to support 'A's' claim."

Salome was the daughter of Herod Antipas and Herodias, but the name of Salome does not occur in connection with the incident referred to above in *Matthew* or *Mark* where it is told.

"H. R. C.," Fargo, N. D.—"Kindly inform me the meaning of 'Victor mortalis est.' This presumably is a slogan from an old English coat of arms."

The phrase means "the Victor is subject to death" or "the Conqueror is mortal."

"J. A. K.," Chariton, Ia.—"What is the meaning of the term pussy-foot?"

The word means "to tread softly and stealthily so as to conceal one's plans or movements."

"B. B. B.," Pensacola, Fla.—"Kindly give me the correct pronunciation of the word *tortoise* as applied to the reptile of that name."

Tor'tis—o as in *or*, i as in *habit*.

"S. D. L.," San Francisco, Cal.—"Can you tell me the origin of the expression, 'A Philadelphia Lawyer,' and when and how it came to be used?"

The phrase *Philadelphia Lawyer* means an unusually sharp lawyer. The title was originally bestowed by grateful British sailors upon some members of the bar of Philadelphia who had rescued them from certain difficulties.

"L. I. S.," Brooklyn, N. Y.—"Is it permissible to use the word *lit* in the following sentence, or in any sentence, 'They *lit* the oil-stove?' Should it be, 'They *lighted* the oil-stove?' Is *lighted* always considered better form?"

Both forms are recognized as in use, but the form *lighted* is given preference. Therefore, "They *lighted* the oil-stove" is better than "They *lit* the oil-stove."

"B. L. B.," Wabash, Ind.—"Is it ever correct to use the word *avocation* for *vocation*?"

An *avocation* is that which takes one from his regular calling. It is a minor or irregular occupation; a diversion. The term is used loosely, sometimes by good writers, for *vocation*, which signifies one's main calling or business in life.

"V. I. M.," Grinnell, Ia.—The Greek letter *phi* is pronounced *fai*—ai as in *aisle*.

"J. S. K.," Saltville, Va.—"Kindly give meaning and pronunciation of the word *opuscle*."

The word *opuscle* means "a small or unimportant work." It is pronounced *o-pus'kiul*—o as in *obey*, u as in *but*, iu as *eu* in *feud*. The form you give is a variant spelling.

"R. P. C.," Nineveh, N. Y.—"An article in a popular magazine states that in shipping tea from the Island of Formosa care has to be taken not to ship any tea when there is a cargo of copra on board. What is the meaning of *copra*?"

Copra is the dried kernel of the coconut, broken up for export from the islands of the Pacific.

"W. G. A.," Cleveland, O.—"I am having a hard time to find out when it is correct to use the word *further* and the word *farther*. Can you give me the rules covering the use of the two words, and can you give me sentences illustrating the words?"

Farther should be used to designate longitudinal distance; *further* to signify quantity or degree. Thus, "How much *farther* have we to go?" "Proceed no *further* along that course."

"B. C.," Marlin, Tex.—"(1) By what name is the State of New Hampshire designated? For instance, as Ohio is called the *Buckeye State*, Indiana the *Hoosier State*, etc. (2) Is New Hampshire General Leonard Wood's native State?"

(1) New Hampshire is known as the *Granite State*. (2) Major-General Leonard Wood was born at Winchester, New Hampshire.

"F. R.," San Francisco, Cal.—"Please give me a definition of the word *moron*."

A *moron* is a feeble-minded person, of higher intelligence than an imbecile.

The Gilbert Thinlarm

The Alarm Clock That Is Built Like a Watch

You can tell at a glance why this compact, slender thoroughbred is winning its way into the hearts and homes of the nation.

It is an ornament to any living room, a necessity in the bedroom, a friend and companion in the kitchen.

The Gilbert Thinlarm is the only thin model alarm clock made—the result of more than a century's experience in clock-making.

Sturdy Gilbert quality and accurate timekeeping are built into this graceful and smart-looking Thinlarm.

And, best of all, the modern Gilbert method of Thinlarm construction enables you to buy it at a popular price!

UNIVENT

"LIVE OUTDOORS-INDOORS"
(TRADE MARK)

Phantom view

Classroom showing Univent installation

Fresh Heated Air from the Window

Your ideal of perfect ventilation is all the fresh air you want, when you want it, where you want it.

Your ideal is realized perfectly in the Univent—because in principle it is as simple and more positive than opening a window—but without the cold and dangerous draft.

The Univent system is designed on a unit basis. Each separate room is heated and ventilated by its own individual Univent. There are no uncleanable ducts or flues. Each Univent draws fresh air directly from outdoors, heats it, and thoroughly diffuses it throughout the room. Wind or weather makes no difference in the operation of the noiseless Univent system. It is positive. Tests have proven that good ventilation in

schools increases mental alertness of pupils and teachers 33 1/3% and decreases sick leave 50%. Univent installation cuts down building costs and saves space because no ducts and flues are necessary.

For the same reason Univent air is purer than air travelling through long dust-laden ducts. The Univent is designed for schools and all buildings where mechanical ventilation is necessary. For old or new buildings.

If you are truly interested in better ventilation, write for free copy of our 32-page illustrated book—"Univent Ventilation."

Note to Architects and Engineers—If you will send request on your professional letterhead you will receive a copy of our special 72-page Architects' and Engineers' edition—"Univent Ventilation."

THE HERMAN NELSON CORPORATION, Dept. L, Moline, Illinois

W. L. DOUGLAS

WHEN YOU BUY W. L. DOUGLAS SHOES
CONSIDER THE EXTRA QUALITY
YOU RECEIVE FOR THE PRICE PAID

W. L. Douglas shoes are made of the best and finest selected leathers the market affords. We employ the highest paid, skilled shoemakers, all working with an honest determination to make the best shoes for the price that money can buy.

When you need shoes look for a W. L. Douglas store. We own 108 stores located in the principal cities. You will find in our stores many kinds and styles of high-class, fine shoes that we believe are better shoe values for the money than you can buy elsewhere.

Our \$7.00 and \$8.00 shoes are exceptionally good values. There is one point we wish to impress upon you that is worth dollars for you to remember. W. L. Douglas shoes are put into all of our stores at factory cost. We do not make one cent of profit until the shoes are sold to you. When you buy shoes at any one of our stores you pay only one small retail profit.

No matter where you live, shoe dealers can supply you with W. L. Douglas shoes. They cost no more in San Francisco than they do in New York. Insist upon having W. L. Douglas shoes with the name and retail price stamped on the sole. Do not take a substitute and pay one or two extra profits. Order direct from the factory and save money.

W. L. Douglas name and portrait is the best known shoe Trade Mark in the world. It stands for the highest standard of quality at the lowest possible cost. The intrinsic value of a Trade Mark lies in giving to the consumer the equivalent of the price paid for the goods.

Catalog Free.

THE SPICE OF LIFE

The Point of View.—MORRIS—"How's business with you, Bernie?"

BERNIE—"Oh, lookin' up."

MORRIS—"What do you mean, lookin' up?"

BERNIE—"Well, it's flat on its back, ain't it?"—*St. John (N. B.) Eve. Times and Star.*

Arithmetically Speaking.—SUNDAY SCHOOL TEACHER—"Willie, how many Commandments are there?"

WILLIE—"Ten."

TEACHER—"That's right. If you broke one of them what would happen?"

WILLIE—"There would be nine left."—*Boys' Magazine.*

The Pants That Failed.

Sir Lancelot, in days of old,
Wore armor made of steel.
And everywhere this knight did go,
Right noble did he feel.
He was invited into court
To dine with Lady Hausers.
He spilled some water on his suit,
And rusted his best trousers.

—*Fun.*

What Makes Them Wild.—The printer in the open shop set up a poster to advertise an address by a militant suffragette. Her subject was, "Woman: Without Her, Man Would Be a Savage." When the speaker called for the posters the proof-reader had to leave town suddenly, for the flaming sheets read, "Woman, Without Her Man, Would Be a Savage."—*American Labor World.*

Mixed Characteristics.—At a political gathering in England an orator waxing indignant said, "To ridicule the idea of this country being invaded is to follow the example of the camel, which buries its head in the sand when an enemy approaches."

The rival speaker rose and retorted, "Surely the gentleman in giving utterance to this apothegm, must have meant to refer to the ostrich which, in those circumstances, has a habit of putting its eye through a needle."—*Boston Transcript.*

Improving on Babylon.—Knowing that we are not like Ancient Babylon—forty-two young men of this city—Montgomery, Ala.—have set out to cure the flapper! After a solemn symposium the following resolution has been adopted:

We, the young unmarried men of Montgomery, in an assembled meeting do hereby solemnly declare that:

Whereas, there has arisen a modern fad among young women of wearing their galoshes unbuttoned and rolling their stockings downward to a point of impropriety, hobbling their hair which the beautiful hand of nature has given them, and smoking cigarets, all of which, in our opinion, are slovenly and unnecessary.

Now, therefore, be it resolved:

That we hereby agree not to escort any young woman to any play, picture-show, party, dance, or reception who practises these useless and nonsensical fads.

By way of explanation this statement is issued: The young men of Montgomery are not prudish or saints, but they have a better notion of propriety than did the young men of Ancient Babylon.

Yours truly,

THE UNMARRIED MEN'S CLUB.
—*Montgomery Journal.*

Precisely.—SUITS Ready to Wear Out.
—From an advertisement in the New York World.

Free but not Easy.—The Irish Free State appears to be a kind of free-for-all state.—*Duluth Herald.*

A Souvenir.—(From a story)—“She held out her hand and the young man took it and departed.”—*Boston Transcript.*

Science in Politics.—President Harding has installed a radio outfit in the White House. The next thing in politics will be wireless-pulling.—*Life.*

Ins and Outs.—“Tea or coffee?”
“Coffee without cream.”
“You’ll have to take it, sir, without milk, sir; we’re out of cream.”—*Puppet.*

Charlie Wins.—Here’s fame for you. In 1922 “Who’s Who,” published in London, Eng., Henry Ford gets 8 lines and Charlie Chaplin 31 lines.—*Detroit Motor News.*

Going Down.—JINKS—“We used to hear about ‘the drinks on the house.’”

BLINKS—“Yes, but now the drinks are under the house.”—*British Whig (Kings-ton, Ont.).*

Teacher’s Mistake.—JOHN—“Teacher, can any one be punished for something they didn’t do?”

TEACHER—“Why, no; of course not.”
JOHN—“Well, I haven’t done my arithmetic.”—*The Boys’ Magazine.*

The Rivals.—A plot to kill Trotsky has just been discovered. It is said that the ringleader was told that he must not do it, as Trotsky was already two assassinations ahead of Lenin, and jealousy would be caused.—*Punch (London).*

A Masterpiece.—CUSTOMER—“Is it really a Tudor table? Shouldn’t have thought so; don’t see any worm-holes.”

DEALER—“Ah, sir, even the insects didn’t have the heart to deface its beauty.”—*Punch (London).*

Warned.—The newly elected president of a banking institution was being introduced to the employees. He singled out one of the men in the cashier’s cage, questioning him in detail about his work, etc.

“I have been here forty years,” said the cashier’s assistant, with conscious pride, “and in all that time I only made one slight mistake.”

“Good,” replied the president. “Let me congratulate you. But hereafter be more careful.”—*Wall Street Journal.*

Stung.—The candors of the brethren are illuminating. An American evangelist was engaged by a church for a week’s special mission. On his arrival he went to see the minister. “What sort of church have you here?” he inquired. “Well,” replied the pastor, “I am afraid things are pretty bad. The people are worldly and careless, the congregations are small, there is no interest in missions, no one comes to a prayer-meeting, dances and card parties go on all through the week, and the people are indifferent to the claims of religion.”

“Well,” sneered the evangelist, “if I had a church with members like that, I’d go out and hire a yellow dog to bite ‘em.”

“Yes,” said the minister, “that’s what we’ve done.”—*The Christian Register (Boston).*

Be Sure It's On Your Oil Stove

No need to get along cooking with a mere oil flame when the stove equipped with the Patented KEROGAS Burner gives you a gas flame.

This wonderful burner mixes air with the kerosene, turning the oil into gas, and then gives a double flame concentrated just where you want it—on the cooking utensils. Heat always under control—low and simmering or high and intense.

Least expensive way to cook, for every particle of the fuel is used—and the Patented KEROGAS Burner burns 400 gallons of air to 1 gallon of oil.

This amazing device is so simple—made from one piece of brass—rust proof, leak proof—and has no delicate parts—that it lasts for years.

THE KEROGAS OVEN
Best by Test
Heats evenly and quickly.
Bakes and roasts perfectly.

Don't try to get along without it, for you can get the best makes of oil stoves equipped with it.

"DEPENDABILITY PLUS"

In an unpretentious office in one of the greatest manufacturing plants in the world, there sits a quiet, elderly man who is known to every one, from the president to the smallest office boy, as "Dependability Plus."

For forty years he has been in the employ of this company. There is not a question concerning the business that he cannot answer better than any one else. He is responsible for more than half the improvements in their product; he tests and approves every change in their methods. His achievements have won him world-wide fame.

Yet, if you ask him, he will tell you that his greatest pride is in the affectionate, respectful name by which he is known to all, "Dependability Plus."

For every man who is voluntarily dependable, there are a hundred dependable only through force of circumstance. Placed in positions where dependability is a requirement, it becomes with them a forced virtue—a feeble flame that needs the constant fanning of necessity.

Voluntary dependability is a quality of the spirit. It may characterize a business as well as a man or woman. When it does you will find the name of that business honored and respected wherever it is heard. And you will find its products of a quality that is rarely equaled.

In the manufacture of pharmaceutical and chemical products Squibb holds such a place. Squibb quality in the products described below is a revelation to persons who use them for the first time.

Squibb's castor oil, for example, is not the offensive, unpleasant cathartic that is taken under protest by so many people. By careful selection of the seed, as well as in the production and purifying of the oil, the Squibb product is almost entirely freed from the detested taste.

This same thing holds true with other Squibb HOUSEHOLD PRODUCTS. At the Squibb Laboratories, for more than half a century, a constant process of testing and research work has raised the purity and efficacy of all Squibb products to a point that never has been reached before.

There is no reason why you should be satisfied with quality that is inferior to Squibb. But there are a score of reasons why you should prefer Squibb quality above any other.

Squibb's Epsom Salt—free from impurities. Preferred also for taste.

Squibb's Cod Liver Oil—selected finest Norwegian; cold pressed; pure in taste. Rich in vitamins.

Squibb's Castor Oil—specially refined, bland in taste; dependable.

Squibb's Stearate of Zinc—a soft and protective powder of highest purity.

Squibb's Sugar of Milk—specially refined for preparing infants' food. Quickly soluble. In sealed tins.

Squibb's Olive Oil—selected oil from Southern France. Absolutely pure. (Sold only through druggists.)

Squibb's Pure Spices—specially selected by laboratory tests for their full strength and flavor. (Sold only through druggists.)

Squibb's Magnesia Dental Cream—made from Squibb's Milk of Magnesia. Contains no detrimental substance. Corrects mouth acidity.

Squibb's Talcum Powder—a delightfully soft and soothing powder. Boudoir, Carnation, Violet and Unscented.

Squibb's Cold Cream—an exquisite preparation of correct composition for the care of the skin.

Squibb's Bicarbonate of Soda—exceedingly pure; therefore without bitter taste.

Squibb's Sodium Phosphate—a specially purified product, free from arsenic, therefore safe.

Squibb's Boric Acid—pure and perfectly soluble. Soft powder for dusting; granular form for solutions.

Sold by reliable druggists everywhere, in original sealed packages.
"The Priceless Ingredient" of every product is the honor and integrity of its maker.

Ten Mistakes Are Being Made in This Picture

Can You Find Them All?

SOME are the bad blunders in table manners. Some are mistakes in dress. Some are glaring blunders in good form. All are errors that you should be able to find at once—errors that are usually made by those who do not know the rules of good society.

See how many you can find. See whether or not any of them are errors you have ever made. It is embarrassing to make blunders in a public place—humiliating to commit breaches that give others the wrong impression. To know exactly what to do, say, write and wear on all occasions, under all circumstances, is to be well-poised and at ease in the company of the most brilliant and highly cultivated people.

At the Dinner Table

Perhaps you are finding it difficult to find the ten mistakes illustrated in the picture above. Suppose you glance through these questions—they may help you.

What is the proper way to hold the knife and fork? Should the knife be placed on the table, after using, or on the plate? If a fork or knife is dropped, should a man pick it up or allow the waiter to attend to it? What is the correct and cultured way to eat corn on the cob? How should a napkin be used, a finger bowl? Should a gentleman sit to the right of a lady at the table, or to the left?

In entering a dining-room together, who precedes—the man or the woman? Who precedes when they leave the dining-room? How can a person learn to be calm and at ease in a public dining-room? Do you know how to create conversation?

Can You Answer These Questions?

It is not only in the dining-room that one must observe the rules of good form if one wishes to be happy and at ease. There is the ballroom, where problems of etiquette are constantly arising; the hotel, where one can suffer keen embarrassment if one does not know how to register, how much to tip the porter, how to conduct oneself in the dining-room. There are weddings, social entertainments, parties, teas—every day in our contact with men and women we need social knowledge to give us grace and charm.

Do you know what to wear to an afternoon dance? Do you know what a man should wear to an evening dance? How should a gentleman ask a woman to dance? What are the correct dancing positions?

When should wedding invitations be issued and how should they be acknowledged? What should the bride's trousseau consist of? Does the maid-of-honor carry a bouquet of flowers? How should the home be decorated for the wedding? What is the correct order of precedence for the wedding march?

Then, of course, there are the little personal problems that are constantly arising—problems that can be solved only through application of the rules of etiquette. These rules do not represent a fad or a fashion, to pass and be forgotten. They are customs that have come down through centuries of developing culture and that are observed today in the best families of America and Europe. For instance, do you know whether or not a widow wears her first wedding and engagement rings when marrying for the second time? Do you know whether the bride uses her own initials or not when embroidering her linens?

To those who know without hesitation or doubt all the important little rules of good conduct, mingling with men and women brings happiness, success. To those who are constantly in fear of doing or saying the wrong thing, who are constantly embarrassed and ill-at-ease, who commit breaches in etiquette, mingling with men and women often brings unhappiness, humiliation.

What Etiquette Means

You probably know, in your own acquaintance, a man or woman who always seems to do and say the thing that is absolutely correct. That person knows the rules of etiquette. He has a certain calm, well-poised dignity that makes people admire and respect him. He is always welcomed wherever he chances to go, and his friends never think of having an entertainment of any kind without inviting him—or her.

That is what etiquette does—it gives you poise, charm, grace. It gives to you that ease and line of repose of manner that characterize the well-bred person. The French like to call it *savoir-faire*. With it one may possess personality, dignity, cultivation. It means the difference between social success and social failure.

Etiquette should serve as a shield that protects you from embarrassment and humiliation. It enables you to do and say at all times what is correct and in good form. It enables you correctly to issue invitations and acknowledge them, to give an entertainment and attend one, to make introductions and to acknowledge them, and helps you to create conversation and keep it flowing smoothly.

The Book of Etiquette

Two Large Volumes Sent to You FREE for 5 Days

Into two handsome library volumes have been gathered in interesting, authentic form the rules of etiquette that represent centuries of polite association between men and women. Here you will find everything you want to know—from the correct amount to tip the porter in a foreign country to the correct thing to say when you overturn a cup of coffee on your hostess' table linen. Here at last is a book on etiquette in two volumes that will solve for you problems of etiquette that may arise in your contact with the social and the business worlds.

The Book of Etiquette it is called. It is encyclopedic in its scope, but written in as interesting a form as a story. It covers all phases of etiquette—weddings, dinners, funerals, entertainments, dress, correspondence, visiting, introductions, dances—even travel etiquette. There is one complete chapter devoted to the business woman, and another devoted to etiquette in foreign countries. And if you like chess, bridge, billiards, golf, tennis, you will find extreme enjoyment in reading all about their history in the chapter called "Games and Sports."

The Book of Etiquette, complete in two library volumes, will be sent free for 5 days to anyone requesting it. All that is necessary is that you clip the coupon below and mail it at once. This special free examination offer enables you to see the Book of Etiquette, read the table of contents, glance at the illustrations entirely without cost or obligation. You have the privilege of returning the books within the 5 day period and the examination will not have cost you one cent. Or if you are delighted, as we know you will be, you may keep them and send us only \$3.50 in full payment.

Mail the Coupon NOW

We know you will not overlook this splendid opportunity to read and examine the Book of Etiquette in your own home. Remember it need cost you nothing if you are not entirely satisfied with the set. You are not obligated in any way to keep the books. Don't miss this opportunity of having them free for 5 days.

Here's the coupon—clip and mail it at once. Find out why the bride wears a veil, why a tea-cup is given to the engaged girl, why black is the color of mourning. The Book of Etiquette tells you all about it. Mail the coupon NOW. Nelson Doubleday, Inc., Dept. 394, Oyster Bay, N. Y.

NELSON DOUBLEDAY, Inc.

Dept. 394, Oyster Bay, New York

Without money in advance send me the two-volume set of the Book of Etiquette free for 5 days' examination. Within 5 days I will either return the books or keep them and send you only \$3.50 in full payment.

ABINGDON

BOOKS FOR TODAY

THERE are some who write for the future, caring naught for the problems of today. There are some who write for gold, and some for literary fame. In Abingdon Books one meets none of these. One meets the spiritual and social builders of the age—they who write for today.

It is the works of such that live. Their sincerity, unaffected directness, and courageous and constructive spirit have won them a place on the bookshelves of every thinking American man and woman.

Abingdon Books may be obtained at all good book-shops.

AMERICAN CITIZENS AND THEIR GOVERNMENT

By Kenneth Colegrove

Associate Professor of Political Science,
Northwestern University

The needs and interests of the average American citizen and voter have been kept in mind in the preparation of this invaluable textbook in citizenship, which presents a broad survey of the vital factors in our National, State, City and Town government.

Price, net, \$1.75; by mail, \$1.85.

SOCIAL REBUILDERS

By Charles Reynolds Brown

Dean of Yale Divinity School

"A discriminating appraisal of conditions growing out of world-wide confusion and disorder. . . . The book is a vital message for the times. Dean Brown discusses what has long been engaging the minds of the world's greatest thinkers."—*Boston Evening Transcript*.

Price, net, \$1.25, postpaid.

UNITED STATES CITIZENSHIP

By George Preston Mains

"The book gives evidence of protracted study and research. It is well and convincingly written. It is both interesting and educational and is the most complete discussion of present-day American problems from the standpoint of the individual citizen that has appeared in many a day."—*The Patriot, Harrisburg, Pa.*

Price, net, \$2.00, postpaid.

CITIZENSHIP AND MORAL REFORM

By John W. Langdale

"The 'call of citizenship,' with especial reference to moral reform, enforcement of the prohibition amendment, is emphasized. The family, poverty, social hygiene, and industrial relations are among the themes treated in a plain, concise manner."—*Social Progress*.

Price, net, \$1.25, postpaid.

THE UNTRIED CIVILIZATION

By John William Frazer

"This little book of seven chapters is a noble plea for the conversion of society into a Christian civilization. It contains some generalizations about modern civilization, couched in picturesque English and shot from a definite Christian angle."—*The Churchman*.

Price, net, \$1.00, postpaid.

THE CHRISTIAN IN SOCIAL RELATIONSHIPS

By Dorr Frank Diefendorf

The author believes that Christian ideals and principles are to be applied to society in fuller measure; that the Christian religion as a constructive force must work towards the increase of human good, as never before.

Price, net, 75 cents; by mail, 80 cents.

THE ABINGDON PRESS
NEW YORK CINCINNATI

Are You Menaced?

One of the greatest, most formidable menaces to the health of the human race is the "White Plague." In spite of heroic work on the part of societies and individuals, one-third of a million of our people are at this moment slowly dying from its attacks, and a million and a half more are incapacitated by it from productive work. It claims an average of one victim in every family, and develops to some extent at one time or another in nine persons out of ten.

Will You Accept the Challenge?

Can you go on sitting quietly, unprotestingly by and permit this dreaded enemy to secretly or openly rob you of your most precious of all possessions—Health! Can you believe that you or those near and dear to you may always be among the one in ten who are free from tuberculous infection? Or will you face the situation cheerfully, fearlessly, and with determination, and arm yourself with that great and powerful weapon of defense and combat—knowledge? Your most friendly, helpful, cheerful, and trusted guide is now at your service in the just-published

Lessons on Tuberculosis and Consumption

By Charles E. Atkinson, M.D.

Long a resident medical director of sanitariums for diseases of the throat and lungs, the author, who is an acknowledged expert, is acquainted with every phase of the subject. His book, which is simply, clearly and interestingly written, furnishes a powerful household weapon for fighting the "White Plague." It shows you how to prevent this terrible disease, how to recognize its first symptoms, and what to do to regain your health. It gives the most definite and detailed instructions for coping with all phases of the complaint and guides you carefully along every step of the joyous road to recovery.

Are You a Chronic Cougher?

Do you have that constant "hack" that nothing will stop? Are you a frequent sufferer from colds? Are you troubled with sore throat or catarrh? Do you feel run down and tired out all the while, lacking your former "vim" and "pep"? Have you pains in the shoulders, neck or arms? Are you bothered by chills, slight fever, or profuse perspiration without apparent cause? All these may be symptoms of Tuberculosis. If you suffer from one or more of them, take action at once, before the disease becomes too deeply seated to permit of your recovery. Consult a physician, but remember that knowledge on your part is a powerful aid.

Prevention is the Only Adequate Defense

in the opinion of experts. Drugs may temporarily relieve the distressing conditions, but a cure can best be effected by nature. You must know how and what to eat, what to wear, where to live, what work it is advisable to do, the amount of exercise to be taken, in fact all the varied details of a health-producing and disease-banishing régime. You must be sure, moreover, that this information is authoritative and that it has stood the test of experience. Precisely such a guide is now ready for you in "Lessons on Tuberculosis and Consumption."

Col. G. E. Bushnell, Director, National Tuberculosis Association. " . . . a valuable work. The instructions to patients are unusually clear and to the point, and the explanations permit the intelligent patient to really understand the reasons for the advice that is given him."

Edward R. Baldwin, Director, The Edward L. Trudeau Foundation for Research and Teaching in Tuberculosis of the Trudeau Sanatorium, Saranac Lake, New York. "It impressed me as being most useful, containing as it does sound information and instruction both to the tuberculosis patient, his physician, and his friends. The language is non-technical, and it is substantially free from bias, and the advice is evidently the result of ripe experience, personal and professional."

It is Never Too Late to Begin

Dr. Atkinson says: " . . . there is a chance for all persons. Unless the ravages of the disease be extreme indeed, you still have an opportunity to obtain the coveted goal, no matter how many times you have previously tried and failed. Perhaps your methods have been faulty; perhaps you did not keep at it long enough—at all events, with the proper key, the gateway to health can still be opened. There is no disease in which the saying, 'While there's life, there's hope,' applies with greater force. A brave fighting spirit coupled with understanding and persistence in the face of great odds, has overcome the handicap of many a late start."

Every Sufferer, Family, Nurse, and Doctor Needs This Book

Learn what to do to keep Tuberculosis from your doors, how to safeguard your home from its chilling touch. If you are a physician or a nurse, here is a mass of the most useful knowledge, the latest and most up-to-date information, that you will find of assistance at every turn. No one who is ever likely to run the risk of infection (and who is immune?) or who has ever been infected, should fail to own and study this remarkable volume. Do not delay. Cut out and mail the coupon that brings it to you TO-DAY.

New Varieties of Roses

Varieties have increased so rapidly of late years that amateur rosarians will find particular interest in a new and revised (fourth) edition of H. H. Thomas' complete guide book entitled—

"THE ROSE BOOK"

Which goes into minute details as to what is to be done in the rose garden, contains descriptions of varieties, cultivated and wild, gives a monthly calendar of garden operations for the year, and warms the heart of the amateur rosarian with words of encouragement by visions of rose beauty still unattained.

The work is beautifully illustrated with eight direct-color photographs and forty engravings made from photographs of rose gardens and varieties of roses. If you are interested in rose culture, you will find this book both interesting and satisfying.

Crown 8vo. Cloth. 296 pages.
\$3, net; \$3.12, postpaid.

Become a Lawyer

This man earns a big income. The directors of great corporations do not hesitate to pay a substantial price for his services, because he knows how to think *effectively*, how to talk *convincingly*. He is a law-trained man.

\$3,000 to \$10,000 a Year

Today the path to power, whether in business or in public life, lies in a thoro and practical knowledge of LAW. "I would advise any man," writes D. P. Kingsley, President of the New York Life Insurance Company, "who intends to equip himself for the management of large business interests, not to consider his training complete until he has taken a law course." "In looking over the field," writes a prominent Eastern manufacturer, "I find that nearly all the positions commanding a salary of \$10,000 or more are filled by men who have studied law."

Swift Advancement by the Problem Method

Why step aside while other men with no greater natural ability than you advance to positions of influence and power? Right in your own home, under the LaSalle Problem Method, you can study the same cases you would read at the resident universities, master the fundamental principles of law set forth by some of the most eminent authorities in the profession. LaSalle text-books, "lesson talks," lectures, quizzes and examinations have been prepared by leading members of the American bar. You graduate with the degree of LL. B.—possessed with all the advantages of a thoro legal training as a foundation for independent practice or a responsible position with one of the big corporations.

The coupon will bring you complete information, together with particulars of our *convenient payment plan*; also your free copy of "Ten Years' Promotion in One." Mail the Coupon NOW.

Just 15 Minutes a Day

What it will mean to you is told by Dr. Eliot of Harvard in the FREE BOOKLET below

HERE are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside the United States.

He knows something of Science, though he had to stop school at fifteen. He is at home with History, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What is the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching, forty years of it as president of Harvard University, has answered that question in a free booklet that you can have for the asking. "For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me, besides, the way to a vast new world of pleasure." This free

We invite you

booklet describes the contents, plan, and purpose of

Dr. Eliot's Five-Foot Shelf of Books

EVERY well-informed man and woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," how he has so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of Literary Digest is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

Do YOU Know the English Language of To-day?

Are you familiar with the wealth of new words with which our already wonderfully expressive tongue has been enriched since the Great War—even during the past few months? Have you amplified your vocabulary with *all* of them? Can you, on the instant, use them correctly in your conversation and writings? Do you fully comprehend their true meaning when you see them in the current newspapers, periodicals, and books, and in your daily mail—when you hear them from the pulpit, on the stage, and in the

conversation of your friends? Can you define and pronounce them accurately for your children?

Packed in the pages of this wonderful volume—the greatest of abridged dictionaries—you have instantly available the definitions of over 83,000 terms, more than in any other dictionary of its size, including *the very latest words* that have come into our language! *And in addition*, a veritable treasure trove of valuable, authentic information is yours in the new Funk & Wagnalls

Desk Standard Dictionary

A Marvel of Up-to-Dateness, Comprehensiveness, Definitive Clearness, and Accuracy

Think of a dictionary containing all the newest words in our language! With over 83,000 words and phrases defined, explained, pronounced, and traced to their original sources for you! With answers to nearly 400,000 questions in all branches of human knowledge! With the most common meaning given *first*, and all definitions expressed with incomparable clearness! With 1,200 up-to-date, clear pictorial illustrations! With information concerning persons, places, countries, cities, states, battles, treaties, mountains, rivers, etc., such as Lloyd George, Dardanelles, Foch, Chateau-Thierry, Bolsheviks, Venizelos, Senlis, Piave, Argonne! With all the authority and accuracy of the great Unabridged Standard Dictionary from which it is derived! Think of such a Dictionary containing this and *more* information of vital importance, all compressed into 900 pages in a volume less than one and one-half inches in thickness—think of such a source of facts which it behooves everyone to know, and you have pictured Funk & Wagnalls Desk Standard Dictionary!

Supplies Information on Practically Everything That Can Be Expressed in English

It is difficult to estimate the immense cultural value and the great every-day practical utility of the information given in the Desk Standard Dictionary on many thousands of terms in such subjects as politics, business, music, art, literature, law, medicine, agriculture, philosophy, history, science, religion, etc. It includes facts of broad interest upon practically every topic that can be discussed, or that can be expressed in the English language!

This remarkable volume also gives you a thorough, practical, and instructive treatment of synonyms, giving not mere lists of synonymous words but *examples of use in actual sentences*, clearly showing their varying shades of meaning. With these are many lists of antonyms—an exclusive and most helpful feature. It gives you the leading events of American and English history. In it you will find a number of lists, phrases, and tables—coins, astronomy, weights and measures, metric system, chemical elements, presidents, sovereigns of England, laws, prefixes and suffixes, foreign words and phrases, etc.

Splendidly Illustrated In addition to its other features, many of them exclusive, Funk & Wagnalls Desk Standard Dictionary contains numerous full-page illustrations, scientifically correct and unusually attractive, which visualize for you the information sought for, such as the page plates of Agricultural Implements—Bark of Trees—Examples of Architecture—Types of Land and Water Birds—Types of Cattle—Types of Dogs—Food and Game Fishes—Types of Flowers—Types of Horses—Types of Fowls—Common American Leaves, etc.

In the Home

It will be a constant fount of information for the growing boy or girl—of dependable, easily understood explanations of those things which are most often the cause of query and doubt in the mind of youngsters in school. It will also serve as an arbiter and information bureau for the grown-ups. It includes all words in ordinary use and in defining them gives authoritative information in all branches of human knowledge. Its presence in the home is an evidence of care in the rearing of children.

In the Office

It should be in the hands of every stenographer and correspondent. It should be in evidence at the conference table and on the desk of every executive. Big business houses are equipping their employees with it, an order for 125 copies being received recently from a large insurance company. Protect your business documents from error by having this absolutely dependable guide-book at your stenographer's right hand. An error in spelling or punctuation may change the entire meaning of a contract or letter. Supply your employees with Desk Standard Dictionaries NOW.

In the School

It has now established itself as the most easily understandable classroom dictionary published. It will answer more classroom questions with authority than any other dictionary. It indicates pronunciation by the text-book key and the revised scientific alphabet. All information in the book is in one simple alphabetical order. Principal events in American and English history are recorded in alphabetical place. Recent advances of science covered. Thorough synonym treatment, etc.

If You Could See as the Eagle

The eagle, from cloudland, sees the world outspread before him—sees all and misses nothing. The panorama of land and water, mountains, valleys and green woodlands are reduced in scale by the magic of distance, and the whole is made clear to his eye.

RAND McNALLY Black and White Mileage Maps

Give in convenient pocket folder form the information which is most essential to the traveler.

The maps show in plain black and white the cities, the railroads, the counties, and the railroad mileage. The booklet which accompanies each map, gives the locations, the populations, the hotels and hotel rates, the industrial classification and leading products of each city. This information is not readily obtained from any other source.

RAND McNALLY Black and White Mileage Maps are published separately for each State, each Canadian Province and Mexico.

Price 25c each
Sold at Book Stores, Stationery Stores, Newsstands and Hotels.

RAND McNALLY & COMPANY makes you see the world as the eagle does. With maps and atlases is put before your eyes a picture of all countries and lands. You see places that you know only by hearsay. You have locations imprinted in your memory. You read facts that astonish you.

The business man, the importer, the exporter, the maker of wares, can use RAND McNALLY maps and atlases with profit, in innumerable ways. The child and his mother find instruction and amusement in playing the game of exploring. The whole family gets new ideas of the world.

Europe is a new place, a changed place. There are new countries and new boundaries of old ones. Old atlases are useless now. You need new ones to keep up with the times. RAND McNALLY Atlases show all that is changed and new.

THE BONUS BILL IN NO MAN'S LAND

OVER THE TOP WENT THE SOLDIERS' BONUS when the Fordney Bill was overwhelmingly adopted by the House of Representatives. But, to paraphrase recent Washington dispatches in the military language appropriate to the topic, this would seem to be the beginning rather than the end of the real battle. Over the top, yes, but there is a long, dangerous, toilsome advance before the objectives can be reached and taken. Both Senate and President must be won, and in the meantime the bonus is out in the open, in "No Man's Land," subjected to a long-range barrage of editorial criticism, the heavy artillery of Senatorial opposition, the machine-gun fire of committee-room and conference discussion, and all the barbed-wire entanglements of parliamentary amendments and obstructions, to say nothing of purely political pitfalls and shell holes. Will the final objectives ever be reached? The vote of 333 to 70 in the House on March 23

was impressive enough. But the observant Washington correspondents, who are on the spot, ask us to consider the fact that at the last session of Congress the House sent up a bonus measure to a friendly Senate only to have the latter return it to a committee pigeon-hole upon the urgent and special request of President Harding. Bonus history, some of them hint, might repeat itself. In fact, the more one reads the Washington dispatches the more it seems as if almost anything might happen to the bonus. There are predictions of acceptance of the present bill by both President and Senate; of an executive veto over an affirmative vote in the Senate; of drastic amendments necessitating conference-room adjustments and resubmission to the House; of long delay by filibustering or by protracted discussions and repeated postponements on the part of the Senate Finance Committee, which has had charge of the bill since March 24.

The Bonus measure now under consideration, as our readers will remember, contains the Fordney plan for "adjusted service certificates," really bonds on which the ex-service men would be expected to borrow at the banks if they should want the cash inside of three years. Service men, according to John Thomas

Taylor, legislative agent of the American Legion, expect that "the bonus bill will pass and become a law." Or, as Hanford MacNider, National Commander of the Legion, puts it, "any measure which has been twice passed by the Lower House by such overwhelming majorities and once made the unfinished business of the Senate is inevitable legislation."

Senator Medill McCormick thinks the Fordney bill "will pass the Senate without undue delay." Senator McCumber, Chairman of the Finance Committee, is said to hold a similar opinion. And Republican leaders in the House are quoted in the *New York Times* (Dem.) as being confident that the bill will be "accepted by the Senate without essential change before the middle of April." A measure which was carried by so large a vote in the House "certainly has a fair chance of success in the Senate," thinks the *Syracuse Post-Standard* (Rep.). And the *Brooklyn Eagle* (Dem.), *New York Evening Mail* (Rep.), and *New Haven*

Reproduced by courtesy of "Life," New York.

"JOE, DON'T THIS REMIND YOU O' THE NIGHT WHEN THE OUTFIT WAS MOVIN' UP TO THE FRONT IN THE ARGONNE?"

"YES. ONLY—YOU AND ME HAD A JOB THEN, JIM."

—Conacher in *Life*.

Journal-Courier (Ind.), which are against the bonus, agree with the *Manchester Union* (Rep.), which is for it, that the Senate is more likely to adopt the bill as it came from the House than to reject it.

On the other hand, Mr. Lewis Seibold, of the *New York Herald*, declares that "if a vote were taken in the Senate Finance Committee to-day the Fordney scheme would be beaten." Besides,

"Leading members of both parties who carefully checked up the Senate do not appear to entertain the slightest doubt that the haphazard bonus venture of the Ways and Means Committee will meet an inglorious defeat whether the Finance Committee throws it into the discard or reports it.

"One thing is quite certain: No bonus bill will be 'railroaded' through the Senate. There are already enough votes lined up to achieve its defeat through a filibuster which could continue without parliamentary restriction until the end of the session. One Democratic Senator who is opposed to the whole scheme to-night express the opinion that 'the bonus is as dead as Hector's pup.'"

Another Washington correspondent, Mr. David Lawrence, who writes for the *New York Evening World* and other papers,

finds that a tacit understanding seems to prevail in the Senate, "that by one parliamentary maneuver or another, something will delay the passage of the bonus." We are reminded that "it was the Senate which last summer blocked the bonus bill and

probably, upon more words of warning from the White House, the measure will be set aside until the finances of the Government are in better condition." The *New York Evening Post* (Ind.) concludes editorially that "it is no more to be expected that the Senate will give the bonus bill a moment's serious consideration than that President Harding will remove Mellon and make Fordney Secretary of the Treasury." Mr. Hearst's *New York American*, which is a zealous advocate of bonus legislation on general principles, does not believe that the Fordney bill, as it stands, can possibly pass the Senate. The *Jersey City Journal* (Ind. Rep.) sets down two reasons for this:

"First, the President would have to veto the bill, if the Senate did pass it, or else he would altogether reverse the course of action he has led the country to believe he would take. Second, the Senate is not in such fear of the 'Soldier vote' as the House is. All the Congressmen come up for election next fall. Only a third of the Senate goes out of office. Therefore, the Senate may be expected to join the President in a demand that any bonus bill it approves must also state the means of payment."

This brings us to the question of a Presidential veto. The Senate Finance Committee is said to be giving much thought to this possibility. Chairman McCumber wants "to make sure that whatever is passed by Congress will become law and will not meet a veto." President Harding has for the most part contented himself with repeating his statements that all he can suggest is a bonus with a sales tax or else postponement of bonus legislation. Such well-informed correspondents as David Lawrence, Mark Sullivan of the *New York Evening Post*, Harry N. Price of the *Washington Post*, and unnamed writers of the *New York Times* and *New York World* say they were given to understand at the time of the President's Florida trip last month that he would veto such a bill as that enacted by the House.

Congressman Pou, a Democrat from North Carolina, and Congressman Snyder, a Republican from New York, both asserted their belief during the House debates that if the Fordney bill ever reached him, the President would certainly veto it. These sentiments, it may be said, are shared by such conservative dailies as the *New York Herald* (Rep.) and *Journal of Commerce*,

Chicago Journal of Commerce, and *Buffalo Commercial*. Others do not expect a veto. Republican leaders in the House told a correspondent of the *Detroit Free Press* at the time the Fordney bill was adopted of their confidence that if the bill were to pass the Senate in the same form in which it passed the House, the President would sign it. Mr. Mondell, Republican floor leader in the House, can not believe that the President would veto the bonus bill. In the first place, he says, as quoted in the *New York Tribune*, "no one knows what the bill is going to be by the time it is ready for his signature." And Mr. Mondell adds: "I don't think there is anything in our bill that is not compatible with the President's views." Mr. Markham, Washington correspondent for the *St. Paul Pioneer Press*, also emphasizes the confidence of Republican pro-bonus leaders "that the President will not veto the measure when it reaches him, despite White House intimations to that effect. Such action by him, it is felt, would prove disastrous in the Congressional elections and the Administration doesn't want to lose control of Congress." There is nothing in Mr. Harding's record, remarks the Democratic *Louisville Courier-Journal*, "to warrant confidence that he would veto any important measure sent to him by a Republican Congress." Another Democratic paper, the *New York World*, expresses the same opinion:

"Whatever Mr. Harding's personal opinions may be, it is always improbable that he will veto any bill that can command the votes of a Republican majority in both branches of Congress. He still thinks that his chief duty as President is to be a conciliator, and there is no conciliation in antagonizing a majority. The very fact that a bonus bill, however vicious it might be, was passed by Republican votes would help to sanctify it in Mr. Harding's eyes. As between a Republican Congress and Secretary Mellon, he will not break with Congress."

Thus the bonus bill "is embarked upon an uncertain course,

sent to the Senate with the blessings of a House wholly in doubt as to whether the Upper House ever will concur, and warned in advance that there is as much chance the President will veto it, if it finally passes the Senate, as that he will approve." So

remarks the Washington correspondent of the *Cleveland Plain Dealer* (Dem.), who further inclines to the opinion, shared by several other press writers in Washington, that the measure is now due for a long sleep in the Senate. As a *New York Herald*

dispatch quotes the Senatorial way of putting it, "mature consideration will be given a bonus bill without haste or panic." It will be a long, long time, concludes Mr. Billings of the *Brooklyn Eagle*, "before the bonus will find a place on the Senate calendar." As the Senatorial situation is envisaged by this Washington correspondent:

"The treaties have the right of way from now on; the tariff is next, and then all the annual appropriation bills which must be put through before June.

"If there is no summer session of the Senate, the bonus may not be taken up before next fall, in which case it would be of little value to the Congressmen in their primary fights. One-third of the Senators come up for election and they may strive to hasten the progress of the measure in order to turn it into campaign material. However, if the bill drags beyond election day, it is almost certain to languish without any vote until next winter's session.

"With its arrival in the Senate the bonus bill takes on a new aspect. It will be turned loose when it comes from the Finance Committee and there will be no gag rule to keep the Senate members from expressing their views about it. Nor will it be bandaged about with rules to ward off amendments and internal alterations.

"The tenor of the Finance Committee of the Senate is as yet problematic. This committee, as shown by its record on the Tariff Bill, can take more time to delay a bill for tinkering than any other in the whole Congress.

"The bonus bill will necessarily be held up in the Finance Committee until that body completes the tariff. The tariff has been before the committee for almost six months and it is not expected that the measure will see light on the Senate floor before next month. If the Finance Committee holds hearings on the bonus before the middle of April or the first of May, the soldier gift boosters will be well satisfied.

"The outlook for the bonus from its present status, with the passage of the House to its credit, to its ultimate enactment, is this: Even if the Senate passes it, there will be conferences between Senate and House committees to iron out the differences which are bound to arise between the two bodies. Then at the very end of the path stands the possibility of the veto from the President, in which case, if the bonus supporters have not by then lost faith, the whole process will have to be repeated to pass it over the President's disapproval."

In the end the Senate may pass a bonus bill, but, declares Mr.

H. P. Stokes, of the *New York Evening Post*, "it won't pass this bonus bill——"

"Senator Smoot and his friends will try to tack the sales tax on it. Senator La Follette and his friends will try to tack the excess profits tax on it.

"There will be a strong effort to make it more of a pay-as-you-go measure. Whatever the outcome of this pulling and hauling may be, no prophecy is certain save that the bill won't be adopted as it stands."

The one "certain and wholesome prospect," in the opinion of Mark Sullivan, also representing the *New York Evening Post*, "is that whatever the outcome we shall have in the Senate a real debate on the merits of the bonus on principle." At present, explains Mr. Seibold of the *New York Herald*, there are three groups in the Senate to be reckoned with:

"The strongest in number at the present time is in favor of a bonus, but not united as to the form. Some members of this group are in favor of a sales tax, others support a cash bonus plan to take in all service men, and a third is in favor of using the foreign debt.

"The next most important group is that which will follow the lead of the Administration. The members of this bloc will rally to the support of a measure which the White House favors or with equal impartiality will vote against any bonus bill.

"The third group, which is almost as strong as that favoring the bonus, is one unalterably opposed to a bonus in any form, and quite as numerous and as well equipped to kill any measure by obstructing its passage if such a course is decided on."

With so many experienced observers forecasting a long delay for bonus legislation, the Democratic *New York Times* jumps to the conclusion that Mr. Harding's "present plan is apparently to have the bonus bill slowly smothered to death in a Senate committee room." Other papers like the *Washington Star* (Ind.) and *Troy Record* (Rep.) seem to incline to the opinion that the Senate will modify the present bill to satisfy the President's require-

ments and that the House will accept those changes. And the Republican *Boston Transcript* agrees that this course will be taken, and should be taken, in view of the pledges made by the party and by its candidates during the last campaign.

"THE LAST LAP."

—Chapin in *America At Work* (St. Louis).

THE TREATY TRIUMPH IN THE SENATE

THE UNITED STATES SENATE'S "well-nigh ingrained habit of treaty-wrecking," as one paper remarks, was seriously disturbed on March 24, when the Upper House, by a vote of 67 to 27, a margin of four over the necessary two-thirds, ratified the Four-Power Pacific Treaty, the foundation-stone on which all the other Washington Conference treaties rest. The *New York World* recalls John Hay's prediction, made a quarter of a century ago, that no important treaty would again be ratified by the country because of the two-thirds rule; and the *Boston Herald* reminds us that "among our national possessions we have a treaty graveyard, with nearly a hundred headstones sacred to the memory of ideas in foreign policy which Presidents have carefully worked out with other nations, only to see them killed in the Senate." Pro-Wilson Democratic editors still speak with emotion of the Senatorial treatment accorded the Versailles Treaty and the League of Nations.

Hence the Senate's ratification of the Conference treaties is hailed by the *Philadelphia Evening Public Ledger* as a "novel, startling and infinitely refreshing" spectacle which "establishes the welcome fact that the highest legislative body of the nation is actually capable of cooperating with executive policy and of serving the best interests of civilization." The Four-Power Treaty, which incidentally abrogates the Anglo-Japanese Alliance, is described by the *New York Tribune's* Washington correspondent as "the culmination of President Harding's efforts to assure peace in the Pacific by providing that questions likely to cause friction be threshed out in conference by the four great Pacific Powers." It was regarded as the necessary forerunner of the treaties reducing naval armaments, restricting the use of submarines and poison gas in warfare, and protecting the integrity of China. This basic treaty, entered into by the United States, France, Great Britain and Japan, provides in Article I that the high contracting parties shall respect one another's rights "in relation to their insular possessions and insular dominions in the regions of the Pacific Ocean," and that in case any controversy between any of these four nations involving these rights is not settled satisfactorily by diplomacy, the high contracting parties shall be invited "to a joint conference, to which the whole subject will be referred for consideration and adjustment." In Article II it provides that, in case these rights are threatened by the aggressive action of any other Power, "the high contracting parties shall communicate with one another fully and frankly in order to arrive at an understanding as to the most efficient measures to be taken, jointly and separately, to meet the exigencies of the particular situation." Article III provides that the agreement shall remain in force for ten years, after which it

shall continue in force "subject to the right of any of the high contracting parties to terminate it upon twelve months' notice." Article IV provides that on the ratification of this treaty by all four Powers the Anglo-Japanese alliance shall terminate. Of the numerous reservations offered in the Senate only one was adopted. This reads: "The United States understands that under the statement in the preamble or under the terms of this treaty there is no commitment to armed force, no alliance, no obligation to join in any defense."

"The treaty-killers have tried and failed. The great results of the Arms Limitation Conference will stand," exclaimed the *Philadelphia Public Ledger* when the vote on this pact was announced. The American people, declares the *Providence Evening Bulletin*, recognize the agreement as "a forward-looking document, a torch-bearer to peace, not only in the Pacific, but throughout the world." Before its ratification it had been before the country for over three months, and under fierce fire in the Senate for a month, yet in all that time, remarks the *New York World*, "just one real defect has come to light—the failure to provide for the admission of a fifth Power to a conference where its interests are at stake." "This treaty is one of peace, and those who have opposed it have done their level best to promote warfare," declares the *Philadelphia Inquirer*; and the *Cincinnati Times-Star* avers that "defeat for the Four-Power Treaty would have been one of the tragedies of the world history."

While the Four-Power Treaty was still before the Senate THE LITERARY DIGEST polled the leading newspapers of the country on the subject. In 803 replies 703 were for ratification, 66 were against ratification, and 14 were non-committal. These replies represented 47 of the 48 States. A canvass of popular sentiment made by the Committee for Treaty Ratification, of New York, resulted in the following report:

"(1) The church forces of the nation appear to be practically a unit in support of the treaties as they stand, as expressing the moral judgment of the people.

"(2) The civic organizations—commercial, economic, social, and political—have expressed themselves with similar unity.

"(3) The educational institutions have been unhesitating in their support and, as far as we know, without any dissenting voice.

"(4) The outstanding and representative bodies of women have rendered vigorous testimony to the same import.

"(5) The organizations of labor have expressed themselves in hearty accord with the favorable action of the American Federation of Labor.

"The reports of opposition are so negligible as to make it clear to us that the people are more significantly united on the proposals of the Conference on Limitation of Armaments than they have ever been on any similar issue."

The Four-Power Treaty's ratification, says Judge Gary, chairman of the United States Steel Corporation, "will have a decided influence in accelerating and establishing a return to business activity." It foreshadows, says a Washington correspondent of the *New York Times*, "the disintegration of that group of Senators of both parties known as 'irreconcilables.'" In support of the claim that the "bitter-enders" are losing ground, his dispatch goes on to say:

"Evidence is accumulating of a drive against irreconcilable tendencies in international affairs in States which have Senators devoted to a policy of American isolation. A change in national sentiment in this regard, granted that the great Republican victory of 1920 was a repudiation of the League of Nations, appears to have taken place since last November.

"A drive has been begun in California against Senator Hiram W. Johnson, who is a candidate for renomination this year. His term will expire next March. The significant part of this drive is that it is being conducted by old friends and supporters of Mr. Johnson in the Republican party and the former Progressive party. It is based almost entirely if not entirely, on the attitude of Senator Johnson toward the Four-Power Treaty."

Other dispatches predict that the victory of the Washington Conference treaties will play a leading part in the Congressional campaign this fall, as it has greatly enhanced President Harding's prestige. At the same time we are reminded by Republican as well as Democratic editors that the Four-Power Treaty would not have passed but for the support of the twelve Democratic Senators who added their votes to those of the fifty-five pro-treaty Republicans.

The other three Powers "either have ratified or will ratify with enthusiasm," says the *San Francisco Chronicle*. With the ratification of this treaty, predicts the *San Francisco Argonaut*, "we may come to a point where we can look forward to a cessation of hate as a policy." "It would be a grand thing to wake up some morning and feel we did not have to hate anybody that day," remarks this California weekly, which goes on to say:

"Mr. Johnson has made more or less political capital out of his Japanophobia, but there are signs that it is beginning to peter out. The treaty fight ought to prove about the last of it.

"This does not mean, of course, that we should begin right away to manifest snuggling affection for the subjects of the Mikado. But having in effect agreed to restrict military operations each to its own side of the water, there is no reason remaining why the two countries may not for the time being, and perhaps for many years to come, confine their interchanges to peaceful diplomacy and trade. . . .

"So that we may expect hatred of Japan to subside little by little and the two peoples to get into a frame of mind which will enable them to avail themselves of each other's arts and ideas without keeping knives up their sleeves."

Turning to the opponents of the treaty, we find them defeated but unconvinced. In an editorial headed "England Recaptures Her Colony," Mr. Hearst's *New York American* denounces the Four-Power Treaty as an "alliance of war" "incomparably more perilous" than the League of Nations:

"The Senate voted for an alliance not with all the nations of the earth like the League of Nations, but an exclusive alliance to guarantee the possessions and the indefinable rights of the three aggressive imperialisms of the earth, Britain, France and Japan. They are the same three imperialisms for whose sake we have just sacrificed twenty-six thousand millions of treasure—some of which may some day be returned to us—and a hundred thousand young American lives which can never be returned. . . .

"The Senate commits the country to an exclusive alliance designed to protect the aggressions of Japan against our friends, Russia and China.

"It is an alliance to prop up the tottering British Empire.

"It is an alliance so threatening that to-day it is driving together, for self-protection the brains of Germany and the brawn of Russia, those two republics gasping for the breath of life.

"Against these white men the Senate votes that our American boys shall march shoulder to shoulder with the yellow butchers of the Mikado.

"The Senate has signed a check we never authorized it to sign. We will stop payment at the bank.

"The process of the people's education on this Four-Power Alliance goes forward. These Senators will one day wish to heaven they had observed the gathering storm before embarking in the frail boat of this alliance.

"Yesterday the Senators failed us, opened the gates, let in the

SHIPS THAT PASS IN THE NIGHTMARE.

—Harding in the *Brooklyn Eagle*.

foreign foe. Next November and the succeeding November WE pass judgment on them."

In *The Searchlight* (Washington) Lynn Haines maintains that "the Four-Power Pact invites war." He argues as follows:

"It is an alliance—a war-breeding alliance. No reservation or evasion can possibly alter the intent and character of the compact.

"It enlarges the Anglo-Japanese alliance by bringing into it France and the United States. . . .

"In a world of wars the outstanding lesson of history is that an alliance is always followed by a counter-alliance, with military conflict as the inevitable result.

"This pact unites Great Britain, Japan, France and the United States in an imperialistic group. Self-interest will force Russia and China, and probably Germany and India, into an antagonistic combination.

"Only a miracle can prevent a world-wrecking upheaval in the Pacific, if this pact is consummated."

Many pro-League papers hail the ratification of the Pacific Pact as a step toward American participation in the League of Nations. "It is a long step toward the larger association that is essential to the maintenance of peace throughout the world and to which we must come," avers the *St. Louis Globe-Democrat*. "It establishes a limited League of Nations in relation to problems in the Pacific," remarks the *New York Evening World*, and—

"It brings the United States into an international partnership in which this Nation is certain to gain experience and confidence of a sort that will gradually allay American fears of larger co-operation in the safeguarding of peace.

"It means that this Nation is being irresistibly impelled toward the bigger rôle in the world's affairs for which it is destined.

"The first step is the hardest. At last we have taken it."

PUTTING THE TURK BACK IN EUROPE

KICKED OUT OF EUROPE two years ago by the Allies, the Turk is personally conducted back, tho with "less baggage than usual," it is said, and with "veiled apologies" on the part of the Allied Foreign Ministers, whose proposed revision of the Treaty of Sèvres was offered on March 27th to Greece and to the Turkish Government at Constantinople and the Nationalist Turkish Government at Angora. The return of this "brutal, corrupt, and archaic organization," known as the Turkish Government, says the *Philadelphia Bulletin*, means that the Armenians are "left to the protection of the League of Nations, the Turks are restored to Constantinople, and the Greeks

Cession of the city and province of Smyrna to Turkey.
Retention of Adrianople by the Greeks.
Equal division of Thrace between the Greeks and Turks.
Demilitarization of the Gallipoli peninsula under Allied guarantees.
Control of the Dardanelles by an international commission.
Recognition of the financial independence of Turkey.
The Ottoman debt to be maintained and confirmed under reserve.
Reestablishment of Turkish nationality and Turkish authority, with Constantinople as the capital.

"Greece is the chief sufferer from this change of front on the part of the Allies," thinks the *New York Tribune*:

"She was to be the Allied agent for the execution of the original Sèvres Treaty. She cast aside that rôle when she recalled Constantine. He sought to take by force even more territory than had been assigned to Venizelos. He has nearly bankrupted Greece by two expensive campaigns for Angora. Now he loses even Smyrna and a part of Thrace. Greece shrinks back to the limits of a minor Near Eastern Power."

Greece and Turkey have been at war for many long months. Greece was given a nominal foothold in Smyrna by the Treaty of Sèvres but, notes the *New York Globe*, "she has enjoyed no rights under this treaty that she did not enforce by her own bullets and bayonets." Under the heading, "A Sordid Truce," *The Globe* explains further:

"The terms the Allied Governments have offered Turkey represent a very considerable modification of those which they proposed to inflict upon her two years ago. At that time it was intended to eject the Turk from all but a nominal foothold in the holy city of Constantinople, and in Asia Minor to restrict him to the not very desirable hills of his native Anatolia.

"The Turks, represented by Mustapha Kemal and his Anatolian Nationalists, demurred violently at these terms, and during nearly two years practically all that the Allies have done to enforce them has been to encourage the Greeks to attack Kemal. Nor were the Allies united even in this policy. French arms are said to have gone forward to Kemal during the hostilities, and some months ago the French concluded an economic treaty with the Nationalist leader. The Greeks continued to fight for the region around Smyrna, which the treaty had put under their control, and for as much more of Asia Minor as they could conveniently conquer."

"The terms proposed by the Allies," in the opinion of the *Washington Post*, "indicate a back-down to the Turks and a delivery of Christian peoples to the barbarians," and it adds:

"All these are vicious proposals, which will plague civilization later if permitted to become parts of the proposed peace treaty. The Turks have no right or title to remain in any part of Europe. They forfeited the right to exist as nation in any part of Christendom when they violated the common laws of humanity. The placing of the Christian population of any part of Thrace under the Turks is a reversion toward barbarism, and merely invites massacres which will lead to war.

"What has become of Mr. Lloyd George's splendid declaration of 1917, when he pledged the British Empire and its allies to the task of ridding Europe of the Turk? The House of Commons rang with applause when this pledge was made, and British prestige throughout the world was greatly enhanced. The work of the British armies in Palestine and Mesopotamia helped to destroy Turkish power in Europe. Finally the crescent was hauled down from the holy towers of Jerusalem. Constantinople passed from the control of the defilers of Christian sanctuaries. Now, for the sake of quieting anti-Christian agitation in British dominions, it is proposed to surrender large Christian populations to Turkish rule, both in Europe and Asia Minor."

The Allies fear that war in Asia Minor will break out afresh in the spring, we are told by the *New York Herald*, which

From the New York "Evening Post."

WHERE TURKEY AND EUROPE NOW MEET.

The heavy black line shows the zone around the Dardanelles, which would be demilitarized under the terms modifying the Sèvres treaty with Turkey, now proposed by the Allied Foreign Ministers. Greece would keep Adrianople and the Allies would hold the Gallipoli Peninsula on the internationalized straits. Turkey would regain part of Thrace and hold Constantinople, which would be defortified, and would also regain Asia Minor, including Smyrna, now held by Greece. Armenia would be placed under the protection of the League of Nations, as a Turkish province.

are expelled from Smyrna." "It is a cynical story," remarks the *New York World*; and "a settlement which leaves everybody dissatisfied," in the view of the *New York Times*. The reason for it all, according to the *New York Tribune*, is that "Great Britain has succumbed to Moslem pressure" from India, and the *Newark News* tells us "the Turk is to be brought back to Europe because the Allies haven't the physical force and moral courage to throw him out and face the consequences in Moslem lands."

If the Allied proposals are agreed to by Greece and Turkey, the *New York Herald* points out, that Turkish sovereignty will remain over Asia Minor from the Persian, Caucasian, and Mesopotamian borders to the Mediterranean and Aegean Seas, while in Europe the Turk goes back to the Enos-Media line of the end of the Balkan War. The Greeks will retain Adrianople and the Gallipoli Peninsula; and the Armenians will continue to be under Turkish sovereignty, with protection by the League of Nations. As summarized by foreign correspondents, the provisions, all contingent upon the cessation of warfare in Anatolia, are as follows:

represents the Greeks as weakening, while the Turks, particularly the forces under Mustapha Kemal, grow stronger. "It was to bring hostilities between Greece and Turkey to an end that the Foreign Ministers met at Paris," points out the *Kansas City Star*. "The fear that unless concessions are made to Turkey they will have a holy war on their hands," was another reason for calling the conference, declares the *Pittsburgh Gazette-Times*.

"Conditions have been too much for England," thinks the *Philadelphia Public Ledger*. "She finds both France and Italy against her. To save India she must compromise. To avoid further trouble in Egypt, she must make such terms as she can." "In this instance, as in a hundred others, the Turk has kept his foothold in Europe through the division of the European Powers," notes the *Boston Transcript*.

But altho many seem to think Turkey has got much, considering her deserts, the Turkish view is markedly different. Thus the only Turkish language newspaper in the United States, *Ham-sharey* (New York) strenuously declares that Turkey is more sinned against than sinning, and proceeds:

"Such propaganda utterances as 'Turkey is a cruel nation,' 'the poor Christians,' 'massacres and the minorities,' and a hundred others are dished to the American public along with the actual news. These slogans are either all lies or half lies.

"At the bottom of this propaganda are two main causes, viz., the difference in religion and customs between Turkey and the Christian nations, and the policy of exploitation and colonization which those European nations pursue toward Turkey, and which meets with strong opposition from the Turks.

"We are sure these treaty conditions will not bring peace. The return of Smyrna, which is of utmost importance to the Turks, is only an indication of the retraction of the European wrong policy; on the other hand the retention of Gallipoli, Kirkilis, and Adrianople by the Greeks will anything but hasten peace to the Near East.

"If Europe does not completely rescind its policy of exploitation and colonization we are of the opinion that peace will never reign in Turkey."

Among the Greek language press of the United States we find the *Chicago Greek Star* predicting that the Greek Government will be unable to accept the Allied proposal, and that "an answer will come from the frontier of Smyrna just as vigorous as the answer given by the Spartans when they were fighting on the battle-fields of Thermopylae," for,

"Smyrna is the Acropolis of ancient Greece. It was built by Antigonos and Lysimachus, generals of Alexander the Great. Smyrna was given by the united support of the Allies to Greece in accordance with the Sèvres Treaty, with full authority to govern the city and to carry on the war against Mustapha Kemal. If the Allies permit Turkish sovereignty in Smyrna then the Treaty of Sèvres is nothing but a scrap of paper and this new treaty, if it goes into effect, may be treated likewise. Greece went through a revolution during the war in order to cast her lot with the Allies, and if the Allies insist in depriving Greece of liberated territories there is but one answer, that European diplomacy has not more value than the German mark."

In the *National Herald*, a Greek liberal daily of New York, we are told that the Treaty of Sèvres "limited Turkey to her natural boundaries and demilitarized her." In other words it "rendered Turkey incapable of massacre and kept her away from countries and positions in which international fears and disputes are centered." As for Greece, this treaty gave her "countries that are hers by history, tradition, and right." Now, we are informed:

"Greece is literally butchered by the diplomats of Europe. They attempt to take from us and give to Turkey a great section of Thrace, of which we took military possession after the Neuilly and Sèvres treaties were concluded, and which we annexed by law, that is to say, by act of our internal law, which act was recognized internationally. The taking from us of a part of Thrace is mutilation of the Greek state and violation of its sovereign rights."

A pro-Constantine Greek daily, *Atlantis* (New York), declares that from the time of its inception at San Remo, the Sèvres Treaty was "so objectionable to the French and the Italians that the then Italian Premier, Mr. Orlando, declared outright it was an instrument of war rather than a treaty of

peace, while the other Allies, who shared his opinion, failed to ratify it in the last three years." Therefore this newspaper concludes:

"The Sèvres Treaty was not written in order to be enforced, but simply to meet temporarily a situation, which the Allies were facing at that time. When the Allies were signing the treaty that none of them has ratified, they held to the belief that the Greek Army would be beaten should it attempt to enforce the provisions of that document against the recalcitrant Nationalist Turks. There was no other way for justifying a modification of that treaty, and there could be no other. Greek defeat was the only foundation on which the Allies built their pro-Turkish policy. And when Greece won, and became the master of the situation in Asia Minor, when the Greek troops occupied and held, as they still hold all the key positions of the Anatolian railway, then the Allies had no other way out of their difficulty, but the one they chose at their latest meeting. . . . Such a decision however is not one that is likely to be accepted by the populations whose most vital interests are affected by the diplomats of Paris; and from the moment the Greeks have decided not to submit to the fate of the hapless Armenians, everything may yet be saved."

A BETTER UNDERSTANDING WITH MEXICO

RECOGNITION OF MEXICO by the United States has been brought much nearer. American editors generally agree, by the personal correspondence which President Harding and President Obregon have kept up for the past year. Mexico's recently announced decision to resume payment of interest on her foreign debt, regardless of whether she is recognized by the United States, and her express willingness to pay the claims of foreign residents for damages suffered during the revolution, also indicate that "skies are clearing to the Southward," as one editor puts it. Moreover, conversations between

HE'S BEEN HOLDING HIS POSE A MIGHTY LONG TIME.
—McCarthy in the New Orleans Times-Picayune.

the American Chargé d'Affaires at Mexico City and the Mexican Minister of Foreign Relations are said by Secretary of State Hughes to be proceeding steadily, and the Mexican Government has recently issued a decree relieving American property owners from payment of tax delinquency penalties.

The one point of difference between the two Executives, it is said, is the desire of President Harding to make the formal recognition of Mexico coincident with the signing of a treaty pledging protection for American rights and properties in Mexico, whereas President Obregon would like the recognition to precede the treaty. If President Harding can find a way out of the dilemma, "he will render a service to this country and to Mexico the value of which it would not be easy to exaggerate," thinks the *Dallas News*. "Obregon has been resting as easily as possible between the devil and the deep blue sea," notes the *Baltimore American*. "If he signs a treaty in advance of recognition he chances his own overthrow, and if he does not sign he prevents American recognition—unless Mr. Harding and Mr. Hughes see the matter in a new light." As we are told by the Washington correspondent of the *New York Tribune*:

"The position of the United States has long been that Mexico must make the next move toward recognition. Certain very definite proposals were addressed to the Obregon Government at the outset of the Harding Administration, and the American State Department has not altered these demands. The assurance has been officially conveyed to President Obregon, however,

that this Government would welcome the granting by Mexico City of the guaranties desired by the United States."

"Whatever ordeal the Obregon Administration had to undergo, he has emerged from it, and this has created a renewed impression of stability," declares the *Buffalo Times*. "It is not difficult to understand Mr. Obregon's position," thinks the *Christian Science Monitor* (Boston): "he has not yet found it possible to win the complete confidence of the Mexican Congress, in which there are many members not in sympathy with his policies." For this reason, believes the *Detroit Free Press*, "the United States ought to be the quickest to act liberally, because Obregon really deserves encouragement in the difficult position he holds."

Article XXVII of the Mexican Constitution, which, by reserving to the State all subsoil minerals, threatened the rights of American owners of oil-wells, has influenced the American attitude toward Mexico as much as anything, it is said. The Mexican Supreme Court already had rendered one decision favorable to Americans in this matter, but we are told that five decisions are necessary to establish a precedent. President Obregon, we are informed by the *New York Globe*, also has made an effort to get from the Mexican Congress authority to abrogate Article XXVII, and in the meantime taxes on oil have been greatly decreased and attempts to confiscate property halted. Another good augury, as interpreted by the *New York Tribune*, is that a new Mexican Congress will be elected in June, and this is expected to be favorable to Obregon. At present, we read in the *Philadelphia Inquirer*:

"It must be understood that Obregon is not entirely his own master. He has Congress to consider and the sentiment of the people, who are very sensitive on any point which, as they feel, involves the national honor, and by whom anything looking like an unpatriotic surrender to the superior strength of the United States would be extremely ill received.

"Such is the easily credible explanation of Obregon's unwillingness to comply with the State Department's terms, and the question which awaits an answer now is whether a way can be found of propitiating Mexican punctiliousness without endangering those substantial and important interests which it is the duty of the Washington Administration to protect."

But it appears that there are several obstacles to be overcome before the Obregon Administration is recognized. According to the *New York Globe*, "it is unlikely that the United States will recognize Mexico in the near future." Continues this paper:

"Technically we stand on the demand that the property rights of American citizens in Mexico must be specifically protected in a preliminary treaty. Obregon replies that he has no legal authority under the Constitution to sign such a document.

"Surface indications are that the Obregon Government has made its peace with the American oil interests, but has still to do so with American bankers, who deplore the policy of the Obregon Government toward the national debt, which amounts to something over \$250,000,000."

The *New York Journal of Commerce* is not in favor of recognition of Mexico because "the present Constitution permits the confiscation of valid, preexisting property rights," and thus "disregards international law." This paper tells us that—

"The value of American interests in Mexico has been variously estimated. Under the Diaz régime at least \$150,000,000 of American money went into Mexican railroads under concessions made according to law. The great oil business of Mexico owes its existence primarily to American enterprise. Of the \$300,000,000 invested in the oil-fields, \$200,000,000 is American, and some \$200,000,000 of American money has gone into mining in Mexico. At least \$50,000,000 of American money have been invested in land in Mexico, and as much more in industrial enterprises, public service corporations and banks. Mexican laws prohibit foreigners from owning real estate anywhere unless they agree never to appeal to their home governments in case of trouble.

"Thus, the most superficial survey or the whole depressing situation emphasizes the necessity for refusing to grant recognition to any Mexican Administration until a written agreement has been signed providing, not in general language, but specifically and in detail, for the full protection of American lives, liberties and properties."

TO PUT OUR NAVY INTO THIRD PLACE

A LOUD AND ALMOST UNANIMOUS PROTEST is rising from the newspapers against reducing the personnel of the United States Navy to a figure lower than the 90,000 named by President Harding. The House Naval Affairs Committee is willing to compromise at 86,000, while the House Subcommittee on Appropriations would reduce the personnel to 65,000 and commission only 135 of the 541 members of the June graduating class at Annapolis. Representative Kelly of Michigan, chairman of the House Subcommittee, declares that the committee's estimate provides for manning 18 battle-ships and all the auxiliary craft necessary to make up a fleet. He says the figures which were used as a basis for the committee's calculations were obtained from naval authorities. Secretary of the Navy Denby, however, maintains that even the "Treaty" Navy requires 96,000 officers and enlisted men. "The Navy already is undermanned," reports the Washington correspondent of the *New York Times*, "and any curtailment of its enlisted strength would necessitate putting many ships out of commission, thus destroying the effort of the Washington Conference to establish a fixt relation of the fleets of Great Britain, the United States, and Japan." Great Britain and Japan, we are told, intend to keep in commission all the ships left to them under the Washington naval treaty, whereas the United States, if its naval personnel were cut to 65,000, "would not only go to third place in active naval strength, but probably would sink to the position of a second-class naval Power."

"It is bad policy to set up an international capital ship ratio and an international standard of strength, and then to deliberately live far beneath the standard," avers the *New York Tribune*. "The ostensible motive is economy—a very desirable thing at this time—but there is such a thing as false economy, and this is an illustration of it," asserts the *Philadelphia Inquirer*.

"National safety," contends the *Oshkosh Northwestern* and a dozen other papers, "requires that the country shall be prepared against any emergency, even if the threat of war shall be reduced to a minimum. An effective Navy still is required, the same as before the Washington agreement, and it is just as important as ever that the personnel of the Navy shall be kept at a standard of real efficiency." "Moreover," points out the

Detroit Free Press, "Great Britain, Japan, France and Italy have a right to expect us to keep in fit condition, prepared to do our full part toward making the new peace program 'go over.' For as soon as the Arms Conference treaties go into effect, the American fleet becomes one of the major factors in maintaining world equilibrium." As "Quarterdeck," a former Rear Admiral,

writes in the *New York Tribune*, the Navy Department asks for only enough men to man the ships left us by the Washington Conference:

"The policy of the Navy Department at this time is perfectly reasonable. It recognizes the need of economy. It asks for sufficient men to man the ships left to the United States by the Conference—no more. The Department has promised to place out of commission all ships except those that belong to the fighting line. In fact, many destroyers, submarines and other fighting craft will be placed in reserve, with crews so small that they can with difficulty be saved from serious deterioration.

"Aside from the battle-ships and destroyers, an increasing number of men and officers will be absolutely necessary for submarines and air forces. Even the layman knows that a submarine with untrained men is a death-trap. Every man on board must be skilled. Constant training is imperative. The same may be said of air forces. Training and experience are vital."

"Our Navy should be kept close to the limit defined by the Treaty, unless Great Britain and Japan permit their navies to fall below the standard," believes the *Oakland Tribune*. And this is not likely to happen, according to the *New York Times*:

"For Japan has decided that the personnel of her Navy shall be 8,588 officers and 68,252 men, a total of 76,840, which will be sufficient to keep in commission the ten capital ships, including the powerful *Mutsu* and *Nagato*; to man other ships of her homogeneous Navy and to provide personnel for shore duty and an ambitious aviation program.

"As to Great Britain, it has never been her intention to take second place as a naval Power, whatever economies may be practised. Our naval attaché at London reports that the active personnel of the British Navy afloat on March 31, 1923, will consist of 98,500 officers and men, exclusive of reserves and not counting the colonial sea forces and the 11,969 officers and men of the aviation service. The aviation service will be of the best, for its value as a fighting arm is better understood in Great Britain than in this country."

According to Assistant-Secretary Roosevelt, our Navy has approximately 100,000 men. Of this number, says the *Army*

and Navy Journal (New York) 5,500 are officers, "whereas 7,000 are needed." And, continues this Service publication, "whatever action Congress may take respecting the Regular personnel, an indispensable measure of the most ordinary preparedness will be to provide also a most liberal Reserve, for we have no great fishing population or large active merchant marine to draw upon, as is the case with both Great Britain and

Japan." Japan, we are told by this authoritative weekly, has 1,793 first-class reserve officers, Great Britain 7,553, and the United States 450; Japan has no reserve officers of any other class, while Great Britain has 2,769, and the United States 7,550. Of unlisted reserves, Japan has 32,000, Great Britain 40,000, and the United States 16,000.

“President Harding is in entire sympathy with the desire for economy,” notes a Washington correspondent, “but he is careful to guard himself from what is called ‘an acute attack of retrenchment fever’ from which Congress is suffering.” In the opinion of the Philadelphia *Record*—

“Congress has the constitutional power to fix the Army and Navy at any figures it likes, and perhaps it might abolish them. But its duties to the country require it to be influenced largely by the opinions of the President and the Secretaries and the officers with whom they are in constant communication. They are in a much better position than any members of Congress to know what the public safety demands, and Congress is betraying its trust if it flouts their opinions.”

The Boston *Post*, however, takes exception to these opinions. Says this paper:

"The war is over; we are not menaced, even remotely, by another. This country has just agreed upon a drastic cut in warship-building and upon the scrapping of vessels already existing. Why in the name of all that is sensible shall we continue to maintain a great naval personnel, much of which, in a little while, will have nothing to do? What are we reducing armament for, if not to reduce the human force that has operated this armament?"

"Cutting the number of men in the Navy is going to hurt—somebody; that is but natural. And there is sure to be an outcry from those who feel the pinch. But the common good is for the greatest number, and the people are the latter."

NOT ENOUGH INCOME FROM THE INCOME TAX

PARLISAICAL SELF-CONGRATULATIONS that we are not as those poor European nations who can't balance their budgets, and who have to keep borrowing money to pay their expenses, are interrupted by the announcement from Washington that the income and profits tax collections for this year will run \$200,000,000 below the estimate. This means according to the *New York World*, that the Government, which had before been at a loss to meet appropriations on the basis of the budget revenue estimates, "now faces the necessity of borrowing heavily to balance its budget." Treasury officials have been expecting a drop in total receipts this year from a total of \$3,200,000,000 in 1921 and \$4,000,000,000 in 1920 to \$1,740,000,000 for the current calendar year. Now they find, on the basis of the payments on March 15, that the total income and profits taxes are not likely to come within \$200,000,000 of the figure. Half of this deficit comes out of the expected revenue for the current fiscal year ending June 30. If that income tax is, as a New York expert accountant specializing in taxation describes it, "the barometer of our economic life, the gage of power to pay," then "Congress, our tax-levying body, should take warning." The Administration has cut expenditures and reduced taxation in accordance with its pledges, but, declares the Republican Rochester *Democrat and Chronicle*, "it can not escape the problem of decreasing revenues." Editors politically out of sympathy with the Administration can not refrain from smiling at its present financial plight. The Newark *News* (Ind.), for instance, wonders whether we are now to be told again that the "best minds" will find a "painless way" to meet a Treasury deficit amounting to one or two hundred million dollars. The Treasury's plans for debt reduction "must give way to action in debt expansion," the *New York World* (Dem.) remarks, while "a leaderless Republican Congress moves now placidly and now riotously along, legislating new expenditures as if the Treasury were bursting with surplus revenues."

Treasury officials in Washington attribute the shortage in March tax collections, according to a New York *Tribune* dispatch, entirely to the business depression during 1921. Such a financial authority as *The Wall Street Journal* agrees that "the falling off represents business and industrial depression which was maintained throughout the greater part of the year 1921. Incomes of many persons were greatly reduced and in some cases wiped out so that it became necessary to borrow money to support homes and households." Tho it seems to the Brooklyn *Eagle* that "the unemployment and the depression are effects, not causes," for which the existing revenue law is largely responsible, as it has been "keeping capital out of reproductive enterprises."

And there is a psychological factor which the New York *Evening World* thinks may in the long run prove to be more important in reducing tax receipts than the business depression:

"In war years the usual attitude of the income taxpayer was liberality. Many scorned to take all the exemptions the law allowed.

"This is all changed. Taxpayers realize the income tax is here to stay. They are educating themselves. Many are keeping exact records of outlay they are permitted to deduct. Others estimate—some liberally.

"Luxury, amusement and transportation taxes are worth consideration. Business expenses, State and local taxes, contributions, union dues, etc., are all listed.

"This is not tax-dodging. It is merely being fair to oneself. But it helps to cut the income-tax receipts."

The shrinkage of income-tax returns simply means, as the New York *Commercial* sums it all up, "that Congress will have to find new sources of revenue and that the Government will have to resort to borrowing to make up deficits until this new money is forthcoming."

WRANGLING OVER WRANGELL ISLAND

THERE IS EVERY INDICATION that the American Government does not propose to remain silent in the face of the claim advanced by Vilhjalmur Stefansson, Arctic explorer, that his recent expedition has established British sovereignty over Wrangell Island, writes the Washington correspondent of the *New York Times*. "The status of the island is now under consideration by the State Department, and there are many scientists who assert that the United States should assert its prior claim, by right of discovery, to this Arctic island," continues this correspondent. The first body of explorers to make a landing on Wrangell Island were Americans, it is pointed out, and they took possession of the island in the name of the United States Government. But, the *New York Evening Post* reminds us, "islands, as Carlyle said of tools, belong to those who can use them. Under international law the mere hoisting of a flag, without continuing occupation, avails nothing." The United States Supreme Court, another Washington dispatch tells us, "has held that discovery alone is not enough to give dominion and jurisdiction unless followed by possession." This is said to be Stefansson's contention, and his desire is that the island be eventually transferred to Canada as part of the Dominion. "In after years," thinks the *Cleveland Plain Dealer*, "England will be grateful for Stefansson's altruistic forethought."

But "is the game worth the candle?" asks the *New York Times*, editorially. "Wrangell is a desolate land. Of what use would it be to any nation?" Burt M. McConnell, one of the members of Stefansson's last expedition, who came ashore with the leader and later landed on Wrangell Island as a participant in the rescue of the *Karluk* survivors, replies in a *New York* interview that "the game certainly is worth the candle." "Wrangell Island is a desolate land," he admits, "but so was Spitzbergen until they discovered coal and iron in close proximity to each other, just as it is found near Pittsburgh. Then almost every nation wanted that 'desolate land.' No one knows what may be found on Wrangell Island, but even if nothing in the line of valuable minerals is found, it will still be an important base for freight and passenger-carrying dirigibles and seaplanes flying directly over the

North Pole from London to China and Japan. That was Stefansson's real reason for taking possession; he was looking ahead ten years. He sees that the distance from London to Shanghai is one-third shorter than by any other route, altho the North Pole route would not be feasible in winter. In summer, however, there are 24 hours of daylight in the Arctic, the weather is pleasant, and open patches of water can be found in case of a forced landing."

But, maintains the *Brooklyn Eagle*, "the British Foreign Office does not seem to be interested." A recent prediction of the British Air Minister, to the effect that airplanes and dirigibles will drive battle-ships off the sea within the next ten years, however, indicates to several American aeronautical authorities that England is more interested in Wrangell Island than she is willing to admit. While the United States may be as keenly interested for the same reason, it is pointed out that this country has the choice of many excellent air-bases along the Aleutian Peninsula of Alaska.

Wrangell Island, we are told, is about the size of Jamaica, and lies about 100 miles off the coast of Northeastern Siberia. Stefansson, who organized the expedition which seized the island, financed it with his own funds earned by writing and lecturing, and sent it out under secret orders, admits that this was done to forestall Japan. In a *New York Times* interview he says:

"Wrangell Island was discovered in 1849 by a British naval expedition under Captain Kellett, who sailed close in but did not go ashore. For a long time it was described in maps as Kellett's Land and was supposed to be a continent.

"In 1881 several American naval ships were searching for the lost expedition of Captain de Long, when two of the ships landed men. The first was the *Corwin*, and the second the *Rogers*. Their explorations would give to America the claim to Wrangell Island if they had decided to follow it up. But this claim lapsed in 1886. The situation subsequent to 1886 was that both America and Great Britain had shadowy claims.

"From that time nobody landed on Wrangell Island so far as I know. It was frequently sighted by American whaling ships, but they never took occasion to land. The only Russian who ever looked for that island was Wrangell, and he did not find it.

"There are no treaties, so far as I have been able to discover, that have any bearing on the ownership of Wrangell Island. It is commonly supposed that under the terms of the treaty by which Alaska was ceded to the United States the right of Russia to any territory to the west of the boundary of Alaska was recognized, but there is no such paragraph in that document."

FOREIGN - COMMENT

SECRET GERMAN ARMAMENTS

"CAN GERMANS EVER BE TRUSTED AGAIN?" irately ask various British and French editors as they consider the latest discoveries of secret armaments in Germany made by the International Commission of Military Control. Nothing shows more clearly the necessity of continued watchfulness over German preparation for the recovery of the armed strength of the Reich, they say, and it is recalled that General Ludendorff's latest book, "*Politik und Kriegführung*" is constructed on three articles of faith: "Heaven, War, and Policy," and of these the central tenet is war. The Berlin correspondent of the *London Morning Post* tells us that in the general's view "heaven is indispensable, because war is a divine ordinance, and policy, because without it the object of war, namely, the annihilation of the enemy, can not be achieved. But war is the great end-in-itself, the sovereign curative and inevitable accompaniment of human life, the only significant task of nations." There follow further thoughts of the general uttered in his own words:

"We [Germans] must learn to understand that we live in a warlike age, and that conflict for the individual as for the State is a permanent natural phenomenon, and is founded in the divine ordinance of the world. The great Moltke said, 'Eternal peace is a dream, and not even a beautiful dream, and war a link in the divine order of things.' In our world of conflict let us place ourselves on this ground, and then we must have done once for all with the talk of our enemies, and of our own democrats of such things as eternal peace, disarmament, and reconciliation of mankind. . . .

"No one knows better than I that it is impossible for us at the present time to wage a war of liberation. The fearful doom of Versailles leaves us defenseless against the violence of our enemies. The perception of this is as indispensable to the political education of the German people as the recognition that war will continue to be the last and only decisive instrument of policy."

General Ludendorff places the blame for Germany's defeat chiefly on her Ministers and Parliamentarians, we are told, who before and during the war are charged as having neglected every patriotic duty, and by sins of omission and commission as having dug the pit into which the army ultimately fell. This Berlin correspondent cites the general as arguing also that as the warlike virtues of the German army have been proved on bloody battle-fields, the German people need no other qualities than these to work their regeneration, and we read:

"Regenerate Germany needs a Government that really

governs of its own will and stands high above the strife of parties, a Government that, if need be, will recall the errant portion of the population to their duty by forcible means. For this a return to the monarchical system is necessary. There must again be a Kaiser at the head of a federation of German—presumably monarchical—states, and the breath of Prussianism must again be blown in-

to the administrative framework. With all this, Germans are to learn not to quarrel among themselves for the benefit of the enemy, to repudiate the idea of growing used to the condition of slavery, and 'de-Germanizing' their labor in the service of the foreigner. They must acquire a sober habit of thought and will in internal politics, which will react upon their foreign policy, and should the enemy drive them to it, resort to war for freedom as the final form of foreign policy. Political leaders of the people, as apart from military chiefs, are to be trained in school and university in the doctrines of Clausewitz and the historic interaction of policy and military operations during the Great War. Thus civilian leaders will be formed who will adequately support the military commanders in time of war.

"This desirable state of things, the general recognizes, is not to be brought about without hard work. The necessary inspiration is to be found in the old Dutch Hymn of Thanks, which the German Army long ago adopted as its own, and of which the penultimate line runs:

"'God gives a pious people its enemy for a prey.'"

General Ludendorff's rhapsodic call for a new militarist Germany strikes with especial significance, it is said, now that one of her after-war industries is found to be secret armaments, and the *London Times* reminds us of discoveries in last November and December of 600 howitzers of large caliber walled up in the Rockstroh works near Dresden. Strenuous efforts were made by the owners, by the workmen, and by the German officer assisting the Commission, to prevent the investigators from exploring the building, and we read:

"When the guns were actually brought to light and further denials of their existence had become impossible, Dr. Wirth explained to the representative of a French newspaper that they had been made before the war and that the owners of the factory had concealed them to save them from seizure by the German Government; they were keeping them to break them up as old material. The head of that Government may possibly have told this remarkable story in good faith, but if he did, this only proves that he was kept completely in the dark by the military authorities, who are nominally his subordinates, and perhaps by other members of his Government. It is now well established that these guns were manufactured after the Armistice under the personal supervision of a representative of the German Government, who was present in the works during the process. The discoveries did not end here. The breech-blocks

GUNS OF 105-MM.

COLLECTED AFTER FIVE DAYS' SEARCH.

German anti-tank guns, revolvers, and machine-guns.

SOME FINDS OF A GERMAN ARMS CACHE AT GLEIWITZ.

and the component parts of 342 howitzers rewarded further investigations. Rifling machines are forbidden under the Peace Treaty, but five of them lay hidden under the flooring of these same works. The Treaty allows Germany eighty-four of these howitzers and no more; in this single factory seven times that number have been discovered. Most interesting, and most significant of all, the Allies have found invoices endorsed with instructions from the German Government to the effect that the guns were to be kept in the works instead of being forwarded in ordinary course to the arsenal at Spandau."

The Rockstroh haul, *The Times* goes on to say, whetted the appetite of the Allies for information. They visited Spandau, and there found the return of the strength of the German army at the Armistice, for which they had vainly asked during two years. The German authorities had met all their demands for these papers, "which are indispensable as evidence of the extent to which the obligations of the treaty have been fulfilled or evaded," by the simple assurance that they had been "lost," but we are told:

"They were not easy things to lose, for when the officers of the Commission came across them they filled two rooms from floor to ceiling. The Spandau military authorities undertook to set a guard over them until the Allied officers should return next day. The latter seem to have trusted the honor of their German colleagues with an implicit faith which the experiences of the war might have impaired in the most confiding. When they came back in the morning the two roomfuls of documents had been removed, by order, we are told, of other and superior authorities. They are 'lost' again, but the Allies now know that they are under the control of these superior persons, that the story told about them is a lie, and that the German Government can have them produced if they so desire. It is for the Allies to make them understand that the papers must be produced. Dr. Wirth and any of his civilian colleagues who may really desire to have the disarmament clauses of the Treaty honestly observed must themselves see that, unless and until they can clear themselves of complicity in these flagrant evasions of Germany's obligations, and can assert their authority over those who do evade them, the Allies can not possibly repose the smallest confidence in their statements or their promises upon any subject."

The Times calls attention to the fact that Premier Poincaré has given out a list of the arms discoveries made in Upper Silesia since October. Seven finds have been made in the present year and we are informed that they include a store of 600 shells for very heavy guns, "found in a barn," and of the equipment for a

whole company of infantry "discovered in a coach house." Moreover, it is related that—

"The park of a country house, a music-hall, a deaf and dumb asylum, were among the places of concealment. Considerable discoveries of a like kind have been made from time to time in widely different parts of Germany. The Commission are becoming experts at their work, and the jubilation of the Germans at the prospect of having their numbers reduced below the standard of efficiency, or of having the experienced officers upon it, who have been studying German artifices and German falsehoods since the Armistice, replaced by newcomers from England is intelligible. Even the present members of that body are daily acquiring fresh experience of German wiles."

In an extensive itemized account of the war equipment found in Upper Silesia, the *Paris Illustration* tells us that during the night of the 30th and the 31st of January, at Petersdorf in Upper Silesia, an armed attack was made by Germans on a French detachment engaged in searching for clandestine arms stations. Twenty French were wounded; and two of them died. Meanwhile, the search in which France sustained these casualties, we are told, "affords convincing proof that the Germans have a real war organization in this province, which is still under Inter-Allied control."

Meanwhile the Paris correspondent of the London *Daily Telegraph* quotes Mr. Leon Jouhaux, Secretary of the General Confederation of Labor, who has just returned from a tour through the principal industrial centers of Germany, with special reference to disarmament, as saying that "all the workmen's organizations recognize the necessity of repairing the ruins caused by German militarism." But the Paris *Temps* retorts:

"It would be sheer dupery to have blind confidence in the sudden transformation of the German mentality through the miracle of German labor's intentions. It is only through a slow and profound education in the democratic spirit, which has nothing to do with the revolutionary spirit, that we may look for moral disarmament from Germany. As long as such education has not been acquired, we have no right to give ourselves up to illusions that would once again put the security of our country in peril. To force a hurried reconciliation with the Germans under the pretext of stemming what is called French militarism, is a trick that we will not be fooled by, nor do attempts to work this trick serve the cause of democracy and peace in the world."

WHEN THE DOUGHBOY LEAVES HIS BILL

WHEN THE DOUGHBOY LEAVES the Rhine the Germans lament, because they consider him a "good fellow"; but when he leaves the Allies his bill, they howl because he wants them to pay occupation charges amounting to \$241,000,000 out of the German reparations money. Thus sarcastically various German editors comment on the reception by the British and French press of Secretary Hughes's claim. Meanwhile the Germans keep up the attitude of their "hopeless poverty," and the Berlin *Tageblatt* exclaims: "We don't know where we are going, but we will have good company on our way, for the demand of the United States comes in strange succession to that country's refusal to participate in the Genoa Conference." So there is "a fine outlook for Genoa," this Berlin daily sneers, "for from England comes a sick statesman and from France sick logic." The Berlin *Vorwaerts* observes:

"America does not desire to participate in a consultation over a dangerously sick patient, when the physicians intend only to cut his hair and manicure him. France's idiotic declaration that 'the German barbarian must pay' is being toned down by the America ice compress. When America begins to bring pressure on political unreasonableness there is some hope for general economic construction."

The *Deutsche Zeitung* calls America's demand a bomb thrown into the Reparations Commission, and remarks:

"Doubtless the United States wants more money, but she is after business. The attitude of France, supported by Great Britain and Italy, is interfering with her commercial aspirations in Europe. We Germans should not be deceived that America wants to help us; she wants to help herself."

The *Volkszeitung* applauds "America's frank tactics," while the *Rote Fahne* says that America's refusal to go to Genoa and her request for reimbursement constitute "a move of the American bourgeoisie to whip England into line." The Berlin *Zeit* regrets that the American troops should be taken from the Rhine because they, of all the occupying forces, "consistently endeavored to maintain a neutral attitude toward the native population." This newspaper fears that their place will be taken by troops "less sympathetic," but the Conservative *Taegliche Rundschau* considers the retirement of the Americans as one more evidence of America's determination to free herself from the European tangle, and it adds that "America in all probability will have to adopt still plainer language in order to make her attitude clear to France."

An American correspondent at Paris points out that Mr. Hughes's note claiming \$241,000,000 as the cost of maintaining the American force on the Rhine, which should be paid from amounts received by the Reparations Commission from Germany, flatly joins issue with the view of Premier Poincaré on the question of American rights under the Treaty of Versailles as reserved by the Treaty of Berlin, and he explains:

"Mr. Hughes holds that the Berlin treaty binds the Allies. The French argument is that the Berlin treaty does not bind the Allies, who neither signed it nor ratified it."

"The French point of view was set forth in a communiqué issued by the Senate Finance Committee, following the hearing of Premier Poincaré and the Finance Minister, M. Lasteyrie. The communiqué says regarding the American claim:

"The French Government considers that the United States, not having ratified the Treaty of Versailles, which establishes priority for payment of costs of occupation, can not legally reclaim their part of the payments received by the Allies in the title of this priority. It is only to the amiable solidarity of the Allies that the United States can address itself in this matter. The March 11 accord reserves the rights to America."

"The American note, it is remarked here, pays no attention to the Allied argument that America, having made a separate treaty, should collect from Germany separately. Nevertheless the offer of Mr. Hughes to open negotiations is regarded as a hopeful sign, and despite legal argument the French Government is hopeful of accord with Washington on the disputed rights under the Versailles and Berlin treaties."

"It is thought that there may be some connection between

the opening of these negotiations and President Harding's desire, as reported from Washington, to have an official American member of the Commission of Reparations. It is recognized that there is an apparent inconsistency between the withdrawal from the Rhine of troops, put there to force Germany to pay, and representation on the Commission of Reparations, which exists for the same purpose. But that is credited to the exigencies of American domestic politics.

"It is thought that perhaps a full-fledged membership on the Reparations Commission is one way to solve the tangle. If the United States takes full membership on the commission there is no doubt that

the Allies would agree to America being paid the amount in question, technicalities notwithstanding. In other words, if the United States helps the Allies to collect 135,000,000,000 marks, they will let the United States have a billion of the amount."

In London, the Diplomatic Correspondent of *The Daily Telegraph* advises us that America's note would seem to suggest a demand for a share in the recent cash payments effected by Germany, the distribution of which, as between the Allies, has only just been settled after months of difficult negotiations. We read then:

"To accommodate America, Britain, who has already sacrificed her priority as to the occupation costs in France's favor to the extent of something like 140,000,000 gold marks, would again be the most badly hit, since France and Belgium have already had their costs defrayed in full, whether in cash or in kind."

"Still America is thoroughly entitled to reimbursement of her occupation costs on the same basis, proportional or other, as the Allies, and with their assistance in respect of that period during which she was their cooperator under the terms of armistice. Nor can it be contended that since upon the conclusion of peace and the supersession of the armistice terms by those of the Versailles Treaty she continued to maintain a military force in the Rhineland at the earnest request of her associates, the latter have not incurred toward her a moral obligation under this head."

"For having declined to ratify the common treaty of peace and concluded instead with Germany a separate one which included only such sections of the former as she herself elected, it would be only logical that she should also make separate arrangements with Germany for the recovery of whatever amounts she considered to be owing by the Reich to herself."

LEST WE FORGET.

LADIES' DAY IN THE LORDS

VISCOUNTESS RHONDDA will be remembered in English history as the pioneer peeress who established the right of women to take their seats in the House of Lords, tho various British editors remark that once women were admitted to the House of Commons it was only natural they should next be received in the House of Lords. Twenty-four peeresses in the United Kingdom can take advantage of the decision won by Viscountess Rhondda, and they include one duchess, four countesses, two viscountesses, and seventeen baronesses, and we are told that some, having married peers higher in rank than themselves, are known by their husbands' titles. Meanwhile, the rejection of women from attendance at medical lectures coincides with the entrance of peeresses among the Lords, and is pointed out as a paradox by the *London Westminster Gazette*, which proceeds:

"The moment which sees Woman, in robes and coronet, sweep to her rightful place in the House of Lords also sees her summarily ejected from a medical lecture-room. And whereas Lady Rhondda, great tho her personal abilities undoubtedly are, inherited her place in the national life, the struggling young medical student is bravely working to win one for herself. We are whole-heartedly glad that Lady Rhondda has succeeded in establishing the claim of peeresses in their own right to sit in the House of Lords on the same terms as men. She has thus removed a ridiculous anomaly from our political system. The professions have been thrown open to women, the House of Commons has admitted them to its midst. The responsibilities and privileges of citizenship have been given them in full. There was, therefore, not a vestige of an argument that could be brought forward in defense of their exclusion from the House of Lords. Lady Rhondda has rendered a service to society as well as to her sex in taking the initiative to get this absurdity removed. We hope that when she meets Lord Knutsford in the lobby of the House of Lords she will seize the opportunity for a few quiet but decided words in defense of the women medical students."

The arguments Lord Knutsford uses to defend the exclusion of women students from the London Hospital, says the *Westminster Gazette*, are feeble in the extreme, and it mentions among them the noble Lord's shuddering objection of "unpleasant subjects that have to be taught," to which it replies:

"We should not have thought that doctors, either qualified or seeking to become so, found anything either unpleasant or the reverse in a scientific exposition of the facts of life. Male doctors, moreover, attend women patients, and work with the assistance of nurses, whose feelings as a matter of fact they are not as a rule wont to consider very tenderly. Lay observers have more often been troubled by a doctor's tendency to treat a nurse as if she were a piece of furniture than by his excessive regard for the fact that she is entitled to be treated with the courtesies due to a woman. Unfortunately, we can not altogether disassociate in our minds the action of the London Hospital from the background of jealousy of women which has unhappily been noticeable in medical schools in general. In Cambridge a great part of the opposition to the grant of degrees to women came from the medical and other scientific schools. They need to realize that for better or worse sex-equality has been established in this country. Whether women can seriously compete with men in this or that particular profession has still to be discovered. If they are not as efficient as the men, their competition will not injure the men. If they are more efficient, the public will be the gainer, and the men will profit but little by yielding with a bad grace. If, as we ourselves believe, they are more efficient in some branches and less in others, they will speedily find their own proper level, and the result will be to the general advantage."

ANGLO-BELGIAN DEFENSE PACT

ONLY TWO SHORT CLAUSES constitute the treaty of guaranty proposed at Cannes for an agreement between Great Britain and Belgium, yet so much erroneous comment has been uttered about it, that the Belgian Foreign Office has found it expedient to issue a statement contradicting prevalent misconceptions on the subject. In this official statement we read that ever since the Armistice Belgium has been endeavoring to reconstitute her international status, which was brushed aside by the German doctrine of "scraps of paper." We are told that Belgium's apprehension about new aggression from the East prevails also in certain Dutch and British circles where Germany's utter incapacity for offense is not credited. As the Belgian Prime Minister Theunis said in an address to the Belgian Chamber of Deputies: "Belgium is too weak to withstand a new attack coming from the East." That is why, the communiqué of the Foreign Office explains, she sought a guaranty from her great and allied friends, France and England, because it is to their own interest to support Belgium in the case of an unprovoked assault on the part of Germany. According to London dispatches, by the proposed Anglo-Belgian Treaty, Great Britain—

"Pledges herself, in case of direct and unprovoked attack upon Belgian soil, 'immediately to come to the rescue of Belgium with all her naval, military and aerial forces.' A second and very important clause contains an undertaking by Belgium not to conclude 'any treaty or arrangement incompatible with the present undertaking.' It is this last stipulation that causes the difficulty."

"On the Belgian side it is represented as a restriction upon Belgium's sovereign rights. Belgium has already concluded a military convention with France. It was pointed out she is no longer a neutral country in the old sense, that her guaranteed neutrality did not save her in 1914, and that she has no desire to revert either formally or informally to that status."

"Yet from the British view-point some such stipulation as that contained in this second clause is an essential safeguard. Just because the integrity of Belgium is almost as much a British interest as that of Kent or Essex, it is regarded of vital importance that Great Britain should be safeguarded against being drawn into a war on any issue save that of 'direct and unprovoked' invasion and that her guaranty should be strictly confined to the one particular case."

"The suggestion has been made in the Belgian Foreign Affairs Committee that the treaty should have a reciprocal form so that presumably Belgian frontiers would be treated as being British frontiers and that the treaty should have a certain time limit. In both cases the purpose, it is held, is sentimental—to rob the treaty of any appearance of establishing a protectorate."

Belgian observers of the treaty negotiations are most anxious that the sovereign independence of Belgium be preserved, in order that she may not sink to the status of "protectorate" of any nation or nations, and as one writer puts it "if Great Britain is going to protect Belgium, it is suggested that Belgium should reciprocally guarantee to protect Great Britain. It seems a good idea, for we should not forget the fable of the Lion and the Mouse—and the Mouse certainly did good work in August, 1914." The *Brussels Independence Belge* says:

"It would appear that the term of the Treaty will be fixed at about thirty years. This duration has been favorably considered by the Belgian Committee on Foreign Affairs. A treaty of thirty years' duration will have an important bearing on the period of the guaranty fixed for us by the Treaty of Versailles. On the other hand, an engagement dated for thirty years does not bind us for life. But, of course, the treaty is renewable."

VISCOUNTESS RHONDDA.

The success of whose test case has resulted in the admission of peeresses to seats in the House of Lords.

SCIENCE - AND - INVENTION

IS ELLIS ISLAND INFECTED?

I WOULD declare Ellis Island an infected port," says Dr. Royal S. Copeland, New York's health commissioner, writing on "Import-Diseases," in *The American Journal of Public Health* (New York). And his warning comes just at the time when the newspapers publish a dispatch from Berlin in which Dr. A. Schlesinger, of the German Red Cross, sends word that hordes of Russian refugees are bringing cholera and typhus into Germany, Poland, Latvia and Esthonia, and "many are seeking passports to America, where they have relatives and friends who are financing them for the journey." Dr. Copeland says that the Federal health authorities have not sufficient funds to protect our great coast cities from incoming disease. In New York their efforts have been supplemented by a city quarantine. Hundreds of thousands of immigrants, says Dr. Copeland, enter the city from infected ports in which smallpox, typhus, cholera and plague may be epidemic or endemic. The detection of disease in these immigrants is dependent on the ability and interest of the ship's doctor and on the adequacy of the staff of medical inspectors assigned to quarantine. While the usual checks operate in ordinary times, there is always a danger of cases slipping through because of hurry, incompetence, difficulty of diagnosis, or failure to observe symptoms. This is greatly magnified when epidemics exist in foreign countries, and particularly when the volume of travel is great. He goes on:

"For these reasons, until immigration and quarantine methods are improved, it is essential, in the interest of the millions in the various communities throughout the country who may receive immigrant settlers coming through this port, that we should have an additional safeguard and not depend on the single filter established by the medical inspection service of the Federal Government.

"Last spring the New York City Health Department established its own quarantine and examined every person entering the city. Now, as a result of that examination, we have found thousands of immigrants coming from countries where typhus fever was endemic or epidemic who were infested with lice brought to this country from abroad. We have found trachoma in many immigrant children in the public schools and, no doubt, if a factory survey were made, we would find this disease among immigrant industrial workers.

"There is not a clinic in the city that has not had to treat venereal diseases in recently arrived immigrants. The crews of many of these vessels are infected with venereal diseases, and their presence in our community for varying periods of time constitutes a grave public-health menace.

"We have eight thousand merchant sailors in New York every day, and it is estimated that at least six thousand of them have the worst type of venereal disease.

"The quarantine officers allow first-cabin passengers and usually the second-cabin passengers coming from abroad to enter with very little or no medical inspection, as if the possession of money to buy better accommodations were a guaranty against various infections.

"Examinations have shown that the vessels, especially the wooden vessels, coming from ports where typhus fever in particular was prevalent, had myriads of lice and sometimes other live carriers of disease in the ballast, and not infrequently in the food and other cargo brought over. In vessels coming from plague-infected countries, not infrequently rats were found, and our city ordinances and measures must provide methods of protection against these rodent carriers of disease, or we stand in great danger of the development of plague.

"The New York City Health Department was called on several years ago, when cholera was prevalent in certain European countries, to assist quarantine in examinations for the detection, not only of cholera suspects, but of healthy carriers as well, and

many were found. Who can say how many cholera carriers there are among immigrants who have been admitted through this port, who may take up food-handling in various parts of the country, or who may spread the disease by unclean habits in their homes?"

There is practically no quarantine safeguard in our seaport cities against coastwise trade, Dr. Copeland asserts. Little more than a year ago a fishing vessel which coasted down from Canada to Long Island had more than a score of cases of smallpox develop among its crew. Of these cases, two came into New York, and one or more were found in certain localities in New Jersey. Moreover, after cases have passed quarantine inspection, they are frequently herded in insanitary conditions at Ellis Island, where the possibilities for the development and spread of disease are many, and these cases may enter the city of New York and spread to various communities throughout the country, carrying disease with them. He continues:

"I made the statement last spring that if I had my way I would declare Ellis Island an infected port, and I would not let any one come to New York from that port.

"These various facts show that New York City, in common with other ports of entry for hundreds of thousands of immigrants annually, must be more adequately protected, and that the New York City Department of Health has a definite function and responsibility. Obviously, unless the Federal Government devises better methods, the time is here for cities like New York, owing to rapid growth and to the thousands of immigrant additions to its population, to have a method of control and follow-up of newly arrived immigrants. In this way we may locate disease which has escaped discovery at quarantine. It is our duty to inculcate hygienic habits and protect the sanitary surroundings of such individuals, so that they may not through faulty habits or through overcrowding spread disease. This undertaking should reach not only to the home, but it should be conducted especially to see that immigrant children do not introduce disease dangers into our schools and that the industrial population is protected against immigrant disease.

"We must not overlook the fact that while many of our immigrants are splendid additions to our national resources, many of them come from benighted countries. They labor under ignorance, or have, as a result of poverty together with ignorance, acquired social and community habits which are a distinct menace.

"We have no way of determining at the present time whether the tuberculosis situation in this country has been intensified by the addition to our population of immigrant tuberculous persons who may be the sources that feed the flames.

"I spoke one night last spring down in East Broadway in the heart of the Ghetto, in the Educational Alliance. There were about one thousand present in the audience, and it seemed to me as I looked at them that half of them must have just landed here. I was interested to know what the health of their children might be, and the next day I sent an inspector to the school-house, and in one schoolroom he found eleven children infected with tuberculosis, nine of whom had just landed here.

"What I have said is not intended to reflect upon the officials of the U. S. Public Health Service. Like Sisyphus, they are attempting to push a stone uphill. Without sufficient strength in the way of appropriation, they are helpless.

"Until Congress recognizes the absolute necessity of spending money to protect the nation, the menace of disease from abroad will ever threaten New York City and the country at large. There is frank prejudice in Congress against the expenditure of money for the protection of the public health. This comes either from ignorance, or from the failure of health officials in the United States to impress our national legislators with the necessity of action.

"It is time that the American Public Health Association arose in its might and demanded of Congress a fuller recognition of what the country needs in the way of health protection."

A CROSS-SECTION OF MANHATTAN ISLAND, CROSSING CENTRAL PARK, FROM THE MOSAIC MAP.

SYNTHETIC GOLD

THE RUMORS that some one has discovered a way of "making gold," and the scientific principles involved in the belief that some of these rumors are true, or may come true in the future, are discussed and explained editorially in *Discovery* (London). No less than three of these claims were made last year, it points out; and altogether about a dozen have been put forward in widely different parts of the world during the past twenty years. The claim is always put forward by some one unknown in the scientific world, and it is a mixture of current scientific theories, of conceivable experiment, of palpable error, and of nonsense. For a short period each claim occupies a place in the conversation of educated persons; scientists are interviewed; economists and others express their opinions, but nothing ever happens and soon the subject drops. The writer continues:

"It may be said at once that this talk about making 'synthetic gold' is nonsense. It is not nonsense like the popular superstition that Hector Macdonald or Lord Kitchener is still alive, for there is no possibility that either of these men is alive, and there is a possibility that gold may some day be made from other materials. But it is nonsense because in fact no one has ever made gold artificially.

"Men who claim that they have done so have not done so. They have really done nothing but assert that a process, which the careful work of a few brilliant scientists has shown to be possible, is actually an accomplished fact. But there is a difference between a thing that is possible and a thing proved or done, and this difference may be very great.

"The two scientific ideas underlying the process of making gold artificially are these: First, there is evidence in nature, obtained partly from physics and partly from astronomy, that the heavier elements have been, and are being, built up in some way upon lighter ones; that the elements are not fundamentally different, as was thought thirty years ago, but are merely different aggregations of a very special kind. The second is that the discoveries in radio-activity (1899-1903) revealed the spontaneous transformation of certain heavy elements into lighter ones.

"Both of these are important and illuminating ideas. The first suggests that elements may be formed by synthesis, i.e., by building up from simpler forms; the second, by degradation or breaking down from more complex. But these are natural processes, and research into their nature has so recently been begun that we are not yet able to imitate them. How or why they occur is yet a mystery. We know little about them save that they exist.

"Of the two processes, that of disintegration or breaking down would at first sight appear to be the more hopeful, for it is common experience that to smash to pieces a delicate mechanism is easier than to accomplish successfully the reverse process; and on pursuing the matter more deeply this view is found to be justified.

"The building up of elements, which is supposed to be going

on in the Universe, can not be properly studied in a laboratory; radio-activity can, and so it is that from this science alone the meager existing evidence concerning transmutation has been obtained.

"Part of this evidence is negative, part positive. The negative evidence is that high temperatures and great pressures (by which, for example, carbon or graphite may be converted into diamonds) have no effect whatever in transforming one element into another; the positive is that certain of the lighter elements, when bombarded by atoms of helium, shot out at great speeds by preparations of radium, do break down into simpler forms, one of which is certainly the element hydrogen. Enormous difficulties are involved in this process, the only known method of effecting artificial transmutation. There appears to be little hope that the process can be so extended that common metals like bismuth, lead, or mercury will be transmuted by disintegration into weighable quantities of rarer metals like gold and platinum, and none that this will be effected on a commercial scale.

"If a new process be found, or the present one be extended, it will be the work of some one who is 'inside' this extremely technical piece of research work; it will not be accidentally found by an unknown man."

HOW MOSAIC AIR-MAPS ARE MADE

ALMOST EVERY DAY we read of new uses for aerial photography. Readers of these pages have already had their attention called to its utilization in selling real estate, planning cities, making surveys, and handling street traffic. More recently we have heard of prospecting for minerals and supervising logging operations by the aid of photographs taken from airplanes. The experts remind us that there are two kinds of aerial photographs. First, as one writer points out in *The Scientific American*, there is the oblique photograph, which is generally used in connection with selling or advertising real estate. But compared with the vertical or mosaic, "its value is more along advertising and pictorial than technical lines." In other words, "the oblique view is a picture, and requires no extensive study to grasp its meaning." But the vertical photograph involves "greater technical knowledge and skill, more preparation, and an enormous amount of work in the finishing process." The expression "mosaic maps" is explained by the fact that "a succession of vertical pictures, taken in such a manner as to be of the same scale and made so that each individual picture overlaps other pictures, constitute a mosaic map when assembled."

New York City was recently photographed in this way. The entire city was divided into a hundred parts, each part being photographed individually from the plane directly over its exact center. The photographs were developed and the prints fitted together like a picture puzzle mounted on card-

board. The picture on page 26 is a portion of this completed map, showing a strip directly across Manhattan Island from the North River to the East River and including a slice of Central Park. After this map was made one of the New York Police Inspectors said: "If I had had an aerial survey of my precinct I could have sat at my desk and determined the location and details of every roof exit, scuttle-hole and skylight, had I all that information right in front of me. It would have been a great help to us in directing a raid or surrounding a burglar." The writer in *The Scientific American* tells the story of the vertical photograph in the words of one of the aerial photographers. The first thing, he says, is to get the right camera. A camera has been developed which makes a picture about 7 by 9½ inches and is fitted with ray-filters so as to take a clear picture through a fairly thick haze. There is a between-the-lens shutter, whose speed may be varied from 1-50 to 1-150 of a second. This camera operates automatically by means of a storage-battery motor. It is mounted over a hole over the bottom of the fuselage. The plane, of course, keeps absolutely horizontal while the picture is being taken, but it might be said that a gyro-stabilizer is being perfected which permits the airplane to swing at an angle while the camera remains stationary and insensible to the vibration of wind and motor. To obviate guessing, a map like those of the United States Geological Survey is used to guide the pilot. There is a double overlap. One is made by having the pilot make each successive trip from end to end of the city at such a distance from the preceding one that there will be a certain overlapping. At the same time, the interval between exposures takes care of the overlap of pictures in each row, as shown in the accompanying diagram.

It is obvious, of course, that in making preliminary surveys over undeveloped country much of the work described would be omitted. Quite different, for instance, would be the task which some of these air-photographers have undertaken, of making aerial photographs of 1,500 square miles of one company's timber holdings in Canada. The maps will show burnt-over, blown-down and cut-over areas; the number of logs in the booms and those left on banks of rivers. At a recent meeting of the Canadian Institute of Mining and Metallurgy in Ottawa, Mr. E. L. Bruce declared that the geologist could make good use of airplane photography in searching for minerals in an unprospected country. The *New York Evening Post* quotes Mr. Bruce as saying:

"From the air it is possible to tell various areas by their color and by the general surface features that are characteristic of sections of country underlain by different types of rocks. Granite can be distinguished from those rocks which are more favorable to the occurrence of economic minerals. Use of airplanes would relieve the geologist of a vast amount of work and would save a large part of his time. Areas of granite, which are not important economically, and those areas of deep glacial cover where no rocks are exposed could be eliminated. It would thus free him from the exploration of the areas of promising rocks and so extend the field covered by each season's operations. It would, moreover, give him an idea of the most advantageous points for inland traverses and would show him the position of inland lakes which might be of use to him in fixing the boundaries of formations."

PRO- AND ANTI-ROAD CAMPAIGNS

AN ANTI-GOOD-ROAD MOVEMENT is announced by *Engineering and Contracting* (Chicago), which warns the advocates of up-to-date highways that they must be prepared to fight for what they want. At the same time we find in another engineering paper, quoted below, a warning against people who are boosting good roads on certain routes for selfish speculative ends. Taking first the writer who tells of the "antis," he reports that serious efforts are being made in various parts of the country to curtail road-building programs now under way and projected. This news, he says, will come as a surprise to many readers. It has been commonly supposed that the farmer's conversion to the good roads cause was complete and permanent, but he is sure that such is not the case—at least as

Courtesy of the Fairchild Aerial Camera Corporation.

DIAGRAM SHOWING HOW THE SUCCESSIVE PHOTOGRAPHS ARE TAKEN.

"A succession of vertical pictures, taken in such a manner as to be of the same scale and made so that each individual picture overlaps other pictures, constitute a mosaic map when assembled."

respects a considerable number of individuals and some powerful organizations. He continues:

"These circumstances need cause no alarm if they are recognized and acted upon speedily. To a large extent, this year's programs are so far advanced that they will go through in spite of opposition; but the same is not true of next year's, and those who have the interests of good roads at heart must exert themselves.

"We criticize the judgment, not the motives, of those who would reduce our road activities. The prime motive—the desire of the individual for lower taxes and assessments—is obviously selfish, but is no more immoral than is any other effort at self-betterment. The belief that such reductions will result in real economic savings is a serious error, and this is the fact that must be brought out clearly and in the best of spirit by those seeking the construction of more roads.

"An example of the character of opposition to be met is presented in a recent issue of *Michigan Roads and Forests*, and is followed by some forceful pleas that the road program in that State be not interfered with. We quote:

"A uniform form of petition was sent to the State Administrative Board, urging that the State definitely limit its road-building program and issue no more bonds during the current year. These petitions have been sent to the various Granges in the State and several of them have been received by the Administrative Board."

"One of the established principles of the Granges is that of opposition to the incurring of debt, either private or public. Abhorrence of indebtedness is natural to thoughtful people, but like abhorrence of the surgeon's knife, it is not always a wise guide to action. It should scarcely need to be mentioned that no considerable mileage of roads can be built from funds

NOT A CORK LOCOMOTIVE: IT IS SUPPORTED BY A "SHOO-FLY" TRESTLE.

immediately collectable, and that almost every other important undertaking, either public or private, is similar in this respect."

Failure to appreciate the principles of earnings and interest has been, and still is, we are told, an important factor in the opposition to active road-construction programs. It must still be explained to many that money paid as interest is not lost; that roads are as much tools for earning money as are barns and plows; and that they earn a good return upon their cost through the savings they effect and the increased business they permit the farmer to make. Lack of good roads will limit the farmer's earnings just as certainly as will lack of good soil and lack of tools for cultivating it. Then, too,

"Another most important task is to overcome the impression prevalent in many minds, that construction costs are now high, and are likely to be greatly reduced. The contrary is the case as respects road construction. A large part of the cost of every road is in common labor, and common labor is now low—in many places too low. Labor which receives less than 150 per cent. of what it got in 1913 is really worse off than it was then, and common labor will not remain at such a level.

"Cement is below the general level of prices, and steel beams, bars and plates are either at or below the 1913 average at the mill. Many kinds of road-making machinery are almost as low. Not only is no considerable recession from the present general price level to be expected, but a steady increase will follow the realization that the depression is over. In this opinion we have ample concurrence of authorities, the latest and most spectacular announcement being that from a member of Mr. Edison's staff. The futility of hoping for cheaper road construction is, we think, as clear as any prediction of future economic conditions can be."

Now for the professional "boosters." Not boosting good roads in general; that is all right, but boosting a particular route and then using it as a basis for speculation. That this is being done is charged editorially by *The Engineering News-Record* (New York), which says:

"Legitimate highway-improvement financing is making such heavy demands upon the public's pocketbook that a diversion of private funds into other channels than construction and maintenance of routes economically justified constitutes a menace to the good-roads movement. The public has made such a ready response to calls for money that the good-roads slogan has been seized upon by scores of road-boosting organizations as a means of supplying 'easy money' to the promoters who head these bodies. At the present time there are somewhat more than 200 of these organizations which select highway routes for their boosting operations, give them a fine-sounding name, like the 'Yankee-Doodle Highway,' and then proceed to go out for money. Some of the funds may be used for legitimate purposes of highway promotion, but the chances are that a large portion does no other good than to fatten the pockets of the professional road-boosters. The danger in the situation is that the public, once victimized by one of these booster organizations, will withhold funds from legitimate highway-development projects. With taxes of one sort and another constituting a heavy burden for all citizens, funds for highway improvement should not be dissipated in

wildcat schemes instituted largely with motives of personal gain. Conditions in the road-boosting business—for it has developed into practically that—have reached a stage which has indicated to the American Automobile Association the desirability of a thorough weeding-out process. All good-roads associations, of course, are not open to charges of uselessness and dishonesty, but enough goats have mingled with the sheep to warrant a separation of the flock to the end that more money shall go into road-building and less into road-boosting."

FLOOD CONDITIONS EXTRAORDINARY

THE LOCOMOTIVE in the accompanying picture is not floating on the water, but is crossing an invisible bridge just beneath its surface. The river is the Fuerte, in western Mexico, and the experiences of the engineers of the Southern Pacific Railroad of Mexico, show strikingly some of the difficulties of railroading along the western coast of that country. A contributor to *The Railway Review* (Chicago) describes the Fuerte as a treacherous stream in the state of Sinaloa, between Hermosillo and Culiacan. During flood periods it rises with startling rapidity, sweeping everything before it. We read:

"When the railroad was first built, several years ago, the river was spanned by a so-called temporary structure. In addition to 750 feet of pile and timber trestle, 12 steel deck plate girders 70 feet long were installed. These were placed on the south side of the river, over the deepest part of the channel where the current was strongest. This structure stood an average height of 40 feet above normal low water.

"This bridge did good service for several years. Then came a period of excessively heavy rains. When the flood was at its height the tremendous current, rushing down at a height of nearly 35 feet above normal low water, carried away four piers at the lower end of the bridge and dropt into the river five sets of girders. Altho some of these girders weighed as much as 70,000 pounds, yet they were carried down-stream for a long distance by the flood.

"Then it was decided to replace the part of the bridge thus destroyed, in the meantime operating trains on a temporary track and deprest trestle on a 'shoo-fly' alignment. On the very day that the main bridge was put into service again, the river went on a rampage. Before sunset the raging flood had carried away three of the new piers and dropt four sets of girders. The shoo-fly trestle was also a sufferer in this flood as it had been in previous times of high-water.

"When to these adverse physical conditions, is added the consideration that all common laborers, mechanics, clerks, foremen and master mechanic were native Mexicans, it can readily be seen that the special engineer who was in charge of the bridge-work had his hands full when it was decided to sink a pneumatic caisson. However, it was found that the men were eager to master the principles and theory of what they were trying to do, and the outcome of the experiment was that the work was completed in good shape, and now the new parts of the bridge are standing firm and giving good service."

RADIO • DEPARTMENT

THE YOUNGEST RADIO OPERATOR

THE RADIO GERM is no respecter of age, as thousands of gray-beard enthusiasts would testify. Meantime at the other end of the age scale, its victims are legion, as every one knows. It would be hard to find a wide-awake boy above the age of twelve who is not interested in radio. But it rather takes the breath away to read of an expert radio enthusiast of the age of seven. Yet the *Pacific Radio News* (the name of which has more recently been changed to *Radio*), in its issue of last September gave a detailed account of the accomplishments of a California amateur of that tender age. We read:

"Robert Garcia, seven-year-old son of Allen Garcia, director for Charlie Chaplin, is the youngest licensed radio operator in the world. Official confirmation of his success in passing the amateur's examination with a percentage of 92 was recently received from Major J. F. Dillon, U. S. Radio Inspector at San Francisco."

The account of the child's astonishing feat, which would tax credulity had it not received editorial authentication, is given by the boy's father, and has interest for parents and pedagogs whether or not they care for radio. Here is the record:

"From the time that his father took an interest in radio (November, 1920), Robert would read the catalogs and manufacturers' advertisements which most every aspirant to the realm of radio is inevitably equipped with, he would ask father some rather embarrassing questions regarding hookups and frequencies, oscillations, amplifications, and many other things that poor father then could not answer, that made the latter sit up nights and study till early morning so as not to fall in the estimation of his son.

"Then he hit upon the idea that if father would let him listen on his set he would learn the code and be able to copy. So the father turned the set over to him in the daytime with the understanding that he learn the code first by heart in two days. Within 24 hours he accomplished that, and later would sit for hours till he heard some sign at a speed that he could copy. He was a little sticker, remaining at the set for three or four hours at a stretch. Later, when father took out a license and was assigned a call, Robert's interest was increased till he had to be shown the workings of every part of the transmitting set and given a concise explanation of everything, including circuits.

"For several days the lad went around drawing circuits on the back of everything in the house, and, strange to say, once shown a circuit, no matter how complicated, he could reproduce it by memory, and has several of his original drawings now that can't be improved on for detail. Five weeks before Robert passed his examination he could not copy even at the rate of five words per minute, but he showed sufficient interest that he begged his father to let him take the test.

"Seeing that the boy really meant business, he made up his mind to coach him and give him a chance. First he made him copy a buzzer, sending words of two or three letters, then increasing speed till the boy acquired a speed of twenty words per minute. Then the words of greater length, and finally numerals and words were resorted to till he could copy 50 or 100 words in succession. In the meantime he would explain to the youngster the theory of both transmitting and receiving sets, using the technical terms and paralleling them with a kindergarten explanation so that the little mind could readily understand. That done he gave the boy a copy of the regulations regarding the transmission of signals, etc., and laid out a certain

amount to memorize so that he would understand the meaning and would be capable of writing it word for word whenever called upon to do it in the future. This he accomplished beyond the father's wildest expectations.

"Then came the big surprise. He had but five weeks in which to prepare for his examination. When he took the test every one that saw him smiled and felt that he was there merely to please his father's vanity. Several lads, many years his senior, fell by the wayside, and several men tried in vain to pass the test. Robert just smiled all through the three solid hours of his examination and if any one said anything to him he would answer with a broad smile and wink, as if to say 'watch me fool them,' and he, only a child of seven years, did what very few ever accomplished—passed with 92 per cent.

"Since passing the examination two manufacturers have honored him with parts for the set he is going to install. He has filed an application for a station license and is going to put it up himself. He has declined an offer to install the set and begs his father to let him do it all alone."

Licensed radio operator at the world's record age of seven.

MULTIPLEX RADIO

EVERY ONE KNOWS, of course, that multiple messages may be sent through the ether simultaneously by using different wave-lengths. Otherwise only one station could operate at a given time in a region as wide as the influence of that station—which, in some cases, would mean the entire world. It has been shown also by General Squier and his associates that multiplex "wireless wired" messages may be sent over the same wire by using instruments tuned to different frequencies. But the sending or receiving of multiplex messages of different character without multiplication of instruments has been a desideratum.

What would appear an important step toward the solution of this problem is thus chronicled in *The Wireless Age*:

"A long forward step in the science of radio communication was demonstrated in the Engineering Societies building, New York City, recently, when telephone and telegraph messages were carried simultaneously from a single wireless transmitting set and antenna. They were received also by a single radio set without interference or distortion.

"The achievement was demonstrated by Dr. Frank B. Jewett, chief engineer of the Western Electric Company, and head of the Bell system and research laboratories, and was made possible largely through an electrical 'filter' invented by Dr. G. A. Campbell. The device makes it possible to separate the various frequencies at which the individual telephone and telegraph messages are carried.

"Two specially constructed demonstration radio sets were placed in the auditorium for the benefit of members of the telephone society, who are chiefly electrical engineers and communication experts. The telephone and telegraph messages were dispatched at the same time and were received at the other end of the stage. They were detected by a single vacuum tube circuit, after which they were passed through the 'filter,' which separated the frequencies of the telegraph message from those of the telephone messages. The filter differs materially from the ordinary tuned circuits familiar to the radio engineer, as the filter separates not single frequencies, but bands of frequencies of any predetermined width. The filter makes it possible to separate the band of frequencies comprising the telephone message from the band comprising the telegraph message. It can also separate one telephone message from another."

SUCCESSFUL TRANSATLANTIC STATIONS

AS A MATTER OF COURSE, all radio amateurdom in America is still excited over the remarkable demonstration of last December that amateur outfits using the legalized short waves can transmit their messages across the ocean. Mr. Robert C. Higgy, in *Q S T* (Hartford, Conn.), makes an interesting analysis of the equipment of various successful stations, and presents a popular statement of results that should appeal to every one who is interested in the technical aspects of radio—and that includes almost every intelligent listener and all transmitters. Says Mr. Higgy:

"The recent transatlantic tests have brought benefits to us amateurs in many forms, among which one of the most important is the data and information about the successful stations. A

where, after telling of the supreme satisfaction the reception of the first message brought to him, he adds:

"The strange, and, I should say, even sad sequel to this wonderful good fortune runs as follows: Due to error in the use of codes between Coursey and myself, station 1AAW was broadcasted to the U. S. A. as being 1AAy. This was not straightened out until 48 hours had elapsed, and, after being straightened out, it was found impossible to locate the sender."

THE BROADCASTING SITUATION

EVERY ONE WHO IS INTERESTED has read in the daily papers a summary of the preliminary report of the Technical Committee of the Radio Telephone Conference at Washington with its recommendations to govern the use of

the ether, and no one is surprised to learn that wave-lengths of from 150 to 200 meters are to be reserved for the amateur. It is further provided that wave-lengths from 200 to 275 meters may be shared between training schools and amateurs for experimental purposes. The allocation of waves, as reported in *The Evening Mail* (New York), is as follows:

"Transoceanic radio telephone experiments, nonexclusive, 6,000 to 5,000 meters; fixt service radio telephony nonexclusive 3,300 to 2,850; mobile service, nonexclusive, 2,650 to 2,500; government broadcasting, nonexclusive, 2,050 to 1,850; fixt station, nonexclusive, 1,650 to 1,550; aircraft radio telephony and telegraphy, exclusive, 1,550 to 1,500; government and public broadcasting, 1,500 to 1,050; radio beacons, exclusive, 1,050 to 950; aircraft radio telephony and telegraphy, exclusive, 950 to 850; radio compass, exclusive, 850 to 750; government and public broadcasting, 700 miles inland, 750 to 700; mobile radio telephony, nonexclusive, up to 650; mobile telegraphy, exclusive, up to 525; aircraft radio telephony and telegraph, exclusive, 525 to 500; private and toll broadcasting, exclusive, 435 to 310—restricted special amateur radio telegraphy, nonexclusive, 310; city and State public safety broadcasting, exclusive, 285 to 275; technical and training schools, shared with amateurs, 275 to 200; amateur, exclusive, 200 to 150; reserved, below 150."

So soon as Congress passes emergency legislation and gives the Secretary of Commerce authority to promulgate and enforce the regulations, the amateur will obviously have no option but to comply. Yet doubtless a good many will do this grudgingly, and not a few will complain that it is impossible for them to get down to the 275-meter maximum with the particular instruments with which they work. For all such objectors, the admonition of an editorial writer in *The Modulator* (New York) is pertinent and timely. We read:

"The radio service is flooded with complaints about amateurs transmitting in such a manner that the concerts are broken up. Upon personal observation it has been found that very few amateurs are transmitting on wave lengths above 250 meters and if the beginners would put in sets that could tune at all no difficulty would be experienced.

"The man who says he can not make his set work on less than

questionnaire was prepared and sent to all of the stations getting across and much valuable and highly interesting information has resulted.

"The accompanying tables have been prepared from the data received and from them may be gathered a skeleton description of each transmitter. The matter contained is for the most part self-explanatory and does not need further comment. The power outputs were calculated wherever possible by squaring the antenna current and multiplying by the total antenna resistance. The efficiencies could then be determined, since the output powers were known. In calculating the efficiencies, input power to the plates of the transmitting tubes only was considered."

In looking over the list of the twenty successful stations, the reader who recalls Mr. Godley's enthusiastic account (quoted here April 1) of the very first message that came to him as he listened over there in Scotland, may wonder that the 1AAW from which the first signal came is not listed. To understand the omission, however, we have only to turn to the full account of Mr. Godley's experience, as published in *The Wireless Age*,

250 meters is plumb crazy. With a little care and the erection of a new aerial it is very easy to make any set work on less than 200 meters."

THE MIRACLE-WORKING VACUUM TUBE

EVERY RADIO AMATEUR knows that the wonderful development of radio in recent years has been very largely due to the introduction and improvement of the marvelous little instrument commonly referred to in this country as a vacuum tube or electron tube, but originally named the audion by its inventor, Mr. Lee De Forest, and often called—particularly by English writers—the ionic valve or thermionic valve. You never go far without encountering this little miracle-worker. In a recent article in the *American Magazine* (New York), Mr. Keene Sumner gives a popular account of this little instrument, and in particular tells of some of the things that Mr. Earl C. Hanson has done with it and plans to do with it. As Mr. Hanson is the inventor of the apparatus which enables ships to come in and out of New York harbor in a fog without the aid of an ordinary pilot and of a remarkable little apparatus called the vactuphone for aiding the deaf, both operated by the electron tube, his opinions and hypotheses are well worth quoting. Says Mr. Sumner:

"Early in 1921, a young American inventor, named Earl C. Hanson, told me personally that he had perfected a system which would receive wireless messages having a wave length of 100,000 meters or more! He predicted that the use of this system would absolutely revolutionize wireless practise. He showed me the drawings and specifications for his patents in this and foreign countries. He said that the use of his receiving system would make it perfectly possible to send wireless messages around the globe, without the vexatious interference and delays now encountered.

"This achievement will come through the use of what may safely be called the great electrical marvel of the present day—the *vacuum-tube amplifier*."

Mr. Sumner first saw the tube in Alexander Graham Bell's former laboratory in Washington, where, through the courtesy of Doctor Bell, Mr. Hanson had been conducting his experiments. Mr. Hanson took a small object from his pocket and said:

"It doesn't seem much more impressive than a child's toy, does it? But probably a million dollars have been spent on it; and already several hundred patents have been taken out to cover different phases of its progress.

"We call it a vacuum tube. The fine tungsten wire in the center is the filament; the spiral around it is called the grid; and the little metal cylinder is the plate. Years ago Mr. Edison made a vacuum tube containing the filament and the plate; they formed the two electrodes. He never made extensive commercial use of it and, in due course of time, his patent expired.

"Some years afterward, Professor Fleming, Mareoni's chief engineer, used the tube as a detector of wireless waves or vibrations. Then, a few years later, De Forest added a third electrode, the grid. And the addition of that one thing, just that little wire spiral, has made it possible to accomplish things on which inventors had been working unsuccessfully for years.

"You have heard of electrons—those invisibly minute particles which many scientists consider the final unit into which all matter can be divided. Well, when an electric current was sent through the Edison tube there was a constant stream of these electrons passing from the filament to the plate. But when the *grid* was introduced it had the effect of *amplifying* the energy received.

"Here is one way of illustrating it: Suppose a great steam pressure has been generated with a force of many pounds to the square inch. One man, even a very frail one, could control that great force simply by turning a lever that would open or close certain valves.

"Now if you will imagine an electrical current instead of steam, and think of the grid as the man controlling it, you will have a fairly good idea of how it works. The point is that we can take a feeble energy coming in by one wire, and by means of the grid add a lot more energy from another source, and vastly increase the feeble current.

"When powerful vibrations are employed, you get a great volume of sound, but it is so full of squealing and hissing and sputtering noises as to be unintelligible. But the little grid in the tube *controls* the energy coming to it, so that you get a smooth reproduction of the natural vibrations made by the voice speaking. You get *clarity* as well as *volume*. Used in ways like this, we call it the vacuum-tube amplifier.

"President Harding's voice was amplified more than a *million times* by the apparatus used when he delivered his inaugural address. I believe that he could have been heard half a mile away; yet he was speaking in moderate tones. The telephone

INVENTOR OF THE VACTUPHONE.

As a little boy in California, where he was born twenty-nine years ago, Earl C. Hanson was always experimenting with electricity. While he was at grammar school in Los Angeles, he made a wireless telephone with which he talked over short distances. Later, while at St. Paul's Preparatory School he continued his experiments. In 1911, when he was only nineteen, he invented a system of wireless transmission which is the basis of important patents which he now holds. During the war, he gave this Government and the Allies the use of his inventions, including his Audio Piloting System for guiding vessels through fog and through mine fields, and other applications he has worked out for the use of the vacuum tube.

company spent many thousands of dollars just to give the demonstration.

"No instruments of any kind were visible to the throng that listened to Mr. Harding. Underneath the platform from which he spoke were three rooms containing a powerful electrical installation, which included several sets of vacuum-tube amplifiers.

"You see, we do not have to stop with *one* tube. We can pass the current on, from one to another and another, constantly getting, and controlling, greater and greater power.

"Just see what this means: It is estimated that one unit of electrical energy is increased ten times by means of the vacuum-tube amplifier. Start with one unit and multiply it six times successively and you get one million! That means that if you started with one unit of electrical energy and passed it successively through six of these tubes you would have amplified it a *million times*.

"Can you imagine the possibilities involved in that statement? If I had a tuning-fork here I would show you something interesting. You know that if you make the prongs of a tuning-fork vibrate rapidly you get a musical note. I could make them vibrate so gently that they would give out no sound audible to the unaided human ear. Yet, if I should hold an almost imperceptibly vibrating tuning-fork close to the transmitter of the vacuum phone, you would hear its musical note.

"In this way we shall be able to listen to sounds which no human ears have heard since the world began! It may be that we shall actually be able to *hear* things growing, and to *listen* to the changes that are taking place in matter."

"CIVIC VIRTUE" IMPERILLED

NEW YORK HAD so merry a time at Boston's expense when the MacMonnies "Bacchante" was ruled out of the Public Library that it may now be Boston's turn. Another MacMonnies statue is going through the fires of public disapproval—his conception of "Civic Virtue," which is designed to replace the old fountain in front of the City Hall. Preliminary approval was given to the design on December 13, 1915, and the statue is now ready to be put in its place. Objection has come from representatives of the National League of Women Voters on the ground that the statue degrades womanhood. From photographs it appears that the muscular young male who represents civic virtue is trampling something like a female form under his feet. This, we are told, symbolizes the temptations, and not the relative position of women in the modern state. Miss Mary Garrett Hay of the National League of Women Voters is quoted by the *New York Times* as saying she feels that "in this age women should be placed not below man, but side by side with him in any representation of civic virtue." Mayor Hylan, learning that many women in the city disapproved of the statue, appointed March 22 for a public hearing. The sculptor did not appear in person, but a letter was sent explaining his design. He selected the figure of a youth, he says, as best exemplifying "the spirit which should preside over a citadel of civic activity." Then:

"In the composition of the lines of the figure in the posture, I used a system of lines which are uncomplicated and direct in their suggestion so that he would seem to be concentrated with single-minded energy on one purpose—to stand upright and hold up the sword of law. As a secondary action, he is freeing himself almost unconsciously from the snares thrown about him. They are dropping away from him without much effort on his part. He looks out into the distance so concentrated on his great ideal, that he does not even see the temptation.

"To suggest this temptation; its dual nature which dazzles while it ensnares, its charm and insinuating danger, one thinks of the beauty and laughter of women; the treachery of the serpent coils of a sea-creature wrapt about its prey. These lovely sea women coil themselves about their victim. Their scaly, sinuous tails entwine him. With one hand each one draws about him the net disguised in tangled seaweed; with a smile on her lips one holds, half hidden, a skull, sinister suggestion of disillusionment and death.

"The other hides her face as we hide all dark designs. They entirely surround him, but he steps out triumphantly and places his foot on a firm rock. Below him lies the wreck of a ship which had sped gaily, its proud figurehead of victory overturned—torn shreds of hopes."

Mayor Hylan gave courage to the attendants of the meeting by saying, "I don't know much about art, but I don't like the looks of that fellow standing up in City Hall Park." As the press report the art criticisms of the protestors, they are in this vein:

"Dr. Ella A. Boole, who ran for Governor against Miller two years ago next November, was there to talk for the W. C. T. U. 'This type of man might have done for a statue in the Middle Ages,' she said, 'but it doesn't represent any modern man, especially anybody engaged in civic work.

"It portrays the degradation of womanhood, not the uplift of man. If we are to have something representing Civic Virtue, let it show a man and a woman going along hand in hand to elevate the morals of municipal politics. That's my opinion."

"The storm of handclaps which greeted Dr. Boole had not died down when Mrs. R. C. Talbot Perkins delivered herself of some remarks.

"A little boy going through the park the other day said, on seeing Nathan Hale's statue," she began, "Gee! pipe the guy's feet." What do you suppose the boys will say if they have a chance to comment on this outrageous group? I can hear them say:

"Come on, Skinnay, see the guy with his foot on the dame's neck and say—" but I leave the rest of the boyish

comment to your own imagination. Some dark loft should be the home of the MacMonnies group."

"Mrs. Thomas Leonard told the Mayor she loved art, speaking for the Civic Modern School.

"But I think a museum would be a more appropriate location for the group, where real admirers of art can see it. I'm afraid it will be sadly misunderstood by the people who travel through City Hall Park."

"Send it down to Washington," exclaimed Mrs. John Jerome Rooney, for the Washington Heights Civic Club. "Tell the Senators it represents the Four-Power Treaty standing on the neck of these United States.

"He might do for the Gas Trust or the Telephone Trust," added Mrs. Rooney, bringing tears of laughter to Mayor Hylan's eyes.

"I think Christy Mathewson or Judge Landis would have made a better model than the one Mr. MacMonnies selected,"

CHARGED WITH DEGRADING WOMANHOOD.

MacMonnies' conception of "Civic Virtue" now assailed by women, who seek to prevent the statue being put in City Hall Park, New York.

said Mrs. Elizabeth Smith Edwards. 'Have him uplifting baseball. The girls can be the fans in the bleachers, or some college girl trying to steal a base.'

Of course the controversy has not been waged with the highest seriousness, considering the invitation to levity that the subject offers. A correspondent writes to the *New York Herald*:

"The women of New York seem to object to having such an honor conferred on man and the insult of being represented as temptations heaped on women. It is out of date, they say, not in accord with the new order. They are wrong. This is the new order, not the old. Let us array the facts, as business men say:

"Isn't it a fact, then, that practically everything decent and proper has in the past under the old order been represented as a woman? In nearly every court-house in this broad land, as the politicians say, is a statue or a painting of Justice. What sex? A woman, of course! Every child knows that. How is Columbia, the gem of the ocean, represented in statues, on coins? A woman, of course! Why? Did a woman discover America?

"How is Britannia, who rules the waves, represented? A woman! Did women beat the Spanish Armada and the German high seas fleet? How is Germania represented? How poor, sad Austria, on her prolific paper currency? Women, women! How about the Statue of Liberty in New York harbor? A woman, bigger than many Civic Virtues! Even such abstractions as Learning, Art, Science, Industry and Agriculture (!) are frequently, if not universally, represented by women.

"Here's a solemn fact: There are many monuments erected to men—great men or locally admired men—which, instead of a likeness of the deceased or the statue of a man symbolizing something or other, display to posterity—which isn't much interested—the likeness of a woman representing Virtue or Honor or Aspiration or Grief or something else. Why, f'r heaven's sake?

"Mr. MacMonnies is right, but he evidently doesn't know why. He thinks the time is not yet for using women as Civic Virtue. The fact is, the time is past in which women could monopolize symbolic personification. Mr. MacMonnies is in line with the new idea. Men want their share. Nowadays the women are not going to crowd us out!

"Let the downtrodden men rise in righteous assertion of equal rights! Give the women their share—no more. In the past we were lucky to get George Washington on a postage stamp. Now we want men upholding gilded scales on court-house towers and all the rest of it."

Mr. Joseph Mulvaney of the *New York American* goes to the "Brobdingnagian boy" himself for light on the vexed question under dispute:

"Towering fifteen feet above the level of the Harlem River, as he stood upright in the studio of the Piccirilli Brothers in the Bronx, all undrest and with no place to go, the big fellow pleaded to this reporter, sitting astride his shoulder:

"Why pick on me? I ain't never done nothing to nobody. Yet so great has been the low-lived clamor against me that my enemies would hang me first and then judge me. After all, I am what I was made, and I should not be held responsible for the faults of my maker."

"He shifted his sword wearily to his left shoulder, and the reporter nimbly climbed into his ear to escape the blade. Tears filled the giant's eyes and, descending in twin torrents, almost submerged the two females on whom he was standing, and one cried:

"Cut that out! D'you think I'm starring in a tank scene?"

"The White Hope, reddening with anger over the three thou-

sand square yards of exposed anatomy, shifted his foot to her face, retorting with Old World gallantry:

"Shut up. If it weren't for you two I'd be a respectable member of the community. As it is, this place is likely to be raided any day and the bunch of us deported as undesirable citizens. So let me do the talking for the whole gang."

"He bent down and, turning the flat of his sword suggestively, measured the distance to the pulchritudinous figure under his right foot. But he stayed his hand and sighed:

"It's no use. She'd only squawk to the cops, and I've enough to worry about, any way. Every hand in the city is turned against me; every door is closed. They certainly put the double-cross on me at birth, and I've missed my vocation!

"I ought to be an actor or a Russian dancer or a Greek figure in a tableau. Then everybody would gasp and cheer, instead of yelling for me to pull on my pants and wipe off my chin. I'm not blaming Mayor Hylan for locking the gates of City Hall Park on me, but I ought to have a chance to earn my living somewhere.

"If it gets to gravel, I'll bet I could draw a gate in a fight with Dempsey over on Boyle's lot, but I don't like to run out on the girls, at that."

The interviewer promised to inquire about the matter and the Big Fellow expressed gratitude, and as the interview ended he said:

"Don't pan this couple of girls too hard, will you? And, if the Mayor is willing to let by-gones be by-gones, I'd like to suggest that we're willing to compromise if he'll put us up in Sheridan Square Park in Greenwich Village. I'm sure we'd find kindred spirits and kind hearts there, and the breeze isn't so strong."

MEANING OF THE DANCING MANIA

DANCING, when it becomes a mania, ought to tell us something about ourselves that would, if properly regarded, save such a débâcle as the world experienced in 1914. So at any rate thinks an Englishwoman, who philosophizes the two concurrent phenomena, war and the dance. With us the height of the dancing wave preceded the war; with Europe, and especially England, it coincided and lingered in its wake. Now, so Miss Cicely Hamilton observes in the *London Daily Chronicle*, "it is certain that the masculine craze for the fox-trot and bunny-hug is passing; men do not dance madly in 1922 as they did in the

year of the Armistice." Ruminating upon this, she asks: "What is the meaning of the dancing mania—of that passion for stepping and whirling to music which possessed the world that had newly laid down its arms?" Here is her very interesting answer:

"Clearly it was not a method of rejoicing over victory—since the German hopped it as wildly as the conqueror who had taken possession of his Rhineland. Nor was it an excuse for the coming together of the sexes whom war had divided; the absence of women was no bar to the joys of the ballroom, and men capered contentedly with their arms round each others' leather belts.

"I remember looking down on a regiment of Highlanders as they waltzed and two-stepped in the guildhall of a little German town; the piano jangling, the kilts swinging round—men by the hundred, not a woman among them, men who were dancing for nothing but the pleasure of the dance. . . .

"We know curiously little of ourselves and our instinctive emotions—the common emotions and sudden herd-impulses whose effects are writ large in the bloodiest pages of history.

"The passing of the dancing craze may seem a small matter to the casual reader of a newspaper; but we might guard the better against future outbreaks of wholesale savagery—might

THE NEW YORK FIREMAN.

George Lorz who posed for the Statue of "Civic Virtue," and declares it is not trampling women.

control more wisely our sudden herd-impulses—if we understood the precise connection between the shedding of blood and the pleasure in capering to music. . . .

"For there is a connection, fundamental and eternal, which the savage, in his war-dance, has always been aware of, but which civilized (or so-called civilized) man had forgotten till the blood-fever swept over Europe and America.

"With the fever in his veins the white man danced—like the savage arrayed in his war-paint."

A GRAVE CHARGE AGAINST WOMEN'S NOVELS

NEVER IN ANY AGE or country has there been the number of "dirty books written by women," that find their way to publication to-day. *The Saturday Review* (London) makes this grave charge, heading its article "Dirty Work" and finding occasion for its attack in a recent volume of

gynecological details are given suitable alone for a midwifery text-book ('Their Hearts'): the ties between mother and child are treated from muddled notions of Freud's theories of sex, and the most sacred of relations defiled: even the children are not respected; the child *Joanna* (in 'The Open Door') at nine years old sees a man's 'hairy' ankles and has 'guilty thoughts'; and there is a passage in 'A Marrying Man,' in which a boy of seventeen states his view of the relations of his 'fair mother' to a man with a black coloring, after being asked by the degenerate heroine, a woman of forty-five, whether his interest in women is 'pathological' or 'something else,' which we believe to be without parallel. All the women intellectuals smoke, drink and say 'damn' on the least excuse. In 'Martha and Mary,' which the publisher, if he has any conscience, will burn, one of the heroines says to her lover, 'Owen, for goodness' sake stop making that bloody row.' Chastity in this dreary, dull, sordid atmosphere, is either tacitly or by actual expression, regarded as an 'exploded theory.' . . .

"While we must not be taken to say that no novels written by women are free from these deteriorating and destroying elements, we maintain that the above class of book is becoming ever more popular: and that if we do not stop its growth we shall be producing a race of men and women whose lives are being poisoned at the source."

It is the "exaggerated individualism" of the feminist movement that the *Saturday Review* holds accountable, which opposes itself "to the great unifying principles of the finest civilizations and is one-sided and dehumanizing." Further:

"Outward interests and distractions and showy spectacular activities, involving no service of the soul, no spiritual and moral development; the reliance on movements, masses and committees; the throwing-off of all restraint and standards; the license to 'do what one likes,' lead not to freedom but to anarchy: its growth is seen in the modern novels by women."

A POET FROM THE SLUMS

POETS TURN UP where they list, but their discovery is not often in such unlikely places as among the labor squads known as "sand-hogs"—Italians who work in gangs with pick and shovel. Out of this environment comes Pascal d'Angelo, who as a preparation for writing has taught himself French and Spanish and has read most of the best poets of those tongues, as well as of English and Italian. As a poet he seems to have been discovered simultaneously by the *Bookman*, the *Nation*, the *Century* and the *New York Evening Post*, where his verses have appeared. Mr. Carl van Doren, writing of him in the *Nation*, tells of a devotion that makes Chatterton's story pale, because Chatterton after all was a vastly clever cheat and didn't have the courage even of his deceptions. "At present he is living under the most desperate conditions, staying in bed half of the day to keep warm in his unheated room, eating nothing but bananas, milk and stale bread, asking no favors, and writing poetry which, tho much of it is naturally full of imperfections, occasionally strikes such notes as these in 'The City':

We who were born through the love of God must die through the hatred of Man.
We who grapple with the destruction of ignorance and the creation of unwitting love—
We struggle, blinded by dismal night in a weird shadowy city.
Yet the city itself is lifting street-lamps, like a million cups filled with light,
To quench from the upraised eyes their thirst of gloom;
And from the hecatombs of aching souls
The factory smoke is unfolding in protesting curves
Like phantoms of black unappeased desires, yearning and struggling and pointing upward;
While through its dark streets pass people, tired, useless,
Trampling the vague black illusions
That pave their paths like broad leaves of water-lilies
On twilight streams;
And there are smiles at times on their lips.
Only the great soul, denuded to the blasts of reality,
Shivers and groans.
And like two wild ideas lost in a forest of thoughts,
Blind hatred and blinder love run amuck through the city.

short stories written by the wife of a foreign minister to the United States. It thinks "the emancipation movement of women to be largely responsible." Speaking of the particular book in question, the *Review* observes that "if it were an isolated one, if any signs of disapproval had been forthcoming from women themselves, the issues involved would be individual and of no importance." But—

"Not only is the book not an isolated instance, but it accurately reproduces the tone and style and point of view of the flood of novels from the hands of women, that have been poured forth ceaselessly during the last six years, without we believe a single protest, encouraged by the two or three women critics who came into notoriety during the war, and exhibit a virgin ignorance alike of scholarship and manners; and, more disquieting, are to be found on the shelves of the local circulating libraries for every boy and girl to read. Examine these pages. Not from the standpoint of morality, which would lead us into deeper inquiries than can be handled here, but from that of ordinary taste, decorum, respect and observance of those restraints which civilization imposes if we are not to return into anarchy. Marriage sensualized and vulgarized is painted in its most sordid details:

Mr. Van Doren puts together some passages from an autobiographical sketch given him by the young poet:

"Pascal D'Angelo was born, he says, near the old walled city in Sulmona, Italy. It is a small town in the beautiful valley that was once the stronghold of the Samnites, walled in by the great blue barrens of Monte Majella. Few roads run to this quiet land and ancient traditions have never entirely died out there. Below the town is the garden of Ovid, with its wild roses and cool springs, and above is an ancient castle that in summer is fantastically crowned with the mingling flight of pigeons which take care of their young on its towered heights. In the valley below are finely cultivated fields dotted with the ruins of Italica, the capital of fierce Samnium. There he went to school a very little during his childhood, handicapped by the fact that his parents at home could neither read nor write and that, because of their poverty, he was frequently obliged to stay at home to herd the family's six or seven sheep and four goats. At sixteen he came with his father and a number of fellow-villagers to the United States.

"In this country immigrants from the same town stick together like a swarm of bees from the same hive and work where the foreman, or 'boss,' finds a job for the gang. At first I was water-boy and then shortly after I took my place beside my father. I always was, and am, a pick-and-shovel man.' Pascal D'Angelo worked here and there at similar rough labor, in New Jersey, New York, Connecticut, Massachusetts, Vermont, West Virginia, Maryland—at first unable to read newspapers printed in English and unaware that there were any printed in Italian. But gradually he learned to read, and always he was a poet. 'When night comes and we all quit work the thud of the pick and the jingling of the shovel are not heard any more. All my day's labors are gone, forever. But if I write a line of poetry my work is not lost, my line is still there—it can be read by you to-day and can be read by another to-morrow. But my pick-and-shovel works can be read neither by you to-day nor by another to-morrow. . . . So I yearn for an opportunity to see what I can accomplish . . . before suffering, cold, wet, and rheumatism begin to harm me in the not distant future.'

D'Angelo's finest lyric, according to Mr. Van Doren, gives a picture of the world in which he then moved:

In the dark verdure of summer
The railroad tracks are like the chords of a lyre gleaming across the
dreamy valley,
And the road crosses them like a flash of lightning.
But the souls of many who speed like music on the melodious heart-strings
of the valley
Are dim with storms.
And the soul of a farm lad who plods, whistling, on the lightning road
Is a bright blue sky.

Resuming his narrative, Mr. Van Doren writes:

"As the result of being taken by a bartender to an Italian vaudeville show on the Bowery, the boy began to write—a farce, jokes, anecdotes 'of the type for my class of people.' Then he bought a small Webster's dictionary for a quarter and set out to master it. His companions laughed at him, but he persisted tirelessly. 'I made them understand by spelling each word or writing it on a railroad tie or a piece of wood anywhere, just to express myself.' As his ardor and his reputation grew, some young brakemen undertook to discipline him. 'What they did was to bring new words every morning. They used to come half an hour before working time and ask me the meaning of the new words. If I could answer the first word, all was well and good; then they were quiet all day. If not, when noon came all the office people, both men and women, crowded the place where everybody was present and tried to show me up. But their trials and efforts were all useless, as useless as I could make them. But one day they brought me before all the crowd, just to have me ridiculed, perhaps, because they all were high-school lads. So they brought five words of which I knew only three. Then they began to proclaim themselves victorious. But I gave them two words they did not understand. Then I bet them I could give them ten words, and two more for good measure, that they could not understand. And I began: 'troglo-dyte, sebaceous, wen, passerine, indecidity, murine, bantling, ubiquity, clithrophobia, nadir'; and instead of two I added seven more to make their débâcle more horrible. So I again wrote seven more words with the chalk which they provided me, writing them against the office façade where every one could see their eternal defeat: 'anorexia, caballine, phlebotomy, coeval,

arable, octoroon, risible.' Then to complete I added 'asininity' and explained its meaning to them immediately. . . . After that triumph they named me 'Solution' and all became friends.' "

At Sheepshead Bay he heard "Aida" sung in the open air, and "there were parts of such eloquent beauty in that opera that they tore my soul." Being wholly unacquainted with the notation, he was deterred from the attempt to write music—

"Music is not like the English language, that I began to write without a teacher. . . . In poetry I fared better. In the library I wandered upon Shelley and was again thrilled to the heart. Shelley I could proceed to emulate almost immediately. . . . It was a hard job to put my words in order. The stuff I used to write at first was unthinkable trash. But I was always bothering people to point out my mistakes. Grammar gave me plenty of troubles and still does. Rhyme stumped me. Then I began to read all kinds of poetry and saw that rhyme was not absolutely necessary. I also discovered that a good deal of what is called poetry is junk. So from the first I have tried to avoid echoing the things I have read, and to bring an originality both of expression and thought."

Two or three more of D'Angelo's poems will be found in the department of CURRENT POETRY.

PASCAL D'ANGELO.

A poet of the slums, who taught himself to write poetry in intervals of his work with pick and shovel!

LLOYD GEORGE IN A BYRONIC MOOD—

While the British Prime Minister was on his recent vacation in Wales he attended a Methodist chapel and heard the pastor refer to the heights attained by the most famous of living Welshmen. Mr. Lloyd George's reply to the effect that the mountain-top of fame is not always a desirable place, calls from the *New York Times* the remark that the British statesman is something of a poet. And a number of correspondents write in to the *Times* to suggest that the Premier did not necessarily take his speech from Byron, but that he might have done so if he had been familiar with "Childe Harold." Mr. Lloyd George's remark was quoted as follows in the cable dispatches:

"Mr. Davies has referred to my having climbed the mountain of fame and responsibility. Let me warn all the young people who are here that the mountain is not by any means an enviable spot. The higher you climb the colder it becomes, and the lonelier you will find it."

This may be compared with the following stanza from the third canto of "Childe Harold," Napoleon being the personage present in the poet's mind:

"He who ascends to mountain tops shall find
The loftiest peaks most wrapped in clouds and snow;
He who surpasses or subdues mankind
Must look down on the hate of those below.
Tho high above, the sun of glory glow,
And far beneath the earth and ocean spread,
Round him are icy rocks, and loudly blow
Contending tempests on his naked head
And thus reward the toils which to those summits led."

RELIGION-AND-SOCIAL-SERVICE

THE MISSIONARY'S CHANCE IN INDIA

INDIA ASSUMES SUCH IMPORTANCE in international affairs to-day that a comprehensive survey of conditions in that distracted country by such a competent observer as Dr. Robert E. Speer, Secretary of the Presbyterian Board of Foreign Missions, and a widely experienced missionary worker, is both important and opportune. After finishing a tour of the country, in which he interviewed many native leaders and examined conditions at first hand, Dr. Speer writes in *The Missionary Review of the World* that altho confusion now marks India for its own, he believes that in the present tumult lies the missionary's opportunity. The general confusion is attributed by Dr. Speer to several causes, chief among which are fickleness of opinion among the native leaders, some of whom seem to change their minds with their clothes; the religious complexion given by the Khilafat program to the Nationalist movement for complete independence, and the bloody outbreaks of Gandhi's followers.

But every such time is marked by follies and excesses, writes Dr. Speer, declaring that, whatever the imperfections, "one can only rejoice, as the wisest politicians and the wisest missionaries are rejoicing, over the present growth of national consciousness in India." This, we are told, is what the best British administrators in India hoped for and looked forward to from the time when the conscience of Great Britain first awoke to the responsibilities in which she had become involved through the occupation of the country by the East India Company. The situation, then, is of importance to the student of missions, since "it ought to be easier to develop a self-dependent Church in a self-dependent nation." The difficulty, finds Dr. Speer, lies in understanding the true character and strength and direction of the present tendencies, and the "incessant and rapid change which is going on in movements and in the attitude of individuals." Some Indians have changed from their sympathetic attitude toward Great Britain to a wholesale denunciation of Western civilization, and some Englishmen in India, writes Dr. Speer, suggest that England let India go, while a "very few" speak contemptuously of the present political reforms instituted there. It is such contemptuous talk, the writer believes, which has intensified the nationalist movement and been responsible for a good deal of bitterness and indignation, and he goes on:

"It has made vastly more difficult also the task of the great body of the British in India who are here in the way of duty and human service, who do not believe that India is ready for absolute independence or that the great mass of the people desire it or that Great Britain could, in honor and fidelity before either God or man, summarily throw overboard her responsibility in India. It would be the easiest course to fling India free, but what would be the judgment of history and humanity? 'No,' say Englishmen of this type, 'such a course would be easy, but it would be cowardly. History is a continuous process. To run a knife across it is to cut living fibers. Difficult as the situation is, we owe it to India to secure to her the best conditions of an independent national life, and we must stay and see the thing through.'

"The Moderate party in India takes this same view and desires to cooperate with Great Britain in carrying forward and enlarging the present reforms. They were adopted for a period of ten years looking toward revision and enlargement at that time. Both the Moderate party and the Government of India believe that if wisely and harmoniously carried forward the time of complete self-government in India may be greatly hastened. Against all this, however, the Extremist party, which has control of the All India Moslem League and of the Indian National Congress, stands opposed, denouncing the present government

as 'Satanic' and demanding immediate and complete independence."

The outstanding personality embodying the whole movement and recognized by every one as its head is Mahatma Gandhi, recently sent to prison for sedition. One meets a few who disbelieve in his sincerity, says the writer; many more wholly distrust his judgment. But the great mass of the Indian people believe in him absolutely, and even most of those who disagree with him respect deeply his character and his devotion. He has been called a "new edition of Tolstoy"; some have compared him even with Christ. Of himself the Indian ascetic has said: "Most religious men I have met are politicians in disguise: I however, who wear the guise of a politician, am at heart a religious man." He has called for a return to conditions of thousands of years ago, and declared that "railways accentuate the evil nature of man," and should be given up together with tram cars and electric lights. His economics and sociology, writes Dr. Speer, "are simple reaction and futility. He would perpetuate the impossible conditions of old India." However, Gandhi has begun to hedge, we are told; and has said that he is not aiming at destroying the railways or hospitals. "Nor am I," he wrote, "aiming at a permanent destruction of law courts, much as I regard it as a 'consummation devoutly to be wished for.' Still less am I trying to destroy all machinery and mills. It requires a higher simplicity and renunciation than the people are to-day prepared for." It was pointed out by the Moderates, however, that Gandhi's methods "were certain to play havoc with his principle of non-violence and to rob 'soul-force' of its spiritual power. . . . It has become clear, as Mr. Gandhi has sorrowfully acknowledged, that his name and the cause that he represents, in spite of the principle of non-violence, may be made to cover gross violence and wrong. Posters used in Lahore at the time of the outbreak in April, 1919, 'called upon the brave people of the Punjab to enlist in the Danda Fauj and kill the English, who were described as pigs, monkeys, and kaffirs,' and the same month posters were put up in Lyallpur in which 'Indians were called upon in the blessed name of Mahatma Gandhi to fight to the death against English cheats and to dishonor English women.'" It is true, we are told, that Gandhi has lamented and denounced violence; yet, on the other hand, Dr. Speer quotes from an article written by Gandhi in the *Indian Mirror* last summer: "I can clearly see the time coming to me when I must refuse obedience to every single state-made law, even tho there may be a certainty of bloodshed."

With regard to the Khilafat agitation to restore Turkey to its pre-war status, Dr. Speer thinks "it is exceedingly difficult to determine how much of it is genuine and how much of it is nothing but a political agitation used to embarrass the Government and to furnish nourishment for the program of Hindu-Moslem unity. The undeniable history and nature of Turkish government, the oppression and massacre of its Christian subjects, the fictitious character of its religious pretensions—these are so indisputable and so notorious that it is hard to see how intelligent Indians can maintain the agitation without a blush or at least without a smile." The Turkish situation has been used as a lever against the British Government, and "without one word regarding the history and character of Turkish rule or her deliberate murder of her Christian people, the Indian Nationalist organ in Bombay calmly demands the immediate and unconditional restoration of Constantinople and the full

and undiscussable recognition of Khilafat claims." Moreover, "the Indian National Congress will have no freedom for India that is not preceded by the freedom of Turkey. It is not to be wondered at that there are many Christians in India who look with misgiving upon such a swaraj, nor is it surprising that many Hindus look with amazement upon such an alliance." Meanwhile official utterance in England and in India has assured the people that the Government intends to go forward with the present reform scheme in the orderly development of self-government, and Dr. Speer is led to believe from his exhaustive investigation that—

"Whatever course others may take, it is within the bounds of that utterance that the Church and the Missions should do their thinking and plan their work. If the British Government of India were an oppressive tyranny or if it were resisting the legitimate aspirations of the people, the problem of the Indian Church would be different, but while the Government may have been paternalistic and dilatory in its past recognition and development of Indian autonomy, it is seeking now with the highest conscience and with a changed attitude of mind which is as wonderful as it must have been psychologically difficult, to abandon once for all, as Lord Chelmsford said, the old principle of autocracy and to replace British rule by Indian rule."

STATE RIGHTS AND BABY WELFARE

FEDERAL AID FOR BABY-HEALTH CENTERS has been accepted by more than half the States, either permanently or provisionally; but whether the Sheppard-Towner Act is in itself a healthy influence or an invasion of States' rights and domestic privilege is still a disputed point, as has been pointed out before in these pages. However, the ground already gained by the Act, which contributes on a fifty-fifty basis to State aid for mothers and babies, inspires one writer to believe that soon "all the States, or all but a very few, will have accepted the Act and received the aid it offers for maternal and infant hygiene work." Dorothy Kirehwey Brown, an ardent supporter of the bill, declares in *The Woman Citizen* (New York) that it is "accused of being everything from Bolshevik propaganda to medical tyranny, with the terms free love, birth control, socialism, sanctity of the home and States' rights tossed freely about in connection with it." To this she replies that "the only definite prohibitions in the act are to safeguard the very liberties the opponents of the law say are endangered by it," and quotes from the bill that "nothing in this Act shall be construed as limiting the power of a parent or guardian or person standing *in loco parentis* to determine what treatment or correction shall be provided for a child, or the agency or agencies to be employed for such purpose." As for the argument about States' rights—"now moved north of the Mason and Dixon line and based largely on States' pocketbooks"—we are told that

the Children's Bureau established under the Act "guards scrupulously the rights of the State governments to make their own plans and to carry them into effect." One answer to the charge that the State work is to be directed from Washington instead of by the States is found, says the writer, in the following parable, labeled a "true story":

A SAMPLE YOUNGSTER.
Who owes his health to what is termed public "interference."

"A woman from New Mexico, a prominent and public-spirited citizen of her State, was recently visiting in New England, where she heard much about States' rights. Should New Mexico take entire care of its own problems? She said: 'What do you mean by its own problems? New Mexico is very poor. Its pioneers—its ranchers and miners—did look out for themselves. But now New Mexico has become the final refuge for people dying of tuberculosis. Men and women come to New Mexico, already hopelessly ill, and they die there and leave dependent children, children often with tuberculous tendencies, for us to take care of. They come from New York and from Illinois and from Massachusetts—they come from all parts of the country, and they leave to us this tragic burden. And still people say that health is purely a State problem.'

"Fortunately most of us are beginning to realize that what touches one of us touches us all, and that it is important to every American for babies to be well born in New Mexico and New York, in North Dakota and in North Carolina. . . .

"Enough has been said about why we need the Sheppard-Towner Act. No one who knows anything about public health is ignorant of the fact that the maternal mortality rate in the United States is distressingly high, more than twice as high as the rate for England and Wales, equaled in Sweden only by the rate for 1806-1810, over a century ago, and that it is 'probably unparalleled in modern times in a civilized country.'

"Every one knows that advice during pregnancy, knowledge of

WHERE KNOWLEDGE IS ADDED TO THE MOTHER'S INSTINCT.

An illustration of how New York City provides for the welfare of its babies and prevents a waste in child life by trying to "determine its own death-rate."

hygiene and skilled care at confinement can very greatly reduce this appalling rate. The same thing holds true of infant mortality. Countless experiments have shown that baby death-rates fall when visiting nurses and baby-health centers are available

to furnish help and advice to mothers. The truth has long been established of the motto on the letterhead of the New York State Department of Health: 'Public health is purchasable. Within natural limitations every community can determine its own death-rate.' Is there a State in the Union which will knowingly refuse to purchase the health the Sheppard-Towner Act offers—which will not gladly invest in this insurance against ignorance and illness and death?"

But isn't it significant, asks the *Boston News Bureau*, speaking for opponents of Federal aid for mothers, that the medical profession, which is "not accustomed to taking a view-point opposed to public welfare," is not among the advocates of the bill? To the medical mind, we are told, there is, among other things, "distinct exaggeration in statements of the bill's supporters when they talk mortality statistics and assume that their bill, by some new magic, would transform the situation." In the opinion of the *Boston paper*:

"The measure savors strongly of paternalism. It is another straw in the direction of Socialism. In fact, it does not take a vivid imagination to conjure up recollections of the soviet ideas of the relation of the State toward children.

"Politically it is a further bit of drift toward bureaucracy—bringing nearer that stage dreaded by some of our public men when half the population will be paying in taxes the salaries of the other half. Not much home rule or States' rights will be left if the process goes on.

"And bureaucracy is expensive as well as usually inefficient. The expense here falls heaviest on the States already most afflicted by taxation. And the country as a whole has more than enough taxes now to pay!"

THE KU KLUX KLAN AND THE CHURCH

THE ZEAL OF THE KU KLUX KLAN to "support the Church" has been displayed by many signs, and intimations multiply, we are told, that certain Protestant ministers are in its confidence and would seem on occasion to be directing its activities. But to some ministers the Klan's mark of approval appears to be embarrassing, a favor which they would much prefer to do without. Scarcely a Sunday passes, says *The Christian Century* (Undenominational), without the publication of the news that a Klan has visited a church in a body, simply to signify approval, or to remain decorously through the service. Latterly it has been the custom, on the occasion of these visits, for the leader of the Klan to present the minister with a "donation." This, we are told, is assumed to be a mark of the favor which the particular minister enjoys with the Klan, or of the favor which the Klan seeks from him or his congregation. Furthermore,

"It is noted that the congregation breaks into applause on some of these occasions. The banners carried in public parades of the Klan give further intimations to the same effect. They support the introduction of the Bible into the public schools, while accompanying legends indicate that the Roman Church does not enjoy the favor accorded Protestant bodies. The chief hindrance to the permanent and universal installation of the Bible as a text-book in the schools is assumed to be the Roman Church. Some of the legends are interpreted as siding with Masonic orders in their assumed controversy with Romanism. All of which reminds one that the restorer and head of the Klan is said to be a Mason and was in earlier years a minister of one of the Protestant denominations. In developing the ritual and ideals of the Klan he is alleged to have drawn upon his acquaintance with Masonry and the Church usages. Here is a field where accurate knowledge can not be gained. By shrouding its operations and principles in secrecy the Klan is subjecting itself to all manner of malignant charges which it can not refute by evidence satisfactory to the public, and may be suffering an injustice which it has itself invited. Its partiality for certain Protestant ministers and their churches must prove an embarrassment also to those enjoying its favor. Such ministers and churches may well devoutly pray to be delivered from the tender mercies of their friends. The accumulating suspicions and antipathies which prompt high-minded citizens to think

what a Texas judge asserted in his court the other day, that the Klan is 'the most dangerous organization that has ever been organized in this country,' must reflect upon ministers who graciously accept its donations and other favors, and upon congregations who applaud its presence and its 'benevolence.' To be the passive recipient of such flattering attentions is embarrassing enough, but to be the inspiration and directing mind in the activities of such an agency, as ministers are believed to have become, can lead only to defeat and undoing for those allowing themselves to be deluded into such 'zeal for righteousness.' The minister who resorts to such devices must have some cause to 'put over,' or must desire to 'get across' with some purpose, not consonant with the aims and ends of the gospel of Christ."

SUICIDE ON THE DECREASE

FEWER SUICIDES were reported in 1920 than in the year before, according to a review prepared for the *Spectator*, an insurance journal, the report indicating that the rate of 1920 was the lowest on record—12.3 per 100,000 of population, compared with the maximum rate of 21.5 per 100,000 for 1908. This report is contrary to the opinion of the statistician of the Save-a-Life League last summer that the number of suicides in the previous year was much greater than in the year before. The year of the highest rate, it is observed in the latest figures, was one marked by a large number of business failures. This was even more the case in 1915, when the suicide rate was 20.8. In 1914 the rate was 20.9. From reports already received for 1921, says the *Springfield Republican*, it seems probable that a considerable increase will be shown over the figures for 1920—"apparently reflecting in some degree the industrial situation—tho not as great as some alarmist reports and estimates have suggested."

The geographical distribution is interesting, says the *Republican* in its analysis of the figures, tho, thinks this paper, the significance of this distribution can hardly be estimated in the absence of information concerning social conditions. San Francisco shows the highest rates in three of the four periods of observation—47.6, 46.4 and 43.7. Omaha's rate—41.5—was highest in 1920. The lowest rates in these periods were: Newton, Mass., 3.2; Charleston, S. C., 5.8; Somerville, Mass., 6.4; Massillon, O., zero. According to the *Republican*,

"A world survey of suicides prepared by the statistical bureau of Spain for the period 1906-1917 showed the United States, with a rate of 161 suicides for 1,000,000 inhabitants, 13th among 26 countries, of which Saxony, with a rate of 356, made the poorest showing and Spain, with a rate of 45, the best. How complete were the data upon which this ranking is based does not appear. It is certain, however, that authoritative and adequate records have been generally lacking.

"Tabulation of the statistics by means employed in suicide covers only the years from 1910 to 1919 inclusive in the *Spectator's* report. The figures show in the last two years of this period a marked falling off in the use of poison, evidently reflecting increased care in guarding its sale and distribution. No attempt is made to tabulate suicides by cause. Material for such a grouping is very inadequate, a fact which carries a pretty direct moral for social workers. Business and industrial reverses, it is suggested, are a rather frequent cause. In general, the report notes that 'there has unquestionably been a lowering in moral fiber on the part of many weak-minded members of society, who find themselves unequal to meet the struggle of an environment of infinite complexity.'

"Suicides of children are particularly distressing, tho the *Spectator's* report, correcting some recent grossly exaggerated statements, declares that there is no evidence to be derived from any source that child suicides in this country show 'an alarming rate of increase.' In 1909 the number of suicides of children under 15 was only four-tenths of 1 per cent. of the whole number of suicides. It is manifestly, however, with the young that much of the effective work of prevention can be done. The new attention which is being given to mental hygiene, including the problem of the backward and sensitive child, has a direct and important bearing on the building up of moral stamina, which is the surest protection against self-destruction."

Here's Nature's prescription for every description
Of "fever" that comes in the Spring.
To fill you with vim, make you frisky and trim
This Vegetable Soup is the thing!

15 different vegetables
Nourishing cereals—rich beef broth

Enjoy them all in this delicious Vegetable Soup!

In every tempting plateful of this soup you get the iron of the green vegetables, the beneficial salts, the strength-giving cereals and the invigorating meat broth that your appetite relishes and your system needs. Nature's own spring tonic—healthful and delightful.

Choice white potatoes, Jersey "sweets," Chantenay carrots, tender yellow turnips—all daintily diced. Luscious tomatoes, chopped Dutch cabbage. Country Gentleman corn, baby lima beans, small peas, selected barley, alphabet macaroni—all blended with a rich broth made from fine beef, flavored with fresh herbs and tasty seasoning. Almost a whole meal—and what a good one!

CURRENT - POETRY

Unsolicited contribution to this department cannot be returned.

PASCAL D'ANGELO, whose interesting story is given in the LETTERS AND ART DEPARTMENT, is a struggling spirit, fighting an alien tongue as well as poverty. The first two poems are quoted from the *New York Evening Post*, the third from the *Bookman*:

LIGHT

By PASCAL D'ANGELO

Every morning, while hurrying along River Road to work,
I pass the old miser Stenowski's hut,
Beside which pants a white perfumed cloud of acacias.
And the poignant spring pierces me.

My eyes are suddenly glad, like cloud-shadows when they meet the sheltering gloom
After having been long stranded in a sea of glassy light.

Then I rush to the yard.
But on the job my mind still wanders along the steps of dreams in search of beauty.
O how I bleed in anguish! I suffer.
Amid my happy, laughing but senseless toilers!
Perhaps it is the price of a forbidden dream sunken in the purple sea of an obscure future.

MIDDAY

By PASCAL D'ANGELO

The road is like a little child running ahead of me
and then hiding behind a curve—
Perhaps to surprise me when I reach there.

The sun has built a nest of light under the eaves of noon;
A lark drops down from the cloudless sky
Like a singing arrow, wet with blue, sped from the bow of space.

But my eyes pierce the soft azure, far, far beyond,
To where roam eternal lovers
Along the broad blue ways
Of silence.

SONGS OF LIGHT

By PASCAL D'ANGELO

1

The wind strikes the pyramids of silence
And they fall into fragments of glistening melody,
And drift beyond the forests and hills
Into sudden distant pyramids of gold.

The wind serpents around their glimmering pinnales of silence,
And whirls off into outer blue,
And perhaps goes ruffling and panting
To where the loose-tressed maidens of space
Are floating on the winds of centuries.

2

The sun robed with noons stands on the pulpit of heaven,
Like an anchorite preaching his faith of light to listening space.

And I am one of the sun's lost words,
A ray that pierces through endless emptiness on emptiness.
Seeking in vain to be freed of its burden of splendor.

CHARLES LAMB had to confess that the tuning of the fiddles was to him the best part of the music. A versifier in the *London Sunday Times* confesses to the same feeling and expands on it:

ANTICIPATIONS

By J. R. J.

I love preliminary things,
The tuning-up of flutes and strings;
The little scales musicians play
In varying keys to feel their way;
The hum—the hush in which it dies;
But most to see the curtain rise.

I love preliminary things,
The little box the postman brings;
To cut the twine, to break the seals,
And wonder what the lid reveals;
To lift the folds in which it lies
And watch the gift materialize.

The snowdrop and the daffodil,
The catkins hanging straight and still,
The blossom on the orchard trees.
Do you know greater joys than these?
Each represents the hope that springs
In all preliminary things.

MR. WILLIAM HARRIS ARNOLD who has collected Stevenson manuscripts possesses the original of "Requiem," and tells us in *Scribner's* that it contains an extra stanza, the second here printed, not found in the familiar versions in the poet's works:

REQUIEM

By ROBERT LOUIS STEVENSON

Under the wide and starry sky,
Dig the grave and let me lie.
Glad did I live and gladly die
And I laid me down with a will.

Here may the winds about me blow;
Here the clouds may come and go;
Here shall be rest for evermore,
And the heart for aye shall be still.

This be the verse you grave for me:
Here he lies where he longed to be;
Home is the sailor, home from the sea,
And the hunter home from the hill.

A SINGER, whose voice is lifted less frequently than formerly, appears in *The Lyric*, organ of the Poet's Club of Norfolk, Va. The old magic is still with her tho.

A HOST IN GALILEE

By THEODOSIA GARRISON

You asked not whence we came nor where we went;
That we were spent and famished—that you saw.
You led us through your door to all content.
What is your law?

You brought cool waters for our hands and feet.—
We whom the road had broken with its rods.
You poured the wine,—you bade us rest and eat.

Who are your gods?

No little words our gratitude may fit;
Parting we lean to kiss your garment's hem.
Tell us your law that we may honour it;
Name us your gods that we may worship them.

IF IT isn't Walton, who is it that leads to such reveries as this in the *London Outlook*? We know of no such "riotously pictured" edition of the great sage of fishermen, but what of that!

THE PASSING OF A KING

By WILLIAM DOUGLAS

The crackling, flickering chorus of the hearth,
The North Wind's weird, chromatic lullaby,
The rhythmic drumming of the driving sleet,
The soothing soporific of a pipe—
All these invite to slumbrous reverie.
All these—but most the witchery of a book
Richer than old romance in golden lore
Of storied morns and memorable eves,
Its printless, riotously pictured page
Brilliant with plumage of a thousand skies,
Peacock and parrot, jungle-cock and grouse.

At once the breath of Spring is in the air;
The April sun plays madcap hide-and-seek
With scampering clouds. Athwart the rippled pool
The wind-swept beeches throw a glancing shade
Where wary salmon seek a sanctuary.

With careful skill the curving line shoots out
Straight. The lure alights upon the stream
Soft as a snowflake. Tensely the senses wait.
The updrawn line is checked. The hidden death
Speeds home!

With sudden plunge he seeks the depths.
The reel shrieks wildly at a dash down stream,
Then holds its breath to watch a giant leap
That threatens ruin. A lightning upward rush;
A race to reach a refuge in the weeds;
A sullen silence; again a frenzied leap;
A vain attempt to gain a tangled haunt
In beechen roots, grotesque and serpentine,
Washed bare, and whitened by the floods of years;
Taut line and cunning strength at last prevail,
And soon he gasps a captive in the net.

The "priest" gives kindly absolution;
And on a bier of sorrel and lush grass,
In armour bright, he sleeps in kingly state.

A NOTE of James Whitecomb Riley sounds in this to be found in the column "A Line o' Type or Two" in the *Chicago Tribune*, it may appeal to some one as suitable for recitation:

THE LAMP-LIGHTER

By R. N. RISSE

When dad was a little boy,
Years ago,
Wasn't any 'lectric lights—
Dad says so;
Lamp-posts stood along the street,
For the lighter-man to keep—
And the lamp-post man would light them just
before boy went to sleep—
Years ago.

When the sun set, and the dark
Grew and grew,
Then the light-man with his stick
He came, too;
Came out of the night somewhere.
With slouch hat and queery air,
And a ladder, and he climbed each post, and lit
the lamp, that's what—
He'd do!

When the evening hour came,
And twilight,
And the stars began to shine
In the night—
Everything was mystery;
In his dreamy thoughts he'd see
This old queery, funny lighter-man come sailing
'cross the sea!
At twilight.

When the lamp-post man came 'round,
Years ago,
Then the Sand-Man, he came, too—
He did so!
When the lamp-posts all were lit,
Boy began to doze a bit,
For the Sand-Man and the lighter-man were
brothers—guess that's it!
Dad says so!

THIS contributor to the "Bowling Green" in the *New York Evening Post* expresses our bewilderment which experiences its renewal each time the oncoming season approaches.

HOKKU!

(The Old English poet chastiseth the cult of Japanese adapters)

Summer is y-comen in,
Loud sing Hokku!
Groweth blurb without a curb
Imagist springeth anew—
Sing Hokku!
Bleateth after print the bard,
Editor groaneth too—
Cubist verseth, public curseth,
Merry sing Hokku!
Hokku's the only rounderlay. . . .
I wonder how they get that way!

Barrett Specification Roofs

Bonded for
20 and 10
Years

This Wearing Surface is "Fire Insurance" and "Life Insurance" for the Roof—

THE illustration shows the final operation in the laying of a Barrett Specification Roof—the pouring of the top coat of hot Specification Pitch and the spreading of the thick wearing surface of gravel or slag, after the entire roof has received the required number of plies of felt and pitch.

This wearing surface is *fire insurance* for the roof, because it provides a high degree of fire resistance. When burning brands fall on the slag or gravel surface, they do no serious damage. This is one of the reasons why the National Board of Fire Underwriters gives Barrett Specification Roofs the best rating.

This wearing surface is *life insurance* for the roof, because it holds in place and permits applying twice as much waterproofing

material as would otherwise be possible. The top coat of roofing pitch is extra heavy. It is always *poured* on—not mopped.

Pitch is used, because of its elasticity and proved superiority as a waterproofing material.

Barrett Specification Roofs are bonded against roof repair expense—Type "AA" for 20 years, Type "A" for 10 years.

Copies of the Barrett Specification sent free on request.

I was surprised, knowing that he had just got a share of the big receipts.

"I didn't have enough left to square up for the season," he explained, "and I didn't want to go to the bank just yet. I want this money to settle the bill for that dinner last night."

You have heard of men who made fortunes out of baseball. Do you personally know of one? In all my acquaintance I know of but three men who accumulated a fortune out of the game. Strangely enough, not one of those made his fortune in advance and went into baseball as an investment. The only ones to grow rich are those who were of baseball in its infancy and grew along with the game, like Charles Comiskey of the Chicago White Sox, for instance.

In case you are a baseball fan and try to keep up with the game, let me ask you something: How many magnates of to-day can you recall who were club owners fifteen years ago in either of the major leagues?

Offhand I can think of but four out of the sixteen clubs. The Philadelphia Athletics, the Pittsburgh Pirates, the Brooklyn Club, and the Chicago White Sox. I may be partly mistaken at that. Often new partners are taken in whose names remain silent.

The reason so many owners drop out, says this particular owner, is they discover in time that they are really not making as much money as they think they are. The big figures confuse magnates as well as fans. One season the profits may really be large, very large. The next year, if the club falls low in the race, the books will show a big loss. As for one big reason behind most losses:

Often you have heard baseball enthusiasts declare that as long as they see a good game they really don't care who wins. That is the biggest bunk in the world. The fan pays his money, not to see a good game, but to see the home club win. The bigger the score the better. And, take it from me, if the home club doesn't win, the fan will quit going to see it.

That very thing accounts for the honesty of big-league baseball—for the fact that in forty years only one smudge has appeared on its record. I refer to the bribing of a few White Sox players in 1919.

You see, a ball club and the ball-players can make more money by winning than by being paid to lose. In addition to that a player's record is his stock in trade from year to year—his bread and butter.

A very large expense in baseball, one very uncertain in results, is the securing of new players to keep the teams up to a high state of efficiency. Despite the fact that every fan thinks he knows of a good player that could be had for the asking, we frequently employ as many as four scouts to tour the United States and rake the bushes with a fine-toothed comb in search of new talent.

About one out of ten recruits brought up to the big leagues makes good. The others are a dead loss. To give these unknowns a good chance costs us on an average \$5,000 a man. But if one man turns out to be a star, he repays us for all the loss.

The outright purchase of acknowledged stars is almost as risky. A star may shine brightly in one spot and be a complete flop in another. An instance, the Pittsburgh Club, a few years ago paid \$22,500 for Pitcher Marty O'Toole, and he was a dead loss. Another: I paid \$11,000 for a minor-league pitcher and carried him at a big salary for a year. He was not worth a nickel. Any number of such cases could be recited.

We have to take all kinds of chances, tho, and overlook nothing. On the slightest tip we start out an experienced scout

to camp on the trail of the prospect and make weekly reports. Sometimes these expert scouts go wrong.

One day a letter came into our office addressed in a boyish hand to the manager:

"Sir: By the standing of the clubs I see that you are in need of good ball-players. I can fill the bill. I am six feet, weigh 170, am fast on my feet, and can hit. Do not overlook this opportunity."

We get many such letters, but the naive assurance of this bushy hit the funny-bone of the manager hard enough to make him answer.

"We are interested in your letter," he wrote to the young man, "but you failed to state in what position you played."

The manager meant to inquire whether the boy was a pitcher, catcher, or fielder.

The reply to this was prompt. The young man inclosed a posed photograph, showing himself bent to the ground and evidently reaching for a grounder.

"Sir," he wrote, "you can see from the inclosed photograph that I play in a stooping position. And I usually get them on either side too."

This correspondence got to be so amusing that we told one of the scouts to slip in and see this boy work without his knowing it. The joke was on us. The fellow really could play. To-day he is a valuable player in a big league.

Some ball clubs that never seem to get anywhere in a race make a business of developing star players and selling them. This brings in a lot of money to offset lack of patronage by the public, but it is a losing game in the long run.

After the Philadelphia Athletics broke up their great team of a few years ago, by selling off star players, one club went there and played a game to a handful of people, the net receipts being less than \$10.

The reason for selling those players and breaking up a great team gives an insight into one of the oddities of baseball. The Athletics had won so regularly and so many years that interest in the team dulled—so much so that the team lost money during a championship year.

Connie Mack thereupon decided that if he had built his club too good he would break it up and build another. It was a daring move, one that required imagination. Unfortunately it didn't work. Every season since his club has been a tailender.

"Well," he said dryly one day, "they lost interest when I had the best club, and now they're kicking because I've got the worst one. What's a fellow going to do?"

EVERYBODY KNOWS HIM.

It is conceivable that certain backwoods citizens might be puzzled by the name of Warren G. Harding, but the chances are they would respond to the mention of "Babe" Ruth.

"Play the game with chips," this owner advises his brother owners several times in the course of his article. He says, in conclusion:

My reference to playing the game with chips may not have been clear. I meant that an owner must not be afraid to make plunges, to take big chances.

The successful club owner must play with chips regardless of what they represent. Otherwise he will look on the money when it is green and weaken in his judgment. If, for instance, his judgment tells him that he must have a certain player to complete the machinery of his team, price must not stand in the way. He must simply shove in his stack of chips—play his hand—and let the banker settle up at the end of the season. Usually his judgment is sound. All he has to do is to employ his money as part of the big game, and not count it.

Many a big bluff in poker would never be called if the player had to call it with a five-dollar bill instead of five blue chips.

Home of H. E. Paddon, a prominent New York architect, in Ridgewood, New Jersey. The house is warmed with American Radiators and an IDEAL TYPE A HEAT MACHINE.

When an architect plans his own home what heating equipment does he specify?

If you plan to build or remodel, send for our book about the IDEAL TYPE A HEAT MACHINE. Mail your request to either address below. This Company is headquarters for warmth.

HOW many regrets would be avoided if Americans would consult their architects more!

Your architect knows the difference between the kind of heating equipment which is merely a purchase; and the kind which is a life-long investment.

If you demand the cheapest boiler and radiators, he can get them for you.

But a better question to ask him is this: "When you planned your own home, what heating equipment did you specify?"

WHY NOT SOME "BARGAINS IN EUROPEAN VACATIONS"?

OUR MERCHANT MARINE is in a position to take thousands of Americans to Europe this summer, at a comparatively trifling expense to the tourists and considerably to the benefit of the shipping men's own flattened pocketbooks. This is the reasoned conclusion of Edward A. Filene, Director of the International Chamber of Commerce, business expert and, in general, a man whose word goes far in both national and international affairs. The proposition looks simple as he presents it. American shipping, he reminds us, is experiencing hard times. The immigrant business has been cut down by restrictive laws, and there is little hope of materially increasing our exports until Europe is brought back to normal condition. In the meantime, however, declares Mr. Filene, "there is a chance of making up this deficit by getting, from an entirely new class of would-be travelers, a larger number of passengers than were carried in the palmiest days of immigration — passengers, moreover, that will not only go to Europe, but come back again, thus providing full cargo for our ships both going and coming." He thus proceeds to develop his idea, in an address delivered before the annual convention of the National Merchant Marine Association, at Washington:

We Americans are a vacation-loving and a vacation-taking people—more so, perhaps, than any other in the world. The kind and extent of our vacations are limited only by our ability to pay and the time at our disposal. I believe that there are hundreds of thousands of people in this country who would spend their vacations in Europe provided the trip was brought within their means.

But the trip would have to be brought within their means—within the means of the great body of teachers, of farmers, of business and professional men who are just beginning their careers, of returned soldiers who have been in Europe and want to go back again, of former immigrants with relatives and friends to visit over there, of students of all sorts and conditions. A new class of tourists would have to be tapped, and it would take a new price and mode of travel to do it.

The tourist agencies, with their conducted parties, have systematized their service to the various European countries until one feels that the trip could not be taken more reasonably than now so long as regular means of travel and first-class hotels are used. The agency tours have brought pleasure and profit to thousands. The continuing success of these enterprises is a good enough certificate of their reliability and efficiency. I do not wish to minimize, in any way, the great service they have rendered.

But there is room for cheaper and simpler facilities, and a chance to care for people in a more wholesale way. I am told that such a passenger-ship as the *George Washington* ferried over, during the war, a number of soldiers considerably more than twice as great as her ordinary passenger capacity, and that boats of the United Fruit Company, that normally carry 150 passengers, carried as high as 1,500 soldiers; that a 7,500-gross-ton ship, which will transport 75 first-class and 45 second-class passengers, will carry from 800 to 900 troops. I am further informed that subsistence costs, which are about \$1.75 a day for first-class passengers, are only 75 cents a day for troops.

What has been done can be done again. Facilities that our young men found good enough in war-time are good enough for us in peace-time. There is no need that we should go back

to luxurious travel—no need, at least, that by failing or refusing to provide facilities for simple and inexpensive travel we shall deny the opportunity of foreign travel to the masses of our people who can not afford to pay from \$100 to \$500 for a one-way passage across the ocean. Would it not be possible to provide for our men—the service would no doubt have, for a time at least, to be limited to men—a transport service at modest costs, just as the Government provided a cheap but adequate transport service in 1917, 1918 and 1919.

I want to submit to you steamship owners here the question whether you would not find it to your advantage to arrange to take shiploads of men over to Europe in much the same fashion as we took our soldiers to France during the war? Whether the cost of a vacation in Europe could not be made to compare favorably with the cost of vacations in this country, especially as transportation and living costs would be combined in two of the four or six weeks of such a vacation? Whether the small profits that would be made from a very large number of passengers carried on the transport plan would not compare favorably with the larger profits made from passengers carried in the regular way?

There are many ships that are 'eating their heads off in idleness at present, some of them, I am told, built for transports and not requiring to be entirely rebuilt inside to make them suitable. If these transports could be used, or if other ships could be refitted as was done during the war so that large numbers could be carried in them, would it not be possible greatly to reduce ocean fares?

This kind of traveler would not demand much more comfort than he gets on his annual camping trip! Cafeteria meals would appeal to him as economical and he would be satisfied, if necessary, to sleep in hammocks. Few stewards would be required to take care of

such passengers. With only men on the boats the accommodations could be simplified in many ways.

It would be possible greatly to reduce expenses, also, for travel and living during the vacation weeks spent in European countries. It might be worth the while of the steamship companies to take this in hand, through some common agency created for the purpose. In the short time at their disposal such tourists would prefer to be personally conducted, as that would be the only way they could see many things of great interest. Going in large parties as they would for this purpose, provision could be made for cheap railway transportation. Special arrangements to receive such bodies and take care of them would gladly be made by Y. M. C. A.'s and by student and travel organizations. Wholesale prices could be had from residential hotels and boarding-houses of proved character and condition, that would be less than the price of living in this country.

It would be to the interest of European cities and governments to have such tourists well imprest, Mr. Filene observes, and he predicts that it would be very easy to get parties conducted through the countries in much the same way as the French Government made it possible to view the devastated regions at a low cost. They could be divided up into groups according to their tastes, and it is not at all in his mind to have the adventure too studious or too solemn. There is another favorable consideration:

A great advantage this year would be the difference in the purchasing power of money. Whereas when things are normal a dollar does only a dollar's work, it will now count for much more in Europe. Exchange rates in many of the countries are very low, so that the traveler can get accommodations at a mere fraction of what he would pay at home. With this advantage he can see hundreds of miles of several countries and become acquainted with their beauty, their civilization and their commercial projects, with a comparatively small expenditure.

Before closing, I want to confess that my idea is not altogether

GOOD SHIPS FOR "BARGAIN VACATIONS."

At the left are seen two liners of the American line tied up in the Hudson River for lack of anything to do. They could be equipped, at trifling expense, to give several thousand Americans an inexpensive trip across the Atlantic.

Chicago Program by Benson's Orchestra, of Victor record fame; saxophone solos by M. Amatore; Benson's Saxophone quartet, M. Amatore, R. Adkins, E. Cary, J. McClure; and vocal numbers by Irving Berlin Trio.

New York Program by Joseph Smith's famous orchestra, (Smith photo above) Saxophone solos, H. Benne Henton (center) Trombone solos, Charles Randall, (below). Vocal numbers by Irving Berlin Trio.

Hear these Great Artists by Radio

APRIL 14th IN THE CONN CONCERT SERIES

MARK this as a Red Letter Date. For C. G. Conn, Ltd., has arranged a series of popular concerts *extraordinaire*, broadcasted from New York, Chicago, Denver and San Francisco.

From coast to coast CONN music will fill the air. The concerts will be given 8 to 9 P. M., *sending station time*. Tune your instrument to the nearest station. Invite your friends and neighbors. Make it a gala night!

Dance by wireless to the music of America's great orchestras. Hear soloists of renown. Enjoy music with a swift, irresistible appeal.

Conn dealers in most cities will entertain at Radio Concerts. Watch for your dealer's invitation in the newspapers. *He wants you as his guest*, especially if you have access to no other radiophone.

Another striking evidence of Conn Leadership—a Leadership acknowledged by the world's great artists. Their appreciation of Conn instruments is reflected by the enthusiasm with which they are cooperating in these concerts.

Beauty and clarity of tone, as well as mechanical perfection in Conn instruments, make them the choice of these and other famous players.

This is the first of a series of Conn Radio Concerts. Watch for further announcements.

PERSONAL GLIMPSES

Continued

altruistic: that I hope to get by-products of large value out of this travel.

One of these by-products is a better understanding, by more Americans, of actual conditions in Europe. Those who went over in this informal way would be broadened by the outlook that international travel provides. It is for our interest, and for the interest of Europe, that as many Americans as possible shall understand the new situation brought about by the war and America's necessary position and interests in the new world.

These tourists would be drawn from, and on their return would leaven, the vast army of voters who determine what our policies shall be. To give them an opportunity to learn from actual experience the difficulties in the way of the resumption of normal trade relations, and to see the ravages for which war is responsible and which have to be repaired, would be casting bread upon the waters that would come back ere long in a more intelligent appreciation of world and national problems that would induce legislation favorable to the business alike of farm, factory and our merchant marine.

As additional thousands of Americans broke bread in Europe and got to know their European neighbors at first hand, lasting friendships would be formed that would make for better understanding between peoples. What the exchange professors and lecturers do in a small way these tourists would do in a wholesale way. The invasion of Europe by an army of eager tourists drawn from the plain people, would make for sanity and understanding both among them and us. It is not too much to expect that the returns from this greater exchange would be more far-reaching and fundamental than those of the more intellectual exchange which has been going on in recent years. An increased probability of enduring peace, within Europe and throughout the world, would result and would constitute an additional by-product of this increased travel.

And now, to sum up:

1. American shipping is undergoing bad times, and needs more cargoes and passengers.
2. Satisfactory cargoes will come only when adequate foreign markets for our surplus goods can be found.
3. Adequate foreign markets will not come until Europe returns to normal conditions and can afford to buy.
4. Europe's recovery will be hastened by—if it does not actually depend upon—our understanding and assistance.
5. The American people can learn most easily the facts of present-day conditions in Europe through personal visits there.
6. There are hundreds of thousands of Americans who would spend their vacations in Europe if they could afford it.
7. If the steamship companies could tap this vast potential tourist trade they would provide themselves with the passenger-business they have lost through restricted immigration.
8. The cost of the passage to Europe could be made very low by providing ships first-class in cleanliness but with the same plain accommodations and food that served, during the war, in the transport of our soldiers.

9. Cooperation could be counted upon from tourist agencies here and abroad in taking charge, at reduced rates, of the land part of such tours; for while the profit per person would be small, such great numbers would avail themselves of the opportunity that total profits would be satisfactory.

10. If the scheme should prove very successful, it would add greatly to the enlightenment of our people, and, as a result, we might expect the application to American legislation of more unprejudiced and wiser policies.

11. The experiences gained by such travel would induce international understanding, cement international friendships and, by making for world peace, increase our commerce, which of course would mean more prosperity for our business and our merchant marine.

THE AMERICAN DOLLAR IN THE EUROPEAN WONDERLAND

THE dollar is having its day, especially in the Central European countries, where the inflated native currency has largely lost respect and influence. A significant illustration of the position of the American standard of value is given in the story a returned traveler tells of his experience in a second-class Vienna restaurant. This man consumed an almost luxurious dinner, relates Joseph Szebenyei in the *Atlantic Monthly*, and offered a twenty-dollar gold coin to the head-waiter, called "Ober," when he timidly presented his bill for three hundred kronen. The waiter looked at the treasure with bewilderment, and did not seem to know how much he ought to give in change. He excused himself and went to the telephone to ask the proprietor. The waiter was heard to say—

"Here is a gentleman, sir, who wants to pay with a twenty-dollar gold-piece. How much am I to give for it?"

Having received the landlord's instructions, the *Ober* returned, and said seriously:

"I am to give you as much change, sir, as you desire."

This is perhaps the nearest approach to the truth so far as foreign exchange, east of France and Switzerland is concerned, says Mr. Szebenyei. A dollar bill is a fortune. In order to get dollar bills, thousands of people have taken up a novel occupation. According to the writer:

In Munich, Vienna, Warsaw, and Budapest the possession of a New York or a Chicago telephone directory constitutes a valuable business asset. There are so many thousands of addresses in it! All Americans, every one of them the owner of a certain number of dollar bills! Having nothing to offer in exchange for the dollar, the only expedient left is to beg for it. Thousands of men are offering American addresses, at five dollars in United States currency per thousand; also, texts of most ingenious begging letters. The begging letters usually pretend to come from a poor, sick woman, mother of five children, whose husband was killed in the war; or from a sixteen-year-old, beautiful girl (photo enclosed), who begs for just one

dollar to save her aged mother and younger sisters from starvation; adding, with tearful entreaty, that, unless she gets the dollar, she will have no other choice than to sell her honor to the first-comer. Now, if this story does not touch you to the extent of a dollar, nothing will. The writer, however, is not a sixteen-year-old girl, but a fifty-year-old swindler, frequently of some prison experience, who in this way receives donations from abroad to the tune of fifty or a hundred dollars a month, and lives in great luxury. For such an amount is a princely income in that part of the world.

Others have other means of getting hold of dollars. Returning immigrants receive special attention from the dollar-hunters. But, in these cases, it is not begging, but an exchange manipulation, that is the means to the end. However, in order to protect their returning nationals, most of the governments have state officials meet every incoming steamer, and these take their countrymen under their wings, and get their dollars from them for the benefit of the government, which serene body is just as anxious to get hold of the valuable American dollar as are any of its needy citizens.

All of the appeals for dollars now being received in this country are not, perhaps, as fraudulent as the one cited by the writer; THE DIGEST, for instance, is in receipt of a letter, enclosing a brief article, from "a German lady writer," who asks that she be given one dollar for the use of her article, surely a very modest request. The article, dealing largely with her own misfortune, is entitled "A German Lady Writer's Day," and runs as follows:

She came from a good family, received the very best education, knows about five languages and has seen many lands and seas—but after the loss of her husband during the war she remained with her boy, in bad circumstances. The *growing miseries* of the war brought her difficulties of all descriptions; at last only 2,000 marks annual income remained, so that she was forced to give up her little flat, to sell her furniture and to move to a roof-flat offered to her in a small place near the east side of the Rhine. To earn her living she was forced to work hard, her writer's income being scarcely sufficient for bread. After the occupation ("Besetzung") of the east side of the Rhine, her roof-flat was taken from her, being wanted for "better paying purposes." Again she was forced to look out for a new shelter. In the meantime *life's misery and all-day's hard work had nearly worn out her spiritual forces* and writing possibilities. In two narrow, moist cellar-rooms of a small mountain-place near Munich she found at last a new refuge, where she is still dwelling with her boy, finding no other place. There she lives on an incredibly small income among the growing difficulties. One of these two cellar-rooms serves as a kitchen, where she also sleeps. Some walls are so moist that books and hangings show stains of rotteness. Only by means of much opening of windows and much open-air work she and the boy have remained in a *tolerable* state of health.

This woman with all her deep scientific knowledge, her practical strength, her universal interest for art, nature and science—*she leads a life like this.*

She rises at half-past six A. M., lights the little iron stove, cooks the breakfast-

To round out its line of high grade bituminous coals, The Consolidation Coal Company recently added to its holdings 28,000 acres in the Pocahontas regions of Virginia and West Virginia and 11,500 acres of block coal in Kentucky.

Fuel for the Railroads

The railroads of America in 1919 consumed 119,000,000 tons of bituminous coal, according to the records of the Interstate Commerce Commission.

Next to labor, coal is one of the major costs of rail transportation and the great railroad systems of the country, in their striving to keep down operating costs, have given much attention to coal quality and to coal economy. These great railroads are governed in their coal purchases not only by the convenient location of the mine but by the suitability of the fuel itself. They demand for their crack trains a supply of fuel that can be relied upon to maintain schedules.

The fact that Consolidated Coal is being used today in the locomotives of some of the Nation's most famous limited trains is a result of the economy records made by our coals.

soup, helps the small boy in washing and dressing himself and sends him off to school. After that she hurries to dress and finish herself and runs to drive a long way to her office, where to take up her half-day's work. Coming home again in the afternoon she finds her boy awaiting her and she has to hurry with the meal prepared the evening before. The rest of the day goes quickly by in cleaning things, washing, sweeping, ironing, darning, preparing food, in needlework a. s. o. After that she yearns to find still an hour to hug her boy, to work and sing with him, to read him a fairy-tale. Her boy asleep, she may even try to write articles and sketches—but in most cases she is so tired that she just falls upon her bed to have a rest.

So this woman does every hard work by herself and she can manage to exist contentedly without a help whatever, without intercourse, *without outward stimulation, without those modest distractions* which elsewhere adorn even the most simple life. This woman has no "finery" at all—*everything gone and worn out—only things of utmost need remained* . . . the poor payment of a half-day's office-work enables her scarcely to buy the most necessary articles, and even not those.

And yet: *she is no unhappy creature*; hers also is the sun, the free air, and over all, her boy's *bright eyes*—and for those she gladly will continue the bitter struggle and hard privations.

One of her strength-giving sentences is this: *Our happiness shall not depend on "things we want to get" but on our ability to find "light and happiness in the day's meanest successes."*

PANHANDLERS WHO THRIVE IN MANHATTAN CROWDS

JOBS IN GENERAL MAY BE SCARCER THAN USUAL, but the wily-minded beggars who "work" New York City are reported to be doing better than common, so much so, in fact, that their profession is taking in recruits at an unparalleled rate. One gentleman who nightly pours hard-luck stories into the ears of passers-by is said to own a country place, kept up by the cash which his appeals bring in. Another professional panhandler is credited with having one of the best-stocked liquor cellars in New York. These, of course, are professionals, men who have made a profound study of the business of getting something for nothing. There are so many professionals nowadays in the alms-collecting business, it is said, that the genuinely needy citizen has a slim chance. The man who is actually suffering from hunger, or is facing the prospects of "carrying the banner" all night for the lack of the price of a bed, can not tell so convincing a story as a gentleman who lives in the country and has money in the bank. Especially in the Times Square district, according to reports issued by the Joint Application Bureau of the Charity Organization Society, and by the Federation of Jewish Charities, professional beggary has increased until it is carried on to-day on a greater scale than ever before. Thousands of dollars nightly, estimates a reporter for the *New York Times*, are extracted by beggars from the Times Square crowd. It isn't hard work, either, according to the news man:

It is perfectly easy for an active beggar or "panhandler," to earn \$5 an hour or more, whereas earnings up to \$60 an hour have been reported, according to Roy P. Gates, the executive of the Joint Application Bureau, who is considered to be the greatest authority on "panhandling" in this country.

In order to test begging conditions and to estimate the number of professionals at work, Mr. Gates frequently does a little "panhandling" himself. At his last experiment several weeks ago at Herald Square he collected \$3.32 in forty minutes. Conditions are nearly the same in other big cities, according to Mr. Gates, who on a visit to Boston last Saturday "panhandled" for an hour on a street corner and picked up \$5.31. In these experiments in New York City Mr. Gates has won the friendship of hundreds in the craft and reports that not one in ten is honest in his hard-luck story and that it is invariably a mistake for a citizen to assist any "panhandler."

"I know one professional who has a good home in the country and commutes daily," said Mr. Gates. "I do not believe that his business is known where he lives. After trying out many occupations he found begging the most profitable and stuck to it. I am not sufficiently in his confidence to know just what his methods are, but I think he makes changes in his clothes in the morning when he arrives here and before he returns to his country home, where he is apparently regarded as a solid and substantial citizen.

"I know a one-legged beggar who works the South Ferry district who has one of the best stocked liquor cellars in New York. There are hundreds of others who have made fortunes at it. The average beggar, however, has not the sense to save, and most of them get rid of their money as fast as they obtain it."

Times Square now harbors the elite of the mendicants of the East, who have applied modern publicity methods to their professions. Most of them just got out of the hospital after being in some disaster which has figured largely in the news. Many limp or have their arms in slings as a result of the Washington theater disaster. Hundreds of others just recovered from the pneumonia or the influenza. A few date their bandages and crutches to the Wall Street explosion. A new disaster or epidemic changes a thousand stories.

Something like a "gold fever" has brought the beggars from many sections to New York City, in the manner of the migration to Alaska after the Klondike strike. Times Square is the greatest begging ground in the world for a variety of reasons. In the first place the theater crowd at night is the biggest and richest on earth. In the second place, it is so thick that a beggar can conceal himself from the police and can beg intensively, because the raw material of population is so thick around him.

He whispers his quick tale—usually a marvel of concise eloquence—into ten or fifteen ears a minute. He is so walled about with population that a person ten feet behind him can not see him beg and each person accosted may think that his petitioner is a man who for the first time in his life has screwed up his courage and choked down his pride to the point of seeking assistance to save his life.

Between Times Square and Herald Square, the pedestrian "steers through a Scylla and Charybdis of rival beggars at every corner." Hereabouts—

Beggars seem thicker, but they are really more numerous in Times Square and half a block down each street leading away from it, but the crowds are so much larger that the individual is not solicited quite so often.

One of the causes of more energetic panhandling is the enormous price of whisky, which makes increased earnings on the part of beggars necessary. In spite of the thousands seeking dimes for coffee and lodging for a night in New York City, the Municipal Lodging House has seldom been full during the winter, indicating that no great numbers have been in extremities.

"They would not go hungry if they did not obtain alms on the street," said Mr. Gates. "Every one in real need who is taken here is provided for at once. Any man who is hungry or shelterless and can do nothing for himself can apply to the nearest policeman, who will send him here. I never knew a case where a person in need was turned down at the Joint Application Bureau, at 105 East Twenty-second Street, and I would fire any man who turned down such a person.

"Many young fellows get stranded here, and those of weaker character resort to begging. Their story is true the first few times they tell it. But many of them find that they can make more money begging than in any other way. They stick to it, and nine-tenths of the begging is done by them.

"In no case does it do good to give them money. If they really need food or shelter they can get it here or at other institutions. If the money is not intended to relieve absolute want, they are simply making begging a business. The man who gives them a quarter saves them from the necessity of going to work.

"The great amount of begging to-day is due, of course, to the fact that there is wide-spread unemployment. The public, knowing this, gives generously in response to such appeals. During times when there is plenty of employment the beggar was unpopular and found his life difficult. To-day it is so easy as to attract thousands who could find work by a little effort.

"The case of the blind is somewhat different, because few can do any real work. A very large percentage of the 'blind' beggars turn out to have pretty good eyesight when they are investigated. The case is also different, of course, with those hopelessly crippled. Of the crippled beggars very few are war veterans, though a number wear pants of military uniforms."

The world's record for fast begging is believed to be held by Thomas Campbell, who lost his arm in a railroad accident and raided Times Square crowds in khaki and a soldier's hat, with a row of medals across his breast. He was arrested and found weighted with several pounds of pennies, nickels and silver and a sheaf of bills. He confessed that he had made \$60 in one hour. Campbell's methods were unique. He went through a Times Square crowd as a crack half-back goes through an open field, thrusting the stump of an arm into face after face, holding his other hand open and exclaiming:

"You understand. Come across!"

His one good hand was hardly fast enough to take in the money thrust at him. Whenever he got jammed so tightly in a crowd that

*Always
Look for
this Gold Seal*

Pasted on the face of every two yards of genuine *Gold-Seal Congoleum By-the-Yard* you will find a paper Gold Seal. It carries our pledge of "Satisfaction Guaranteed or Your Money Back," and is your protection against inferior imitations. Remember the seal is printed in green on a gold background. Be sure to look for it!

*Below is Gold-Seal
Congoleum pattern
No. 4022*

*Above is Gold-Seal
Congoleum pattern
No. 830*

It's easy to keep this kitchen floor spotless—

NO small part of the charm of this cheerful kitchen is the attractive floor of *Gold-Seal Congoleum By-the-Yard*. This floor-covering possesses the same long-wearing, flat-lying qualities that have made our *Gold-Seal Art-Rugs* so popular with the women of America.

Liquids and grease cannot penetrate the smooth, firm surface of *Gold-Seal Congoleum*. A damp mop makes it spotless in a twinkling. It "hugs" the floor snugly without fastening of any kind. Being waterproof, it does not rot and crumble away along the seams and edges.

Gold-Seal Congoleum By-the-Yard offers the one solution to the national demand for beautiful, sanitary floors that are low in cost and easy to clean. Its low price and long-wearing qualities make it particularly practical wherever the entire floor must be covered.

In either the 2-yard or 3-yard width, the price is only 75c a square yard.

*Owing to freight rates, price west of the Mississippi
and in Canada is higher.*

there was no maneuvering space for his unique tactics he would lower his head and bellow:

"Let them pass. Let them pass!"

The crowd would open as if to let a fainting woman be carried through, and Campbell would again have elbow-room to work in his silver mine.

A WARM JOB ON VESUVIUS

ONE of the recent cablegrams which announced to this country that Vesuvius was again in eruption concluded with the information that Professor Alessandro Malladra, Director of the Royal Vesuvian Observatory, had descended into the crater at the beginning of the eruption, and that "the heat scorched his face." For a number of years Professor Malladra has been, in a very literal way, sitting up with the volcano and keeping tabs on its temperature. His residence is said to be in the hottest place on earth. His actual home, as described by a writer in the *Kansas City Star*, is a small stone building near the top of the mountain, just a few minutes' stroll from the mouth of one of the largest, most active, and most deadly volcanoes in the history of the world. The little stone building is referred to as an observatory. Recently, the writer goes on:

Vesuvius groaned, bellowed and spoke with a huge cloud of smoke, obnoxious gases, molten lava and great tongues of purple, red and vividly yellow flames. And did the professor stay on the job? He did. How hot was the lava? About 2,000 degrees Fahrenheit—about the hottest thing this side of the bad place.

If volcanoes still remain largely a mystery to the scientists, altho many theories have been formulated, it is surely not the fault of this Italian who has frequently risked his life and dared Vesuvius. The recent dispatches from Naples stated that "lava has formed around the crater an incandescent band more than three hundred feet wide. The temperature of this molten mass is 2,000 degrees Fahrenheit. The width of the crater is now fifteen hundred feet."

Cable editors "read between the lines" of that item and knew that the Associated Press correspondent at Naples did not guess, from his view-point in that city, at the width of the lava band, the temperature of the molten rock, or the width of the crater. They knew somebody close to the scene gathered that data and that that somebody was very probably Professor Malladra, who has been plunging special thermometers into the lava streams and staring into the terrible mouth of the volcano for so long.

Frequently he has penetrated toward the heart of the cone, and once, back in 1912, when Vesuvius had enjoyed a particularly quiet spell, he reached the center of the floor of the actual crater and with a companion planted a flag there. Whenever the volcano shows signs of activity or presents any unusual phenomena his efforts are redoubled, for it is then that he has the best opportunities for learning something of value from the scientific standpoint.

In his famous descent into the crater in 1912, when he reached the very center, Professor Malladra and his companion took two ropes, one three hundred and fifty feet and the other five hundred feet long. Using the long rope for the first part of the descent and carrying cameras and scientific equipment they dropt inside the lips of the volcano to a depth of three hundred and eighty feet. Then they maneuvered over jutting crags of lava on which they had landed, overhanging another abyss one hundred and fifty feet lower. Large and small rocks were constantly being dislodged and hurtling past them and the rising vapors obscured whatever might be below them. But they affix their rope to a crag and dropt down the steep sides of the floor of the crater.

Of this adventure, Professor Malladra wrote:

"The whole bottom is criss-crossed in all directions by small cracks concealed by sand. Stamping the feet on the ground makes the earth sink, and the splits are unmasked for several meters in length. What seem from above to be small isolated stones are rocks of several cubic meters scattered and heaped up everywhere.

"The ground is very hot; acrid fuma-roles spring forth on every side. Stones that are moved leave a smoking track, and the thermometer inserted into the cracks registers 85 Centigrade almost everywhere.

"A great number of landslides crashing down on all sides, long, imposing and raising clouds of ashes, saluted our exploration, which lasted a little more than two hours. Putting the ear to the rocks in moments of external quiet, rumblings, growlings, sharp and sonorous shocks were heard, produced certainly by the underlying magma.

"The fierce heat of the sun and of the baked earth made themselves keenly felt down there, and, altho we were in our shirt-sleeves, we were bathed in perspiration. However, we could breathe freely at the center of the crater.

"We planted in the middle of the crater as a sign of our descent the flag of flaming red, the color most suitable to a volcano, and the most visible."

They tarried to make a collection of minerals, "a very arduous task," the scientist explains, because the stones had a temperature of about 300 Centigrade. And he adds a scientist's attempt at humor in describing the constant bombardment of rocks to which they were meantime subjected:

"It was here that Andrea (his companion, Andrea Varvazze) received a large orange on his head, which fortunately he resisted, and a very large melon brushed the posterior wing of my hat, giving me a rapid massage of the spine!"

And now Vesuvius has "snarled and scorched the face of this apologist and admirer." Her next move, it may be, will be to bury the Royal Vesuvian observer, together with the observatory in which he lives. Leaving the scientist out of consideration, the observatory would be a loss to science, says the writer, who described the unique building in these words:

This observatory is 2,620 meters from the central chimney of the volcano. It was started about 1840, when the eminent naturalist, Melloni, was called to Naples by King Ferdinand II. It was completed in 1847 and installed magnificently, with

three stories of large rooms, a platform on top for meteorological observations, and cellars underneath containing seismological registering apparatus. Every scientific device needed is contained in its equipment, and the temperature and chemistry of the emanations from the vents of the volcano are constantly observed and studied. The seismographs show that the mountain is in a perpetual quiver, the needles oscillating day and night, even when the volcano is quietest.

Life at the observatory moves along ordinarily in a routine of scientific experiments, but when the mountain wakes to activity, as it may any day and frequently does, there is a rush by the scientists to record every detail of its behavior, and in times of important eruptions the highest degree of heroism is demanded of them, for no one knows what may be expected of it, and its manifestations are terrifying.

Such an occasion occurred in April, 1906, during the last great eruption of the volcano, when the observatory men remained at their posts through many terrific convulsions, taking observations and keeping up their records while the floor of the laboratory rocked under their feet and the air was filled with huge stones thrown up by the volcano.

At that time Prof. Frank A. Perret of New York, an American who had studied volcanoes in all parts of the world, and who is now volcanologist to the Carnegie geophysical laboratory, Washington, was stationed at the Vesuvius observatory. His account of the eruption shows what terrors the observers faced while tons of ashes and stones rained about them like snow.

"The most terrible moment came Saturday night," he said. "I had gone to Boscotrecase for the purpose of photographing the lava stream that was then deluging the town. I returned to the observatory about midnight. The dynamic force of the main crater increased enormously and new crater mouths opened in the mountainside within ten minutes of each other. This caused immense havoc.

"At midnight the situation in the observatory was terrible. The ground rocked under it, and it was impossible to stand firmly on one's feet. The roaring of the main crater was deafening; the volcano operated like a fountain, its discharges rising and spreading and then falling over a great area. The electric phenomena was terrifying. The claps of thunder were incessant, with a lurid play of lightning. The cause of the phenomena was friction from the ascending particles generating electricity, which displayed itself in incessant lightning and thunder claps.

"No one thought of sleep, but all stood gazing at the awful scene. At 3 o'clock in the morning the lowest station seemed to be burning, and at 3:30 o'clock the whole cone broke open with a tremendous earthquake shock. Red-hot projectiles were precipitated toward Mount Somma and the observatory. That seemed to be the critical moment, and the brigadier of the carbiniers ordered a retreat. We made our way to a small house down the mountain-side, but even there the rain of stones continued. One of the carbiniers was struck on the head and badly cut. After this the intensity of the eruption steadily decreased."

The King of Italy rewarded both Professor Mateucci, the then director of the observatory, and Professor Perret, by making them commanders of the Order of the Crown. Who knows but that Professor Malladra's opportunity to win a similar distinction will come soon?

"It's Ignition Trouble ~ but *Where?*"

IT might be a broken wire—a bad plug—a short-circuit.

Little use guessing, however, and less use trying to locate the trouble by the primitive screw-driver method.

Nine out of ten times it is the apparently trivial thing you allow to go unnoticed that starts your car on the road to expensive repairs.

Yesterday it was like looking for a needle in a hay-stack to detect these undermining defects but today they can be instantly and unerringly located by the

Airco IGNITION GAUGE

The Watchdog of the Ignition System

For All Internal Combustion Engines

This handy instrument enables anyone to spot a faulty plug instantly. Just as quickly and unerringly it reveals short-circuits, breaks or current leaks in the coil, magneto, distributor or high-tension wires of your car or motor boat.

The Airco Ignition Gauge consists of a hard rubber insulating shell enclosing a small glass tube of Neon—a rare gas of the air which flashes orange-red when electrified. When the metal cap of the gauge is touched to a spark plug terminal or slid along a high-tension wire, the flashes are visible through a window in the side of the shell. Variations in the regularity and relative intensities of the flashes indicate trouble and reveal its cause.

The Airco Ignition Gauge is conveniently small to carry, and, without being cumbersome, is just the right length to test even the least accessible parts of the ignition system. Its blunt contact cap will not slip off plugs or wires when testing. The few simple directions are printed indelibly on the shell. There are no wires to connect, no shocks, no danger. Be sure you get the Airco—the original ignition gauge.

You can buy it at your accessory dealer's, or fill in and mail the coupon.

AIR REDUCTION SALES CO.

The name Airco on this ignition gauge signifies that it embodies all the high standards characteristic of the twenty-one other products of the Air Reduction Sales Company, pioneers in commercializing the elements of the air and large manufacturers of oxygen, acetylene, apparatus, etc., for the oxyacetylene welding and cutting industry. It is most logical that an instrument relying solely for its functioning on Neon—a rare gas of the air—should be built by an organization of such specialized experience.

MICHELIN

"Regular Size"

CORDS

Average only
8%
 more in cost
 than Fabrics

HERE is the tire for which hundreds of thousands of motorists have been waiting. A tire that gives an average of 30% more mileage than a fabric, as proved by tests covering hundreds of thousands of miles—yet costing only 8% more—in other words, 22% mileage free.

These new cords are the same size as your fabric tires and interchangeable with them, and may be fitted one at a time as your fabrics wear out. Thus you may change to cords by easy stages at practically no increased expense. Just ask the nearest Michelin Dealer about "Regular Size" Michelin Cords.

MICHELIN offers a complete line of cord tires, oversize and regular size, in one quality only, the best—all just as good as the famous Michelin Ring-Shaped Tubes

MICHELIN TIRE COMPANY, MILLTOWN, N. J.

Wholesale branches in 30 leading cities. Dealers everywhere

BIRDS - BEASTS - AND - TREES

A SOCIABLE, CITIFIED HUMMING-BIRD

A FEATHERED JEWEL flew into a very ordinary back yard, and liked it so well that she decided to stay. She chose for her home the half-dead branch of a pear-tree that scarcely had room to spread itself between a house and a shop, certainly not the place one would expect a bit of a humming-bird to lodge. With her coming the whole neighborhood took on an air of romance. The little ball of cotton, daintily balanced on the twig and fastened with cobwebs, soon became the cynosure of the city, and we are told that many a prosaic eye that had never before responded to the call of nature, softened as it examined the fairy-like structure. When the nest was all finished it was no larger than a walnut, and it had taken only two days to build

it, shape it well within and without, and finally to decorate the outside with bits of bark and gray lichens so that it would resemble a knot and thus escape detection. The female hummer did all the work. She was architect, builder, and carpenter. The male bird never put in an appearance. In fact the male humming-bird is little better than an ornament, says Professor A.

A. Allen of Cornell University, in *Scribner's Magazine* (New York). He recounts the bird's brief wooing thus:

During the days of courtship he is quite in evidence, rocketing back and forth before the object of his affections, with throat ablaze and wings humming, while she perches demurely on some dead twig. From his throat come excited chipperings that are doubtless intended for song and a declaration of his undying devotion, but it all never lasts long. Acceptance and banishment come almost simultaneously, and after the eggs are laid he is a nonentity. Some high, dead twig or telegraph wire in a distant part of the woods or in another garden seems to be his St. Helena, from which he makes occasional excursions to the flowers of the neighborhood. He seems morose most of the time, as tho his banishment had soured his disposition, and no bird is allowed to pass without immediately being attacked. He has apparently staked out his claims and brooks no trespassing. It is true that the males of most birds are thus tyrannical in the defense of their homes, and that kingfishers and herons seem to have their chosen fishing-grounds, from which they drive off others of their kind. There is an obvious reason in each case, however, in the protection of their mates or their food supply. With the male humming-bird, on the other hand, it is different. He is not interested in defending his mate, and certainly the unoffending crow or chickadee does not compete with him for food. He is a regular Tartar. With this we dismiss him, for he no longer enters the story, and we return to the ball of cotton on the branch of the Bartlett pear.

The day after the nest was completed a tiny white egg appeared in it, and the following day another. They were about the size of navy-beans and not so very different in shape, tho

their potential energy was of a far superior sort. The writer says:

The little housekeeper was very solicitous about them, nestling them close to her breast and ever and anon inspecting them carefully, turning them, or caressing them with her probe-like bill. For fifteen days she was thus attentive, leaving them just long enough to buzz out a meal from the trumpet-creepers or to pick a few tiny insects from the underside of leaves or twigs. During this time we got pretty well acquainted. At least, I developed quite a friendship and was not loath to show it, tho she treated me much like a clod or the branch upon which her nest was fastened. I have watched quite a number of humming-birds at their nests, but never have I known one that was so absolutely devoid of fear as was this little bird.

At first I thought that I had developed some magic charm which permitted me to walk beneath the nest, and even to reach up and touch it, without frightening her away. When I actually stroked her on the nest and lifted her with my finger, I was positive that I had been chosen by the gods to bring birds and man to a mutual understanding and friendship. Alas! for my pride. When I rushed back with a friend to secure photographic proof of my newly acquired power, the tiny bird showed

Photograph by S. A. Allen

A FAMILY PORTRAIT IN A SPOON

The two youngsters were almost invisible in the bottom of the nest, so they were put into a teaspoon, and the mother bird, a little surprized, but not at all disconcerted, posed obligingly on the edge.

just as little fear of him. If one edged her gently from the nest with his finger, she would buzz up into the tree for a few minutes, hovering beneath leaves as tho searching for insects, but soon she would drop back to the nest. If one held his finger over the edge, she would settle lightly upon it, her tiny claws making about as much impression as a thistle-down. Never have I felt my own brute strength and awkwardness more than when that mite of a bird first perched upon my finger, its weight just barely perceptible to my excited nerves.

For fifteen days our strange friendship endured, and then the great event happened: first one egg, and, a day later, the second egg broke open and two tiny hummers emerged. They were no larger than honey-bees, and their bills, instead of being long and slender like their mother's were as short and stubby as other birds'. Tiny atoms of bird life that they were, as homely and helpless as new-born babies, they lay in the bottom of their cottony cradle, scarcely able to open their mouths.

But mother-love, says Professor Allen, is a strange instinct—it has the virtues of faith, hope, and charity, and the shapeless, uncouth babies, that gave so little promise of how they would develop, could not have been given more careful attention. Perhaps for once in her domestic affairs she wished for that ruby-throated spouse of hers to bring food while she brooded her featherless babes; but if she did, she never showed it, but skipt from flower to flower and back to the nest again, wasting no time en route. And this is the way she fed them:

It usually took some time to fill her crop with nectar, but when she returned she had plenty to distend the crops of both her youngsters. At first she inserted only her tubular tongue

Giants of The Automobile Industry

HAVE you ever, at any time, heard questioned the judgment of a manufacturer who equips his cars with the Stewart Vacuum Feed System. Look at the equipment specifications for the various automobiles; about 90% of cars are so equipped.

If all other things were equal,—reliability, workmanship, operation, there is still one reason why the foresighted manufacturer will, and does, choose the Stewart Vacuum System. It is the one feed system on which the car-owner can obtain real service, if ever necessary. In Stewart Service Stations there are Stewart-trained mechanics ready to give expert service at all times.

This same service may be had on the Stewart, Warner and Van Sicklen Speedometers which are standard equipment on over 90% of standard makes of cars. When purchasing a car equipped with one of the above speedometers you are assured of getting an instrument that operates silently and accurately. Made of highest grade materials. Thoroughly tested, rigidly inspected.

Stewart reputation and service is behind every Stewart Product. There are 86 Stewart-Warner Products Service Stations at accessible points all over the world, at the disposal of any car owner using Stewart equipment.

into their throats, but as they grew larger she sank her whole bill from sight and injected them with a throbbing movement of her head, as tho each drop had to be pounded into place. When the crops of the newly hatched youngsters were fully distended they appeared nearly as large as their heads, and the skin of the neck was so stretched as to be transparent. Indeed, one could see the small insects and minute spiders floating around inside, some of them still alive and kicking.

That her faith and hope were to be rewarded was evidenced in less than a week when the bills of the young birds began to lengthen and green feathers began to appear on their backs. The second week found them well feathered, and before the end of the third they were overflowing the nest and had flattened it out of shape.

Photograph by A. A. Allen.

A HUMMER AND A HOPPER.

The baby hummer is smaller but fatter than a grasshopper, and is "absolutely devoid of any resemblance to a bird."

Twenty-one days after the first shell cracked, the larger of the two youngsters, that had been trying his wings for several days, felt himself rise from the soft cotton that had been supporting him. As his tiny wings buzzed, he mounted up and up, nearly to the top of the tree, when, without the slightest effort, he settled upon a dead twig as tho he had been doing it all his life. His mother was not even around to see him do it or to encourage him. He rose as easily as the butterfly from the chrysalis, or the cicada from the cracked shell of the nymph. There was none of the fussing and fluttering that so often marks the "coming-out party" of larger birds. Nor did the mother seem surprized when she returned and found that one of her children had broken the home tie. After feeding the younger one she uttered a few squeaks, that were immediately answered by the fledgling, and without the slightest waver, she flew directly to him, alighted on the branch beside him, inserted her long bill into his throat, and injected him with his dinner as she had been doing in the nest for three weeks. The next day the other young one tried his wings, but he was not quite so strong and he started in the wrong direction.

where there were no twigs on which to settle. He crossed the yard, rising at first, and then settling until he came to a wisp of timothy, where, ever so daintily, his minute claws encircled the stem and he came to rest. Later in the day, as strength came to him, he rose from his lowly station and joined his brother in the top of the pear-tree.

TURNING GOATS INTO GOLD

"DO goats eat clothes and things?" a woman asked of a man who raises goats in Atlanta, Georgia, and he replied: "They eat clothes, but not 'things.' A goat has the best digestive system in the animal kingdom, and is the one creature known that can digest cellulose. Because clothes contain a wood cellulose from their cotton fiber, goats will eat them. Goats can also digest pine needles, but their ability to Fletcherize hardware is very much over-estimated." This gentleman, Mr. H. H. Turner, an attorney, some years ago bought a goat. It was first a necessity, and then it grew to be a family pet, and we are told by Victoria Her in the *Atlanta Journal*, "its kids and his kids became chums." Later on he bought more goats, and devoted his spare time to studying goatology, and the writer exclaims:

Imagine an Atlantan living in an apartment house, and owning twenty goats—the only pure-bred goats east of the Mississippi and south of Ohio! That really isn't as incongruous as it sounds, for H. H. Turner owns the apartment house in which he lives, which has a two-acre "backyard" and plenty of space even for his high-brow "Toggenburgs."

Mr. Turner is very much interested in goat-raising as a new industry for Georgia, and to sound out Georgia farmers on the subject, he printed a letter in the *Market Bulletin* of the State Agricultural Department, offering to give away some of his graded Toggenburg goats for breeding purposes. He received a flood of answers! Most people didn't know there were that many goats in the State, even—let alone farmers who raised 'em.

"There are many graded Angora goats raised in Georgia for their wool," said Mr. Turner. "But I am anxious to see our farmers raise milk goats. They are much more profitable," and he gave us some information sent out by the Government's Bureau of Animal Husbandry which conducts an experimental "goat" station at Beltsville, Maryland.

In the first place, the goat's milk, according to chemical analysis, comes nearer to mother's milk than that of any other animal, and this gives it a high commercial value. Goat's milk is more nutritious than cow's milk, and contains two per cent. more cream. It is more readily digested. It does not sour easily. It is purer because a goat is not as susceptible to disease as a cow.

In California goat-raising has developed into a great industry. There are goat dairies that have become ultra-profitable throughout the State. Goat butter sells at a higher price than cow butter, yet it has a lower-rate of manufacture.

Government figures show that a farmer can maintain a small herd of ten goats (maximum number) for the cost of upkeep of one cow! Good milk-goats give from five

Tracks of Wire Rope

Two parallel wire cables supported at intervals by skeleton-like towers. These are the "tracks" of a modern Aerial Wire Rope Tramway upon which the conveyors glide between loading and unloading points.

Wire rope also supplies the "pull" that moves the conveyors far over-head, where mud and snow and sleet can't interfere with steady operation.

Being designers and builders of Aerial Tramways, this company knows the peculiar requirements of track and pulling cables. Here Yellow Strand performs, as it always performs, wherever there's heavy work to do in mine, quarry, logging—everywhere—lowering upkeep costs by putting off renewals.

The strand that's painted yellow is your guide to wire rope quality and economy. Follow the Yellow Strand.

We also manufacture all standard grades of wire rope for all purposes, and have been since 1875. There is an authorized dealer in every locality. Write us for the name of the one nearest you.

BRODERICK & BASCOM ROPE CO., ST. LOUIS

Branches: New York and Seattle

Factories: St. Louis and Seattle

Baseline Autowline and Powersteel Autowlock, two indispensable automobile accessories made of Yellow Strand Wire Rope, have strongly entrenched themselves in the hearts of motorists the nation over.

In one container-

The properties of
3 emergency necessities!

If each household in America should tonight hold a Limitation of Preparations Conference much needless confusion and delay in emergencies could be eliminated, as well as much unnecessary expense.

Crammed medicine cabinets, obnoxious odors and preparations that in general make for confusion would get a permanent holiday.

In tens of thousands of homes this program is already adopted. Absorbine, Jr., the antiseptic liniment, is used for the strains and sprains, for the aches and pains that occur so often and unexpectedly, following the violent or prolonged exercise of unused muscles. Powerfully concentrated herbal ingredients make it the safe and clean liniment with an agreeable odor.

It is minus all dangerous properties.

It is an equally efficient antiseptic and germicide. It is cleansing, healing and germ destroying to cuts, scratches, abrasions and other skin wounds. It is economical because highly concentrated. An application of a few drops suffices all ordinary purposes.

Absorbine, Jr., is supreme in convenience. Often where a liniment is required there is need for an antiseptic and often where the latter is required there is need for a germicide. Think of Absorbine, Jr., as these three emergency necessities in one container!

At most druggists, \$1.25, or postpaid.

Liberal trial bottle, 10c, postpaid.

BIRDS, BEASTS AND TREES

Continued

to seven quarts of rich, wholesome milk a day.

"There is certainly a golden opportunity for some enterprising Georgia farmer to start the industry," said Mr. Turner. "And I am convinced it would be worth his while, financially. The secret will lie in his breed of goats. Pure Toggenburgs are rare, but they are more profitable. Less than two hundred of them have been imported into the United States since the passage of the quarantine law, which was a preventive measure against the spread of the hoof and mouth disease. Since the prohibition of the importation of cattle without a year of quarantine, the cost of importing a goat from Switzerland, its native country, has increased to about three hundred dollars, but it pays in the long run."

"And aren't you afraid for the children to play with them?"

"No. These Toggenburgs have been bred in Switzerland for hundreds of years for dairy purposes, so the vicious ones have been weeded out, and the ones we receive are gentle, docile, and easy to handle and raise."

"How much are the goats worth?"

"The purebreds sell from one hundred dollars up, and breeding in itself would net a farmer a good profit. Many are sold for meat, and the mutton chops that you eat are 'goat chops' nine times out of ten. I generally kill two or three a year myself, but I'd rather loan the bucks that I have this year than to kill them for meat."

THE YOUNG WOMAN LION-KILLER WHO WAS SORRY FOR GORILLAS

IT hurt her conscience when she ate a bit of gorilla—it seemed so cannibalistic. But in the jungle one must not be too squeamish, for on the whole the jungle is "perfectly lovely," and Miss Martha Miller has come back from it with an elephant ear for a tea table and an elephant foot to make a wastebasket, which she secured for herself. It was not just to get these articles that she went, however. She was a member of an expedition led by Carl E. Akeley to collect material for the American Museum of Natural History. The New York Times says:

Miss Miller was so successful in her first attempt at big game hunting that the museum officials have nicknamed her the "Museum Diana," and the goddess of the hunt wouldn't have been at all chagrined to have Miss Miller named for her. She is 23 years old.

With Carl Akeley, Mr. and Mrs. Herbert Bradley of Chicago and six-year-old Alice Bradley, Miss Miller has just arrived from Africa after an expedition through the gorilla and lion country.

Mr. Akeley went to get a group of gorillas for the new African Hall to be built back of the Roosevelt Memorial Hall on the Central Park West side of the museum. He got five of them, and when they are mounted they will make the best gorilla group in the country.

Miss Miller was born in Texas and lived a good part of her girlhood on a ranch. She had six brothers, and a good deal to do to keep up with them. They all went to

the war, and she determined to get even with one bound by making a trip through Central Africa. She persuaded Mr. Akeley to take her. Incidentally, he proved that traveling with three women, one of them a nurse for a small girl, may be just as safe in Africa as in the United States.

They left New York last July, when it was hotter here than they found it at any time in Africa, and arrived in Cape Town late in August. The party went by railroad to Elizabethville, then up the Lulabo River on a boat through the jungle, a trip which Miss Miller described as "perfectly lovely." After journeying overland again to Lake Tanganyika, they went on another boat to the head, where they started on an eight-day journey on foot to Lake Kibu.

"We had just made camp on the fourth day out when Mr. Bradley saw a herd of elephants," said Miss Miller. "We started after them, and forded small rivers on the backs of our porters. Finally, we got to our station below the elephants and waited until almost sundown for them to move down to us. When they got close enough Mr. Akeley told me I could have third shot. We were almost ready to shoot when I turned around and saw my gun-boy had put on my helmet, and that upset me more than the elephants. After two others had fired I picked out my elephant and fired. I was the most surprised person there when he fell. All I could do was to jump up and down and say, 'I got him, I got him!'"

They next went after gorillas, and the young woman saw three and was with the party when one was killed. They were tame and would run rather than attack. She observes:

"They give you an impression of great strength and size when they lift their shaggy heads and shoulders out of the underbrush, but when you first see their faces there isn't anything mean about them. They don't look as fierce as I had thought they would. Mr. Akeley's biggest was five feet five inches from head to feet, but the arm spread was seven feet eight inches.

"My lion was a 'boma' lion. That means a lion that you lie in wait for, instead of a lion that you go after. I waited five nights for mine. We sat in a little thorn shelter, with the kill about a dozen feet in front. We could hear them near us for several nights, but they didn't come. Finally, on the last night, after the moon came up and the animals all came out, we could hear lions getting nearer. We heard the thump of their tread, for they weigh 400 pounds, and at last mine came out of the brush right in front of me. He looked as big as a house. He was suspicious, and sniffed at the kill and looked all around, and then I shot him. The shot hit his backbone, and he went down paralyzed, but just to make sure, Mr. and Mrs. Bradley fired after me. He had a lovely skin and mane."

In the New York *Evening Post's* account, we read:

"Sometimes," said Miss Miller, "a porter will suddenly decide not to be a porter any more, and then, unless some one is walking behind, he just drops his load and starts back to his tribe. I felt a little bit sympathetic, for they carry mountains on their heads. They seemed to prefer loads of ivory. Tusks have tradition and dignity about them and are easily balanced. But how they did hate gorilla skeletons done up in straw!"

Jim Henry's Column

Tested

Our tremendous increase of sales shows that a lot of men have just taken my word for it that Mennen Shaving Cream is amazingly efficient.

I suppose some have indifferently ignored my statements as mere advertising claims.

But here is one man who really put Mennen's to the test.

It seems that after trying almost everything he finally settled on one soap as the least irritating of the lot. But a friend told him that his experiments were inconclusive since he had overlooked Mennen's. So, he bought a tube.

First, he used Mennen's on the right side of his face and his old soap on the left, employing two brushes.

Score—Mennen—1 Opponent—0.

Next time, he reversed—Mennen's on the left side. Mennen's won.

In the last round, he shaved three times running with the old soap, and then three times with Mennen's.

To quote from his letter:

"There was no longer room for doubt. My face certainly felt better after using Mennen's."

The other day, I was explaining to a friend the scientific reason for Mennen's startling superiority and he asked, "Why don't you put that in your column?" I showed him the letter from which I have just quoted.

"There is only one way in which a man can be convinced that Mennen's is better," I told him, "and that is by trying it on his own face. There are three things the selection of which no man leaves to science—his wife, tobacco, and shaving soap."

Faced by the actuality of 365 shaves a year for the rest of his life, a man wants to know. That is why I say, "never mind the reason—try it!"

There's more proof in my 10 cent demonstrator tube than in all the science that has ever been written. Oh! and by the way, don't forget that Mennen "Talcum for Men" is a genuine he-powder.

Jim Henry
(Mennen Salesman)

THE MENNEN COMPANY
NEWARK, N.J. U.S.A.

THE SALAMANDER'S DOUBLE LIFE

JOHN BURROUGHS, usually so accurate in his observations on natural subjects, is taken gently to task by another naturalist for his "unscientific" comments on the "little orange-colored salamander" which we quoted in these pages from his book "Under the Maples" (Houghton Mifflin Co., Boston). Mr. Burrough's account read as follows:

The little orange-colored salamander, a most delicate and highly colored little

is laid aside when it goes back to the marshes to hibernate in the fall.

These statements, considers E. Laurence Palmer, Assistant Professor of Agriculture at Cornell University, show considerable disregard of the facts, and he says in a letter to THE DIGEST:

One hesitates to criticize a statement of a man who has done so much to interest the general public in the study of nature—particularly when that man has the per-

creature, is as harmless as a baby, and about as slow and undecided in its movements. Its cold body seems to like the warmth of your hand. Yet in color it is as rich an orange as the petal of the cardinal flower is a rich scarlet. It seems more than an outside color; it is a glow, and renders the creature almost transparent, an effect as uniform as the radiance of a precious stone. Its little, innocent-looking, three-toed foot, or three-and-a-half toed—how un-reptilian it looks through my pocket-glass! A baby's hand is not more so. Its throbbing throat, its close-shut mouth, its jet black eyes with a glint of gold above them—only a close view of these satisfies one.

Here is another remarkable transformation among the small wild folk. In the spring he is a dark, slimy, rather forbidding lizard in the pools; now he is more beautiful than the jewel-weed in the woods. This is said to be an immature form, which returns to the ponds and matures the next season; but whether it is the male or the female that assumes this bright hue, or both, I do not know. The coat seems to be its midsummer holiday uniform which

sonality of John Burroughs and is not, unfortunately for all of us, here to defend himself. He, however, showed no compunction in criticizing Thoreau for making unscientific statements, and so, tho he were here, could not object to this criticism of his article which you quote.

In the first place a salamander is an amphibian and has nothing "reptilian" about it. The use of the word "lizard" is for the same reason unscientific since salamanders and lizards are by no means synonymous. To be sure many salamanders resemble lizards in general form, but salamanders are amphibians and have no scales and lizards are reptiles and have scale-covered bodies.

The description of the life history is very ambiguous and deceiving. For the benefit of your readers I am submitting a graph which I have prepared in accordance with the facts outlined in a paper by S. H. Gage in 1891. The graph should, I believe, be self-explanatory.

There are, Professor Palmer says further in the Cornell Rural School Leaflet (Ithaca),

many different kinds of salamanders, chiefly busied in cleaning out the various different cracks and corners in Mother Nature's house. In some places in this country there are salamanders that live their entire lives in the trees, tho they look as tho they ought to be living in the water. One of the most common species is that whose life history is shown in the accompanying graph, the newt. This little amphibian may be found along the edge of ponds or in streams. He is mostly brown above and yellowish beneath. The writer says:

If you keep some of them in your aquarium you will very quickly find that many of the smaller animals living there will disappear, and if you are lucky enough you will possibly see some of them go where the others have,—down the throats of your newts.

It is possible that in the early spring the newts are more interested in their own family affairs than they are in caring for Mother Nature's house. Certain it is that their eggs are laid at that time of the year. You may see these eggs, which look not unlike little beads of jelly; but the chances are that you will not see them, for they are attached to water plants and are often wrapped in, or hidden among, the leaves so that they are not easily seen. These eggs hatch into little newts wearing ruffles at their necks not unlike those which the mud puppies have. These little newts grow rapidly and in late summer lose their ruffles and come out on the land. At this time they are small and red, and are very interesting little creatures to watch.

For the next two years these little red newts go about cleaning up cracks and corners on the floor of Mother Nature's house. Sometimes you will find them under stones, sometimes under leaves, sometimes in rotting logs, and sometimes walking around over open ground. All the time, as they work, they are growing larger and stronger. They still keep their red color and will make nice pets. At the end of two years from the time they left the water, they go back to it. Then they begin to look like their parents, and begin to do the same sort of work that their parents did before them. Instead of being red, they turn brown, for the most part. Their tails now look more like the tails of polliwogs than they did when the newts were living on land. The newts spend all the rest of their lives eating insects, and polliwogs, and fish eggs, and other things which they find in the bottoms of the sinks and drains of Mother Nature's house. Each spring they lay eggs which develop into more little newts. From this you may know that newts work both on the land and in the water. Probably they do more good than harm, particularly while they are on land, and certainly they are worth watching because of their interesting ways.

Between the mud puppies in the deep water and the red-backed salamanders in the logs in the woodland, the crevices in the floor of Mother Nature's house are kept pretty clean. The two-lined salamanders help at the edges of the colder brooks; the newts work in the shallower waters of warmer ponds and lakes. On the land, the dusky salamanders care for the places under stones in wet places and are helped in their work by the slimy salamanders. In the more open land the spotted salamanders do their work, and with the assistance of all of these, Mother Nature finds it possible to keep her floor fairly well cleaned out.

Above photo 30" Ideal with riding trailer used on estate of H. G. FISK, Longmeadow, Mass.

Golf Club Officials!

Write for details of our new power putting green mower.

The Ideal "Junior."

A Moderate Priced Power Mower for Medium Sized Lawns

Here is a Power Lawn Mower that will be welcomed by thousands of home owners who have large lawns to care for.

We call it the Ideal "Junior." It is a machine that fulfills a greater need than any power mower ever built. It is surprisingly moderate in price, absolutely dependable, easy to handle, and costs but a few cents per day to operate.

In general principle, the Ideal Junior, is exactly the same as the larger Ideal Power Lawn Mower which is giving universal satisfaction upon thousands of the best kept lawns in the country. It is smaller and lighter in weight, having a 22-inch cut. It will mow from 3 to 4 acres of grass per day. Just the machine to use when there is too much grass to economically cut with hand mowers, yet where the lawn is hardly large enough to warrant the purchase of a larger power mower.

Also used by golf clubs for work on putting greens, and by parks and cemeteries for close cutting, trimming around shrubbery and as an auxiliary unit to the larger power mowers.

The Ideal Power Mower for Large Lawns

For larger lawns the standard Ideal Power Lawn Mower has no equal. It cuts from 5 to 6 acres of grass per day, doing the work of 6 or 7 men. There are thousands of these machines in use on private estates, public parks, golf courses, college grounds, industrial grounds, cemeteries, etc.

They are wonderful labor savers and stand up year after year with just the ordinary attention that any good machine requires.

For Large Parks and Golf Courses

For large parks and golf courses we build the Ideal Power Triplex Mower which cuts from 25 to 30 acres of grass per day.

Write today and get details of the complete line of Ideal Power Mowers. If you want our recommendation, tell us the size of your lawn, condition of grounds, etc.

HOW ROVER RESCUED DAN THE BUCK

"I 'D have been drowned, I would, you know, if it wasn't for the dog," said Daniel the Buck. "He saved my life, he did, and he's only a young dog at that. But he's a good one, 'danged' if he isn't, as brave as a lion and as knowing as a man. I'm struggling in the water there, fifty feet off the stern of the *Yankee*, when he grabs me by the collar and starts tugging away." As he spoke, Daniel Cuddihy, for years a famous character on the Boston Fish Pier, was overhauling a tub of trawl, and John T. Brady tells in the *Boston Post* how little by little he drew from the fisherman the yarn of the rescue:

"Courageous dogs, those St. Bernards, and strong, too," said Daniel the Buck, as he coiled the lines that he had straightened and repaired, back in the tub. "I've heard tell of those that are trained by the pious monks of the St. Bernard Pass in the Alps, and of the wonderful feats they perform in saving the lives of travelers dying in blizzards, but I never saw the like of that dog Rover, the mascot of the *Yankee*."

"Look here now, you can almost see the marks of his teeth on my collar yet. It was this way that he grabbed me."

Daniel the Buck placed the lapel of his coat between his teeth and looked at me out of the corners of his honest blue eyes.

"I thought he was going to rip the collar right off the way he yanked it, and lifted my head clear of the water, and now that I come to look at it, I see that he'd tear it a bit. But it's an old coat and I have another like it at home."

"But that's near the end of the story, isn't it, Dan?" I said.

"It is indeed," he replied, "and by the same token, it came near being the end of me, but I'll tell you how it all happened. Sit down on that coil of rope there."

I sat down and lit a cigar.

Daniel the Buck drew a brown T. D. pipe with a stubby stem from a pocket of his coat and struck the bowl against the palm of his hand. Only a small deposit of gray ash fell out.

"I might be telling the story better if I had a quid of tobacco for my pipe," he said, looking up. "That smells like a good cigar you're smoking."

"It is," I said, "but the second mate to it got burned to death."

"And how about the first mate," said Daniel the Buck, a humorous twinkle in his eyes. "Did he get drowned, as I would have been if it wasn't for the dog?"

"No, here it is," said I.

"That's generous of ye, and if ye don't mind I'll smoke it in my pipe," said he.

When the pipe was working properly, Dan leaned back with a sigh of contentment, and began:

"Be listening now to what I'm telling you, for it's the truth, as true as my nickname, is 'Bucky Dan.' You look like an honest man yourself, and so I'll tell you no lie.

"Rover has been coming to the pier with Captain Brophy of the *Yankee*, and the dog knows me well. Every dog and cat seems to like me, for no reason at all that I know of, unless it's because I like the dumb creatures myself.

"It was Thursday week it happened, and I might as well admit it now that you have me cornered here against the pilot house. I'd been to a shindig over in Charlestown, and I'd had a noggin of whisky or two, during the evening, but I've had more of a night, and better stuff, too.

"I had all my wits about me, tho, when the shindig was over, and I bethought myself of a promise I had made to Purser Cheney of the *Progress* to have two tubs of trawl overhauled for him next morning.

"Now, Bucky Dan," I said to myself, 'you promised faithfully to have those lines overhauled on the morrow, sure pop, and they're not done yet. It's up to you to keep your word. You can finish the job in a couple of hours, get a wink of sleep aboard the vessel, and awake in the morning with a clear conscience, and two dollars as good as in your pocket.'

"I'll do as my conscience says,' I finally decided and, lighting my pipe, I mouched over toward the Fish Pier. It was twelve o'clock when I left City Square and it must have been near one when I got to my destination, as I walked leisurely like.

"The *Progress*, that's the boat I was looking for, was tied up half-way of the dock, but in the darkness I passed beyond it and hove to abreast of the *Yankee*.

"The *Yankee* was moored well out toward the cap of the dock, and thinking all the time it was the *Progress* I made a leap for the rigging."

Bucky Dan led the way to the rail of the vessel nearest to the

pier, and pointed down into the water just aft of the bilge of the schooner's hull, and explained:

"That's where I found myself, in the space there between the ship and the fender of the pier, in danger of being crushed 'twixt the two of them should the wind cause the vessel to swing toward the dock."

"I was almost forgetting to tell you how I came to fall into the water. You might go away thinking I was a poor kind of a sailor if I didn't tell you that. The beam on the edge of the dock was slimy from the drippings of the fish falling on it as the vessel was being unloaded, and as I leapt, my foot slipped. It did just that, and I was sober as you see me now, but I slipped all the same. The best of men will make a slip sometimes, and that you know without my telling you. A dog is more sure-footed than a man, and that reminds me of Rover.

"I fancy his long black and white hair bristled up the moment I set foot on the dock, for he set up a loud barking when I jumped for the rigging of the *Yankee*, and I had it on the tip of my tongue to say, 'Shut up, you scallawag. Do you want to wake up the whole of East Boston?' But I'm glad my mouth was full of water before I could speak the words, for I'd been drowned there, and no one would have been the wiser as to what had become of me if the dog hadn't heard my fall.

"My first thought as I found myself in the harbor was to get my coat off and my arms free to swim, but that was easier said, in my own mind, than done. I slipped the collar back off my shoulders, but at the same time the skirt floated up under my oxters, and then I couldn't get the thing neither up nor down, off nor on.

"It's a fine fix I was in, and no mistaking it for anything else, struggling helplessly as I was, with my wet clothes getting heavier as they soaked up the water, the tide beginning to catch me, and no human aid in sight or ear-shot of my cries for help.

"In the distance I could see the lights of the Narrow Gauge ferry crossing the harbor to East Boston, and the beacons of the outer bay blinking, as tho beckoning to me. On the stern of the *Yankee* the dog was racing up and down, barking furiously.

"Come on, my fine laddie-buck," I shouted to him at the top of my lungs. 'If you've got any of the blood of your life-saving ancestors in your veins, now is the time for you to show it. Pick up the end of a ratline and swim out here with it, or I'm as good as doomed.'

"He didn't bring the rope, but he came himself. Jumping up on the main boom, he ran to the end of it, plunged off into the water as tho he'd been shot out of a gun, and came paddling toward me. He'd been waiting for some sound to locate my whereabouts in the darkness—dogs are near-sighted creatures as a rule, anyhow—and my shout had given him a sense of direction.

"Faith and it's going down for the third and last time I was, thinking on all my sins, when he grabbed my coat collar in his strong teeth and yanked my head up out of the water. A full forty feet we were astern of the *Yankee* then, but a shout from the boat gave me hope of being saved. I'd shipped a lot of water the second time down, but I still had my head about me enough to turn over on my back and hold my breath so I would float. This helped the dog greatly in tugging me to the schooner's stern.

"The voice I had heard was that of John Moran, the watchman of the *Yankee*. The barking of the dog had attracted him from the cabin of the vessel, to see what the rumpus was about, and he pulled Rover and myself on board.

"I was pretty well played out, but after getting into some dry clothes and having a few drinks of hot coffee, I was full of fun as ever I was.

"Are you all right now, Bucky Dan?" said Moran, when he was through dosing me up. 'I am, John,' said I, and just to show him that I was, I danced a bit of a breakdown for him. Then I crawled into one of the vacant bunks on the boat and had a good snooze for myself till dawn, when I went aboard the *Progress*, to overhau the two tubs of trawl as I promised to do.

"There isn't much more to the story now except you want to speculate a bit on the reason for the dog's risking his life. I picked a fish-hook out of his paw one day—'twas a thing any man would do for a poor dumb creature in pain—and it's waiting to repay me for the service that he's been ever since. I could see it in his big brown eyes, and we're 'even Steven' now again."

Daniel the Buck took off his cap as we shook hands.

"You didn't say how you liked my new cap," said he.

"It's very becoming," said I.

"It is that," said he, "and it fits me to a T. I lost my old one when I fell overboard. It floated out to sea, and I'd be floating after it now if it wasn't for the dog. I suppose some fisherman has found it on one of his hooks by this time, and is cursing the luck that brought him an old cap instead of a big halibut, but I'm not cursing mine."

"I'm prepared for the Worst ... Give me a Quart of Oil"

AT LEAST 50% of all serious engine troubles are traceable to the careless request—"Give me a quart of oil."

You can't dodge this fact.

There is a wide gulf between the average "pick-up" oil and Gargoyle Mobiloil.

We suggest you ask for Gargoyle Mobiloil, being particular to specify the correct grade for your car.

How the Right oil saves money

Many motorists expect entirely too little from their lubrication.

The grade of Gargoyle Mobiloil specified for your car feeds adequately to every friction point. It protects. It seals the piston rings against blow-by of gasoline and power—it saves gasoline. It cuts down operating troubles. And you will be surprised at your greater freedom from carbon.

Yes: Gargoyle Mobiloil costs a few cents more per gallon. It costs more to manufacture. But you will

see the real economy of this few cents difference after you observe the operating results.

Not a gasoline by-product

Nine out of ten lubricating oils on the market are simply by-products in the manufacture of gasoline.

Gargoyle Mobiloil is *not* a by-product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil is manufactured from crude oils chosen for their *lubricating* qualities—not for their gasoline content. It is manufactured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

This is one of the essential reasons for the superiority of Gargoyle Mobiloil.

Warning!

Don't be misled by some similar sounding name. Look on the container for the correct name *Mobiloil* (not *Mobile*) and for the red Gargoyle.

Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

A means Gargoyle Mobiloil "A"
How to B means Gargoyle Mobiloil "B"
Read the BB means Gargoyle Mobiloil "BB"
Chart: E means Gargoyle Mobiloil "E"
Arc means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

VACUUM OIL COMPANY

LITTLE TRAGEDIES OF BIG FISH

THE FISHING SEASON is with us once again, and with us, also, is the teller of long, strong fish stories. Most of the yarns, of course, are tragedies, for the tale of the fish that was hooked but never landed is most popular among the official and ex-officio members of the thriving Izaak Walton Club of America. *Outers' Recreation* is collecting a number of these fishy tragedies from its readers, and presenting them under the caption of "My Most Tragic Fishing Moment." "Here is a short and sweet one from a veteran fisherman," writes the editor of the department, introducing a tale by B. R. Hart, of Washington, D. C. Mr. Hart deposes and says:

I must needs go 'way back along the trail to the time when, as a small boy in the Blue Grass Region of Kentucky, I fished for the chubs, the sun perch, the suckers, the blue gills and—yes, I admit it—the lowly mud-eat.

Did we have "tackle" in those golden days—rods? lines? lures? leaders? and theories about their use? No: we had a pole, a spool of cotton thread, a nickel's worth of hooks, a pebble sinker, a tin can, a cur dog, and Youth.

With the money my father gave me for feeding a bunch of calves all of one winter I purchased me a bamboo rod, a silk line, a reel, a red and green cork float and three Cincinnati hooks with real gut on them. Then came a day in the spring when I hied me down to the river (where I had never been before) to try out my new tackle. I carried it in my hand very carefully all of the eight miles for fear of its getting broken. As if it were only yesterday I can recall that beautiful river, and well do I remember the pool where I chose to do my fishing. I can see the live shiny, minnow bait as it sank into the water, covered with benedictions, spit and hopes that a crappie would take it.

Soon the cork began to move slowly and then stopt. Thinking something had gotten my bait, I pulled up to see—and then it happened. The whole pool seemed to explode, and something went tearing off with my tackle—my first small-mouth bass. It was all over in a second, and all that was left was the butt of the rod, the reel, some experience and my most tragic fishing moment.

Here is one from Frederick L. Reid, of Poughkeepsie, N. Y., a tale that is guaranteed to fill any true fisherman with horror and chagrin. Mr. Reid relates:

I have had so darned much hard luck and so many tragic moments in my fishing career that I am afraid I will have to look up my file to get a hold of the "tragicest."

However, one awful day comes to my mind, and here is the story: During the early days of the bass season last year I played hookey from business and sneaked out at four A. M. one morning to a small neighboring lake. I had just purchased a new split bamboo rod, which I thought was just about "it," and, upon arriving at the lake, commenced to cast with the "stick," first using one plug and then another. There were several other parties fishing that morning and all were catching fish, but not a single strike did I receive.

I would whip a weed-patch from cellar to garret without any reward except exercise, and then one of the other parties would follow me up and take fish right from under my nose. This made me pretty darned sore all the way through, and I was ready to fight anybody at the word "go."

Finally I discovered a fishy looking weed-patch overhung with branches of a silver-maple that was growing along the shore, and made a cast right in front of the patch. As soon as the plug hit the water, I was rewarded with a REAL strike that gave me a funny feeling in the pit of my stomach. (Did you ever get the sensation?) After giving him the butt, the old warrior started in to show me his bag of tricks, and, believe me, he had more up his sleeve than Ching Ling Foo ever thought of having. First he rushed right for and under the boat, then to the right, then to the left, and finally sounded similar to a submarine.

After much coaxing and pumping, he decided to make another run, this time right into the weeds, and then proceeded to embrace every weed in the lake with my line. After giving him another third degree, I started him on another rampage that was breaking my heart, pretty near breaking my rod, but it did break his spirit—temporarily!

There were two other boats nearby watching my wrestling match with B'rer Bass, and filled with enthusiasm. Have you ever met these birds who always watch you play your fish and give you all kinds of advice which is bunk from the start? It is an education to sit in on one of these little "First Aid" parties.

Well, to go back to my story, Old John Bass was getting pretty tired, and finally came rolling in with a very contented look on

his face. As soon as he came within actual reach, I slipt the landing-net under him and brought out a large-mouth that would tip four pounds if an ounce.

But here lies the tragedy. One of the "bleacherites" rowed alongside to inspect the catch and asked me if he could take the fish over to the next boat to show his wife. I agreed, being highly elated and puffed up over the incident. So he put the bronze backer in his landing-net and proceeded to the adjoining boat. But I am going to whisper the balance of the story. She picked up the fish by the gills and was admiring it, when all of a sudden the fish gave a wiggle. She gave a scream, dropt the fish, who hit the gunwhale of the boat and swam peacefully through the water, back to his tribe and family.

I can not remember any other time when I ever swore at a woman, but I sure did on this occasion. Her better half began to laugh, and I began to see red! Needless to say, I took down my rod, packed up my kit, started toward shore and then home—FISHLESS.

A tale of "humiliation and disappointment" that seems to "stick out more prominently than do any more refined tragic-comedies of later years" is related, in these words by Dr. B. F. Wilson, of Golden City, Mo.:

The date, more distant than I care to contemplate, was in my bait-fishing period of angling growth. Three of us were camped at a deserted mill-site by a broken dam on Sac River, a considerable stream heading in the Ozark country. We had had a surfeit of bass, jacksalmon and drum, and were ready to welcome a suggestion that would add a bit of adventure or variety to our activities.

Tales by the natives of huge catfish to be caught in the mill-pond prompted our efforts eastward. These same fighting cats, our tempters allowed, could not be handled by our bait rods, reels and slender lines. This was too much; we'd show 'em.

There was a rude sort of a punt tied to a tree above the dam, which we appropriated for the work. Mitchell, the huskiest one of the lot, was selected as oarsman. I insisted on handling the tackle and catching the cat because I had the best tackle, consisting of a lancewood rod and double-multiplying reel full of heavy linen line.

Laboriously Mitch rowed the old tub to the upper end of the millpond. I put a large dead chub on the biggest hook we had, and getting into the middle of the stream we started to float down through the fancied retreat of the siluroid monsters. I used a cork or float, of course, and naturally all eyes were constantly turned to it. I sat in one end of the scow, Mitchell at the oars and Lyman, just a spectator, at the other end, all tense and expectant.

Three voices gave the cry, "a bite!" as the cork popped under and out of sight. I struck hard and hooked. I could feel the swaying of a huge body as it surged unyielding to the strain of the rod. Line ran from the reel in spasms in spite of all the pressure I dared apply to the spool. Lyman and I both directed Mitch how to row and he, poor soul, by watching the line, had his work cut out for himself to keep the line from fouling. How he rowed that unwieldy craft up and down stream, roundabout and across! We tried to get the quarry close to the boat, but were afraid to get it too close.

Slower and shorter its runs became, and I began to sense victory. It was slowly getting under my control. I got it close to the boat, but it was running too deep for me ever to get sight of it.

Then the question arose—"How are we going to boat it or land it?" We had no net, no gaff—nothing but bare hands. A regular "gig" was what we needed. "Did I think I could manage the monster now from the bank if we should row ashore and have one of the boys go to a neighboring farmhouse for a gig?" I thought I could.

Then Mitchell headed in, and with a vicious surge he put his weight on the oars.

"Oh, he's off!" I yelled. The sad misery of it can not be described. Mechanically and disconsolately I reeled in my flaccid line. The line, hook and bait were intact, but from the barb dangled a strip of bark, apparently from a waterlogged grapevine.

The humiliating truth dawned upon all of us at once. None of us had paid any attention to our relative position to anything except the spot where my line was continually cutting the water. Mitch and the crazy boat had supplied all the movement of as great and erratic a fight as it could possibly have been had the grapevine been a forty-pound cat!

That afternoon Mitch sulked in the tent contemplating his blistered palms; Lyman went over the ridge, squirrel hunting; I sneaked off by myself and fished for a pumpkin seed in a pond.

Direct Service to
England via Plymouth
on French Line Vessels

S.S. PARIS
33,700 tons

S.S. FRANCE
24,800 tons

NEW YORK - PLYMOUTH
HAVRE - PARIS

COMMENCING with the sailing of the S. S. Paris on April 26th, and the S. S. France on May 10th, these two giant liners will stop at Plymouth, England, on their route to Havre, as well as on all return trips to New York. This service for westbound travelers will start with the sailing of the Paris from Havre on May 13th, and the France on May 20th.

With this new arrangement for landing passengers for England at Plymouth, it will be possible for them to actually be in London in six days from the time of sailing from New York. Special trains will be in readiness at Plymouth to take them to London.

Passengers who are sailing to France will reach Havre in the same time as on the present schedule.

The popular one-class steamer Rochambeau will be added to the westbound service on May 16th, and on all eastbound voyages will stop at Plymouth commencing with the September 14th sailing from New York.

Direct service will be maintained from New York to Havre and Paris with the six splendid vessels Lafayette, La Savoie, Chicago, La Touraine, La Bourdonnais and the Roussillon.

The French Line is gratified to be able to offer to travelers to England the same excellence of service, accommodations and famous cuisine that it has provided for many years between America and France.

HOT WATER

WITH A PITTSBURG Automatic Gas Water Heater in your home, you *always* have hot water without a moment's delay. No one need run downstairs to light this heater—it's *automatic*. The PITTSBURG lights itself and heats water as fast as you need it. Turn the faucet—hot water in unlimited quantities! It responds immediately to the call for good, clean hot water any hour of the day or night.

When you've drawn all you need, the Pittsburg turns off the gas automatically. People sometimes forget, but a Pittsburg never wastes a foot of gas.

Pittsburg Gas Water Heaters are made in 18 sizes. There are sizes to suit small or large families—and extra large sizes for clubs, institutions and larger buildings. We see that every purchaser secures just the right size for his particular hot water requirements.

EASY PAYMENT PLAN. A small first payment puts a Pittsburg in your home. Easy, deferred payments take care of the balance. You'll never miss the payments and you will have the pleasure of knowing that you've given your home a convenience that makes it more up-to-date and comfortable.

Look up the Pittsburg dealer in your city—the gas company or one of the prominent plumbers, or write us the number of hot water faucets in your home and the number of people in your family. We will recommend the proper size Pittsburg for your needs. At the same time we will send you a free copy of "Hot Water," an interesting little book, which tells the whole story of better hot water service.

A BATTLE WITH A GALLANT TROUT

A BROAD NOSE came up at intervals to take a fly. Creeping up on his hands and knees, the fisherman could see the great trout itself, by peering through the sedges into the clear water. He judged it would weigh about three pounds, and it was in perfect condition: hog-backed, of great girth compared with its length, measured from the slowly opening and shutting pink mouth to the gently waving broad, square tail. Such a fish! Slow in movement, with the dignity and the proportions of an alderman who has prospered exceedingly. The fisherman had not fished for some years, and had forgotten the secret of using for big trout the very best and strongest tackle to which they can be lured into attaching themselves. He should have remembered that he was dealing with an unsophisticated fish that had never seen an artificial fly. He used an old cast, the finest he had. The trout took the fly at once. Directly he felt the hook, he made a terrific rush up-stream through what looked like an impenetrable weed-bed, leaped high out of the water in a clear pool beyond, and the line came back, less the fine point of gut. The man reeled in sadly and tried his luck elsewhere. The next time the Broad nose was seen, the fish took the fly again with confidence. Again he made the same mad rush, followed by a jump, and again he broke the cast. In his book, "Mostly About Trout" (Houghton-Mifflin, Boston) Sir George Aston tells of "the glamor of a long campaign" with this trout, which ended in "a final terrific battle." Following the two opening combats, in which the fisherman failed so completely, he says:

Then came many weeks of prolonged and patient warfare. I could only get away in the evenings, generally about twice a week. There was always a hatch of fly soon after sundown, and I could make sure that he would then be feeding. During the summer months I must have spent on an average at least an hour and a half in every week trying to induce him to take my fly again. Out would come his nose every few minutes, sometimes two or three times a minute, but always to take the natural flies, which I had done my best to copy in the pattern selected. He would take them freely and frequently, without, as far as I could tell, even glancing at my copy, which constantly passed within an inch of the spot where his nose was appearing (it was a very easy cast, right-handed, from a point below him, a nice, strong flow to carry the fly down, and not a vestige of "drag"). So the weeks went by. Then, one day in September, near the end of the season, I broke my landing net in trying to bend down a bough of a tree on which my fly had caught. I managed to find a weak toy substitute, which I took with me for the evening rise, and found "my enemy" awaiting me as usual, rising freely and confidently. The usual game began. I think that I must have put eight or ten different flies over him, and he still rose confidently and constantly at

The Modern Way to Heat a Store

CLOW GASTEAM—the modern way of providing steam heat without coal, burning gas in self-contained units—is used in every type of building—residences, offices, churches, apartments, factories, etc.

It is particularly desirable for stores. Unlike ordinary heating systems, that take moisture from the air, and injure health, goods and furniture, CLOW GASTEAM heat is *humid* heat.

Makes the Basement Usable

Because CLOW GASTEAM heating obviates the need of furnace or fuel storage, and makes the basement available for business purposes, and because of its economy, both in installation and operation, it is used by many of the largest chain stores systems, such as the United Cigar Stores—over five hundred of which are heated with CLOW GASTEAM—the Douglas Shoe Stores, the F. W. Woolworth Company, S. S. Kresge, and many others.

Heat Where You Need It

CLOW GASTEAM gives steam heat—recognized as the best—when and where it is wanted.

The fuel is gas—bought as needed and delivered in a pipe. There is none of the dirt, inseparable from coal, no disposal of ashes, and no janitor service. Radiators can be turned off at night, as there is no danger from freezing.

Used by Great Chain Stores

The Clow representative in your vicinity will be glad to explain to you the many advantages of CLOW GASTEAM, and show you a list of satisfied users. You will find in it the names of practically all the large chain stores in this country—buyers whose narrow margin of profit demands the utmost efficiency in everything they use.

He will also, without obligating you, give you an estimate of cost.

In the meantime, send for the CLOW GASTEAM catalog.

every natural fly on the surface, ignoring altogether the artificial.

My enemy went on steadily rising to natural flies after I had succeeded in placing exactly above his nose, and also an inch or two on either side of it (in case he should be blind in one eye), what seemed to me to be exact copies of the fly on the water. He must have seen every one of the eight or ten patterns I tried, some of them three or four times, and still he rose. The light was failing and I was giving up in despair, as I had done many times before during the season, when I determined to make just one more effort, using a fly as unlike as possible to anything he was taking. I put up a pink Wickham, tied on a hook of size O. In sheer weariness I made a poor cast, the fly dropping in a position which brought it several feet to one side of the fish. He came across at it, took it confidently, and dashed toward the weed-bed up-stream. I knew that he meant to bore through the weeds as usual and break the gut by a jump in the clear water beyond, so I put on all the strain that I could, determined to force his head down-stream before he could achieve his purpose. The little rod bent nearly double with the effort, and a break seemed almost certain, when at last the pressure began to tell. His pace slackened. He came to rest. His head turned, and soon he was boring steadily down-stream, trying to get his head down the whole time and to turn up-stream into every weed-bed we passed during our progress; but I hauled him by main force, and gradually guided him toward my bank. It seemed as if he would never tire. Once or twice he headed round, and regained almost his full strength directly he met the current again. At last I managed to guide him under my bank, shifted the rod to my left hand, keeping up the strain, slipped the landing-net into the water below him, and tried to head him into it. He saw it, or me, and was off at once, well into a weed-bed. The strain was no longer a live one; it had become dead and steady. I believe in the theory that chalk-stream trout, when hooked, sometimes seize hold of weeds in their mouths in order to gain a purchase and prevent their heads being turned down-stream by the rod-pressure. I put all the strain on the tackle that I dared, without result. There was still a dead pull. Then I bethought me of the dodge of hand-lining. I stepped back, pointed the rod at the weed-bed, took the line between finger and thumb, and gave a series of little tugs. After three or four of them, the strain again showed life, brought about, as I believe, by the little tugs having compelled the fish to open his mouth and let go the weed he was holding. . . .

Then as a last resort I threw the rod down in the meadow-grass, waded into the water, followed the line of the gut into the weeds, groped with my hands amongst them for the fish, touched him lightly with the tips of my fingers, moved them gently up his sides, wondering whether I should ever get a grip of him, or if he would bolt before I could get near to his head. Gradually my hands got to his gills, and then, with one hand gripping from above and the other lifting simultaneously from below, I gave a great heave which sent the fish on to the bank just clear of the water. I wonder whether I played the game quite fairly. Tickling trout is poaching; but is it allowable to land one in that way when all other methods have failed and the fly is still in his mouth, with line attached? Was I a true sportsman? Can he, from the Valhalla of gallant fish, reprove me by exclaiming "Bad form!"

THE 40th LEONARD YEAR

The ten great refrigerator ideas

Let the Leonard guard *your* family's health. It keeps food fresh, eliminates waste, saves work, worry and money. It gives the housewife extra hours for rest and recreation. The Leonard Cleanable Refrigerator crowns forty years of progress in the science of food preservation.

Here are the ten points of perfection that make the Leonard the logical choice of those who seek highest efficiency and greatest economy:

1. Ten walls of insulation—cold retaining, heat-resisting.
2. One-piece food chamber—triple coated with porcelain.
3. Rounded inside corners, with porcelain lining extending to outside edge of door-frame; sanitary, clean-easy.
4. Circulation system—chilled dry air, constantly moving.
5. One-piece porcelain door-plate, pan-shaped; no wood exposed.
6. Self-closing air-tight lock.
7. Removable drainpipe, non-sweating.
8. Patented non-leaking device (No moisture can reach the wood frame.)
9. Retinned, woven-wire food shelves.
10. All-metal ice rack—no rust, no leak.

One out of every seven refrigerators sold is made by Leonard. A tribute to Leonard superiority!

Visit the Leonard dealer in your town. If you fail to find him, write us and we will see that you are supplied.

Send for sample of porcelain, catalog illustrating over 75 styles and sizes of refrigerators, Mr. Leonard's own booklet on the "Selection and Care of Refrigerators."

There is a size and style of Leonard Refrigerator to suit every purse

SCIENCE • AND • INVENTION • CONTINUED

SHALL UNIVERSITY WORKERS PATENT THEIR DISCOVERIES?

SHALL discoveries and inventions made by research workers in university laboratories be patented? If so, who shall own the patent, the man who made the discovery or the university whose money has enabled him to make it? Some have argued that all discoveries in pure science, made non-industrially, should be free. Discoveries in medicine have always been regarded as gifts to the world. But research is poorly endowed, so it has been suggested that the universities themselves should patent the inventions of their workers and apply the money gained by leasing the patents out for industrial purposes, to the support and encouragement of additional workers. In an article contributed to *Chemical and Metallurgical Engineering* (New York), William J. Hale, of the Dow Chemical Co., points out that the proceeds would hardly be large, and he advocates the patenting of research inventions in the student's own name, denying that such a course would be in any way inadvisable or discreditable. An increasing number of university professors in the sciences, he says, now hold patents. He writes:

Patents of general processes are rarely of much pecuniary value. I can not recall a single instance where a patent on some basic principle yielded a revenue worthy of consideration. True, a number have been sold outright at handsome prices, such as the Nernst lamp, for instance, but the purchasers here, as elsewhere, are the financial losers.

The early basic patents would seem to serve primarily the purpose of an inspiration for subsequent inventors. The basic patent of the sewing-machine—an eye in the point of the needle, unheard of in all preceding centuries—yielded nothing. The Selden patent on internal combustion engines with clutch release is at the basis of the great automobile industry, but it survived only a few years till broken.

It is, therefore, the particular rather than the general that commands industrial value. No sooner is a new principle promulgated than each conceivable adaptation of it is visualized in every industrial research laboratory in the country. So much better equipped than the average university laboratory for purposes of detailed practical applications, there is little wonder that the industrial scientist can evolve new points of value and points equally as patentable as the general principle itself. In other words, a university laboratory could not be expected to give more than the merest generalization in its claims for patents, and by the time the patent was granted there would be so many more patents pending on details, and especially upon new ideas growing out of the original patent, that the university itself might be forced to pay an appreciable amount in royalties to subsequent inventors in order to present anything attractive for lease to industry.

"Industries nowadays patent everything," says Mr. Hale. They have had costly experiences when acting to the contrary. They patent to protect themselves and not to claim any wonderfully conceived new ideas. When thus protected they proceed with comparative impunity, as they know they can not be interfered with. The patents of others interest them only to direct the attention of research men to still better adaptations of their own particular manufacturing processes. To quote further:

If there appears some altogether new patent of which we wish to make use, naturally it is to our advantage to buy it outright or lease it on some very small royalty. If another concern desires to lease this same patent, I doubt if we should continue with our lease unless our costs of production were materially lower than our competitor's. It is not worth while to take on extra competition unless you have a material advantage at several points. So soon, therefore, as a university owning rights to a patent began to lease the same to several companies (she never could get much pecuniary assistance from leasing to one company alone) so soon would the value of the patent depreciate and sooner or later the free use of the patent would be forced upon her.

A good chemical staff at a large university will scarcely be able to evolve much of a basic nature in the course of a college year. If, however, its concerted action is directed to some particular small problem there is reason to hope for positive results—but think of the "leaks"! You might just as well announce the work at the start. Men at an industrial plant are so much more advantageously situated with scientific material and legal equipment that a new idea, no matter how crude its conception, can be safely secured for their industry long before the university men realize what they are at work upon. When, however, the university man works alone or with a close collaborator and the question of time is left out of consideration, we find many discoveries to his credit, and patents have usually followed free from outside interference.

I know of no type of university man willing to grant that patent counselors could be helpful to university scientists. The scientific men fully realize that these counselors are anything but scientists. They may have had some scientific training, but they are not capable of diagnosing scientific problems save where exactly similar questions have been a matter of study between them and the Patent Office. The only possible help from patent attorneys would be a comprehensive report on all patents bearing on the general processes involved. With such reports at hand, the investigator can not do better than consult privately with industrial leaders, men of high standing in their profession and in their community. These men and these men alone are the only men who can help the inventor. Tho this is, indeed, solid truth, some way or other I just can't

QUALITY without Extravagance*

"IF it's a good brim, it's a good hat." Any expert hatter knows that. Mellow "tight" felt and the "Sta-Shape Brim"* are Berg features that mean "Quality without Extravagance." Berg styles stay smart because the "Sta-Shape" Process strengthens the brim and "retains the style lines longer."

HATS FOR YOUNG MEN

picture to myself the solicitation of advice from industrial leaders on the part of our university professors.

There is nothing dishonorable in a university scientist seeking a patent. On the contrary, he gains enormously thereby in international prestige. Of course he usually is condemned at home by the university drones unable to comprehend the value of ideas other than their own; but such childish criticisms are negligible.

The establishment of a 10-year period for research in pure science for a man after receiving his doctorate is all well enough and admirable for the future of both university and industry, no matter where the young man casts his lot, but the salary paid is usually so small during the early years of this constructive period that barely a living wage is afforded the scientist. Physically he may become more or less a wreck.

The financing of these men and their investigations brings out the proposal which the authors have suggested. They argue that the industries will gladly pay for patents thus obtainable after assignment to the universities. This is all true enough, but there will be so little of patentable nature that the university and the investigator will reap greater renown if he goes on his quiet way with never a thought of patent or legal advice until he himself runs across something which he recognizes is new and which he is anxious to secure in his own name.

GELATIN, A PARTIAL FOOD

THAT gelatin is a true food, altho nourishing only when taken with certain other foods, is asserted in *The American Food Journal* (New York) by Robert Herman Bogue, industrial fellow of the Mellon Institute, Pittsburgh.

In the minds of some people, says Mr. Bogue, there exists a prejudice against the use of gelatin on account of the relationship which they think that it bears to glue, and to what they believe to be the source of the product. From the days of our childhood we have heard that gelatin was made from horns and hoofs, but this is not true. Neither gelatin nor glue can be obtained from that source. He goes on:

Gelatin and glue are obtained by cooking pieces of skin, tendons, cartilagenous material, and bones, with water below the boiling point. The fundamental distinction between edible gelatin and glue lies in the selection of the raw material, and the care exercised in handling. Only the perfectly fresh, clean, healthy stock is permissible for the manufacture of edible gelatin. After a very thorough washing, the materials are allowed to soak in lime-water sometimes for several weeks. Further washing follows and the lime is neutralized with an acid and again washed. The cooking is conducted in enamel or other non-corrosive tanks. Bacterial contamination is especially guarded against. When gelatin is prepared in this manner, and no subsequent deterioration has occurred, there can be no reasonable objection raised, from an esthetic point of view, to its use in the dietary.

We are not permitted to regard gelatin as the equivalent of the combined proteins, such as are found in milk, meat, eggs, etc.

That it functions as a true food is proven,

THE route to Yellowstone Park

Three great wonder spots—Yellowstone Park, Rocky Mountain (Estes) Park, and Colorado, all on one circle trip

Note where your Burlington-Northern Pacific Vacation takes you—for the price of a round-trip ticket to Yellowstone alone!

Enter Yellowstone through Gardiner Gateway—tour the park—leave over Cody Road—words cannot describe it. Then, Colorado—side trip to tranquil Rocky Mountain (Estes) Park. Thence Denver and near-by vacation regions direct, or across the Continental Divide to Grand Lake and back through Denver's Mountain Parks. In one trip, on through trains!

Vacation costs are down

This year your dollar goes much farther. You can now afford to see the wondrous West.

Often a bridesmaid but never a bride

THE case of Geraldine Proctor was really pathetic. Most of the girls in her set were married, or about to be. Yet not one of them possessed more grace or charm or beauty than she.

And as Miss Proctor's birthdays crept gradually toward that tragic thirty-mark, marriage seemed farther away from her life than ever.

She was often a bridesmaid but never a bride.

* * *

Your mirror can't tell you when your breath is not right. And even your most intimate friends probably won't.

That's the insidious thing about halitosis (the medical term for unpleasant breath). Halitosis creeps upon you unawares. You may even have it for years without knowing so yourself.

That of course is when halitosis is a symptom of some deep-seated organic trouble a doctor must correct. Or maybe a dentist.

But so commonly halitosis is rather a temporary or local condition that will yield to more simple treatment.

Listerine, the well-known liquid antiseptic, possesses wonderful properties as a mouth deodorant. When regularly used, it arrests food fermentation and leaves the breath sweet, fresh and clean.

As such it becomes an indispensable friend to people who wish to enjoy the comfortable assurance that their breath is always beyond reproach.

Listerine will put you on the safe and polite side. Provide yourself with a bottle today and use it regularly as a gargle and mouth wash.

Your druggist has handled Listerine for years, and regards it as a safe, effective antiseptic of great merit.

Start using Listerine today. Don't be in doubt another day about your breath—Lambert Pharmacal Company, Saint Louis, Mo.

SCIENCE AND INVENTION

Continued

but it is not a complete food. It appears to be incapable of supplying more than about a third to a half of the required nitrogenous matter.

Some effort has been directed at an explanation as to why gelatin could not be substituted completely for other types of protein in animal economy, and the conclusions of these studies indicate that its failure lies in the absence of certain specific and necessary residues. Thus tyrosin, cystien, and tryptoplane are practically absent in gelatin. Kauffman reports that gelatin may be substituted for protein normally to the extent of 20 per cent. without harm. Murlin affirmed that the sparing action of gelatin is due to its content of nitrogenous residues. In every case the conclusions point to the insufficiency of gelatin as a complete protein food. But many other pure proteins, as albumin, fibrin, etc., are also incomplete, and it should be emphasized that in a normal diet where a great variety of ingredients go to make up the dietary the need for a complete food being embodied in any one material is quite negative and a matter of indifference. As one of a variety, however, there can be no reasonable objection raised to the inclusion of a pure gelatin, for it is a true food, a preserver of nitrogen, is easily digested, and is readily burned in the production of energy. The additional value of gelatin in the diet as a protective colloid is probably, however, of even greater importance.

Some colloids are not only practically uninfluenced by the addition of electrolytes, but possess the striking and important property of being able to stabilize colloids that are normally easily precipitated. Exceedingly small amounts of these colloids are able to protect very large volumes of otherwise unstable material.

Gelatin is capable of functioning as a protective colloid, in conjunction with lactalbumin, in preventing coagulation of milk during digestion. Jacobi advocated the addition of gelatin or gum arabic to cow's milk for infant feeding as early as 1889 and, altho the exact nature of the action was not then understood, the beneficial results obtained by such practise were well known. It is very probable also that gelatin functions in keeping the fat in a finely divided condition.

Herter finds that addition of gelatin to the milk in cases of serious malnutrition to be highly beneficial, and to result in a much greater absorption of the milk fed. The milk fat tends, in such cases of malnutrition, to coalesce into relatively large masses which are quite impossible of digestion in the infant organism, and the amount of fat fed is often reduced to less than two per cent. without greatly improving the case, while any successful attempt at preventing the coagulation of the casein is simultaneously reflected by a perfect digestion of the fat. Even in adults the ingestion of protective colloids in the form of albumins and gelatin is of the highest importance in maintaining an emulsion of the fats which are ingested, and in that way preventing digestive disorders. This important phase of dietetics has not been adequately investigated but there can be no doubt in the light of what has already been accomplished that the chemical constitution of a food is only one of a number of the factors which must properly be considered in the selection of a dietary.

We have observed that a certain association of foods may react in the body quite differently than a certain other association. And in this field lies the influence of the protective colloid. There is no colloid that exhibits this property of protection to the degree shown by gelatin, and the value of this substance as a part of the normal diet, especially to those who suffer from poor digestion, is probably far more as a protective colloid and emulsifying agent than as a food, but it functions unquestionably as both.

A CITY ALL MAIN STREET

SEVENTY-FIVE miles will be the length of Henry Ford's city at Muscle Shoals if Providence and the Congress of the United States will let him build it. Presumably the width will not be great. This one-dimensional plan, says a contributor to *Engineering and Contracting* (Chicago), has usually been stigmatized as "straggling," and considered an example of "civic ugliness and inefficiency." But, he goes on to point out, the advantages are not all on the side of the more compact forms, and where new projects or extensions permit of sufficient control and guidance, the elongated plan may actually possess the greater sum-total of merits. He continues:

Of course, if the prime object is to have every point within the city as close as possible to every other point, the circle is the correct figure, with the square as a reasonably close second. For the sake of convenience, let us limit our references to the circle, and consider that all of its relations to which we may refer have close and obvious counterparts in the square.

The grouping of the city's developments within the circle will be essentially either on zones like the rings of a target or on sectors or on fractional combinations of these. In general the center will be occupied by the retail store and office business, with various combinations of industrial, residential and mixed occupancy grouped about it in imperfect zones and sectors.

Usually the worst combination of different uses is that which brings a residential area into direct contact with a manufacturing area, railroad yard or the like, but the circular form of itself conduces to these very contacts. The best that can be done with them is to extend narrow parks between the incompatible areas or to develop secondary retail streets as lines of separation. Either of these courses will be unsatisfactory at times, or perhaps even impossible.

The city which is developed in more or less parallel bands instead of in portions of a circle, has the advantages of a quite natural separation of its areas, and an arrangement permitting of growth without the development of objectionable contacts. Altho in any sizeable community there would be certain variations and many minor subdivisions, three principal zones or bands would be in evidence as comprising the residential, business, and industrial districts. The business district would separate the other two, and each of the three could grow at both its ends without any tendency toward conflict. Admittedly it is not a compact arrangement, but with perhaps a few exceptions, extreme compactness is no longer either sought or desired for a city as a whole. Modern trans-

400,000 Little Sufferers Need Your Help NOW!

400,000 Austrian children suffering from mal-nutrition and its attendant diseases, and the appalling conditions that have followed the World War, need immediate help if they are to live through the coming summer.

No European nation was left so destitute by the war as Austria. With her finances demoralized to the point where one American dollar represents 8,000 Kronen, Austria is unable to purchase enough food and other materials to keep the nation alive.

America, always generous, is asked to help Austria in this life and death crisis. We appeal to the readers of the Literary Digest for immediate aid for 400,000 Austrian children like those shown above, as well as thousands of adults who have no means of support.

Make This a Special Easter Offering!

While America is enjoying all the blessings of life, Austria is dying of hunger and disease.

Your contribution will quickly relieve distress and bring life and hope to a people of fine culture and great possibilities. A once proud and powerful nation, mourning for her dead, shorn of her possessions, humbled by defeat, stands asking the victors for food, clothing and the chance to work. Let International Good Will and Humanity rule the mind and heart of America and lead us to do for Austria what we can.

Send your contribution to the Relief Committee for Sufferers in Austria, which collects money for food and clothing which is distributed to the most needy by the Friends (Quakers), who have set up their stations of mercy and hospitals all over Austria.

Last year the Friends distributed \$1,858,000 worth of food, clothing and hospital supplies. Help them this year do an even greater good work. Give as much as you possibly can. Even \$10 will keep one child alive until the next harvest.

All contributions will be acknowledged, and should be sent to:

EMIL FISCHL, Treasurer,
American Relief Committee for Sufferers in Austria,
19 Nassau Street, New York City.

Dear Sir:

Please find enclosed my contribution of \$.
for the work of your Committee.

Very truly yours,

"The Most Interesting Development in Golf —since the rubber core ball"

The Bristol Steel Golf Shaft is the successful result of years of experiment in the effort to produce a golf shaft that would be equal to the finest hickory.

Lighter than hickory, the Bristol Steel Golf Shaft makes a better balanced club—it puts the weight where it ought to be. When you take hold of it, it feels right—it possesses the same "whip" in all weather, will not corrode and is unaffected by climatic conditions. It is a handsomely finished shaft.

NOTICE: Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

Good hickory is growing scarcer, as everybody knows. The Bristol Steel Golf Shaft is the equal of the finest hickory in every particular. Give it a trial and convince yourself. Ask your "Pro." about it. Have him fit the Bristol Steel Golf Shaft to one of your old clubs or buy a new club equipped with it.

Golf Shops and Sporting Goods Dealers: A great deal of interest is being shown by golfers everywhere in the new Bristol Steel Golf Shaft. It will pay you to investigate this new source of revenue.

Golf Clubs fitted with Bristol Steel Golf Shafts can now be supplied by The Crawford, McGregor and Canby Co., Dayton, Ohio, and The Hillerich & Bradsby Co., Louisville, Ky.

Write for our descriptive circular giving us the name of your golf club and professional.

The Horton Mfg. Co.

241 Horton Street,
Bristol, Conn.

If You Fish

then you know Bristol Steel Fishing Rods—you know them as the standard; the rods demanded and used by real fishermen; the rods which give maximum satisfaction in all kinds of game fishing. Every Bristol Steel Fishing Rod is guaranteed in workmanship and material.

No. 16, Cork Handle "Bristol" Trout Rod, 9 feet long, can be purchased from your dealer for \$5.50, or it will be sent to you direct by us for the same price postpaid.

Write for Bristol, Meek and Kingfisher Fishing Catalogue—mailed free on request.

SCIENCE AND INVENTION

Continued

portation more and more appears as a revolutionizer of our environment and manner of life.

Longitudinal streets of special width, probably divided for the accommodation of different classes of traffic would of course be necessary features of such a plan. In the ideal city, each person would live approximately opposite his place of business or work, and in going to and from it, would for the most part follow a lateral street either into the business district or across it to the industrial section.

Of course no one expects a city to be built on such simple lines. Local business centers in the residential district will still be necessary in some cases, prior developments and established lines of communication will be of great effect; and other influences will doubtless complicate the situation. It is by the consideration of such ideals that the modern science of city planning is developing. The writer concludes:

These are mere suggestions in the search for an ideal—a sort of friendly chat wherein we hope, not so much to impart knowledge as to stimulate the thoughts of both our readers and ourselves. The modern science of city planning, in spite of its great progress, is not yet complete; and there still must be much of mulling over generalities, of choosing and discussing and rejecting.

HELIUM AIRSHIPS BETTER SAILERS

THAT a helium-filled dirigible, in addition to being non-inflammable, is easier to handle in the air, was discovered in the recent flights over Washington of the Navy dirigible built for hydrogen but filled with helium. This first practical test of helium as a balloon gas on a large scale, we are told in Science Service's *Science News Bulletin* (Washington), also demonstrated the superiority of the United States in lighter-than-air craft resources. The United States is the only nation that can produce sufficient amounts of helium gas to take care of its army and navy needs and have a considerable amount left over for commercial purposes, according to Dr. R. B. Moore, chief chemist of the Bureau of Mines, who has directed the work of developing helium gas recovery from the natural gas wells of the country. We read:

Lt. Commander Wood, who piloted the C-7, declared that the helium-filled ship is steadier and moves with greater momentum than any hydrogen-filled airship with which he has had experience. Paradoxical tho it may seem, the helium gas, twice as heavy as hydrogen with ninety-two per cent. of its lifting power, acts, in an airship, just as a heavy automobile on a road at high speed, in comparison with a light car. Wind currents do not deflect it easily from its path, and after it gets under way it travels more smoothly.

In hydrogen-filled ships it has been necessary, in descending, to let part of the gas escape after a long trip, to make up for

(SONNEBORN PRODUCTS)

Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

Makes Roofs Leakproof

It costs about the same to cover your roof with Stormtight as it does to coat it with ordinary roof paint.

Yet Stormtight gives positive roof protection for many years, while roof paint is a temporary makeshift and requires constant renewals.

Stormtight prevents leaks and it stops them. Brush on Stormtight over old tin, canvas, paper or other leaky roofs. It is an unnecessary expense to pull up the old roof and to put on a new one. Simply cover with Stormtight.

Stormtight furnishes a seamless one-piece roofing, without laps, seams, nail holes or other weak spots where leaks start. It makes the roof better than new at one-third the re-roofing cost.

Buy of your dealer or write us if he has not yet stocked it. Send for "Leakproof Roofs" and testimonials covering years of use.

the loss in weight of the fuel which has escaped after being burned in the engine. With the helium ship, its weight is sufficient so that by nosing the ship downward, the propeller will pull it to the ground.

Dirigibles in flying pick up static electricity from the atmosphere. With hydrogen ships there was always danger in landing, since when the ship touched the ground an electric spark of considerable power resulted. If this spark touched the envelope, fire and an explosion was extremely likely to result. Helium, being absolutely non-inflammable, does away with this danger.

While it is not known how many helium-bearing natural gas deposits there are in Mexico, the wells developed in the United States give off sufficient amounts to take care of all military and naval needs, and other possibilities of a considerable commercial development. Dr. Moore asserts that present known sources are sufficient to take care of the urgent needs of the United States for twenty-five years.

"In a properly designed ship," he said, "the loss of helium is one per cent. per flying day. In such a ship the vapors from the gasoline Diesel engines, which will be used eventually, will be condensed, and thus saved for ballast. It is an interesting fact that the water procured by condensation is almost as heavy as gasoline before it is burned in the engine."

Dr. Moore said that the helium used in the C-7 was shipped from Texas plants in nearly 1,000 cylinders, each containing 200 cubic feet of the gas, compressed.

The tremendous value of helium for use in dirigibles was made apparent during the war. British scientists made endeavors to find a sufficient supply to enable them to use it in their ships. The supply, however, was limited to very small amounts obtained from mineral wells which give off gases containing helium, and from minerals. These sources were woefully insufficient.

In February, 1917, Sir William Ramsay wrote to Dr. Moore concerning work done in the Bureau of Mines. In June of the same year, the War and Navy Departments made funds available for obtaining supplies of helium from sources in the United States. Since that time great progress has been made.

In the laboratories in the Department of the Interior Building practically all of the research work has been done. The Bureau now has three plants—two at Fort Worth, Texas, and one at Petrolia, Texas. The latter is the most productive. At the time the Armistice was signed 147,000 cubic feet of helium was on the docks ready for shipment to Europe.

Sir William Ramsay is acknowledged the discoverer of helium in 1894. His discovery was accidental, and was based upon findings of Dr. W. F. Hillebrand, of the U. S. Geological Survey, in 1888, connected with a study of gases from certain minerals containing uranium. Its presence on the sun was discovered by astronomers more than fifty years ago.

Up to the time of the war less than 100 cubic feet of the gas had been captured and stored. It was worth \$1,700 per cubic foot. At the plant in Petrolia, Texas, Dr. Moore says it can be produced for about seven cents per cubic foot at present. Eventually, he says, it would be possible to produce it at about two or three cents per cubic foot. The capacity of the Petrolia plant is about 40,000 cubic feet of ninety-two per cent. pure helium per day. The Government has spent about \$7,000,000 so far in its research work, building plants and producing helium.

Letting your customers Buy!

AS your salesman gives full attention to one customer, good display will start a dozen new sales. Suggestion through the eye is a quiet worker, but it is the most effective sale influence known.

A well-arranged display behind plate glass and against the rich mahogany finish of a McLean Display Unit furnishes a courteous but irresistible urge. Your customers choose leisurely, buy wisely and are thoroughly contented. It's sound salesmanship.

These cases trim from the front, and all the goods are in plain sight. Sales are quickly made without knocking down the display, going after the goods with a ladder, or crouching behind a low showcase. Every article is easy to reach.

Constructed in complete units; easy to rearrange as often as desired. Try one unit and check the sales from it. You will find that it outsells any other showcase you ever saw. Use the extra profits to add more units as you need them. If you ever sell out, McLean Units are worth nearly the full purchase price because they fit anywhere. Sold direct from the manufacturer, without bonus or commission to agents.

SCIENCE AND INVENTION Continued

For the cost of one modern battle-ship the Government could build six helium air-ships, each as large as the ill-fated Z R-2, pay for the work that has been done, and still have some money left over, Dr. Moore says.

The amount of helium obtained from the natural gas wells at Petrolia is .93 per cent. of the raw gas. The volume of raw gas from these wells is so great, however, that it was wise to build a plant there rather than at a smaller well which gave off a higher per cent. of helium. There are a few wells on the continent that give off as much as one and one-half per cent. The process consists of liquefying all the gas present except the helium. The principal work of perfecting condensers and other machines used in the process has been done in the cryogenic laboratory, located in the Department of the Interior building here.

LATEST FIGURES ON THE EARTH'S AGE

THIS is the stock scientific problem of the epoch since the introduction of geology; yet it is not by geology alone that it must be answered; and the geologist, the physicist and the astronomer have been at odds over it for many years. It was discussed recently in Edinburgh, Scotland, at a session of the British Association for the Advancement of Science, and the discussion, we learn from the Manchester *Guardian*, attracted the largest and most representative audience seen at the meeting, hundreds having to be turned away through lack of room. All the physicists, mathematicians, geologists, and zoologists were there, besides many of the chemists and stray members from other sections. We read:

Lord Rayleigh opened by stating that he had definite evidence to bring forward. He would not say that his answer was right, but he would not be giving it if he did not think it was. Thirty years ago Lord Kelvin said the earth was cooling at a rate which made it seem certain, "provided no new sources of heat were discovered," that 20,000,000 years ago it was unfit for the existence of life. The same reasoning, with the same qualification, showed that in another 20,000,000 years the sun would no longer be a source of light and heat for its planets. The geologists and zoologists objected that the time was too short, but they had no very definite data to found their case on.

Within recent years the discovery of the release of intra-atomic energy by radioactive substances had put an entirely new aspect on the question, at least as regards the earth. Uranium was changed through radium to lead by a long series of transformations, in which "chips" of helium were thrown off with enormous velocity, producing heat as one of their results. Indeed, the difficulty just now was to understand why the earth should not be getting hotter instead of cooler, in view of the quantity of uranium present in the earth's crust.

How could the transformation of uranium into lead be made a clock for measuring past eras? The rate of the transformation per annum was accurately known. It was

excessively small, only 1.22 ten-billionths of a given quantity per annum. If they took a mineral containing uranium lead and estimated the relative amounts of these substances present, they could calculate the time of the formation of the mineral in question. The result showed that the oldest or archean rocks had an antiquity of 925,000,000 years.

Similar evidence was got from the amount of helium present, if one allowed for its tendency to evaporation and diffusion. If the same methods were used for rocks of more recent geological formation, smaller results were naturally attained. On the whole physical chemistry confirmed geology in the sequences of strata it had accepted. For example, iron ore from a certain eocene formation was found to be 30,000,000 years old, but the earth's crust in some form or other was older than the oldest rocks, and from an estimation of the total quantities of uranium and lead present an antiquity of something like 6,000 million years was probable.

Professor Sollas, the geologist, who followed, said that, like a "bloated capitalist" of time, Lord Rayleigh had given the geologists more millions of years than they knew what to do with; but Professor Gregory, also a geologist, warmly denied this, and would apparently be content to have still more.

EVOLUTION UP TO DATE

NOT Darwin, but Waagen, an obscure German paleontologist, discovered the origin of species, as we understand it to-day. At least, so says Prof. Henry Fairfield Osborn, an eminent authority, lately Director of the Museum of Natural History in New York, writing in *Science* (New York). Mr. William Jennings Bryan, and others who execrate the name of Darwin, will therefore please stop it, beg his pardon, and begin at once to execrate the name of Waagen, which, as he was a German, ought to be considerably easier. What has brought this slumbering question to the fore just at present, it would be hard to tell; but probably Mr. Bryan must take a large share of the responsibility, the legislature of Kentucky probably ranking next. Professor Osborn's letter is in the nature of a comprehensive review of recent discoveries regarding the antiquity and descent of the human race. He says:

The mode of origin of species was practically discovered by a little-known German paleontologist by the name of Waagen in 1869, but, like the great discovery of Mendel in heredity, this truth has been long in making its way, even among biologists. Waagen's observations that species do not originate by chance or by accident, as Darwin at one time supposed, but through a continuous and well-ordered process, has since been confirmed by an overwhelming volume of testimony, so that we are now able to assemble and place in order line after line of animals in their true evolutionary succession, extending, in the case of what I have called the edition de luxe of the horses, over millions of years. These facts are so well known and make up such an army of evidence, that they form the chief foundation of the statement that evolution has long since passed out of the domain of hypothesis and theory, to which Mr. Bryan refers, into the domain of natural law.

Evolution takes its place with the gravi-

Playing Against Odds

Alarming as the figures are, statistics show that four out of every five persons who reach the age of forty are afflicted with Pyorrhea. Unless you take proper care of your teeth the odds are four to one against you.

Are you willing to gamble with the health of your teeth?

Pyorrhea is preventable. Your first duty to yourself is to go regularly to your dentist for teeth and gum inspection.

Then buy Forhan's For the Gums and use it every morning and night. The results will repay you greatly.

Pyorrhea begins its evil work by attacking the gums. If they are tender, if they bleed easily when brushed, take care! Those are Pyorrhea's symptoms.

If you neglect such warnings, you may pay with your health and with your teeth. For Pyorrhea's work is thorough. It loosens the teeth until they drop out or must be pulled.

If you are wise you will not gamble. Stop at your druggist's and get Forhan's For the Gums today. Use it just as you would use any other dentifrice. It keeps the teeth clean and white and the gums healthy.

Brush Your Teeth With Forhan's—How to Use It

Use it twice daily, year in and year out. Wet your brush in cold water, place a half-inch of the refreshing, healing paste on it, then brush your teeth up and down. Use a rolling motion to clean the crevices. Brush the grinding and back surfaces of the teeth. Massage your gums with your Forhan-coated brush—gently at first until the gums harden, then more vigorously. If the gums are very tender, massage with the finger, instead of the brush. If gum-shrinkage has already set in, use Forhan's according to directions, and consult a dentist immediately for special treatment.

35c and 60c, in the U. S. and Canada. At all druggists.

SCIENCE AND INVENTION

Continued

tation law of Newton. It should be taught in our schools simply as Nature speaks to us about it, and entirely separated from the opinions, materialistic or theistic, which have clustered about it.

It would not be true to say that the evolution of man rests upon evidence as complete as that of the horse, for example, because we have only traced man's ancestors back for a period of 400,000 years, as geologic time was conservatively estimated in 1893 by Secretary Walcott of the Smithsonian Institution, Washington; whereas, we have traced the horse back for a period of 3,000,000 years, according to similar estimates of geologic time.

The very recent discovery of Tertiary man, living long before the Ice Age, certainly capable of walking in an erect position, having a hand and a foot fashioned like our own, also a brain of sufficient intelligence to fashion many different kinds of implements, to make a fire, to make flint tools which may have been used for the dressing of hides as clothing, constitutes the most convincing answer to Mr. Bryan's call for more evidence. This Foxhall man, found near Ipswich, England, tends to remove man still further from the great lines which led to the man apes, the chimpanzee, the orang, the gorilla and the gibbon. This is not guess-work, this is fact. In this instance again truth is stranger than hypothesis or speculation.

Nearer to us is the Piltdown man, found not far from 75 miles to the southwest of Ipswich, England; still nearer in geologic time is the Heidelberg man, found on the Neckar River; still nearer is the Neanderthal man, whom we now know all about—his frame, his head form, his industries, his ceremonial burial of the dead, also evidence of his belief in a future existence; nearer still is the Cro-Magnon man, who lived about 30,000 years ago, our equal if not our superior in intelligence. This chain of human ancestors was totally unknown to Darwin. He could not have even dreamed of such a flood of proof and truth. It is a dramatic circumstance that Darwin had within his reach the head of the Neanderthal man without realizing that it constituted the "missing link" between man and the lower order of creation. All this evidence is to-day within reach of every schoolboy. It is at the service of Mr. Bryan. It will, we are convinced, satisfactorily answer in the negative his question: "Is it not more rational to believe in the creation of man by separate act of God than to believe in evolution without a particle of evidence?"

In the same issue, Prof. Edwin Grant Conklin has something to say on the theological issue raised by Mr. Bryan. Is it any more degrading, he asks, to hold that man was made through a long line of animal ancestry than to believe that he was made directly from the dust? As Sir Charles Lyell once said, it is mud or monkey. But this lowly origin does not destroy the dignity of man; his real dignity consists not in his origin but in what he is and in what he may become. Professor Conklin goes on:

If only the theological opponents of evolution could learn anything from past attempts to confute science by the Bible,

The perfect metal building

Erected in a few hours. Adaptable to hundreds of uses

AN entirely new idea in metal building construction—the interlocking joint which eliminates every objectionable feature of old-type metal buildings.

This joint insures a building strong, rigid and durable, simple and light in construction, quickly erected or taken down, and weather-proof. Swartwout Metal Buildings are also fireproof, rust-resisting and inexpensive.

The patented joint locks itself together, forming its own frame. It requires no fastenings. One man and a helper can easily erect a Swartwout in one day. It makes the ideal building for garages, tool houses, bunk houses, storage houses, offices and for hundreds of purposes on farms and industrial plants.

Send for catalog and prices

IF you need a small building for any purpose whatever, before you buy or build by old-fashioned methods send for the Swartwout Book of Metal Buildings. If there is no dealer in your town, we will ship direct immediately upon receipt of order. The Ohio Body & Blower Co., 9211 Detroit Avenue, Cleveland, Ohio.

they would be more cautious. It was once believed universally that the earth was flat and that it was roofed over by a solid "firmament," and when scientific evidence was adduced to show that the earth was a sphere and that the "firmament" was not a solid roof, it was denounced as opposed to the Scriptures.

The central position of the earth in the universe with all heavenly bodies revolving around it was held to be as certain as holy writ. The Copernican theory was opposed not only by the Roman Catholic Church, but also by the leaders of the Reformation. Martin Luther denounced it as "the work of a fool." Melancthon declared that it was neither honest nor decent to teach this pernicious doctrine, and John Wesley declared that it "tended toward infidelity." Even as late as 1724 the Newtonian theory of gravity was assailed by eminent authorities as "atheistic," since "it drove God out of His universe and put a law in His place."

The conflict between geology and Genesis as to the days of creation and the age of the earth lasted until the middle of the last century, and students of Dana's geology will recall the reconciliation between the two which that great man devoutly undertook. But, by the ultra-orthodox, he and other Christian geologists were denounced as infidels and as impugnors of the sacred record. It took three hundred years to end this conflict, if it may be said to be wholly ended now, but certainly no intelligent person now believes that the earth was made just 5,246 years ago and in six literal days.

And now comes Mr. Bryan in this twentieth century of enlightenment preaching a new *auto de fe*, attempting to establish an inquisition for the trial of science at the bar of theology!

Scientific investigators and productive scholars in almost every field have long since accepted evolution in the broadest sense as an established fact. Science now deals with the evolution of the elements, of the stars and solar system, of the earth, of life upon the earth, of various types and species of plants and animals, of the body, mind and society of man, of science, art, government, education and religion. In the light of this great generalization all sciences, and especially those which have to do with living things, have made more progress in the last half century than in all the previous centuries of human history. Even progressive theology has come to regard evolution as an ally rather than as an enemy.

In the face of all these facts, Mr. Bryan and his kind hurl their medieval theology. It would be amusing if it were not so pathetic and disheartening to see these modern defenders of the faith beating their gongs and firing their giant crackers against the ramparts of science.

"She Look Good."—"The following letter from an incipient distiller to a company offering electric washing machines for sale might be taken to indicate that vendors of washing machines are overlooking a fertile field," reports the *Howell County Gazette*.

"The letter says: 'Puritan, Mo. Dear Sir: your maeheen she look good to me. How many galons will she hold and how much money will it cost to put pipe for cooling. Does she work on wheat or barley or corn. You work great bluff on wash maeheen. I laf. You let me know what it take to fix me up.'"—*Missouri Notes, Kansas City Times*.

W. L. DOUGLAS

FOR MEN AND WOMEN

Attractive and Enduring Homes

THESE attractive homes in the beautiful Country Club District of Kansas City are built for comfort, beauty and endurance.

Siding, shingles, porch work and other parts exposed to soil moisture and the weather are built of Redwood. Every fibre of Redwood is impregnated during the growth of the tree with a natural, odorless pre-

servative, which protects it against all forms of rot and decay, as well as against the elements and the attacks of boring worms and insects.

Redwood is not expensive. It gives permanent beauty to your home and keeps down repair expense.

If you are planning to build, send for "Redwood Homes" booklet. To architects, engineers and industrial executives we will gladly send our "Construction Digest" and our "Engineering Digest".

"A House Divided"

TWO sisters and a brother had been living with their father in a fine old house that had been the family home for generations.

To so leave matters after his death that the family estate and possessions should be preserved for his children's and their children's use, was the object closest to the aged father's heart.

He consulted his children regarding the making of his will and was persuaded by the younger daughter to name his son as executor and trustee.

Upon the father's death, the estate came into the son's hands. He became interested in a number of plans which required financing.

The older sister, becoming anxious about the safety of the estate, finally brought herself to demand an accounting from the brother by court order. It was found that the estate was almost hopelessly involved. All that was finally left was the old home—and there was but little to keep it going. The sisters still live in the same house, but they are strangers to each other.

A Free Book About Wills

Leaving money and property to be managed by "someone in the family," or "someone we know," has been the cause of many disasters. A safe, sensible, modern way to insure the preservation of an estate, is to name a trust company as your executor and trustee. With the trust company, the administration of an estate is a specialized business. The trust company is expert in the handling of

investments. It is familiar with legal requirements. It has ample financial resources. It does not enter into family disputes.

Ask a trust company, or write to the address below, for "Safeguarding Your Family's Future," an interesting booklet on wills and trusts.

INVESTMENTS AND FINANCE

NORTH AND SOUTH AS PARTNERS IN IRISH TRADE

BACK of all the political and religious animosities which have kept Ulster and the South of Ireland apart, there is a great commercial bond which business writers here feel must eventually exert a tremendous pressure toward unity. Ireland's two great sources of revenue are the animal industry of the agricultural South and the textile industry of the North. A Dublin correspondent of the New York Herald notes that the animal industry adds a "larger proportion of value to the credit side of Ireland's foreign trade ledger than does the textile industry." On the other hand, textiles may be more important because all sorts of textiles are both imported and exported. In other words, "textiles create business to be done within Ireland for itself and outside Ireland for her foreign trade. Hence the denser and more industrial population which the Belfast area is able to support." The list of articles that agricultural Ireland exports without any corresponding imports is an amazing revelation of Ireland's natural wealth:

Aerated and mineral waters.....	£206,397
Fat cattle.....	20,628,822
Store cattle.....	5,361,347
Milch cows.....	1,033,780
Calves.....	117,194
Sheep and lambs.....	2,120,905
Swine.....	2,434,104
Eggs.....	15,479,581
Feathers.....	83,389
Potatoes.....	2,259,533
Hay and straw.....	388,940
Pork.....	264,346
Poultry.....	2,756,825
Game.....	90,872
Provisions and groceries.....	233,857
Steamships.....	10,600,000
Marble, granite, limestone.....	44,872
Tar, pitch, creosote.....	110,247
Jute, yarn.....	51,348
Rope, cordage, twine.....	1,171,169
Bags and bagging.....	292,386
Canvas.....	556,844
Roofing felt.....	283,887
Woolen goods.....	2,272,399
Yeast.....	868,002

Total..... £69,711,046

Taking the animal industry of Ireland as a whole, there is said to be a "favorable" balance of exports over imports amounting to £51,913,912. The export and import figures are given by *The Herald's* correspondent as follows:

Commodity	Export	Import
Butter.....	£4,901,613	£67,127
All cattle, sheep, hogs as above.....	31,696,132	
Eggs.....	15,479,581	
Feathers, poultry, game.....	2,931,086	
Horses.....	1,399,080	405,160
Fats, lard, tallow.....	736,709	1,538,683
Hides, skins, leather.....	1,580,990	1,444,740
Bacon.....	4,546,334	3,252,247
Fattening feeds.....		4,649,656

Totals..... £63,271,525 £11,357,613

For the textile industry the favorable balance is only £18,704,423, the complete

figures being set down in *The Herald* as follows:

Commodity	Export	Import
Wool yarn.....		£924,945
Raw cotton.....	£102,939	345,072
Cotton yarn.....	134,199	3,266,060
Cotton goods.....	11,093,405	18,587,916
Flax.....	511,850	3,798,432
Linen yarn.....	3,151,868	513,777
Linen goods.....	31,808,586	2,542,304
Wool.....	1,370,963	380,585
Carpets, thread, hosiery and dry goods.....	2,618,256	6,356,585
Jute yarn, rope, cordage, bagging, canvas, etc....	2,071,747	
Roofing felt.....	283,887	
Woolen goods.....	2,272,399	
Totals.....	£55,420,099	£36,715,676

Using these figures as a basis, the writer in *The Herald* proceeds to show why the North and the South need each other commercially:

Belfast takes its flax and gets everything out of it it possibly can before the bulk of it is put on shipboard. Furthermore, it imports more flax, more linen yarn, more linen goods to manufacture in its own factories and mills and turn a penny on it, with Irish capital and Irish labor benefiting. Then it turns its textile mind to other fabrics and imports and manufactures and sells huge quantities of cotton and jute and hemp and their products. Its great shipbuilding industry is built sheer and alone on organizing, working and merchandising ability, for it possesses not a single natural advantage, except a deep water bay not possessed by scores of other ports in Ireland.

Take the meat industry, on the other hand, and it is found that the vastly larger part of its product goes out distinctly in the raw. Instead of getting out of its cattle and pigs and sheep everything but the squeal it exports them almost as nature made them and pays British and Scottish workmen to fatten and kill and dress them, to tan their hides, prepare their wool and manufacture their bristles.

Ireland imports twice as much fats, lard and tallow as she exports. She imports just as much hides, skins and leather as she exports, about a million and a half pounds' worth. And to this is to be added £5,380,000 boots and shoes imported, as against a mere £150,000 exported. There is no way of telling how much of this material went out of Ireland on the hoof to be turned over to the profit of the British manufacturer, workman, wholesaler and their distributors in Ireland. Ireland imports almost two-thirds as much bacon as she sells, despite the fact that Irish bacon might be thought to be a product unapproachable by any imported kind. That is true in quality, but not in price.

So it is that the south of Ireland needs just the sort of organizing and selling abilities that have made the North great if she is to go on with her dream of developing to support her normal increase in population. It is calculated that Ireland can hold from sixteen to twenty million souls before her agriculture becomes subject to the law of diminishing returns. But to do that she will have to be organized nationally, and organized from Cape Clear to Malin Head.

Leaking Again

"It seems to me we only had it put up last year . . . This time we'll use Copper. It's cheaper after all."

Copper is certain. Copper *does* mean faithful, expense-proof service. Copper's durability has been proved in ages of use.

Copper resists corrosion as no other metal does. Copper will last as long as the house stands.

No paint, no repairs, no renewals, when you use Copper.

A little money spent on Copper now saves you a great deal of money—and trouble—later.

Sheet metal contractors will tell you their customers are demanding more Copper than ever before.

Use Copper this time on your house—and be forever rid of the perpetual nuisance and expense of leaky leaders and gutters.

Are You Building for "Sixty"?

WHILE working and earning for today, every individual should also see to it that there is a surplus building up for the years of declining earning power which are sure to come.

The Halsey, Stuart & Co. Investment Plan fits perfectly into such a scheme. It establishes a means of obliging the investor to save and invest regularly a determined part of his income in safe bonds—then makes his savings grow remarkably through the process of compound interest.

An Accumulation of \$50,000 in Safe Bonds

at age 60 or before is within the reach of men of even moderate income. Business men, professional men and high-salaried executives can set a much higher mark and build toward it with assurance.

Our booklet, "A Sure Road to Financial Independence," tells how the Halsey, Stuart & Co. Investment Plan fits all ranges of incomes—how to apply it on incomes from \$2500 to \$50,000 a year. Let us send you a copy, without obligation.

COMPARISON OF FRENCH AND GERMAN FINANCIAL BURDENS

WHEN we talk about Allied debts and German reparations, it is just as well to realize exactly where France and Germany stand financially. Official figures from the French Ministry of Foreign Affairs have been put together by the Bankers Trust Company on a dollar basis and at the rates of exchange prevailing last September. Here are the figures, not including Germany's debt to the Allies:

	Germany	France
Foreign debt.	\$787,250,000	\$6,856,000,000
Internal debt:		
Consolidated	850,250,000	10,171,000,000
Floating	2,111,110,000	7,499,000,000
Taxes per head	\$13.88	\$45.62

The following cost-of-living figures have been prepared by the same authorities:

	Germany	France
Bread (per kilogram)	\$0.35	\$0.82
Coal (per ton)	2.50	9.56
Transportation (1 ton at 1,000 kilometers)	6.00	17.85

1922 AS A YEAR OF MERGERS

ONE of the evidences of coming business prosperity, in the opinion of a writer in *The Wall Street Journal*, is the tendency toward large mergers of hitherto independent corporations. He says:

It is not permitted to report in detail preparations which are now under way for the purpose of enabling one of the larger railroad companies of the United States to purchase, through control of stock, a considerable number of small railroad properties. Announcement of this may be made before the spring ends.

A step of this kind is sure to be imitated, so that before the end of the year it may be that many of the weaker railroads will have passed into the ownership of some of our larger railroad corporations, thereby insuring restoration of health.

Within a few days, one of the larger national banks of New York City, the eighth in point of resources, has taken over a trust institution, and in this manner secured a branch which makes the ninth controlled by this national bank. Rumors are persistent that other transactions of this kind will be consummated before the end of the year, because the tendency is strongly toward the bringing into the family of large banks the smaller banks of New York City.

Chicago has already followed the example of New York. The Continental & Commercial bank has acquired the Fort Dearborn banks. Interests associated with one of the largest packing-houses have taken over two Chicago banking institutions.

Presumably four or five of the copper corporations will have been merged into a single unit before midsummer, and the evidence is plentiful that some of the corporations in the steel industry will be merged into a single family. Facts like these are sufficient to demonstrate the confidence which American business and banking life has in the return of prosperity.

MR. SCHIFF AS AN EXAMPLE TO INVESTORS

THE inventory of the estate of a rich man always interests investors. Particularly, observes the *Boston News Bureau*, when the wealthy man in question happens to be a partner in one of the largest investment banking houses in the United States, as was the late Jacob H. Schiff of Kuhn, Loeb & Co. Mr. Schiff died toward the end of 1920, tho his estate has only recently been inventoried, and the *Boston editor* thinks that if he had lived another year he might have changed his holdings somewhat to meet new conditions. *The News Bureau* goes on to tell briefly where the eminent Wall Street banker thought it wisest to put his own personal fortune:

Of the \$25,633,574 stocks and bonds in the Schiff estate the largest single holding was bonds of the City of New York to the value of \$9,164,952, and the next largest \$6,650,000 United States 3¾% Victory notes. Other tax-exempt bonds and notes to the value of \$1,327,764 were included in the inventory. These included obligations of the State of Massachusetts, the city of Rochester and Federal Farm Loan bonds.

Thus over two-thirds of Mr. Schiff's holdings were in tax-exempt securities. Assuming an average rate of return of but 4% on his holdings and none from his interest in Kuhn, Loeb & Co., his income for 1920 would have been \$1,025,320. If such an income were fully taxable, he would have paid \$681,833 to the Federal Government, but the investment in tax-exempt securities reduced the tax bill to \$156,360. In the light of such figures the insistence of Secretary Mellon upon the advisability of a comparatively low maximum surtax rate may be more easily appreciated.

The other bond holdings in the estate were exclusively railroad bonds to a total value of \$2,662,000, none of them of the highest grade. The absence of public utility and industrial bonds is noteworthy. Evidently the transportation industry retained in full measure the confidence of one of America's leading bankers.

Only 13% of the estate consisted of stocks, and the bulk of these were bank, insurance and trust company stocks. The balance consisted of miscellaneous industrial, mining and railroad stocks, all but one item consisting of common stocks.

Several features of the list of holdings are rather striking. First is the almost entire absence of speculative securities. The list consists almost exclusively of bonds and stocks of preeminently investment character. Surely if any one has access to "inside" information, Mr. Schiff might have been included. Yet he apparently felt that more money was to be made in his own business and purchased securities only for their permanent value. Investors will also note the concentration of the estate into a relatively few items. Over 60% of the estate was invested in two securities and the balance was spread over a comparatively short list. Evidently Mr. Schiff preferred a few prime securities to a heterogeneous list.

Bracing Him Up.—Mrs. Peavish says that if the Bolsheviks have got the nerve to ask for a loan of \$500,000,000 it does look like Mr. Peavish could get up courage to talk back to the grocer.—*Dallas News*.

They Fight Film— They who have pretty teeth

Note how many pretty teeth are seen everywhere today. Millions are using a new method of teeth cleaning. They remove the dingy film. The same results will come to you if you make this ten-day test.

Why teeth are cloudy

Your teeth are coated with a viscous film. It clings to teeth, gets between the teeth and stays. Film absorbs stains, then it often forms the basis of thin, dingy coats. Tartar is based on film.

Old brushing methods do not effectively combat it. So most teeth are discolored more or less.

Thus film destroys tooth beauty. It also causes most tooth troubles. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea, now so alarmingly common.

Now a daily remover

Dental science, after long research, has found two ways to combat film. Authorities have proved their efficiency. Now leading dentists, nearly

all the world over, are urging their daily use.

A new-type tooth paste has been created to comply with modern requirements. These two film combatants are embodied in it. The name of that tooth paste is Pepsodent.

Its unique effects

Pepsodent, with every use, attacks the film on teeth.

It also multiplies the starch digestant in the saliva. That to digest the starch deposits which may cling to teeth and form acids.

It multiplies the alkalinity of the saliva. That is Nature's neutralizer for the acids which cause decay.

In these three ways it fights the enemies of teeth as nothing else has done.

One week will show

Watch these effects for a few days. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. Enjoy the refreshing after-effects.

Do this to learn what millions know—the way to whiter, cleaner, safer teeth. Cut out the coupon now.

Brand-New TYPEWRITER!

\$4 Puts It At Your
DOWN Finger-tips

Factory Price
Big Saving
To You

This beautiful machine, the wonder typewriter, is a selling sensation because it is the only brand-new, standard, full-size machine with a 4-row, 42-key, 84-character keyboard that you can buy for less than \$100. It comes direct from the factory to you at a big saving.

Tried and Tested

Designed by men who have studied typewriter construction for years, built by men whose lives have been devoted to typewriter engineering, tried by every known test, measured by only the highest standards, the Annell comes to you as a revelation in typewriter perfection.

Fully Guaranteed

Strength and simplicity are the outstanding qualities of this machine. Here is a modern typewriter with every essential late-style feature and operating convenience. A wonderfully smooth touch and easy action. Will last a business lifetime.

Absolutely Free Trial

We have seen the Annell convince the most experienced typists and are convinced that it will convince you. For this reason we want you to give it a thorough trial and satisfy yourself in every respect that it is the machine for your use. So we give you ten days to try it out without cost to you.

A Year to Pay

Then if you like the machine you keep it and pay for it by easy monthly installments. In this way you can own the best and pay the least. Send coupon today and get complete information. It will pay you.

CURRENT EVENTS

FOREIGN

March 22.—The French, British and Italian Foreign Ministers, meeting in Paris, request the Athens, Constantinople and Angora governments to conclude an immediate armistice in the Turko-Greek war for three months, pending Allied mediation for a permanent peace.

March 23.—The British submarine *H-42* is rammed and sunk in the Mediterranean by the British destroyer *Versatile*, and the crew of 23 is lost.

Twenty persons have been killed and between 40 and 60 wounded in Southern Ireland since the truce went into effect, Sir Hamar Greenwood, Chief Secretary for Ireland, informs the House of Commons.

March 24.—The British Government formally invites Michael Collins, Chairman of the Free State Provisional Government, and Sir James Craig, Ulster Premier, to confer in London on means of quieting the situation in Ireland.

Five are slain and two are wounded in the sectarian warfare continuing in Belfast.

March 25.—The Irish Provisional Government accepts the British Government's invitation to confer with Ulster leaders in London.

The German cabinet rejects the terms under which the Allies will concede a moratorium on the reparations payments due in 1922 under the Treaty of Versailles and the London ultimatum.

March 26.—Constantinople will be internationalized and Allied troops will evacuate the city at the end of the Turko-Greek war in Asia Minor, if the Athens, Constantinople and Angora governments accept the agreement reached by the Foreign Ministers of Great Britain, France and Italy.

Insurgents of the Irish Republican Army meet secretly in Dublin and vote to repudiate the government of the Dail Eireann and to maintain a separate Republican Army to defend the Republican movement led by Eamon de Valera.

Forty-six men were killed and 109 wounded on the German side during every hour of the World War, according to an estimate by General Von Altroek. Germany's casualties are estimated at 1,808,548 dead and 4,246,779 wounded out of a total of 13,000,000 under arms.

The total number killed in Belfast from March 1 to March 28, inclusive, is 56—50 civilians, three regular policemen, two special constables and a military officer—according to a dispatch from Belfast.

March 27.—Premier Craig, of Ulster, accepts the British Government's invitation to meet the Irish Free State leaders in London.

The Irish Free State treaty bill passes the third and final reading in the House of Lords, with little opposition.

March 28.—Chancellor Wirth tells the Reichstag that the Reparations Commission's demands are nonsense and asserts that Germany must have a complete moratorium for 1922 and a foreign loan.

In an attempt to assassinate General Gwiichi Tanaka, former Japanese Minister of War, two Koreans kill an American woman in Shanghai.

DOMESTIC

March 22.—In identic notes to Belgium, Great Britain, France, Italy and Japan, the United States Government insists on its right to be reimbursed for the cost of the American Army on the Rhine out of German reparations payments.

Earth tremors lasting 18 seconds and beginning at 8:22 p.m. are registered by the seismograph at St. Louis University, and are felt in Tennessee and Missouri.

March 23.—The House of Representatives passes the compromise soldiers' bonus bill by a vote of 333 to 70.

The United States Treasury announces a shortage of \$200,000,000 in estimated revenues from collection of income and profit taxes of the March 15 instalment. The original estimate of revenue from these sources was \$1,740,000,000.

Six persons are drowned when the flying-boat *Miss Miami* falls into the sea on her way from Miami, Florida, to Bimini.

American railroad operations last year resulted in the accidental death of 5,587 people and the injury of 43,324, according to compilations of the Interstate Commerce Commission. The totals for 1920 were 6,495 persons accidentally killed and 63,786 injured.

Governor Parker, of Louisiana, issues an appeal to law officers to suppress "with an iron hand the evil of Klu-Kluxism wherever it raises its head."

March 24.—The policy committee of the United Mine Workers appeals to 200,000 non-union men to join the coal miners' strike to be launched on April 1,

By a vote of 67 to 27, the Senate ratifies the Four-Power Treaty with the modified Brandegee reservation which excludes any commitment of the United States to use force or to form an alliance.

Eight miners are killed and ten are missing as the result of an explosion in a mine of the Colorado Fuel and Iron Company, near Trinidad, Colorado.

The Senate receives the soldiers' bonus bill from the House and sends it to the Finance Committee for consideration.

March 25.—Eight members of a Boy Scout party are drowned in Magician Lake, near Dowagiac, Michigan.

March 27.—Joseph P. Ryan, International Vice-President of the Longshoremen's Union, announces that the union will be prepared to take steps to prevent the importation of British coal into this country in an effort to break the miners' strike set for April 1.

William Phillips, of Massachusetts, present Minister to the Netherlands, is nominated by President Harding to be Under Secretary of State, succeeding Henry P. Fletcher, appointed Ambassador to Belgium.

As a protest against wage reduction approximating 20 per cent., 7,500 textile operatives in seven cotton-mills in Lawrence, Massachusetts, leave their work.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"C. F.," Seattle, Wash.—"Please tell me if there is such a word as *practise*, and if so, just how it differs from *practice*?"

The distinction sometimes made in the spelling of the word *practise* (*practice*) when used as a verb and as a noun is not correct, for analogy requires that the noun and verb, which are pronounced alike, agree in spelling. But there are two ways in which to spell this word; the New Standard Dictionary prefers the "ise" form because the word came into the English language through the Old French *practiser*. Some authorities sanction the spelling *practice*, and derive the word from the Latin *practico*.

"C. S.," Milwaukee, Wis.—"Kindly state what is the difference between *jealousy* and *envy*?"

"One is *envious* who cherishes selfish ill-will toward another because of his superior success, endowments, possessions, or the like. A person is *envious* of that which is another's and to which he himself has no right or claim; he is *jealous* of intrusion upon that which is his own, or to which he maintains a right or claim. An *envious* spirit is always bad; a *jealous* spirit may be good or bad, according to its object and tendency. A free people must be *jealous* of their liberties if they would retain them. One is *suspicious* of another from unfavorable indications or from a knowledge of wrong in his previous conduct, or even without reason."—Fernald, *English Synonyms, Antonyms, and Prepositions*.

"C. S.," Battle Creek, Mich.—"What is the correct pronunciation of the term *Pythagorean*?"

The term *Pythagorean* is preferably pronounced *pi-thay'-o-ri'an*—i as in *habit*, th as in *thin*, first a as in *fat*, o as in *obey*, i as in *police*, second a as in *final*.

"R. P.," New York, N. Y.—"Can you give me the nicknames of the different States?"

The following are the nicknames of the different States:—*Alabama*, Cotton State, Lizard; *Arizona*, Sunset, Apache; *Arkansas*, Bear State, Bowie; *California*, Golden State, also Grizzly Bear State, El Dorado; *Colorado*, Centennial State, Silver; *Connecticut*, Blue Law State, Freestone State, Nutmeg State; *Delaware*, Blue Hen State, Diamond State; *Florida*, Gulf State, Peninsula State, Everglade; *Georgia*, Cracker State, Buzzard, Empire State of the South; *Idaho*, Gem of the Mountains; *Illinois*, Prairie State, Sucker State; *Indiana*, Hoosier State; *Iowa*, Hawkeye State; *Kansas*, Garden State, Squatter State, Central State, Jayhawker State, Sunflower State; *Kentucky*, Corn-Cracker State, Bear State, Blue Grass State, Dark and Bloody Ground; *Louisiana*, Pelican State, Creole State; *Maine*, Pine Tree State, Lumber State, Old Dirigo; *Maryland*, Old Line State, Coekade; *Massachusetts*, Bay State, Old Colony; *Michigan*, Wolverine State, Lake State, Auto; *Minnesota*, New England of the West, Bread and Butter State, Gopher State, North Star; *Mississippi*, Mudcat State, Bayou State, Magnolia State; *Missouri*, Bullion State, Ozark State, Iron Mountain; *Montana*, Stub Toe, Bonanza; *Nebraska*, Antelope, Blackwater State, Tree-planter State; *Nevada*, Sage-Brush State, Silver State; *New Hampshire*, Granite State; *New Jersey*, Jersey Blue, Garden, New Spain; *New Mexico*, Sunshine, Spanish; *New York*, Empire State, Excelsior State; *North Carolina*, Turpentine State, Old North State, Tar Heels; *North Dakota*, Flicker-tail, Sioux; *Ohio*, Buckeye State; *Oklahoma*, Boomer; *Oregon*, Beaver State, Web-Foot State; *Pennsylvania*, Keystone State, Steel, Coal; *Rhode Island*, Little Rhody, Plantation; *South Carolina*, Palmetto State; *South Dakota*, Blizzard State; *Tennessee*, Big Bend, Hog-and-Hominy, Volunteer State; *Texas*, Lone Star State, Beef; *Utah*, Desert, Mormon State; *Vermont*, Green Mountain State; *Virginia*, Old Dominion, Mother of Presidents, Mother of States; *Washington*, Evergreen, Chinook; *West Virginia*, Panhandle State; *Wisconsin*, Badger State, Copper; *Wyoming*, Equality (Suffrage Pioneer).

Quiet wilderness and bustling cities within a stone's throw of one another.

My Greatest Summers all were spent in Southern California.

By AN EASTERNER

THAT may seem strange to you. I, too, once thought—before I spent a summer there—that Southern California was a place to go in winter, not in summer.

And yet I know no other that offers such a wealth of summer fun, such complete recreation because of complete change, or—strange as you may think it—a summer climate so attractive in all ways!

I have spent summer after summer there, and in a three months' stay, slept under blankets ninety nights.

Southern California is America's ideal summer as well as winter resort. Average mean temperature: June, 66 degrees; July, 70 degrees; August, 71 degrees; September, 69 degrees.—The 44-year record of the U. S. Weather Bureau.

What Do You Do?

You motor, if you wish, for 4,000 miles on paved highways as smooth as city streets through a country unlike anything you have ever seen—unless you've been there.

You play golf on inspiring courses, some of the world's best. You stay at beautiful seashores at the foot of mountain ranges, or in the wilderness at mountain camps.

You view a great desert, like Sahara, and drive back to one of the world's largest cities for your dinner at a famous restaurant or hotel.

You visit great National Parks and Forests—see giant trees, stupendous panoramic views. Or you go quietly and fish in mountain lakes and

streams or at world-famous ocean fishing grounds.

You hike, you ride horseback, you breathe deep and you enjoy a sort of youthfulness that you haven't felt, perhaps, for years.

And all within a few hours of a great metropolitan center!—an easterner who doesn't know hardly can conceive of this.

Different and Enchanting

The enchanting difference is what lures me and the other thousands who go there in the summer from the east.

It's that difference which renews your youth, changing your viewpoint if you're "run down." You become absorbed, fascinated, relaxed to perfection. The greatest cure for "nerves" you've ever known.

Summer? An amazing summerland—you'll never spend a more delightful, restful, interesting summer anywhere.

Ask any railroad ticket office for further information, or mail coupon below.

Special, low-rate, round trip fares beginning May 15th—No more War Tax.

Plan now for this summer. Let the family have this great change and great trip.

BUY DIAMONDS DIRECT**FROM JASON WEILER & SONS**of Boston, Mass., one of America's
leading diamond importers

For over 46 years the house of Jason Weiler & Sons, of Boston, has been one of the leading diamond importing concerns in America selling to jewelers. However, a large business is done direct by mail with customers at importing prices! Here are several diamond offers—direct to you by mail—which clearly demonstrate our position to name prices on diamonds that should surely interest any present or prospective diamond purchaser.

1 carat, \$145.00

This one carat diamond is of good brilliancy. Mounted in Tiffany style 14K solid gold setting. Order this diamond, take it to any expert, make any comparisons you wish—if you are not entirely satisfied your money will be returned at once without a quibble. Our price—direct to you. . . . \$145.00

A few weights and prices of other diamond rings:
1/4 carat, \$31.00 | 1/2 carat, \$ 73.00 | 2 carats, \$290.00
3/8 carat, 50.00 | 1 1/2 carats, 217.00 | 3 carats, 435.00

We refer you as to our reliability to any bank or newspaper in Boston.

If desired, rings will be sent to any bank you may name or any Express Co. with privilege of examination. Our diamond guarantee for full value for all time goes with every purchase.

THE SPICE OF LIFE

Naturally.—No woman is so angelic as to prefer a halo to a hat.—*London Opinion*.

More Needed.—Lots of peace has been made; but the supply is still short.—*Wilkes-Barre Times Leader*.

More Nature-Faking.—Nature can not jump from winter to summer without a spring, or from summer to winter without a fall.—*Tiger*.

New Name for Old Trouble.—Despite the alleged shortage of money, there is no let-up in the business of buying and selling gold bricks.—*Wichita Eagle*.

One Word More.—"Have you given Jack his final answer yet?"

"Not yet—but I've given him my final 'No.'"—*Mass. Tech. Yoo Doo*.

Bygones.—BIBBIE—"How did ye hurt yer hand? Been fightin'?"

EDDIE—"Yep. Those were awful sharp teeth Sammy Jones used to have."—*Life*.

Logical.—TOMMY—"Funny how a fellow would start a superstition that Friday is unlucky."

ROT—"Yeah, he musta been a fish."—*The Stanford Chaparral*.

The Only Danger.—CUSTOMER (with week's beard)—"Do you think that old razor will do it?"

BARBER—"It will, sir—if the handle don't break."—*London Tit-Bits*.

Where the Hole Thrives.—MATH. INSTRUCTOR—"What do we mean when we say the whole is greater than any of its parts?"

STUDE—"A restaurant doughnut."—*Gargoyle*.

The Voice of Experience.—CONDUCTOR (new to the job)—"I'm sure the old boy there has paid his fare twice. Think I had better tell him about it?"

MOTORMAN—"No-o! Ask him for it again."—*Sydney Bulletin*.

No Brains

The shades of night were falling fast, The fool "stepped on it" and rushed past. A crash—he died without a sound: They opened up his head and found

Excelsior!

—*Boston Transcript*.

Economical.—JOHN—"Just burned up a \$100 bill."

DEMIJOHN—"You must be a millionaire."

JOHN—"Well, it's easier to burn them than pay them."—*The Stanford Chaparral*.

Mistaken Identity.—As a steamer was leaving the harbor of Athens a well-dressed young passenger approached the captain and pointing to the distant hills inquired:

"What is that white stuff on the hills, captain?"

"That is snow, madam," replied the captain.

"Well," remarked the lady, "I thought so myself, but a gentleman has just told me it was Greece."—*Kind Words*.

How Strange.—"HOMESEEKERS SEEKING HOMES."—*New York Sun* headline.

Another Point Against 'Em.—Politicians know the ropes—they smoke so many of them.—*Wilkes-Barre Times Leader*.

Limited Liability.—SR—"Be those there college students, Mirandy?"

MIRANDY—"Well, they all go to college, if that's what you mean."—*Lemon Punch*.

Razing Religious Standards.—Says the LITERARY DIGEST: "We burned six million dollars' worth of churches in the United States in the two years 1919 and 1920." Holy smoke!—*Chicago Journal of Commerce*.

Well-Named.—CO-ED—"Why didn't you find out who he was when the professor called the roll?"

ANOTHER CO-ED—"I did try to, but he answered for four different names."—*Shawnc*.

Competition.—The Germans are said to be exporting to this country toy motor-cars made from waste material, such as old oil-cans, at seven marks a dozen. Mr. Ford is reported to be looking thoughtful but confident.—*Punch (London)*.

Insuring the Cheers.—"Your constituents cheer your speeches enthusiastically."

"Why shouldn't they?" replied Senator Sorghum. "I always take care to avoid saying anything that is not in line with their present sentiments."—*Washington Star*.

Poor Mary!—"Mama, why do they wax people?"

"They don't; where did you ever get that idea?"

"I heard Uncle tell Papa that at midnight the party waxed Mary."—*Virginia Reel*.

The Buck Passes the Buck.—An Americanization incident of the West is related: A Piute Indian with a stick and white paint raised a dollar bill and passed it on a Chinaman who paid a gambling debt to an American with it. The American was arrested.—*New York Morning Telegraph*.

Safe and Sane.—The head of one of the large American railroad companies was making inquiries with regard to acquiring a small branch line which belonged to one old man. "Now, as to the state of your road," he asked, "is it well and safely laid?" "Sir," replied the old man indignantly, "ours is the safest line in the country. I may say we have been running for over twenty years, and have never had a collision." "That's good!" exclaimed the big man. "And what's more, sir," went on the proprietor of the little line, "a collision would be impossible." "How do you make that out?" queried the other in surprise. "I know that the latest automatic devices are excellent, but 'impossible' is a big word." "It is literally true with us," was the proud rejoinder. "In what way?" "Well, sir, we have only one train."—*The Argonaut (San Francisco)*.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"H. H. H.," Cincinnati, O.—"Are both spellings, *kidnapper* and *kidnap*, correct?"

Yes; the dictionary, however, prefers the form with the one "p"—*kidnap*, as the main stress is on the first syllable.

"S. J. H.," Carmel, N. Y.—"Please settle the following: Did or did not Colonel Theodore Roosevelt lead the assault of American troops up San Juan Hill in the Spanish-American War?"

The *New International Encyclopedia* under the article *Theodore Roosevelt* gives the following: "This regiment [the First United States Volunteer Cavalry], popularly known as the Rough Riders, Roosevelt (colonel since the action at Las Guasimas) led in a famous charge up San Juan Hill, near Santiago, Cuba."

"V. L. V.," Brooklyn, N. Y.—"Is it incorrect to use the expression 'Those kind of books'? If so, why?"

Since *kind* is singular, it should not be preceded by the plural *those*. Say, "This kind" or "that kind." "That kind of apples is best," not "Those kind of apples are best." "That kind of books" is the correct form. But *this* may be used instead of *these* in collective expressions, such as "this ten dollars." Shakespeare, however, wrote, "these kind of fools" (*Twelfth Night*, act i, sc. 5), "these kind of knaves" (*King Lear*, act ii, sc. 2), and "these are a kind of men" (*Othello*, act iii, sc. 3). Professor L. C. Carson ("English Composition," p. 126) rules that before the plural of *kind* the plural demonstrative should be used; as, *these kinds of apples*.

"C. F. K.," Berkeley, Calif.—"Is it not incorrect to say 'each and every one' as many writers and public speakers do? Is not 'each one' the same as 'every one,' and the expression 'each and every one' the same as saying 'each and each one'? For instance, to say 'each and every one must do his duty' would be a stronger sentence if said 'every one must do his duty,' would it not, or 'each one must, etc.'? Please give your opinion of this question."

Johnson in his "Alphabet of Rhetoric" says— "... As to the correctness of the expression *each and every* (*per se*), some critics hold that it never should be used. Certainly it is pleonastic in the great majority of instances where it occurs; but there are a few rare cases in which it serves the purpose of first attributing the predicate distinctly to each individual and then to all collectively, but using *every* as a more emphatic inclusive than *all*. An Ohio judge is reported as saying, 'The evil results of this verdict will be felt in this community long after *every one* of these jurymen are in their graves.' The last four words should be *is in his grave*."

Safety First.—"How is it that you are never affected this way, Captain?" asked the seasick old lady.

"Because I always bolt down my meals, madam," replied the weary captain, turning on his heel.—*Brown Jug*.

Our Flexible Language

This freak poem, we are informed by the lady who sent it in, was a favorite with Oliver Wendell Holmes.

Frolicked in the early spring a miss,
Fancy free with not a thought amiss;
Later in the season came a mister
Hanging round the maiden—then they
missed her.

Fall in love perhaps they didn't mean to.
But papa objected and 'twas mean, too;
Swore that marry he would never let her
So she disobeyed him to the letter,
And the mister and the merry maiden
Fled and found a justice and were made 'un.

—*Boston Transcript*.

WINCHESTER

TRADE MARK

SKATES

BOYS

WE want you to own a pair of Winchester skates. They are good skates designed for speed, action and hard service.

☛ The frame is supported by a bridge girder that strengthens and stiffens the whole skate. The ball-bearing rolls are light-running and especially hardened to give long wear on asphalt and concrete. We have had all sorts of boys skating continuously for days on these skates over rough pavements to test them out thoroughly before offering them to you. We believe they are right, and want you to own a pair.

☛ There are 4000 stores in the United States which sell Winchester Skates and other new products. Look for this sign on the window: "The Winchester Store."

FIRESTONE CORDS

Firestone Cord values have given users a new high standard of mileage and service. For 1922 Firestone Cords have been selected by sixty-seven of the foremost American car makers as standard equipment. They lead in popularity too among taxicab and motor transport companies who buy on the strictest mileage basis.

30 x 3½	\$17.50
32 x 4	32.40
33 x 4½	42.85
33 x 5	52.15

Maintaining Mileage Leadership

THE Firestone organization, justly proud of its record and its product, is keenly aware of the importance of the human factor in tire-building.

The Firestone worker is constantly reminded that Most Miles per Dollar is the Firestone standard. As he enters the main entrance of the factories he sees this message emblazoned on the company's bulletin board:

"It is our job to see that the name Firestone always means to the car owner the most miles for his money."

It is this determination to give greatest value that keeps Firestone quality improving while prices are lowered.

With Firestone mileage greater than ever before, Firestone prices now being quoted by dealers were never more favorable to the car owner.

\$11.65

30x3½ extra size non-skid, the best known tire in the light car class. Higher in quality than ever and now being produced on a scale that permits its being sold at the lowest price on record. The same unusual value in 30x3 size at \$9.95.

Most Miles per Dollar

Firestone

\$9.99

Oldfield '999'—guaranteed—a full size 30x3½ anti-skid tire. Built with four-ply long staple fabric. In 30x3 size at \$8.99. Prices that cannot be equalled for a reputable, well-known tire of trustworthy quality. Sold by Firestone dealers

Dramatized Facts out of The Day's Work

No. 14

All of the incidents depicted in this advertisement are facts—facts gleaned from the daily work of Grinnell engineers, salesmen and artisans. If you are interested in knowing the times, places or anything more concerning the facts, we shall be glad to answer your request.

"Say," yelled the Production Manager, bursting in, "the big valve on the Blooming Mill line has cracked."

PLANT ENGINEER

PRODUCTION MANAGER

PRESIDENT

PRESIDENT'S SON

Father's economy lesson explodes in his hand

"That, son, is the kind of economy that keeps this steel mill paying dividends," said the father, tapping the paper before him. "That Bar Mill pipe line you had done, under contract cost \$1,800 more than the Blooming Mill line Henry put in with our own men. And besides he utilized most of that old material you wanted to junk."

"It's no use, Father," replied the young man, "we'll never agree on it. I'd better resign. Any consulting engineer will tell you the only way to figure costs on a line like that is on the horsepower delivered over a period of years and not on initial expense."

But right here they were interrupted. The door to the office slammed open.

"Say," yelled the Production Manager, bursting in, "the big valve on the Blooming Mill line has cracked. It won't last the day out. You'll have to work all night with a crew to get a new valve hooked up."

"And that's the old valve from the saturated steam line," gasped the engineer, sinking into a chair. "We'll have to comb the country to find a special dimension valve like that in stock."

"That means a month's shut-down," cried the President, "and the Blooming Mill can't be shut down—it can't!"

"What's it worth, Father, to have the mill running again in 24 hours?"

"Worth? It's worth \$7,000—and it's—it's nothing for you to mix in on."

"Four times what you think I wasted on the Bar Mill line, eh?" smiled the son. "Will it square it if I have a new steel valve on that line by 7 o'clock tomorrow morning?"

"He's kidding," snapped the engineer.

"No, I'm not kidding. I requisitioned a *real* valve long ago. The people who installed my job advised it when they saw Henry putting that cast iron valve from the old saturated steam line into the new 'super-heated' Blooming Mill line."

"You mean the Grinnell Company advised it?" asked the President.

"Yes, and more than that, I had them test the gaskets you're using in the 1100-foot line. Their micro-photographs show them up—about as worthless as chewing gum in those joints. Take their word for it, Dad, and save another \$7,000. Pull out every gasket on that line and use the kind they furnished me on the Bar Mill line. If you don't, some day you'll have a long shut-down while you are digging up a trench, stripping off steel lagging and insulation to get at a bunch of leaky joints."

"Chewing gum gaskets that might cost me \$7,000! I thought gaskets were just gaskets!"

"You'd know the difference if you had sat through just one lecture on 'Purchased Material as a Factor in Power Piping.' Every Senior class gets it in the course on engineering economics. Old Professor Holborn taught us that we've got to depend upon a concern like Grinnell Company, for instance, to be sure of the right materials. They know through experience in hundreds of power piping jobs and from the results of their investigations in their big testing laboratory. They buy materials on the basis of fact, not on the basis of price!"

Entered as second-class matter at the Post-office Department, Ottawa, Canada.

An Architect, A Painter and A Sculptress Joined in Designing This Exquisite Lamp

The lines, proportions and coloring of most of the lamps you see in these days of commercialism are the work of designing departments of large factories. They are the fruits of a deep knowledge of what makes a "popular seller." But some people, the **Decorative Arts League** committee felt sure, would like a lamp designed purely with an eye to good taste, a lamp of artistic proportions and harmonious tones, a lamp embodying grace, symmetry and beauty rather than the long experience of the "salesman-designer" of what seems most in demand in retail stores.

Hence this exquisite little lamp you see pictured "Aurora," as it has been named by an artist, because of the purity of its Greek lines and tones.

A Labor of Love

For the delicate work of designing a lamp that should be a real work of art instead of a mere unit in a factory's production, and yet should be a practical and useful article of home-furnishing, the League enlisted the enthusiastic coöperation of a group of talented artists—one a famous architect skilled in the practical requirements of interior decorating, one a painter and genius in color-effects, and one a brilliant sculptress, a student of the great Rodin in Paris.

They caught the spirit of the League's idea and the designing of a lamp that would raise the artistic standards of home-lighting became to them a true labor of love. Model after model was made, studied and abandoned, until at last a design emerged with which not one of the three could find a fault.

Every Detail Perfect

One style of ornamentation after another was tried out, only to yield in the end to the perfect simplicity of the classic Greek lines. Even such a small detail as the exact contour of

the base was worked over and over again until it should blend in one continuous "stream" with the lines of the slender shaft. The graceful curves of the shaft itself, simple as they seem in the finished model, were the results of dozens of trials. The shape, the exact size, and the soft coloring of the shade were the product of many experiments.

The result is a masterpiece of Greek simplicity and balance. Not a thing could be added or taken away without marring the general effect—not the sixty-fourth of an inch difference

in any moulding or curve but would be harmful. And yet with all the attention to artistic effect the practical knowledge of an experienced interior decorator has kept "Aurora" in perfect harmony with the actual requirements of the home. It blends with any style of furnishing, it adapts itself to boudoir or foyer-hall, to library or living room. And wherever you place it "Aurora" will add taste and refinement besides furnishing, with its tiltable shade, a thoroughly practical and mellow light wherever required.

In the exclusive Fifth Avenue type of shops, where lamps that are also works of art are shown, the equal of this fascinating little "Aurora," if found, would cost you from \$15 to \$25—perhaps more. Yet the price of this lamp is but

\$3.50—Think of it!

Only the Decorative Arts League could bring out such a lamp at such a price. And only as a means of widening its circle of usefulness could even the League make such an offer. But with each purchase of this beautiful little lamp goes a "Corresponding Membership" in the League. This costs you nothing and entails no obligation of any kind. It simply means that your name is registered on the League's books as one interested in things of real beauty and art for home decoration, so that as Artists who work with the League create new ideas they can be offered to you direct without dependence on dealers.

Send No Money

No matter how many other lamps you have in your house, you will always find a place just suited for this dainty, charming little "Aurora," 16 inches high, shade 10¾ inches in diameter; base and cap cast in solid Medallium, shaft of seamless brass, all finished in rich statuary bronze; brass-bound parchment shade of a neutral brown tone outside and an old rose colored reflecting surface; shade holder permitting adjustment to any angle; push-button socket; six feet of cord; 2-piece attachment plug.

You will rarely, if ever, get such a value again. Send no money—simply sign and mail the coupon, then pay the postman \$3.50 plus the amount of parcel-post stamps on the package. Weight of lamp shipped is only five pounds, so postage even to furthest points is insignificant. If you should not find the lamp all we say of it, or all you expected of it, send it back in five days and your money will be refunded in full.

Clip the coupon now and mail to
DECORATIVE ARTS LEAGUE
175 Fifth Avenue, New York, N. Y.

"AURORA"
\$3.50

You may send me at the member's special price, an "Aurora" Lamp, and I will pay the postman \$3.50 plus the postage when delivered. If not satisfactory I can return the lamp within five days of receipt and you are to refund my money in full. You may enter my name as a "Corresponding Member" of the Decorative Arts League, it being distinctly understood that such membership is to cost me nothing either now or later, and is to entail no obligation of any kind. It simply registers me as one interested in hearing of really artistic new things for home decorations.

Decorative Arts League (175 Fifth Avenue, N. Y.)

Reprinted By Request The advertisement below appeared a short time ago in the LITERARY DIGEST. Since then we have received an unusual number of letters asking whether this offer still "holds good." Rather than continue answering such letters individually we reprint the advertisement—to show all those who are interested that the offer has not yet been withdrawn.

Is this offer too good to be true?

Is it possible that we are offering a value too great to be credible?
Do people shy at the thought of getting too much for their money?

WE recently mailed several thousand circulars to book-lovers. We described and pictured these thirty volumes of the Little Leather Library honestly, sincerely, accurately. But we received relatively few orders.

Then we mailed several more thousand circulars to booklovers, *this time enclosing a sample cover* of one of the volumes illustrated above. Orders came in by the hundred! The reason, we believe, is that most people can not believe we can really offer so great a value unless they *see a sample!*

In this advertisement, naturally, it is impossible for us to show you a sample volume. The best we can do is to describe and picture the books in the limited space of this page. We depend on your faith in the statements made by the advertisements appearing in Literary Digest; and we are hoping you will believe what we say, instead of thinking this offer is "too good to be true."

What this offer is

Here then is our offer. The illustration above shows thirty of the world's greatest masterpieces of literature. These include the finest works of such immortal authors as Shakespeare, Kipling, Stevenson, Emerson, Poe, Coleridge, Burns, Omar Khayyam, Macaulay, Lincoln, Washington, Oscar Wilde, Gilbert, Longfellow, Drummond, Conan Doyle, Edward Everett Hale, Thoreau, Tennyson, Browning, and others. These are books which no one cares to confess he has not read and

re-read; books which bear reading a score of times.

Each of these volumes is complete—this is not that abomination, a collection of extracts; the paper is a high-grade white wove antique, equal to that used in books selling at \$1.50 to \$2.00; the type is clear and easy to read; the binding is a beautiful limp material, tinted in antique copper and green, and so handsomely embossed as to give it the appearance of hand tooled leather.

And, though each of these volumes is complete, (the entire set contains over 3,000 pages) a volume can be carried conveniently wherever you go, in your pocket or purse; several can be placed in your handbag or grip; or the entire thirty can be placed on your library table "without cluttering it up" as one purchaser expressed it.

What about the price?

Producing such fine books is, in itself, no great achievement. But the aim of this enterprise has been to produce them at a price that anyone in the whole land could afford; the only way we could do this was to manufacture them in quantities of nearly a million at a time—to bring the price down through "quantity production." And we relied for our sales on our faith that Americans would rather read classics than trash. What happened? OVER TEN MILLION of these volumes have already been purchased by people in every walk of life.

Yet we know, from our daily mail, that many thousands of people still cannot believe we can sell 30 such volumes for \$2.98 (plus postage). We do not know how to combat this skepticism. All we can say is: send for these 30 volumes; if you are not satisfied, return them at any time within a month and you will not be out one penny. Of the thousands of Literary Digest readers who purchased this set when we advertised it in previous issues *not one* in a hundred expressed dissatisfaction for any reason whatever.

Send No Money

No description, no illustration, can do these 30 volumes justice. You must see them. We should like to send every reader a sample, but frankly our profit is so small we cannot afford it. We offer, instead, to send the entire set on trial. Simply mail the coupon or a letter; when the set arrives, pay the postman \$2.98 plus postage; then examine the books. As stated above, your money will be returned at any time within 30 days for any reason, or for NO reason, if you request it. Mail the coupon or a letter NOW while this page is before you, or you may forget.

Little Leather Library Corp'n

Dept. 264 354 Fourth Avenue, New York

Little Leather Library Corp'n, Dept. 264
354 Fourth Avenue, New York

Please send me the set of 30 volumes of the De Luxe edition of the Little Leather Library. It is understood that the price of these 30 volumes is ONLY \$2.98 plus postage, which I will pay the postman when the set arrives. But if I am not satisfied, after examining them, I will mail the books back at your expense within 30 days, and you are to refund my money at once. It is understood there is no further payment or obligation of any kind.

Many people who have been asked to guess the value of these books have estimated, before we told them the price, that they are worth from \$50 to \$100 for the complete set. These records are on file for inspection of any one interested.

Did YOU Ever Fall In Love With Words?

HAVE you ever fully realized the wonder and witchery of words? A single word can be a blessing or a curse, an incantation or a prayer, a blow or a caress. It can mirror all the haunting glamour of starlight on the sea or limn the blackest abysses of despair. It was with words that those master magicians of style—Stevenson, Pater, Maupassant, Flaubert, Poe—built their deathless fabrics of imagination that will eternally enthrall the minds of men. As Browning's musician, by adding one sound to three others, made "not a fourth sound, but a star," so your practised writer can fashion out of a word or two not a sentence but a spell. With a few palpitating syllables the poet can picture to your enraptured fancy "Bokhara, where red lilies blow, and silken sands of Samarcand," or revive for you for a wondrous moment all "the glory that was Greece and the grandeur that was Rome." No art of all the arts is comparable to this, that from mere words weaves the magic arabesques of fiction, cuts the polished gem of the essay, or conjures the sheer beauty of a song.

The Magic Power of Words

The study of words is really a thrilling occupation. Thousands of men and women who daily use the English language get no further than the stunted vocabulary which is theirs by haphazard acquisition, when a little study would soon give them a mastery of a vocabulary that would express countless shades of meaning. When you remember that there are scarcely any two words in the English language that mean exactly the same, you can readily appreciate how careful one must be in choosing the exact word to express a given meaning.

Dr. James C. Fernald, that great teacher of the English language, in his intensely interesting work, "English Synonyms, Antonyms, and Prepositions," says that "the great mass of untrained speakers and writers need to be reminded, in the first place, that there are synonyms—a suggestion which they would not gain from any precision of separate definitions in a dictionary. The deplorable repetition with which many slightly educated persons use such words as 'elegant,' 'splendid,' 'awful,' 'clever,' 'horrid,' to indicate (for they can not be said to express) almost any shade of certain approved or objectionable qualities, shows a limited vocabulary, a poverty of language, which it is of the first importance to correct. Many who are not given to such gross misuse would be surprised to learn how very limited is the number of words they employ. Yet they attempt to give utterance to thoughts and feelings so unlike, that what is the right word on one occasion must of necessity be the wrong word at many other times."

"You See" and "You Know"

"Such poverty of language is always accompanied by poverty of thought. One who is content to use the same word for widely different ideas has either never observed or soon comes to forget that there is any difference between the ideas; or perhaps he retains a vague notion of a difference which he never attempts to define to himself and dimly hints

to others by adding to his inadequate word some such phrase as 'you see' or 'you know,' in the helpless attempt to inject into another mind by suggestion what adequate words would enable him simply and distinctly to say."

Thirty-seven Words That Denote "Pure"

Do you know that there are fifteen synonyms or substitute words for *beautiful*, twenty-one for *beginning*, fifteen for *benevolence*, twenty for *friendly*, and thirty-seven for *pure*? The mere mention of such numbers opens vistas of possible fulness, freedom, and variety of utterance, which will have for many persons the effect of a revelation.

There is no other work on the English language that can compare with Fernald's "English Synonyms, Antonyms, and Prepositions" as an aid for selecting the exact word to make your meaning absolutely clear—to give "punch" and "power" to a proposed letter, advertisement, speech, sermon, article, report, or story. Without this handy book at your elbow, you may be wasting half the power of your thoughts in weak expression.

DR. JAMES C. FERNALD

The Use of More Than Eight Thousand Words Explained by Example:

"An *antagonist* is one who opposes and is opposed actively and with intensity of effort; an *opponent*, one in whom the attitude of resistance is the more prominent; a *competitor*, one who seeks the same object for which another is striving; *antagonists* in wrestling, *competitors* in business, *opponents* in debate may contend with no personal ill will; *rivals* in love, ambition, etc., rarely avoid inimical feeling."

"There may be *loneliness* without *solitude*, as amid an unsympathizing crowd and *solitude* without *loneliness*, as when one is glad to be alone."

"*Pardon* remits the outward penalty which the offender deserves; *forgiveness* dismisses resentment or displeasure from the heart of the one offended; *mercy* seeks the highest possible good of the offender."

"A *dunce* is always *averse* to study; a good student is *disinclined* to it when a fine morning tempts him out; he is *indisposed* to it in some hour of weariness."

In this vital book more than 8,000 words are classified and discriminated and their correct use shown by illuminating examples. Nearly 4,000 antonyms (words with opposite meanings to synonyms) are also included, together with the correct use of prepositions.

President Cochran, of the Polytechnic Institute, Brooklyn, says that "this book will do more to secure rhetorical perspicuity—propriety and precision of expression—than any other text-book of higher English yet produced."

Thousands of "Brain Twisters" Like These Are Answered

Do you *stop* or *stay* at a hotel? How does *prohibit* differ from *abolish*? What is the legal distinction between *abettor* and *accessory*? What is the difference between *accident* and *chance*? How does *acquaintance* differ from *companionship*? from *friendship*? from *intimacy*? How do *sharpness*, *acuteness*, *penetration*, and *insight* compare with *acumen*? How does *admire* compare with *revere*, *venerate*, *adore*? How does *alien* differ from *foreign*? Is a *foreigner* by birth necessarily an *alien*? How does *allure* differ from *attract*? from *lure*? What does *coax* express? What is the difference between *amateur* and *connoisseur*? between *connoisseur* and *critic*? Wherein does *advertise* differ from *propound*? *promulgate*? *publish*? How do the words *indict* and *arraign* differ from *charge*? *accuse*? *censure*? How does *pretty* compare with *beautiful*? *handsome*? What does *fair* denote? *comely*? *picturesque*? What are the shades of meaning distinguishing *choose*, *cull*, *elect*, *pick*, *prefer*, and *select*? Also between the antonyms *cast away*, *decline*, *dismiss*, *refuse*, *repudiate*? Of what things is one *aware*? Of what is he *conscious*? How does *sensible* compare with these words? What does *sensible* indicate regarding the emotions that would not be expressed by *conscious*? How does *conversation* differ from *talk*? Do we apply *doubt*, *distrust*, *surmise*, *suspect* mostly to persons and things, or to motions and intentions? Can you give the distinction between a *copy* and a *duplicate*? a *facsimile*, and an *imitation*? What is a *transcript*? How does *egoism* differ from *egotism*? Is *help* or *aid* the stronger term? Does *help* include *aid* or does *aid* include *help*? What is the present popular meaning of *idea*? What is *knowledge*? How does it differ from *information*? What is *perception*? *apprehension*? *cognizance*? What is *learning*? *erudition*? What is the difference in the meaning of *flame*? *blaze*? *flare*? *flash*? *glare*? *glow*? What do *glimmer*, *glitter*, and *shimmer* denote? What is it to *slander*? to *defame*? to *libel*? What is it to *aspere*? to *malign*? to *traduce*? to *disparage*? What is *virtue*? How does *goodness* differ from *virtue*? What is *honesty*? *probity*? *integrity*? *purity*? *duty*? *rectitude*? *righteousness*? *uprightness*?

Watch Your English!

Avoid embarrassment and humiliation. Know you are speaking and writing correct English. Shakespeare said, "Mend your speech lest it may mar your fortune." Your personal and business affairs suffer from even occasional errors. Refresh your mind with correct English forms. You can do so easily by using these

Five Big Little Wonder Books at a Bargain Price

In their 270 pages you get thousands of important bits of information. They give you the right and wrong usages of words and phrases in common use. No need to struggle through pages of grammatical rules. These five big little books give you the facts briefly, concisely, and to the point, with all the authority of Funk & Wagnalls New Standard Dictionary behind them. They are gold mines of information! Read our descriptions of them—get an idea of their every-day value to you.

MEND YOUR SPEECH. 1,000 hints on the correct usage of many words and idioms most commonly misused. Brimful of valuable information!

BETTER SAY. Gives correct pronunciation of frequently mispronounced words, and corrects errors in using words and phrases. Packed with important and highly useful facts.

FAULTY DICTION. Clearly explains puzzling word usages, and gives concisely, so you can easily apply them, the reasons for their correct use. Invaluable information on the use of correct English.

WHO? WHERE? WHEN? WHAT? 20,000 facts on makers of History, Art, Literature, Science, and Religion. Gives you dates of birth and death (wherever authentic information is available); dates of Ancient, Medieval, and Modern Celebrities; names of Battles; names from Mythology; names of Characters in Famous Writings, and other bits of valuable information.

FOREIGN PHRASES IN DAILY USE. A reliable guide to popular and classic terms in French, Italian, Latin, Spanish, Greek, and German, with explanations of their meanings in English. Indispensable!

In the home, the office, the study—for all who write or speak—these books are of highest permanent value. If you act quickly you can get them and

Save Nearly 25%

These five big little wonder books, strongly bound in cloth and printed in clear type on durable paper, are yours for a limited time for only \$1.39 instead of \$1.83 postpaid, the regular price—a saving of nearly 25%!

Send No Money!

Just fill in and return the coupon. We will send the books to you by mail, you pay the postman only \$1.39, and the books are yours. No extras—no collection fees. You pay \$1.39 and that is all! Satisfaction guaranteed or money refunded. Send the coupon NOW.

BECOME AN EXPERT STENOGRAPHER AND SPEED TYPIST

A profession that offers men and women rich rewards, fascinating work, big pay, and opens the way for promotion to high executive positions paying \$50 to \$100 a week and up. Many of America's biggest business men and women got their start because they mastered stenography. Demand for expert stenographers and typists always exceeds the supply at salaries of from \$30 to \$50 a week. The Tulloss New Way makes you an expert, one who can start in at a large salary. Complete course in shorthand and typewriting, new principles, insures exceptional speed and accuracy. You can write shorthand the new way 125 to 150 words a minute. You can typewrite 80 to 100 words a minute and with this speed goes accuracy and ease of operation—no fatigue as with the old way. Remarkable methods—remarkable results. You learn faster the Tulloss New Way. No previous stenographic schooling necessary. Train at home during your spare time. Only about half usual cost—you will become a far more efficient stenographer—worth more money than the average right from the start. If already a stenographer you nevertheless need New Way training in speed typewriting, for no matter how good you are in shorthand, you can never expect the high salaried position until you get speed, real speed and accuracy on a typewriter. Quickly acquired in ten easy lessons. Will send you free our amazing book, "How to Be Big Men's Right Hand." It tells how business men choose their private secretaries, how they advance them to executive positions. Send postal or letter and indicate whether you are interested in the complete stenography course or simply speed typewriting. No obligation—write today.

LEAVING THE MINE.

CAUSES BEHIND THE COAL STRIKE

AS SPRING COMES SLOWLY UP THE WAY, over half a million men, accustomed to spend their days mining coal far underground, are out in the sunshine in their little gardens with their children digging up the soil and planting vegetables, while seedsmen in coal towns report a record business. Coal operators, as their mines are not working, have gone to join their families and play golf at Pinehurst or Hot Springs. Government officials blandly tell us that there is nothing in the coal strike situation to call for Federal intervention, the Secretary of the Treasury perceiving no harm to business in the first weeks. But, perhaps, the great consuming public must be alarmed, anxious, frantic, in the face of the greatest strike in history, with all the anthracite and most of the soft-coal mines shut down, with 600,000 striking miners added to the ranks of the unemployed. Quite the contrary, for, to judge from editorial comment, the public views the coal strike calmly. As one writer puts it, "the public sits as a bored spectator until its bins are empty or its pockets."

But let the strike last long enough, say a number of editors who remember previous strikes, and this now indifferent public will rise in its wrath and demand coal, caring not whether the end of the strike means Government intervention, the smashing of the unions, or even the nationalization of the mines. The present then, they say, is the time to find out exactly what is wrong with the coal business that causes these recurrent strikes and startling price fluctuations. A Congressional committee is conducting hearings to this very end. Weekly and daily newspapers are gathering facts from authoritative sources in an attempt to explain the workings of this mysterious coal industry.

Before presenting some of their conclusions it may be well to

note the positions taken by miners and operators as the contest in the coal-fields opens. It should be remembered that the strike which began on April 1 is a double-header. Anthracite and soft-coal miners are striking together for strategic reasons, but with different ends in view and under different circumstances. The hard-coal miners call for a 20 per cent. wage increase and their representatives are now in conference with the anthracite operators. The soft-coal miners call for the retention of their present wages in the face of the operators' demands for reduction; but the bituminous operators have been unwilling to meet the representatives of the workers in a joint conference to decide on a basic wage-scale. When the strike was called on April 1, some 560,000 union miners, more than 400,000 of them in the soft-coal fields, and an undetermined number of non-union men, responded. The strike in the unionized fields, says President John L. Lewis of the United Mine Workers, is 100 per cent. effective. Speaking for the soft-coal men he said on the second day of the strike: "The miners are looking to the carrying out of their contracts. The miners want to retain collective bargaining in the manner in which it has been in vogue in the coal-mining industry for thirty years." In reply to anthracite operators' demands for "wage deflation," Mr. Lewis says: "In the case of anthracite mine-workers, wages were never 'inflated'; they were never even raised to a fair and reasonable level, and are even now below such a level."

An outspoken advocate of the miners' cause, *Labor* (Washington, D. C.), wants its readers "to get certain essential facts straight":

"(1) The bituminous coal-mine owners have refused to meet

the representatives of the workers, altho they signed an agreement to do so.

"(2) The miners are fighting for a living wage. Congressman Bland of Indiana inserted in *The Congressional Record* a statement showing the average earnings of miners in the principal coal-fields. In the Pittsburgh field these workers received an average of \$762 in 1921. In Ohio, \$550, and in West Virginia, \$500. How can men rear families on such beggarly incomes?

Photograph by Hine.

"CUTTING A KERF" IN A FOUR-FOOT SEAM.

The kind of work from which the miners are now taking a vacation.

"(3) This appalling situation is not due to the impoverished condition of the industry. While coal miners were probably never more miserable, the records show that coal-mine owners were never more prosperous.

"(4) The miners in demanding a five-day week and a six-hour day are insisting that they be permitted to do more work, not less. Miners are paid by the ton. They can not earn enough to support their families unless they are permitted to work at least thirty hours in the week.

"(5) The coal miners are fighting the public's battle as well as their own. The operators want to restrict production and increase prices. The miners want to decrease prices by increasing production.

"(6) The coal-mine owners are preparing to use the strike as an excuse for further profiteering."

All that the miner asks, writes Benjamin Stolberg in *The Nation*, is that "his poverty may be so regulated as to lift from his home the curse of debts and rags and hunger from which his family is now periodically suffering." The coal miner, declares Ellis O. Searles, editor of *The United Mine Workers' Journal* (Indianapolis), "can not maintain his family on anything like a decent American standard of living on his present meager income."

But these demands are "economically ludicrous," in the opinion of one coal operator. In a *Survey* article, Mr. C. E. Lasher, editor of *Coal Age* (New York), asserts that the miners have been getting a living wage, that their wages, raised to meet the high cost of living, have not been decreased now that living costs and prices generally have come down. The country, says Mr. Lasher, wants cheaper coal. The question has been asked, "why not have the producer cut the price out of profit and thus satisfy the public without asking the miner to dig it for less?" This, he answers, is impossible. The bituminous operators, he says, made 9.72 per cent. profit in 1918; between 8 and 9 per cent. in 1919; data for 1920 are not available. In 1921 the net production cost of half the soft coal sold was \$2.94 and the average price received by the producer was \$3.04 per ton. "What a magnificent sum, the remnants of a dime, to

divide with the public!" Owing to the competition of non-union mines, we are told by this authority, the average price received declined to \$2.56 in December, when the average loss per ton was 35 cents. "Save only those protected by high freight rates or bulwarked by contracts at comparatively high prices, the union mines have not operated for more than a year save at a loss." Mr. Lasher quotes 1919 census figures, which bring the average net profit to the operator on anthracite down to 4 or 5 per cent. He again uses census figures to indicate an average yearly earning for anthracite miners of more than \$1,600. Mr. Lasher says that last December 75 per cent. of the soft-coal miners in Illinois were earning \$50 or more every two weeks. Many miners in this district, he says, were making average earnings at the rate of \$165 a month last year.

An important coal organ, *The Coal Trade Bulletin* (Pittsburgh), declares that the operators are not opposed to collective bargaining, that they are perfectly willing to take part in district conferences and, apparently referring to the unsuccessful efforts of the Secretary of Labor to bring about a conference before the strike, remarks that the Pittsburgh and Ohio operators "refuse to enter a Central Competitive wago conference and have told governmental meddlers so in unmistakable terms." *The Coal Trade Journal* (New York) asks: "Is the mine workers' pay envelop any more sacred than the butcher's, the baker's or that of plain John Smith? Shall railroad rates and coal prices stay up when everything else has been coming down?" That, we are told, is what the strike is about, "that and

nothing else." *The Black Diamond* (Chicago), seems to welcome the strike "because it is going to bring many miners to their

senses." None of these coal-trade papers, by the way, see the slightest chance of the miners winning the strike.

Except that the men in the two branches of the industry belong to the same organization and are quitting as one, the situation in the hard-coal districts bears little resemblance to that in the bituminous fields. In the latter it is a serious strike. Both the unions and the industry are in a critical position, and have much

ONE REASON WHY THE PUBLIC VIEWS THE COAL STRIKE CALMLY.

Part of the reserve coal supply of a Chicago lighting company.

at stake. In the anthracite field, however, Mr. John J. Leary, Jr., asserts in the *New York World*, both operators and miners have prospered, and the present lay-off is hardly more than a suspension of work while the representatives of the two sides prepare a new wage agreement without bitterness or ill-will.

The complex and distressing situation in the bituminous fields is summed up for *The Survey* in a special number on coal, by two members of the United States Geological Survey. The fundamental trouble, write Messrs. F. G. Tryon and W. F. McKenney, is the soft-coal miner's broken year. During the last thirty years the bituminous mines of this country have lost three working days out of ten. In the Central Competitive Field men now receive about seven dollars a day, and those paid by the ton can earn more. For 1919, however, the average earnings were about \$1,200. In 1920 there was a rise in wages, and in Ohio the average wage was \$1,500; 1921 earnings are difficult to estimate. The potential working year is 308 days. Out of this 308, the men in the soft-coal mines were out of work 105 days in 1915; 75 in 1916; 65 in 1917; 59 in 1918; 113 in 1919; 86 in 1920; and 139 in 1921. The miner suffers not only from low pay, but because "irregular employment tends to beget irregular habits."

Nor is the miner the only one to suffer from the "intermittency of operation." "To the operator it means increased cost, lower profits, difficulty in maintaining and keeping an adequate labor force, mechanical troubles in the mine, waste of resource." And the consumer has to pay for it all. "He must pay the labor and capital in the industry for the 93 days of idleness as well as for the 215 days of work." The chief cause of intermittency is that our mines are developed to an annual capacity of 750,000,000 tons, "when the most that has ever been burned or exported in a year is 550,000,000." Car shortage, labor troubles and the seasonal nature of the demand for coal all play a part, but by far the most important is the rôle of "sheer over-development," which is credited with being responsible for 78 out of 93 idle days annually. This over-development, we are told, is not the fault of the operators—

"Without concerted action of a kind forbidden by the anti-trust laws, they can not control the economic forces which surround them. The over-development is the result of free competition playing on a resource so widely distributed as to be almost a free gift of nature.

"Whereas the concentration of the anthracite reserves in an area of 480 square miles in Eastern Pennsylvania naturally fostered combination and led to an economic organization which more than once has been challenged by the courts, the reserves of soft coal are spread over an area a thousand times as large. Nearly a sixth of the surface of the United States is underlain by soft coal or lignite. The beds are thick and readily accessible. Under these circumstances it has been so easy to open new mines

that an effective combination to control production has yet to be created. The soft-coal market behaves as nearly like a free market as almost any the United States can show."

Thus do two geologists sum up the basic difficulty in the coal industry. An editorial writer in the *Philadelphia Public Ledger* somewhat more breezily attacks the wastes of distribution and marketing, saying:

"Coal is not marketed in this country. It is left to find its way somehow, anyhow, from pithead to coal-bin. It is hawked and peddled, but it is not marketed. The retail and even the wholesale coal business is a dangerous jumble, merely unorganized and out on its own.

"Distribution is overlapped, scattered, puttering about, stepping on its own feet. This applies equally to bituminous and anthracite retailing.

"Mine costs are high and freight costs are strangling, but the climax always is capped by the marketing wastes and costs that are saddled on coal after it reaches the point of consumption. There is a classic case of the car of egg coal, mined in Pennsylvania in December, 1820, and delivered in a New England town in January, 1821. Mine labor per ton cost \$3.38; cost at the mine was \$6.92; freight, including tax, was \$6.44; and on this particular car there was no dealer profit. The miner who pulled down the coal, dragged it out and lifted it to the top got \$3.38; and local labor and delivery cost came to \$1.81. The teamster who hauled the coal 300 yards got more than the man who tore it out of the seam. The long rail haul cost one cent per ton mile and the short local haul cost \$4 per ton mile.

"Small wonder that car of coal cost \$15.17 per ton delivered, even tho it paid neither wholesale nor retail profit! Add these to the marketing costs, plus mine and transportation costs, and you have a matter that is of vital concern to a nation that must shiver through the winters of the North Temperate Zone, and a situation that may some day be of vital import to that nation's government."

It has been noted before that one reason consumers are not panicky over the coal strike is because of the large supplies on hand. Newspaper summaries of official Geological Survey figures state that there is at present a supply of 64,000,000 tons of soft coal, which at an average rate of consumption ought to last some eight weeks. This, of course, might be increased by a production of perhaps as much as 6,000,000 tons weekly from the non-union mines. There is said to be in storage some 4,000,000 tons of anthracite available for domestic use, which should last twelve weeks, and something more than an eleven weeks' supply of steam sizes of anthracite available for industry. As Mr. Rodney Bean remarks in *The Annalist*:

"On the whole, the country is in about as sound a condition to face a coal strike as it was possible to get it. It is probable that the prediction that no great distress will be caused if a settlement is reached within sixty days will come true."

RUSSIA APPROACHING RECOGNITION

A FRANTIC NOTICE, printed in characters that "increased in size until the last word leaped from the cardboard like a shriek," adorned the door of Tchitcherin's private office in Moscow for weeks before the Russian delegation started for Genoa. It read: "It is forbidden to everybody, whosoever he may be, to speak with the people's commissar on the subject of Genoa." That Russia's Minister of Foreign Af-

the Soviet Government has propounded as the method of solving the problems of life." Moreover, he urged, "Europe needs what Russia can supply." To quote further:

"Now what are the conditions laid down at Cannes? I am not yet going through them in substance. They mean that Russia must recognize all conditions imposed and accepted by civilized communities as the test of fitness for entering into the comity of nations. She must recognize her national obligations. The country which repudiates her obligations because she changes her Government is a country we can not deal with, certainly in these days when Governments change so often.

"Russia can not pay immediately. Nobody expects that she can. M. Poincaré said the other day that he acknowledged France's debt to America, but if she were called upon immediately to pay she could not do so owing to her position. That is equally true of Russia. But she must shoulder the responsibility as France and Britain have done and acknowledge it. . . .

"Impartial tribunals must be established, with free access to them by the nationals of all countries, and these tribunals must not be creatures of the executive. There must be complete cessation of attacks upon the institutions of other countries. There must be an undertaking that there will be no aggressive action against the frontiers of their neighbors. The compact which is embodied in the League of Nations will have to be extended in principle to Russia so that Russia shall undertake not to attack her neighbors, and her neighbors must undertake a corresponding obligation not to attack her frontiers. The only difference would be that I do not think we could undertake the responsibility we have under Clause 10 of the League of Nations of defending her frontiers if they are attacked."

As evidence of a changed attitude on the part of the Soviet Government, he cited new decrees in Russia which "recognize private property, set up courts, and acknowledge responsibilities"; and he went on to say:

"I would call the attention of the House to a very remarkable speech in which this new policy was propounded. It was propounded on November 1, 1921, in a speech by Lenine. It was an admission of the complete failure of the Communist system, and in that respect was a singularly courageous speech. He admits they have been wrong, that they have been beaten, and points out that the result of communism has been

to destroy the very proletariat upon whom they are dependent. These are some of the words, and I think I quote them fairly:

"There can be no doubt among Communists that we have suffered economic defeat on the economic front, extremely heavy defeat, and we put forward our new economic policy with a thorough knowledge of the fact.' He goes on to say: 'Our economic policy means transition to the reestablishment of capitalism to a certain extent.' To what extent we do not know. He continues: 'If capitalism is to win and grow, so will industrial production.'

"Was there ever such a condemnation of the doctrines of Socialism, the doctrines of Karl Marx? With capitalism and industrial production goes the proletariat, inasmuch as while large capitalist interests have been undermined and works and factories stopt, so has the proletariat disappeared. With the disappearance of the capitalist that of the workman follows. That is the new doctrine of Lenine, a very remarkable admission to make."

The British Prime Minister's quotations from Lenine's speech of last November move the New York *Tribune* to remark:

"More recent utterances of Lenine, recanting his recantation, seem to have escaped his attention altogether. The Russian dictator is still Marxian. His principles are unchanged. All he has altered are his tactics. He yields to capitalism because he has a famine on his hands and because Russia under communism has neither credit nor goods to buy essential supplies from other countries. Confiscation is still righteous to him and he merely defers communism.

"No orator is adroit enough to shuffle out of view the fact that production in Russia has been well-nigh killed. Except the gold

THE CAN OPENER.

fairs found it necessary to resort to this device to protect himself from a too popular topic of conversation, remarks a correspondent of the *Manchester Guardian*, is evidence of the intense interest felt by the Russian people, after their long period of moral and diplomatic isolation, in the Genoa Conference for the economic rehabilitation of Europe.

Nor is the interest all on Russia's side. Many weeks ago the British Prime Minister stated that if Russia could give satisfactory "guaranties and safeguards" at Genoa "then recognition may follow, perhaps immediately." And in his speech before the British House of Commons on April 3, when he again challenged his political enemies and again won an overwhelming vote of confidence, Lloyd George announced that the main plank of Britain's Genoa program would be qualified recognition of the Soviet Government. Under his plan the Bolsheviki are called upon to respect private property, acknowledge their debts, refrain from attacking neighboring states and discontinue subversive propaganda abroad. Emphasizing the importance to the world of "peace in Russia and peace with Russia," he explained that not only could Russia not get the capital necessary for her reconstruction without securing confidence and internal as well as external peace, but that Germany could not fully pay her reparations until Russia was restored. He pointed to indications of "a complete change of attitude" on Russia's part, and said that the famine had been "a great eye-opener to Russia regarding the dependability of her neighbors and the futility of the scheme of things which

from Czar days that the Bolsheviki personally cling to, and some platinum and stolen jewels and sables and sacred vessels taken from churches and synagogues, Bolshevik Russia has little to offer in trade, and hence there is no trade. . . .

"It is said that the Soviet Government is now Russia's only center of authority—that should it fall there would be chaos. But this is mere prediction. Who has a right to say, if the pressure were removed and a free Russian Assembly held, that there would not arise a new and better power? The great mass of Russians know what is the matter—have seen communism face to face. Why assume that the 200,000 members of the Communist party have a monopoly of all the organizing talent? The likelihood of Russia being regenerated while the Leninites are in authority is slim. For many reasons the Bolshevik group, no matter what some of its leaders say, can not reverse its course.

"Everywhere is a great longing for Russia's restoration. But the lessons alike of common sense and of history demand the retirement of those who have demonstrated their incapacity. Russia's misery is due to a particular economic system. It must go. The change should scarcely be placed with those who don't in their hearts wish a change. Lloyd George has contributed more to confusing the issue than to clarifying it."

"Soviet Russia's economic retreat has ended, and will go no further in its concessions to capitalism," Nikolai Lenine told the Moscow Congress of Metal Workers on March 9 of this year. "The comedy of Genoa will not catch us," he assured them, because "while we are going to meet the Allied merchants, the limits of our yielding are already fixed." And early this month War Minister Trotzky said to the Moscow correspondent of the *Paris Journal*:

"You foreigners have exaggerated notions of Russia's ills. With or without Genoa we would pull through. The Conference is not indispensable to the revival of Russia. We only consented to participate on being guaranteed that the delegations meant business and that the Conference was not merely an electioneering dodge of Lloyd George."

Trotzky went on to say in the course of this interview:

"We are prepared to meet considerable hostility in France, chiefly over our refusal to recognize the Czarist debts. I propose that France should take over all Russian property in France and redistribute it among French workers. Then we would be quits.

"Why should we recognize these debts? Fifteen years ago as President of the Petrograd Workers' Syndicates, I warned Foreign Governments that the Russian people would not repay the debts being incurred by the Czar for the subjection of the Russian people.

"Supposing French industrials went into business at Naples and an eruption of Vesuvius ruined their property. Would the Italian Government repay those industrials? Well, we have an eruption in Russia."

The *Brooklyn Eagle* calls this "a flat defiance to France." On the other hand a Berlin wireless dispatch to the *New York Times* quotes Mr. Tchitcherin, Russia's Minister of Foreign Affairs and leader of the Russian delegation to the Genoa Conference, as saying that "the Russian Government is at one with the British Prime Minister regarding the tasks to be faced at Genoa, particularly in regard to the restoration of normal economic conditions."

The *Washington Post* sees the Soviet Government as "hard prest and straining every nerve to reach an understanding with European Governments in order to retain its grip upon the governmental machinery of Russia." And in another issue it says: "American intelligence rejects the idea of a politico-financial confab at Genoa, to bring about the exploitation of Russia for others' benefit, while ignoring the existence of vast armies that are eating the substance of Europe and preventing the production of food." "The fact that Russia is represented at Genoa is one of the reasons why the United States is not represented," remarks the *Cleveland Plain-Dealer*. And in the *Troy Record* we read:

"Both the French and the British desire access to Russian markets. The British are far more conciliatory to the Russians

than are the French, but even the French are not as firmly opposed to dealings with the Soviet as is the United States. However, both the British and the French are determined in one particular, namely, that the Soviet Government must give certain clear guaranties before there can be any official recognition of that Government. . . .

"Admitting the importance of Russian rehabilitation to the general reconstruction of Europe, a question may be properly asked in regard to the degree of trust that may be placed in Soviet promises. Lloyd George says that Russia must recognize all the conditions imposed upon and expected of civilized communities as a test of her fitness for entering the community of nations. That is true enough, but the position of the United States Government, judging from Secretary Hughes's note declining the Allied invitation for American participation at the Genoa Conference, is that the political and social structure of Russia must be radically changed as the only guaranty worth considering so far as recognition of Russia is concerned. In

other words, the United States will have no dealings with a Government that refuses to recognize certain principles upon which civilization is based in this and other countries."

On the other hand we read in a Washington dispatch to the *New York Herald* that "the American Government will interpose no objections to any trials which may be made to bring about a change in the Russian situation for the better. But it will not be stampeded from its present position, regardless of what may be done at Genoa." "It is by no means certain that the restoration of Russia to a place in the family of nations may not prove the quickest and most effective way to combat the communistic ideals which are now made the chief excuse for denying her that place," remarks the *Boston Christian Science Monitor*. The *New York Journal of Commerce* regrets that "we have pursued the Pharisaical policy of 'watchful waiting' in its present form." But the *New York Evening Post* suggests that possibly "something of the sanity which has been creeping back into Russia is the result of America's moral boycott." And it adds:

"The very fact that the Soviets are changing is a fair vindication of American consistency. The American people may be excused for thinking—quite apart from the rights and wrongs of the question—that if the United States goes on being consistent a little longer the Soviets' rulers may go on changing; may go as far, perhaps, as allowing the Russian people to vote."

THE ROCKY ROAD GROWS SMOOTHER

MARCH 30, 1922, WILL BE REMEMBERED in Ireland as the day on which the age-long bitterness between the North and South officially began to give way to unity and cooperation. For it was on this day that the Governments of Northern and Southern Ireland signed an agreement to cooperate in every way for the restoration of peaceful conditions in the Emerald Isle. "This is the best news that has been received from Ireland since the treaty with Great Britain was signed," say half a dozen editors who look upon March 30 as a milestone in Irish history. Moreover, believes the *Philadelphia Inquirer*, "the prospects of the Northern Government joining the Irish Free State were never brighter than they are to-day." "It is now for the Republican irreconcilables under

SUMMARY OF TERMS OF IRISH PEACE AGREEMENT.

The main points of the peace agreement signed by representatives of the Irish Free State, the Ulster Government and the British Government are as follows:

1. Peace is declared, the two Irish governments agreeing to cooperate to restore order in the unsettled areas.

2. The police of Belfast in mixed districts are to be composed half of Catholics and half of Protestants, and all police, except the secret service men, are to be uniformed and numbered.

3. A court, of which the Lord Chief Justice will be a member, is to be constituted for the trial, without jury, of persons charged with serious crimes, such as those punishable by death, penal servitude or imprisonment exceeding six months.

4. A committee consisting of equal numbers of Catholics and Protestants, and with an independent chairman, is to be established in Belfast to hear and investigate complaints of outrages and intimidation.

5. Irish "Republican" Army activities in Ulster are to cease and a special police organization is to take the place of the Army.

6. The British Government is to ask Parliament for a relief fund not exceeding £500,000 for Northern Ireland, one-third to be expended for the benefits of Catholics, and two-thirds for Protestants. The Ulster Government agrees to use every effort to reinstate expelled workmen in their former positions.

7. The two Irish governments can, in cases agreed upon, arrange for the release of political prisoners imprisoned for offences committed before March 31, 1922.

de Valera to say whether they alone will hold out for war in Ireland," declares the *New York Evening Post*.

In Ireland, notes the *New York Times*, "things have a way of looking their blackest just before they brighten; a week before the agreement was signed, it seemed as if there would be civil war." Aside from that, a British war ordnance tug had been seized by Republican factions, and more than a thousand rifles, revolvers, and machine-guns, with 500,000 rounds of ammunition taken. Approximately 2,000 Irish Republican troops had announced that they would take a new oath of allegiance to De Valera. The *Freeman's Journal*, of Dublin, an ardent advocate of the Free State, had been wrecked while the representatives of Northern Ireland and Southern Ireland sat at the council table in London, and in Belfast the toll of fatalities due to disorders had reached a total of sixty-four for the month of March—the blackest in Belfast's history, cables an Associated Press correspondent.

Even after the agreement was signed by the two Irish Governments and by Great Britain, and the King had given his assent to the bill ratifying the Irish Treaty, thus endowing the Provisional Government with full powers to administer the country until the general election, "the Republican Army secessionists gave notice that the boycott against Ulster goods would be enforced until further notice," says a Dublin cable to the *New York Herald*. Casualties in Belfast continued in excess of those on

the border between Ulster and Southern Ireland. American editors, therefore, are not highly optimistic regarding immediate peace in Ireland, particularly, as the *Brooklyn Eagle* notes, since "De Valera declares for a revival of the war for independence and for a flat repudiation of the Irish Treaty." As this paper observes:

"The announcement of another treaty involving the Irish Free State on the one hand and Ulster on the other, with the British Government as a third party vitally concerned in the agreement of the other two, will be everywhere greeted with mixed feelings. Hopefulness will be judiciously tempered by the knowledge of what has been going on in the North and South ever since the London Treaty was hailed as the end of a conflict centuries old."

"But peace on the Ulster frontier will do much to promote peace throughout Ireland," thinks the *Springfield Republican*, while the *Baltimore American* tells us that—

"Those who are acquainted with the local details of Irish conditions will recognize that the agreement just reached is a considerable step in advance. On this side the Atlantic it is a perfectly normal affair for Protestant and Catholic to cooperate sincerely and heartily for public ends. The significance of the agreement which representatives of the three governments have signed is its record that for the first time during the last generation Protestants and Catholics in Ulster, as organized bodies, have formally and officially pledged themselves to work together whole-heartedly for the repression of violence and the maintenance of law and order."

"The new agreement, if loyally executed, should remove the grounds for the most serious differences between the North and the South," maintains the *New York World*. "The will to unity has been shown," remarks the *Newark News*, which goes on to explain that—

"Best of all, the agreement shows the Irish moderates of North and South making common cause against the extremists at both ends of the line; and that is where Ireland's hope lies. The strength of the extremists has been due to the division of the moderates of the North and South. When this great body unites, the De Valera Republicans of the South and the die-hards of the North are weakened. It is the best move Ireland can make toward meeting all its troubles—political, economic and religious."

"But it is a little early yet for us to grow wildly enthusiastic about the Irish agreement," in the opinion of the *Philadelphia Record*. Says this paper:

"How the agreement shall work out must depend in great measure upon the ability of the governing parties in both sections to make their 'die-hards' followers behave. The attitude of De Valera and those associated with him in the determination that all Ireland must be an absolute republic, owing no allegiance whatever to England, will have to undergo a radical transformation before this latest pact can be wholly acceptable to them."

Also, remarks the *Boston Transcript*:

"It is to be noted that ultimate success for the agreement hinges on the supremacy of the Provisional Free State Government in South Ireland. At this moment that supremacy appears, unfortunately, problematic. The Provisional Government is having very poor success in keeping order. The wrecking of the *Freeman's Journal* office, for the crime of criticizing the acts of the De Valera insurgents, is a poor augury for peace; so is the squarely disobedient attitude of a large part of the Irish Republican Army."

"Important as the agreement is," observes the *St. Paul Pioneer Press*, "it is still far from a complete solution of Ireland's internal troubles." For, as this paper sees the situation—

"The agreement, it must be remembered, does nothing with De Valera and his troublesome Republican Army of the South. It is impossible that any conversations in London or anywhere else could settle the question he has raised."

THE "SOFT-MONEY" ISSUE LOOMING

ARE THE MID-WESTERN FARMERS "headed toward a new greenback party"? "Put that question to a business man and he laughs," observes a writer in a farm weekly; "put it to a banker and he looks worried; put it to a certain kind of farmers' meeting and you get a cheer that raises the roof." Among thoughtful politicians in Washington, says one press correspondent, there is neither laughter nor cheers, but a settled and growing belief that the banking and currency question will figure largely in the next presidential campaign and perhaps in the preliminary contests. The agricultural bloc in the Senate is supporting measures tending to cheapen money, believing, in the words of Senator Capper, that "cheaper money means cheaper and more abundant food." But a representative of Eastern business like the *New York Journal of Commerce* declares that this "new Bryanism" would "make bank credit as cheap as dirt and would raise prices of goods accordingly—with resultant 'prosperity'." In a Washington dispatch to this newspaper, Mr. H. Parker Willis asserts that the recent attacks which have been made on the Federal Reserve System by radical members of Congress have a distinct political object. For one thing, there are expectations that Mr. Bryan will organize his personal following in no small measure on banking and currency lines and will "attack the Federal Reserve System as one of the chief stones of stumbling in the way of the nation." Political lines are somewhat obscured by the fact that while the Federal Reserve System is a Democratic achievement, the Republicans have been defending the system "and thus assuming a place as its natural supporter while Democrats of the Heflin-Watson variety were lavishing their abuse upon it." But this Republican policy, we are told, "has become unavailable on a national scale through the fact that the agricultural bloc has so largely devoted itself to attacks upon the system and will probably stand out against any so-called 'conservative' policy." Mr. Willis continues:

"The issue of sound banking would, in fact, be sure to arouse more antagonism inside the Republican party than outside it. Therefore, not a few of the compromisers in the organization now regard it as unavailable as a major issue for them. The radicals, however, want to bring it forward as their own. They would gladly forestall the Bryan-Democratic group by outstripping them in abuse of the Reserve system. This makes a complex situation within the Republican party just as within the Democratic party.

"A very peculiar feature has been added to the contest by the fact that Messrs. Ford and Edison have taken ground on the populist or radical side. Thus far, they have confined themselves very largely to attacks on the gold standard and to demands for Government issues of paper money, but the anti-Federal Reserve cult is very close to this inflation movement. What they are doing is thus a great support for the advocates of unsound money and banking measures.

"There are a good many evidences of the influence that this work on the part of Messrs. Ford and Edison is having upon the rank and file of business men.

"Measures are now pending in Congress which would permit the discounting of long term agricultural paper presented by land banks. Apart from these relatively moderate changes, however, there is a large mass of bills of very drastic character calling for extreme action on questions of money and banking.

"The free-credit and soft-money propaganda is thus not only a political issue of the early future, but affords a present problem of first-class importance."

The Middle West is now experiencing a return of the greenback movement of the '70's, writes Mr. Donald R. Murphy in a leading article in *Wallaces' Farmer* (Des Moines), owned by the family of the present Secretary of Agriculture. It seems to this writer that two basic contentions of the old greenbackers "were sound then and seem sound to-day; that the gold production of the world is inadequate to furnish the circulating medium for trade; and that the control of the volume of money and circulation

Copyrighted, 1922, by the New York "Tribune," Inc.

FOLKS WHO BELIEVE IN CHEAP MONEY FOR THE U. S. A. SHOULD TAKE A GOOD LOOK.

—Darling in the New York Tribune.

should be by the Government and not with bankers." To some extent the creation of the Federal Reserve System is said to be an acknowledgment of the justice of these claims and, incidentally, by its policy of lowering interest rates and thus slightly inflating values, the Reserve Board may possibly "kill the fiat money boom." Eastern financial experts are advised that they reckon without a large and growing sentiment in the farming districts when they predict further deflation and a return to pre-war price levels. Mr. Murphy reminds us that:

"Fiat money has been adopted as almost an official creed of the Iowa Farmers' Union. Milo Reno, its president, is preaching the greenback gospel in a series of meetings over the State. A similar attitude seems to be taken by the Farmers' Union of Kansas. In the official publication of the Union, of March 16, the editor says, in discussing the bonus question:

"The business body is sluggish on account of contracted credit and currency. Why not stimulate it with a little transference of circulating medium turned out by the Government printing-press?"

TIES WITH GERMANY RENEWED

HAVING IN MIND the hundred-odd years of "peace and friendship which bound the American and German peoples, rather than the few years of war and misunderstanding which have separated them," our first Ambassador to Germany in five years sailed recently for that country. While American Legion posts denounce this light interpretation of "misunderstanding," and the New York *Tribune* surmises Ambassador Houghton's farewell speech "will scarcely make a great hit in America, even tho much admired in Berlin," the New York *Evening Post* declares that "Ambassador Houghton is right in refusing to enter upon his mission with a hymn of hate upon his lips." "It is possible to hold the Germans to their obligations without perpetuating hatred against all of them," agrees the Philadelphia *Public Ledger*.

The new Ambassador, a wealthy glass manufacturer and member of many clubs in New York and Washington, who has served in Congress and who was educated in Germany and France, said at a farewell dinner in New York that:

"First and foremost, I do not believe in the moral or spiritual or even the economic value of hate. Hate serves no useful purpose. It is far more dangerous to those who hate than to those who are hated. It leads only to confusion and destruction.

"The war is ended. The loser, to his ability, must foot the bill. But its causes, the apportionment of blame or guilt, are matters which, frankly, I for one will no longer discuss.

"Both North and South after the Civil War found the way out of the dilemma when they simply turned their backs upon the causes of the issue which had divided them, and went to work. The parallel is not exact. But, frankly, it does seem to me that a similar process of practical reconciliation must be worked out or European civilization, at least, will perish."

The German press, regardless of political complexion, says a Berlin wireless dispatch to the New York *Times*, featured the Houghton speech, and he is said to be hailed by some of them as the "Peace Ambassador." He will confer at London with Ambassador Harvey and at Paris with Ambassador Herriek "on his way to his difficult and thankless post," as the Boston *Transcript* puts it. The better understanding which he will endeavor to build up between the United States and Germany "will help to lighten the world's load," believes the Rochester *Democrat and Chronicle*, which has this to say of the new mission:

"By appointing an official representative to the German capital the American Government manifests its opinion that the time has come to forget the war and to put the world as near as possible back on a peace-time basis. The world's greatest economic and political problems will involve Germany for a few years and Mr. Houghton will play a leading rôle. Unhampered by ill feeling he will be able to look at the problems in the broad light of day and decide what is best. He will protect America's rights, but he will not seek to persecute Germany."

"The new Ambassador should not enter Berlin with an olive

branch in one hand and a hand-grenade in the other," maintains the New York *Evening Post*. In this paper's opinion—

"To see in the expression of cordiality toward a late enemy nation with which we have made peace a disposition to sacrifice the interest of the country which one represents is to take a provincial view of international affairs. An Ambassador is not going to do his duty by his home Government the better by adopting an attitude of suspicion toward the other Government. There is no inconsistency between good will toward another people and a determination to obtain just dealing for one's own. If there were, diplomacy would be impossible."

But, warns the *Evening Post*,

"If there are any Germans in this country or in any other who hope that this means a repudiation of the principles for which we sent a million men to fight in France, they will soon be disillusioned. Any such attitude is as hostile to friendly relations between the United States and Germany as is the attitude of those who criticize Mr. Houghton for being too conciliatory. There can be no upsetting of the results of the war. Nor will either country lose anything by realizing that their renewed association will benefit not only themselves but also the entire family of nations."

"Peace with Germany has been restored," observes the New York *World*; "the time is past for fanning old passions as the best proof of patriotism. It is no disloyalty at this day to practise common sense and observe the ordinary rules of courtesy." "Much of the hate prevalent in Europe has been made to order by politicians," notes the Philadelphia *Public Ledger*. According to this paper—

"It is about time that the world cleared its mind of the remnants of some of the more reckless war propaganda, and remembered that there are women and children in Germany and a new generation, and that something must be left of that

vast liberal element that would have set up a real democratic government in Germany within a very few years if it hadn't been deliberately overwhelmed and martyred in the war."

Ambassador Houghton's comparison of relations between the North and the South after the Civil War with present German-American relations is "a bit of Ambassadorial license," says the New York *Globe*, which adds:

"It is the fashion to romanticize the Civil War and pretend that both North and South were fighting a just cause. None the less, by any rational interpretation of progress, this war must be construed as a war of a democracy against a slave autoeracy, and the 'lost cause' must be regarded as a bad cause.

"In the same way the war against the German Government arose, not from a misunderstanding, but from an exceedingly clear understanding of the purposes of that Government, which were evil. Reconciliation between the two peoples will not be brought about by condoning the sins of the Hohenzollern Empire any more than by exaggerating the sins (which were sufficiently numerous) of the Entente nations. Renewed friendship must rest on truth, and the truth is that the Hohenzollerns were as much enemies of the German people as they were of the rest of the human race."

"HIS IS A THANKLESS TASK."

says the Boston *Transcript* of Alanson B. Houghton, our first post-war Ambassador to Germany. He has made a fortune in the manufacture of glass, and his farewell speech before sailing for Berlin shows that he doesn't believe in throwing stones.

ANOTHER FOREST FIGHT

ASPECTACULAR POLITICAL ROW between two Cabinet officers, reported to have all the earmarks of the "Ballinger-Pinchot fight which did as much as anything else to break the Taft Administration," as the *Baltimore Sun* puts it, is now declared by Washington correspondents to be "on" between Secretary of the Interior Fall and Secretary of Agriculture Wallace. In the opinion of the Washington correspondent of the *Philadelphia Record*, "one or the other of the principals will be called upon to quit the Cabinet sooner or later" because of the differences that have arisen, and the Washington correspondent of the *Baltimore Sun* does not see how President Harding "can avoid taking a hand in the controversy." The issue, we are told, is which Department shall have jurisdiction over Alaska and other forest reserves.

In the days of Roosevelt the public forests were taken from the jurisdiction of the Department of the Interior and placed under the Department of Agriculture, where they are now. This arrangement, however, does not suit Secretary Fall; he would have them returned to the Department of the Interior, particularly in Alaska, in order to "obtain better coordination of effort between the various bureaus handling public lands." Certainly some coordination of effort is needed, according to Alaska's Governor, Scott C. Bone, for at present the affairs of the Territory are handled by some thirty-eight bureaus at Washington.

Bills are pending in Congress for the transfer of forest reserves, especially in Alaska, from the Department of Agriculture to the Department of the Interior. Other bills propose that the Department of Agriculture not only shall retain all its present functions, but that the national parks, Indian Affairs, and the Reclamation Service shall be transferred from the Department of the Interior to the Department of Agriculture. The whole matter, according to observant Washington correspondents, is put directly up to President Harding by the fact that he must approve or disapprove certain recommendations regarding the reorganization of government departments made by Walter F. Brown, the President's personal representative. One of Mr. Brown's recommendations, we are told, is that the Alaskan forests be transferred to the Department of the Interior.

The "farm bloc," writes Mark Sullivan, the *New York Evening Post's* Washington correspondent, "has lined up solidly in favor of keeping the forests in the Department of Agriculture."

"Under the Department of Agriculture the forests have been adequately safeguarded, and the work of forest conservation has reached a high plane of efficiency," maintains the *Cleveland Plain-Dealer*. "This wealth must be conserved," agrees the *New York Times*. "It would be neither good business nor good politics to transfer the forests to the Department of the Interior," believes the *Washington Herald*. As the *St. Paul Pioneer-Press* puts the case of the pro-Wallace element:

"There is actually no more reason for the transfer of the Alaskan forestry service to the Department of the Interior than there is for the transfer of the service in general. The forestry service is not a matter of mere administration, but a service of development and production of timber. . . . This is true no less of the Alaskan forests than of American forests in general."

"But," maintains Secretary Fall, "conservation has been overdone." "Hoarding forests is not conserving them," points out the *Rochester Post-Express*.

Another complaint against conservation comes from the *Los Angeles Times*: "Why should the Government build barriers around the great Alaskan forests and thus add to the cost of the lumber so necessary for home building?" "There are 20,000,000 acres of virgin timber in Alaska, and it is a promising field for the paper-making industry," points out the *Seattle Post-Intelligencer*, while other papers remind us that the tree crop must be harvested the same as any other crop, or it will deteriorate. "The forests of Alaska, lying idle, could furnish one-third of the paper used in the United States without noticing the loss," declares the *Wheeling Intelligencer*, "yet Alaska newspapers are paying five cents a pound freight charges on paper shipped in from British Columbia."

"Conservation of natural resources is highly desirable," in the opinion of this paper, "but it can be carried to extremes."

"There is more than appears on the surface in the bills which the 'agricultural bloc' have introduced in Congress," asserts Ashmun Brown, Washington correspondent of the *Seattle Times*. As this writer views the bills favoring conservation:

"The purpose is to prevent those lands and resources from coming in competition with the lands and resources now privately owned. It is a project to permit those who have 'got theirs' to exact a larger degree of profit than they now enjoy."

"A practical application of this proposed policy would mean that the public lands remaining in the West and Alaska would never pass into private hands, never get on the tax rolls, but would remain in idleness."

"This is the real issue that lies beneath the present controversy in which Alaska is a figure. It is becoming clearly defined. Presently it must be fought out to a conclusion."

"POEMS ARE MADE BY FOOLS LIKE ME,
BUT ONLY GOD CAN MAKE A TREE,"

wrote Joyce Kilmer. Here are two giant Sitka spruce trees—the larger 38½ feet in circumference—in an Alaskan forest reserve—which both Secretary Fall and Secretary Wallace wish to administer.

SENTENCED TO DIE

TWELVE MEN, with grave faces, were met to decide an issue of life or death.

No burly criminal stood there to receive punishment for his crimes—only a little child, begging for life.

Her sin was hunger and nakedness.

She trembled, and almost fell, as she stretched out thin, bare arms in supplication.

"Hunger!—Bread!" were the only words she spoke.

A long time passed, while those men fought to escape the verdict they must render. But then the words came:

"We have not found any one who will give you bread, little girl. We have told a great many people about you, but they have given to so many other boys and girls that they are tired of giving. There is not enough bread, now, to go around—no, not even a crust. We are very sorry, dear little girl, but—we must let you die."

A cruel jest? No! A cruel fact, multiplied thousands upon thousands of times! If only one such pleading child were condemned to die because we are "tired of giving" it would be enough to blanch the cheeks of every man and woman who reads this page. But upon many thousands of boys and girls the sentence of death has just been passed.

In Armenia a Christian race is being blotted out—while the world looks on. In Armenia peace did not come when the rest of the world stopt fighting. Last year 140 villages were destroyed; thousands of mothers and grown daughters were violated and slain; fathers were herded into buildings and burned; multitudes of orphaned children were driven into the wilderness to wander and die, unless, perchance, they might be gathered, like lost lambs, into folds of safety by the Near East Relief. Conditions are worse than at any time since the armistice. Frantic appeals for more food to save the children, for more clothing to cover their naked bodies, for more hospitals and orphanages to give them refuge come surging over the cables to "kind, generous America," the hoped-for savior of Armenia.

And in the moment of this crisis, when the question of life or death for unnumbered thousands of children must be answered, the tender charity of American mothers and fathers has begun to fail. Their answer to the multitude of little orphans whose only sin is hunger, and nakedness, and immeasurable grief, has been—in December, and January, and February, and March—not more money, and more clothing, and more food, but less. And so the cruel order has gone forth from the offices of the Near East Relief to reduce all expenditures twenty-five per cent. Twenty-five children from every hundred now receiving care must be turned away. Among the many thousands whose wails of hunger, and sickness, and cold have not yet been answered, not one can be satisfied.

And now the cries of terror and dismay are reaching America:

CABLEGRAM, via Paris: "Thousands of deportees filling Near East threshold, receiving crust of bread, hoping for summer peace. *Shall we push them off our doorstep?* Order of twenty-five per cent. reduction necessitates closing all general relief."

CABLEGRAM, Constantinople: "Appalling increase of need for general relief throughout Anatolia Caucasus. Reduction in already inadequate appropriations cuts off multitudes who are hopeless without American aid."

CABLEGRAM, from American Women's Hospital, Erivan: "We have eight hundred and fifty-two cases in the hospital, and children dying in all corners of Erivan. All day long we can hear the wails and groans of little children outside the office buildings hoping we can and will pick them up. If the sun shines a little while they quiet down; when it rains they begin again. One day when the rain turned to snow it was awful to listen to them. The note of terror that came into the general wail was plainly perceptible upstairs, and I had the windows closed. They well knew what a night in the snow would mean. We are picking them up as fast as possible, but it is fatal to crowd them to such a point that we would lose those already in orphanage."

Has that story of unutterable suffering, of passionate love and gratitude for what has been given, that trusting, prayerful appeal for rescue of children whose lives now depend on us—has it all grown wearisome to us? Are we tired of being "kind and generous? Is there no longer any sacrificial tenderness for little children in our hearts? Is it time to be rid of the burden, to stop our giving, and so, through the Board of Trustees of the Near East

Relief, *who must act as we dictate*, to pronounce the sentence of death on these thousands of boys and girls who have believed, to the last moment, that *we* would save them?

Mothers and fathers of America, it is not true! You will not allow it! Your hearts have not turned to stone! What are a few paltry miles of distance! They can not separate you from that famine-stricken land, where dead and dying children litter the city streets. They can not shut out from your vision those hunger-pinched faces and outstretched hands! You can shut your windows, as they did, in very desperation, in the City of Erivan; but the wails and moans of little children, waiting in rain and snow, by day and night, to be "picked up" and clothed and fed, can not be shut out of your heart.

From far-away stations, by the magic of science, our homes are being filled with song, and story, and music for the dance. But there are messages more wonderful than any controlled by the wizards of wireless. They are coming now from far away, and the story they bring is burdened with tears. The music is not for dancing, for those who make it can scarce stand upon their feet. The song, swelled to a chorus of woe by thousands of little voices that ought to be musical with laughter, is always the same: "Hunger—Bread!" And with the pleading cry of the children comes a voice, sweet and solemn, saying: "These are MY little ones; ye are My Shepherds; *Feed My Lambs.*"

To catch these messages, every American heart that has thrilled at the laughter of a little child or throbbed at its cry of pain is the receiving instrument, and the messages are broadcasted to us from the very throne of Heaven.

No mistake can be more tragic at this moment than for you to say, "The call is not to me; I need not respond this time; others will give, and the children will not have to die."

There are no others—if you refuse. Armenia is surrounded by bankrupt nations, or nations struggling to keep from bankruptcy. Europe is full of suffering and need. Armenia's only hope is America. *A Christian race will die if America fails* at this crisis.

There are no others to love and care for Armenia's little children—no others but you. The vast majority are orphans. Father is dead; mother, too, is dead; sister—if not dead is praying God for death; brother is dead; aunt and uncle, grandfather and grandmother—all dead, the home destroyed, and the lonely little girl or boy has no one—but you. You are father, and mother, and sister, and brother—the only one in whose heart the sad little waif can now find refuge.

How splendidly you have given, perhaps, sometime in the past, and have brought health and laughter to some of Armenia's little sufferers! But for every one saved then, at least one other was left without food, or shelter, or friends. And the child to whom you gave one meal a day last year can not live now if that meal is stopt. A year ago the delivery of supplies for the Alexandropol orphanage was interrupted between November and May by transportation difficulties. Before April the children had to be placed on half rations, and by May, on the very morning the supply train arrived, the last meager ration was distributed. During those sad weeks, when there was so little food at Alexandropol, *more than two thousand children died.*

If you withhold your gift now, the boys and girls you fed last year may be the very ones "sentenced to die."

Revoke the cruel sentence! Stop the order to reduce all relief work twenty-five per cent.! Thank God it is in your power at this Easter time to give life in place of death, health in place of sickness, laughter in place of tears. You can speak the word of *Resurrection* which will call back some little child from the dark valley of shadow and flood its new life with sunshine.

Two things will fill your Easter Day with sweetest joy; the knowledge that Armenia's children did not wait for you, and trust in you, and appeal to you in vain; and the voice of the Risen Christ, the Lover of little children, saying to your soul, "Ye have done it unto Me. Ye have done it unto Me."

So deeply have we, as publishers of THE LITERARY DIGEST, been stirred by the tragedy impending among the innocent children of Armenia, that we would feel a heavy share of responsibility for the needless death of countless little ones if we did not do as we are urging you to do, and give, still again, a substantial contribution to save their lives. Therefore, altho we have given several times before, we feel that we can not—we must not—do less in the present crisis than add immediately another five thousand dollars to help save the children of Armenia from the death that threatens them. Send your check at once to CLEVELAND H. DODGE, Treasurer, Room 1600, 151 Fifth Avenue, New York City.

FOREIGN - COMMENT

AMERICA'S REFUSAL TO GO TO GENOA

FAILURE IS FOREDOOMED at the Genoa Conference because America will not be there, say some pessimistic German spokesmen, while among the British and French press, we find it hazarded that, if Europe loses by America's non-participation in the present effort to restore economic soundness on the Continent, America herself may have to share in the resultant loss. It is hinted in some French quarters that if Europe single-handed must fight her way out of her international rivalries, evils from which America is free, America may yet find social conflicts within her borders, which are threatened by no competitive nation, and Europe's troubles are "bound to react indirectly on America's domestic difficulties." Speaking before the Committee on Foreign Affairs of the Reichstag, Dr. Walter Rathenau, Germany's Foreign Minister, assured his hearers that Genoa will "furnish an opportunity for diagnosing the general causes of the world's ailments, and for inducing the nations to collaborate in discovering ways and means to heal the maladies from which the entire European Continent is suffering." He prophesied that Genoa "will be the first link in a chain of conferences which will take place this year and next year," but whether the Genoa Conference will constitute a milestone along the road leading to world peace, depends largely on the attitude of the United States, and he added:

"Through its entry into the war, the United States decided the outcome; at Versailles it determined the peace, and now by throwing its political and economic assets into the balance, it is in a position to accomplish the salvaging of the disordered world, thus decisively influencing the direction of political and economic peace."

The Berlin *Taegliche Rundschau* agrees that Germans wish America would "assume the responsibility that Dr. Rathenau has placed upon her shoulders," but it declares that "this is a weak hope on which to build the German policy." Frankly disillusioned seems to be the Berlin *Zeit*, which avers that "beyond all doubt America has renounced her moral and political duties to Europe." This daily believes that Premier Lloyd George was convinced of the efficacy of the Genoa Conference, because he counted upon America's support, but it asserts: "One characteristic of American idealism is the fact that it often fails to function over long periods."

In England the London *Westminster Gazette* considers the arguments in Secretary Hughes's note of declination to be "genuine enough" and worthy of serious attention. The United States Government is of the opinion that the Genoa Conference

is "not primarily an economic conference, as questions appear to have been excluded from consideration without the satisfactory determination of which the chief causes of economic disturbance must continue to operate." On this argument of Mr. Hughes this newspaper remarks:

"This can only refer to the exclusion from discussion of questions arising out of the treaties of peace and the reparations scheme. Here, of course, the Americans are right. Without a revision of the work done in Paris a revival of European trade is impossible. We find some difficulty, however, in reconciling this very sound argument in the Note with the objections raised to the 'political' aspect of the Conference and to the invitation sent to Soviet Russia. Americans are quite alive to the dangers and extravagances of the present international politics of Europe, and to the urgent necessity to reform its ways in which it finds itself. Political and economic questions cut across one another all along the line, and as a matter of fact if the subjects wrongly excluded from discussion had not been so excluded, the Conference would have been more political than ever. Turning to the references to Russia, we fail utterly to understand how the 'chief causes of economic disturbance' in Europe can be removed while Russia is treated as a pariah. Russian raw materials and Russian markets are vital to the trade of Europe, and without a political settlement with the Soviet Government the policy of disarmament which America is rightly

anxious for Europe to adopt is only very partially possible.

"It is understandable that the United States should hesitate to enter upon a discussion of European affairs until the future policy of the European nations has been more clearly defined. Americans fear that the cooperation asked of themselves will be expected to take the form of new credits and of the remission of old debts. For such proposals American opinion is not ready, and it will certainly not become ready while it retains any suspicion that Europe intends to go on squandering its funds on a riot of militarism. It is for the European Powers to demonstrate at Genoa that they resolutely intend to put their past errors behind them."

As the American people are firmly convinced that they ought not without necessity to become involved in European questions of a political order, remarks the London *Times*, their Government feels bound not to be represented at Genoa, and it points out that—

"The American people are paying the interest on their war loans to Europe in the form of taxation. To help her, the better-informed classes know would be not charity, but an act of enlightened self-interest. But this truth has not yet come home to the masses. They feel the burden and nevertheless they are not unwilling to help Europe, if they were satisfied that Europe is really doing all she can for herself. But they do not believe she is doing the best she can for herself. They think reparations

ought to be discusst they look askant at land armaments, the necessity for which they do not grasp, and their suspicions were stimulated by the submarine controversy at Washington. The Genoa project was not likely to heighten their faith in the intentions of its authors. Rejection was the only course open to them, and rejected it they have, naturally and wisely, as we believe most competent observers will judge. . . .

"Broadly considered, it would be far better that the United States should not be represented at Genoa, save possibly by a diplomatic 'observer,' than that it should take part in the Genoa Conference only to find the Conference unable to agree upon measures calculated to restore stability to Europe. Far better would it be that at Genoa a successful attempt should be made to deal, practically and precisely, with urgent European issues, so as to prepare the way for a more important gathering later on, in the preparation for which the United States might wish to take an adequate part. We trust, therefore, that nothing will be done at Genoa to confuse European issues, to estrange American opinion, or to accentuate differences of view, but that every effort will be made to achieve precise results on precise issues, so as to clear the way for the treatment of larger problems that can not, by their very nature, be solved without American cooperation."

In France the *Paris Gaulois* expresses the belief that without the cooperation of the United States at Genoa it is difficult to see "how it will be possible to establish economic reconstruction in Europe, since such perforce implies the preliminary liquidation of the interallied debts, by means of an international arrangement, of which America would be in a sense the keystone." The Genoa Conference is "becoming a gathering of insolvent debtors who can not extricate themselves unless through an understanding with their principal creditor," and this journal points out that if the principal creditor remains absent, all the

discussions of the conferees are of no avail. Thus it begins to look as if "the only beneficiaries of Genoa would be Soviet

Russia and Germany, which is always clever at turning confusion to her advantage."

America's refusal was expected, according to the *Paris Journal des Débats*, and it may be considered to mark the failure of the combination formed in London last December, based on America's participation in what was pompously named the "Reconstruction of Europe," and this daily proceeds:

"It becomes more and more obvious that the Americans will consent to no sacrifice for the sake of this grandiose project, bound up, in the mind of its authors, with the devaluation of the German mark and the Russian ruble, and with other phantasmagoria. The Americans are mainly concerned with recovering the moneys they advanced to the Allies, in order that they may improve their economic situation, which is no brighter than our own."

Gloomy prophecies about Genoa are not greatly tempered, it is said, by the rousing votes of confidence given to Premier Lloyd George in England, and to Premier Poincaré in France, on the eve of the opening of the Conference. Mr. Lloyd George was confirmed in his Genoa policy, say London dispatches, by a vote of 372 to 94; and Mr. Poincaré was equally assured of his policy by a vote of 484 to 78. The argument of Mr. Lloyd George's one hour and a half speech in the House of Commons is that there must be a united effort to get a broken Europe on its feet again by assuring peace and setting the wheels of world trade again in motion. He envisaged recognition of Soviet Russia by cautious and slow stages, we read, dependent on Russia's recognition of her international obligations and proofs of her *bona fides*. According to Paris correspondents, the debate in the French Chamber of Deputies showed that the present Chamber expects France to withdraw from Genoa if any discussion is raised of a political character, such as reparations, treaty revisions, or Russian recognition without guaranties, and especially efforts at the present time go reduce France's Army.

BRITAIN'S DIVORCE LAW "SCANDAL"

CRIES FOR DIVORCE LAW REFORM are frequently uttered by American editors because of the miscellany of statutes affecting the marriage bond in the various States, but British editors are clamoring for reforms that under certain circumstances will make the marriage contract "less ironclad." England's divorce laws are "hopelessly antiquated," they say, and the radical changes proposed as long as ten years ago by a Royal Commission were lost sight of in the great cataclysm of war. Meanwhile they point out that every year supplies more evidence supporting the conclusions of the Commission, and exposing the scandalous cruelty to which large numbers of innocent husbands and wives are being subjected "in the name of a conventional and hide-bound morality." The subject is agitated anew because of a decision in the Appeal Court, which we are told has the effect of "tying Mrs. Rutherford to a husband who was found guilty of murder, but insane." The London *Daily Chronicle* points out that there is no need to recall the circumstances of the *crime passionnel* of which in effect Colonel Rutherford was found guilty; or of the events which led to Mrs. Rutherford's action in the Divorce Court. It is sufficient to point out that "even the law which has refused to make the decree *nisi* absolute, so far recognizes the impossibility of this man and woman living together that it grants a judicial separation, but is unable to grant logical relief by divorce." Since the Royal Commission made its recommendations ten years ago, this daily observes, public opinion has "moved a long way in favor of the reforms advocated, and indeed beyond them," and it adds that legislation is "urgently needed." Says the London *Times*:

"In the interests of the parties and of the State there can be no reason of general recognition to be advanced for rigorously maintaining a matrimonial bond the entire basis of which has disappeared, and which if it could be restored would lead in

every conceivable ease to consequences disastrous to the public welfare. In the report of the Royal Commission on Divorce the minority concurred with the majority in recommending that there should be a decree of nullity in cases where one of the parties at the time of marriage was of unsound mind. *A fortiori* can it be said that the marriage bond should be deemed to be indissoluble where one of the spouses has been found guilty of the capital offense and is detained as a criminal madman?"

According to the London *Daily Telegraph*, the abuses flowing from the "existing narrow and illogical requirements of our divorce laws are steadily undermining public morality" and this journal believes it to be "strictly accurate" and explains:

"The nation is not in a position fully to realize the wide-spread results traceable to the anomalies which now exist, for even the present restricted facilities for divorce are not usually available to the poorer classes. There is, in fact—tho not in intention—one law for the rich and another for the poor. . . .

"If Mrs. Rutherford had been a working-class woman, without means or friends, nothing would have been heard of a case which has aroused the keenest sympathy for the sufferer. Her misfortune has again directed attention to a grave social sore, which is far more wide-spread in its ill-effects than is sometimes imagined. Hundreds of married men and women have been put away by the state for life, or for many years, for good reasons; but the state which incarcerates them in the interest of society generally refuses to concede relief to those to whom they are bound by the existing marriage law. The husband or wife of a confirmed and hopeless drunkard or an incurable lunatic is firmly denied freedom, tho the marriage has become a tragic mockery. The law legalizes separation in certain circumstances, and that separation may continue until the grave closes over one or other of the parties; death offers the only hope of release. Can it be seriously suggested that such efforts to perpetuate a contract—for marriage is a contract—are conformable to the tenets of justice and make for the maintenance of high moral ideals not merely in theory but in practise?"

Since the above was written, we learn from London dispatches that under proposed new rules the poor in England are to be

given increased facilities for using the divorce courts, and it is related that—

"Heretofore a wife could not be admitted as a 'poor person' in a matrimonial case if the combined income of herself and her husband exceeded £4 a week, even if they were living apart. Moreover, the wife could not bring action unless she deposits £5 with the court.

"Under the proposed rules a 'poor person' wife may obtain the benefits of the rulings if her own income is less than £4 a week. If unable to deposit £5 with the court it will be possible for her to obtain an order for her husband to pay the amount."

SCOTTISH ORANGE AND PROTESTANT PARTY

ULSTER WAS BETRAYED when Mr. Lloyd George and his colleagues concluded their treaty with Sinn Fein, and the great majority of Scottish Unionist members in the House of Commons were consenting parties to the betrayal, says the *Belfast Weekly News*, when the "infamous compact" came before the House of Commons. Therefore this newspaper finds much satisfaction in the foundation of an Orange and Protestant party in Scotland, which is to be known by that name and which is made up of the members of the Orange Institution who, we are told, are to be congratulated on the "bold and courageous" step they have taken. For years the members of the Orange Institution have been loyal supporters and enthusiastic workers in the cause of Unionism in Scotland, this weekly relates, and the claim that they were really the "backbone of the party in the West of that country is amply justified."

In the official proclamation of the Orange and Protestant Party we read that the Constitution, briefly stated, embodies the following principles: "One flag, one throne, one empire, equal rights for all, and special privileges for none." The four committees to carry out the purposes of the party are denominated as the Ulster, the Election, the Propaganda, and the Finance, and to quote further:

"(1) The Ulster Committee will be responsible for policy in supporting the Northern Parliament of Ireland and carrying into effect the wishes of their brethren and North of Ireland Protestants in any manner as directed, and other matters which meantime will remain private.

"(2) The Elections Committee will deal with the following items: (a) Imperial Parliament—To promote the election of men and women of good Protestant character. (b) Parish, Municipal and County Councils—To promote the election to these bodies of men and women of good Protestant character who are able and willing to serve solely in the public interests, and who will support economy and efficiency in local administration. (c) Educational Authorities—To promote only the election of good Protestants to this body who will stand firm for the teaching of religious and temperance instruction in the schools. (d) Scrutinizing and questioning of all candidates for these foregoing bodies, and advising all Orangemen and women and Protestants whom to support.

"(3) The duties of the Propaganda Committee are of such a nature that it is not deemed advisable to divulge them beyond stating that it will supply speakers on demand to Protestant bodies splendidly equipped to deal with Religious and Evangelical, Economic and Social and Parliamentary and Local Government questions in all their phases.

"(4) The Finance Committee—This body will undertake, supervise, and manage all matters regarding the financial part of the new organization. These four committees are responsible to a powerful executive."

The organization is of such a strength, according to the party statement, that properly directed it "can make itself a power to be reckoned with by either the Unionist, Liberal, or Labor and Socialist parties."

The *Belfast Weekly News* believes that now that the Orangemen and Orangewomen of Scotland have shown such enterprise in the Protestant cause it is surely time for the Protestants of Ulster to bestir themselves, and it adds:

BRITISH SUGGESTION FOR A NEW IRISH STAMP.

—The Passing Show (London).

"Had we in the past attended to propaganda work as we should have done we would never have been plunged in our present plight; but if we allow public opinion to be poisoned against us we need not expect to escape the consequences. When the Ulster Unionist Council launched its propaganda in England and Scotland the results were soon apparent, and we believe that similar effects could be produced to-day. On every hand our opponents are hard at work. In England and Scotland the majority of the papers are only too ready to insert anything that will discredit Ulster while from the Provisional Government offices comes a steady stream of communications all designed to produce a similar effect. Surely it is time for some organized attempt to be made to counter this poisonous propaganda, nor is the need confined to England or Scotland. Almost every mail from the United States, Canada, Australia, and New Zealand brings us proofs of the wide-spread and efficient propaganda that is being carried out by our enemies, and la-

ments that Ulster takes no steps to set herself right before the world. Surely something more could be done in this respect, nor is it necessary that it should entail a big expenditure of money. Our kinsfolk in the United States and the Dominions are eager to hear our side of the case, and we believe they would be quite prepared to pay for admission to lectures and addresses on the subject."

At the same time, this newspaper points to the necessity of "order with loyalty," and trusts that every Loyalist will respond to Sir James Craig's appeal for a "continuance of the splendid restraint shown by our people under unparalleled provocation." The *Belfast Northern Whig* also recognizes the need for educating public opinion, but chiefly at home, and explains:

"A general election can not be long delayed. Ulster's case must be put before the constituencies. Let there be an appeal from faithless, opportunist Ministers and a subservient Parliament to the people. Lord Carson did an excellent night's work in the House of Lords by revealing a part of the sinister truth about Southern Ireland under the new régime, which, so far as is possible, is being hidden from the British electorate. The obscurantism which has helped the Government and their Sinn Fein allies has to be fought and beaten; and the more volunteers are engaged on the side of Right, Justice and Loyalty the sooner will success be attained."

SOVIET TRY-OUT IN SOUTH AFRICA

SETTING UP A SOVIET REPUBLIC in South Africa was the aim of the revolutionary element in the recent outbreak originating in the mining strike on the Rand, according to Premier Smuts, who declared before the House of Assembly that there had been "a menace of slaughter comparable with that of the French Revolution." South Africa, he said further, has "escaped a tremendous danger, the gravity of which has not been sufficiently made clear." Fortunately the Government forces had overcome this danger and the situation following is "almost normal," according to the Premier, who explained that the Mine Workers Union and the Industrial Federation of Trade Unions were "not free agents—but that there was another agency in the background."

As reported in Cape Town dispatches, Premier Smuts asserted also that the great mistake of the labor organizations was in not dissociating themselves from the revolutionary element when they noticed the movement toward physical force. There was no doubt in his opinion that the revolutionaries wanted to set up a Soviet republic and that they expected assistance from the country. It had been his fear, we read, that before the burghers could come to the Government's assistance the rebels would have been able to start a revolutionary régime and "mete out executions, with the result that there would have been a blood bath at Johannesburg." But every part of the country responded to the Premier's appeal for support, we are told, and tribute is paid by him to the police, who had done their duty beyond praise, while he averred that deep gratitude was "due the natives for not having stampeded." As to the prisoners taken in the disturbances, Premier Smuts expressed his dislike of trial by court-martial, and informed the House of Assembly that they should be tried by the ordinary course of the law of the land. What is more, the President announced that the Government adhered to its decision to appoint an Industrial Commission to consider the labor grievances, and that in order to make it impartial, neither side to the dispute should be represented on it. Cape Town correspondents advise us that "this announcement was greeted with loud cheers." In Canada the *Vancouver Province* points out that on the labor question in South Africa "there can be little in common between the union workers and the Boer farmers," but—

"The Communistic industrial group may make common cause with unreconciled Boers in their resistance to the established order. In the last general election Hertzog and his party advocated separation from the Empire and the establishment of an independent republic. The Labor party had its own program and candidates. Against this divided opposition the Smuts Government obtained a decided victory. It would appear that revolutionists of the labor camp and revolutionists of the Boer camp are now partners in arms and the Rand district. How far the great body of prosperous Dutch farmers throughout the Transvaal would be interested in such a movement remains to be seen. They are them-

selves large employers of labor, but the farm laborers are mostly natives."

The fact that the South African Government has some 6,000 prisoners to deal with for complicity in the recent disturbances, remarks the *Winnipeg Manitoba Free Press*, is as vivid an indication as is necessary of the extent and serious nature of the trouble. It recalls that the strike began as an industrial dispute between the gold miners and the mining companies, and proceeds:

"The points at issue were the question of reduced wages and the ratio of employment of white men and natives. After running for a number of weeks the temper of the strikers began to manifest itself in acts of violence. Dynamite explosions and acts of intimidation were charged against them fully a month ago, and these acts of violence rapidly developed during the past few weeks into what became a virtual armed revolutionary uprising endangering the government of the country. The strike became general

throughout the Rand, where the strikers formed themselves into 'commandos,' or organized armed bands, the total numbers in the commandos running evidently into many thousands. Pitched battles were fought between the insurrectionists and government troops, and many casualties were suffered by both sides; artillery and bombing airplanes were called into service, and the South African Rand was the scene of what was evidently a violent and bitterly contested civil war."

The inquiry which Premier Smuts has ordered to be made into the rising, this *Winnipeg* newspaper goes on to say, will disclose the facts as to the foreign influence and money which, it is alleged, were behind the strike and fomented it into revolution. But it is noted also that the great spread of the strike through the Rand mining area indicates that the Rand is a fallow field for industrial

trouble, and that the relations existing between the miners and the mining companies are far from amiable. We read then:

"The Rand is the richest gold field in the world, and in recent years some \$200,000,000 worth of gold has been mined in it annually; the white laborers, numbering between 22,000 and 25,000, it is admitted, have found the post-war years a time of great hardship. One writer says:

"Their industry is not permanent and is highly speculative. Many of the richest mines have been worked out, and in others the value of the gold content of the rock has dropt so far that profits are small. The fall in the value of gold since 1914 has aggravated the discontent."

"The strike was the product of this aggravated discontent, and just how aggravated it was may be judged by the lengths to which it ran. Numerous conferences, and the intervention of Premier Smuts, who, at the beginning of March, advised the strikers to go back to work pending a negotiated settlement, had no effect, and the conditions in which the miners will now find themselves are a matter of conjecture. The original grievances are all still to be settled; they will undoubtedly be settled by some process of negotiation such as Premier Smuts advised. But now a ruinous strike, an armed and bloody civil war, and a huge army of captured prisoners awaiting trial, lie in the background of whatever settlement is reached—grave facts which will continue to occupy attention in South Africa for some considerable time to come."

BOLSHEVISM IN SOUTH AFRICA.

"Smuts bags the man-eater!"

—The Mail (Birmingham).

SCIENCE - AND - INVENTION

THE WEALTHY WEST

MONEY LINES THE POCKETS of the Far-Westerner these days. At any rate he is spending money faster than the dweller in any other section of the United States, as shown by recent Internal Revenue reports, says a writer in *The Stirring Rod* (San Francisco). Possibly he is oftener a tourist and less often a factory worker than the Easterner. At any rate, figures compiled from government reports on proprietary, excise and luxury taxes show that the States lying between the Rockies and the Pacific, and especially the Coast group, have unusual per capita spending power. For the statistical purposes of the pharmaceutical journal named above, the "Middle West" is here grouped with "the East," an experience enjoyed by the Mississippi Valley States only when a Californian or an Oregonian is conducting the proceedings. Why should the Far-Westerner spend 73 cents more annually for soda-water and 57 cents more for perfumery and cosmetics, than the rest of us? Our author has the answer. "The great West," he says, "has the money and is spending it." He continues:

"And by West we do not mean that 'West' to which the Way-Down-Easter refers when he talks of taking a trip 'way out west to Buffalo.' We mean the Great West which lies between the Rocky Mountains and the Pacific and which comprises nearly one-third of the total area of these United States, tho housing only 8.6 per cent. of the population.

"'West' is more than a direction or a point of view; it is more than a state of mind. It is a separate entity among the subdivisions of the United States and a market worthy the best efforts of the Eastern producer.

"That the West is spending its money, is now and has been all along through the trying times of the past year and a half the most prosperous section of the country, is shown in the reports of the Internal Revenue Bureau on its collections of excise and luxury taxes on soft drinks, carpets, trunks, umbrellas, wearing apparel, jewelry, watches, clocks, perfumes, cosmetics, medicinal articles and amusements. Just how much of the country's production of commodities of all sorts are bought and consumed in the West can only be a matter of conjecture, for there is no way of tracing them. The reports of the Internal Revenue Bureau, however, allow of no contradiction. These statistics are gathered by States and districts and are accurate to the last penny. They form the only reliable check on the spending power and spending habits of different sections of the country.

"Tables throwing into relief some remarkable facts regarding the buying power of the eleven Western States compared with that of the remainder of the country have been prepared with painstaking care from the Internal Revenue reports by *Sunset* magazine, published in San Francisco, and form signposts pointing the road along which the Far West is destined to travel. The figures were taken from the Government reports for the fiscal year ending June 30, 1921. By 'West' is meant the eleven Western States, grouped and treated as a unit, because they form a distinct entity from the advertiser's point of view and fall geographically into place as a separate market. Among the eleven Western States the Pacific Coast group, Washington, Oregon and California, separates itself automatically from the rest, for it embraces the entire coast line and includes more than half of the population of the 'eleven West' group.

"Based on a tax of 1 cent on each 25 cents or fraction thereof, during 1921, the Western States spent \$17,937,474 for perfumes, cosmetics and proprietary articles, according to the stamp tax

returns. At the same time all the rest of the United States spent \$136,733,262 the same way. Per capita sales in the West on these articles amounted to \$1.99, while per capita sales in the rest of the United States came to \$1.42. In other words, the eleven Western States, or 8.6 of the population, spent 11.6 per cent. of the money spent in the entire country for proprietary articles, perfumes and cosmetics, a per capita expenditure 40.1 per cent. greater in the West than in all the rest of the country combined.

"While sales in 1921 in the other States fell off sharply, suffering a drop of 4.5 per cent. from 1920's figures, sales in the eleven Western States experienced a rise of 2.5 per cent. over 1920—remarkable in the face of existing conditions.

"Sales of medicines, perfumes and cosmetics in the three Coast States made up 79 per cent. of the total sales in the West, while the per capita sales exceeded those of the eight inland States of the group by 57 per cent., and per capita expenditure in the whole group exceeded the rest of the country by 40.1 per cent.

"California shows up exceptionally well, with a sales total of \$9,980,000, well over half of the total for the Western States, and a per capita sales figure of \$2.93 as compared with \$2.72 for the Coast States and \$1.99 for the entire Western group, and \$1.42 for the other States.

"During the same period the West spent \$26,170,271 for soft drinks, or \$2.98 per capita, while all the rest of the United States spent \$216,468,349, or \$2.25 per capita. In other words, the eleven Western States, comprising 8.6 per cent. of the population, spent 10.74 per cent. of the money spent in the entire country for soft drinks, a per capita expenditure 32.4 per cent. greater in the West than in all other States combined. Soft drink sales in the three Coast States totaled 70 per cent. of the gross sales for the eleven Western States, altho the population of those States amounts to only 64 per cent. of the entire group. The per capita expenditure of \$3.26 in those three States is 26 per cent. greater than in the remainder of the Western group which, as a unit, exceeded the rest of the country by 32.4 per cent. California assumes the lead in the three Coast States with a sales figure for 1921 of \$12,428,000, more than two-thirds of the total sales in the three States. California's per capita sale was \$3.63, against \$2.42 for the remainder of the Western group and \$2.25 for the rest of the country."

X-RAY PROSPECTING—A rumor which *Nature* (London) hesitates to credit, but will not condemn, because marvels so often insist on coming true nowadays, is embodied in what this magazine terms "a somewhat startling paragraph" in *The Times* (London), giving an account of petroleum "divining" of an extraordinary nature by means of laboratory experiments carried out in France. Says *Nature*:

"Dr. Henri Moineau and M. Regis have apparently been at work on an apparatus for which it is claimed that by 'harnessing Hertzian waves' the composition of subterranean solid, liquid, and gaseous matter may be indicated, quite irrespective of distance! Experiments are at present being carried out at the Puy du Dôme, in the Clermont-Ferrand region, and already this mysterious apparatus has detected petroleum deposits in Alsace, Saxony, Hanover, Czecho-Slovakia, Italy, the Rocky Mountains, the Allegheny Mountains, and finally in the Andes. No account whatever is given of the nature of the apparatus itself, tho it is suggested that X-ray photography plays an important rôle in the determinations, particularly in the elucidation of

underground structures. It is further alleged that with the apparatus it is possible to discern, not only oil, but also coal, minerals, and water occurring in remote parts of the world, the idea being that once such occurrences are located all that is necessary as a preliminary to successful boring is an aerial reconnaissance for the purpose of taking 'X-ray photographs' of the selected areas. We can not refrain from remarking that, altho first impulse may dictate a dismissal of the matter as extravagant, present knowledge of electromagnetic wave propagation, tho limited, is sufficient to promote realization of possibilities, and caution before condemning prematurely their utilization in the present connection."

IS THE CORN BELT DRYING UP?

TO THIS QUESTION, asked by George H. Dacy in an article contributed to *The Illustrated World* (Chicago) he replies that it is, if by "drying up" we mean the lowering of the level of water stored in the soil. This level has fallen an average of nine feet throughout the United States

of the reach of some of our most useful economic crops. Crop and drainage experts say that it is time to take inventory of our water resources in order to devise and perfect ways and means of limiting extravagant leaks and losses of this our most important natural resource. The U. S. Department of Agriculture made a survey of fifteen thousand farm wells in all parts of the country which showed that the subsoil water level is being lowered gradually each year due to our unsatisfactory systems of husbanding soil moisture.

"Scientists do not believe that this country is reverting to a condition of aridity rapidly or that the rainfall is gradually decreasing. Facts do not support the fantastic theories that cultivation increases rainfall or that deforestation reduces it. The waste of storm and thaw waters through surface run-off is one of the chief causes of the lowering of the subsoil water table. This condition, fortunately, can be remedied very easily. The waste of soil water results indirectly in depleting the fields, to a certain extent, of their supply of plant food. Run-off waters cause destructive floods and heavy property damage. They destroy the navigable properties of many minor streams and also operate to contaminate the drinking-water supply. Water losses of particular moment also result from the cultivation of the land, drainage and industrial operations such as mining. Open ditches are flagrant offenders in lowering the water table and increasing the run-off."

In most of the Corn Belt States, says Mr. Dacy, the local ponds, streams and small lakes were Nature's safeguards to maintain a fairly constant ground-water level, to stabilize stream flow and to reduce soil waste. The extensive construction of innumerable open ditches and tile drains with catch-basins in many Middle Western farming regions has more or less completely removed these natural barriers. Open ditches are objectionable because they waste from two to eight acres of land per mile while their banks develop all kinds of obnoxious weeds. Tile drainage operates to equalize the run-off while open ditches increase the inequalities between flood waters and low waters. We read further:

ARE THESE VAST FIELDS IN DANGER?

Miles upon miles in Illinois, Iowa and Indiana are covered with corn as far as eye can reach.

since the Civil War. Mr. Dacy holds excessive drainage responsible for much of the change, and he thinks that if we keep it up, Illinois, Iowa and Indiana may become unprofitably arid. Mr. Dacy asserts plainly that underdrainage may develop into overdrainage to the permanent disadvantage of the lands thus rescued unless land reclamation enthusiasts make more comprehensive studies of both the losses and benefits which result when waterlogged fields are drained and dried. He continues:

"The surplus ground water really is a reserve moisture supply for the crops which they can draw on during periods of drought. Ordinarily the upper level of the ground water coincides very closely with the limit of its availability for crop growth. The universal lowering of the ground-water level throughout the United States should be a matter of grave concern to all of us, as it indicates restrictions in potential food production unless efficient control measures are instituted and practised religiously.

"During the last sixty years, the average lowering of the ground-water level for the entire country has amounted to approximately nine feet. In Iowa, during this period, the water-table level has dropt on the average 12.5 feet. This recession of the ground water is still continuing gradually year by year. Unless most effective measures are adopted and practised to conserve our supplies of soil moisture, it will only be a matter of a few years until the great reserve supply of soil moisture is out

"Investigations by the United States Geological Survey in the White Mountains of New Hampshire show conclusively that the amount of forest is intimately associated with the regulation of stream flow. Deforestation makes for rapid melting of snow waters and increases the amount of run-off, floods and soil removal, while the protection and multiplication of our forest resources work for the conservation of valuable soil moisture. Potentially, the matter of water conservation will be one of the most important which will confront progressive agriculturists. Intelligent drainage and cultivation as practised by the leading Corn Belt communities will be the most effective weapons for combating this condition. The open ditch must go except in the case of community drainage districts where often conditions make it a necessity.

"One worth-while suggestion offered by a leading conservationist who also is actively engaged in agricultural pursuits recommends that a thorough hydrometric survey be made of the most prominent agricultural regions of the Middle West where underdrainage is practised on a large scale. The prospects are that such a scientific survey would indicate the wisdom of preserving large tracts of wet and swampy land in their natural state. From an agricultural insurance standpoint, such moisture-protective areas would be well worth while. When one also considers that they could be developed into valuable sources of wild game and fish production, their utility as economic projects would be endorsed. Such reservations might serve incidentally as parks, playgrounds or recreation summer camps."

HEATING ORCHARDS WITH STOVES

FRUIT-GROWERS in Southern California have been equipping their orchards with portable heaters, to fight frost, for many years back. This protective device was put to an unusually severe test during the cold wave of January last, we are told by N. L. Chapin, editor of *The California Farmer*, writing in *The American Fruit Grower Magazine* (Chicago). This "January freeze" was "one of the worst cold snaps of history," yet many California growers saved their crops by having for emergency use an adequate system of heaters. The test, writes Mr. Chapin, emphasized lessons which heater manufacturers and meteorological experts have long been preaching. He continues:

"Heat efficiently or not at all," is the big lesson of the freeze, says Floyd D. Young of Pomona, Calif., meteorologist of the Department of Agriculture, and author of a government bulletin on frost protection.

"No grove which the owner proposes to protect," he says, "should be equipped with less than 50 heaters to the acre. An orchard properly equipped and tended during a cold spell can always be protected from damage either to fruit or foliage. But if there is to be a lack of vigilance, lack of foresight and preparedness, or carelessness in regulating heaters so that the oil burns out at a critical time, it would be better to save the expense of the equipment and not fire at all.

"The most perfect system of orchard firing in the world is that of the Limoneira Company at Santa Paula. Here no detail is overlooked, and the firing itself is reduced to an exact science, with every contingency prepared for in advance. Next to this company I would say the Bear Creek Orchard Company of Medford, Oregon, has the best system.

"Efficient frost protection is largely a matter of personality. It depends wholly on the directing head of the frost-fighting forces and on his capacity for planning so that the fuel supply shall never run short and that fires will always be lighted and regulated when needed."

"The Limoneira Company grows lemons, principally, and uses a heater to every tree, about 80 to the acre, of the modern, high-stack type, holding nine gallons of oil each. The Bear Creek Orchard Company grows deciduous fruit and protects from spring frosts at blossoming time with 105 lard-pot heaters to the acre. This type of heater burns low after about two hours and must be refilled to restore its heating power. Never more than half of the heaters are lighted at once. Refilling at night frequently becomes necessary.

"With temperatures in most citrus districts ranging as low as 18 degrees for many hours the first night, nearly as low the second night, and very low for five successive nights, the drain on oil resources and equipment for refilling heaters was severe. Several cars of oil were rushed on passenger schedule into the Pomona district, but teams and tank wagons enough to resupply all groves could not be secured.

"Frost hit every district alike, except Rialto, Fontana and Bloomington, where high winds prevented serious damage. Favored groves, close to the foothills and with good air drainage, escaped in some districts. No heating was done in central California, but this district of early Navels had shipped its fruit, and the trees, being dormant, did not suffer severely.

"The first official estimate of the California Fruit Growers Exchange of 40 to 50 per cent. damage to the orange crop and 35 per cent. damage to lemons will stand for some weeks until more accurate figures are available. About 1,500 cars of lemons were safe in packing-houses. About 25,000 cars of oranges and 9,500 cars of lemons for the entire season is the shipping estimate. This compares with last year's total of 60,000 cars.

"A high, freezing wind in Ventura County, home of the Limoneira orchards, blew the heat out of the groves, but the

damage in the district was limited to about 5 per cent., almost wholly in unheated orchards.

"The Leffingwell Ranch reports a similar cold wind. It cut down some tender shoots, but on the same trees practically all mature lemons and a great many of the blossoms and tender fruits just forming were saved. Here 32 seven- and nine-gallon heaters to the acre were used, and temperatures were raised over 150 acres from 10 to 12 degrees. Near by Mr. W. C. Scheu and the writer found a lemon grower who declared he never would go to the trouble of heating. From appearances at that time his trees will be several years recovering from the damage they have suffered.

"Manager Frank G. Webber of the Sierra Madre-Lamanda Citrus Association, finds 95 to 98 per cent. of the fruit saved in

Courtesy of "The American Fruit Grower."

"THE ENTIRE CROP SAVED."

Ten-gallon automatic heaters—forty to the acre—with an extra row 25 feet to windward in an orange grove at Pomona, Calif. The entire crop was saved and the trees were undamaged.

some heated groves and 75 per cent. in others. He was in the lemon grove of Col. Thomas Lambert of Chicago the morning of the 20th when the outside temperature was 20 degrees and that inside the grove 31 degrees, a difference of 11 degrees caused by heating.

"At Corona 35 per cent. of the lemons and 5 per cent. of the oranges were equipped with heaters. The district suffered lighter damage than others."

In his official capacity Mr. Young tests appliances devised to fight frost, but he finds that nothing will take the place of the orchard heater. A device now being developed by a Pomona grower to create an artificial breeze, however, looks promising and, if successful, will be patented in the name of the Government for the benefit of all growers. In this connection, a zephyr, probably a gust from the Fontana district, blew into Cucamonga for twenty minutes and during that time raised the temperature from 20 to 30 degrees. The mixing of the air strata was the reason. We read further:

"With any heater it is essential to keep out water, or the oil will boil over, and there will be no fuel when fuel is needed worst. This is accomplished by using a cap over the stack and by raising the regulator opening about a quarter of an inch so water will flow off the bowl. To meet the anti-smoke ordinance, high-stack heaters are used, or high stacks added.

"In the Pomona district temperatures were raised about three degrees over all groves by the heating that was done, and and it has been shown by Mr. Young in actual tests that heaters may actually help the grove to leeward more than the grove in which they are lighted. Hence the necessity for a protective row of heaters on the north and east some distance to windward of the outside rows."

ROUGH WALL SURFACES THAT KILL ECHOES.

KILLING ECHOES WITH PAINT

OBJECTIONABLE ECHOES IN AN AUDITORIUM may be softened, or done away with, by the application of proper paint to the walls. So we are assured by Henry Gardner and William Downie, in a paper on "Paint as an Aid to Proper Acoustic Conditions," read before the International Association of Master Painters and Decorators at Kansas City and now printed as a pamphlet. This subject, Messrs. Gardner and Downie believe, has been much neglected. Every one knows that light in a room may be controlled by the paint on reflecting surfaces, but the similar control of reflected sound seems to have been ignored. A study of this subject is of importance, they say, to the decorator of an auditorium, or even of rooms in schools, offices or factories. They write:

"The principles of acoustics have been developed to such an extent that the only obstacle to precise determination of the effect of design is lack of numerical data on the sound-absorbing properties of different materials.

"Sound waves follow a straight course, but their course is liable to become changed by the obstacles they meet. They are subject to reflection, deflection, conduction or absorption.

"The laws of reflection are analogous in many instances with both light and sound. A ray of light when striking a polished white tile is not much dimmed or altered. The same is true with a sound. Thus when light falls upon the walls of a very rough-painted surface, less is thrown back. Sound waves are also absorbed by such a surface.

"Sound is swallowed up easily by large unoccupied spaces and by all soft, dull-painted surfaces within reach. The audience in any room absorbs much sound by the soft, uneven, unreflecting surfaces which they present. Similarly, all curtains, hangings, and carpets deaden and absorb much sound. When there is too much reverberation in any room, the judicious presentation of a soft-painted, absorbing surface may correct it. In the British Museum reading-room the reverberation was excessive and so the bare floors were covered with cork composition and the chairs and tables covered with leather.

"Foremost authorities on acoustics in the United States are agreed upon the fact that the texture of any material will largely determine the degree to which defective acoustics develop in auditoriums. Reverberation may be due to the defective proportions of a building, the conduction of sound along the walls, or to spaces above the ceilings, below the floors or beyond the walls. Sometimes the general tone of a room is such that it is desirable to increase the reverberation. In such cases, smooth, unbroken, high-plastered walls and plastered ceilings, somewhat square and of lofty proportions, tend to give the desired effect.

"Sound is a form of energy. Energy can not be destroyed, but may be transformed. A hard surface reflects and transmits sound at each impact. A panel or a painted surface containing a sufficient number of fine pores may produce a different action. The sound passing through these pores is absorbed and converted into heat. Paints having a high volatile content, which will cause the formation of minute pores in the film, would be well suited for this purpose. This would suggest a flat wall paint. In many instances, however, such as in factories, it may be

desirable and highly advisable to use a gloss or egg-shell finish. In such cases undercoats may be built up with flat finish. It would appear to the writer that in factories in which many machines are operated, such as spinning-mills, a great reduction of noise would result from the use of any one of the three finishes mentioned. Such factories would be quiet as compared to those in which the walls are left unpainted.

"If a room is 'dead,' add metal fixtures just enough to tune up the sound. Hardness of surface aids in making rooms noisy, and this is always likely to occur where smooth, hard wall and ceiling linings are employed, as is the case in what is known as the whispering gallery at St. Paul's. If the walls and ceilings of this gallery were given several coats of paint, it would probably lose its place in the Old World as a mecca for Cook's tourists.

"It has been pointed out that in offices, typewriters, adding-machines and other office equipment, together with conversation and street noises, produce a condition that is fatal to proper mental concentration for the carrying out of good work. Fatigue of the nerves is apparently brought about, and the efficiency of the workers is greatly lessened. One manufacturer has overcome this through the use of a system of so-called acoustical correction, which, briefly stated, consists of the application of a special non-inflammable, vermin-proof felt having very high sound absorption properties. Over this is usually applied a special fabric or membrane susceptible of decoration with a special paint.

"The echo is the final obstacle which takes our interest. Echo is caused by reflection from some obstructing surface. Successive repetitions are termed multiple echoes. The echo is not always a menace, since, as a general rule, rooms are so small that the echoes blend with direct sound. When echo results from the wall, to cure such echo two methods may be considered. One method consists in changing the form of the walls so that the reflected sound no longer sets up the echo. The second method is to make the reflecting wall a good absorber, so that the sound is swallowed up and little or none reflected. Painting the wall accomplishes this. It is less expensive than the other methods and can be easily done. The paint, however, to have the greatest sound-absorbing factor should have the qualities of porosity and flexibility, consequently thickness is a very important requisite. High plasticity is desirable for certain finishes. Several successive coats of paint may be applied, or one heavy coat with the special sand, cork or sponge treatment, as outlined in the illustrations.

"In order to get at least an approximation of the sound absorbing properties of paint, a series of tests was made by one of the writers, using a specially constructed cylinder three feet long and one foot in diameter, placed horizontally on a wooden base. In the center of the cylinder a watch was suspended. The observer then stood with one ear at the open end of the cylinder, and slowly moved away. The point at which he could no longer hear the tick of the watch was marked. The cylinder was then lined with coatings such as are depicted at the top of this page. The results are given below as the averages of several readings by four observers:

GREATEST DISTANCES FROM END OF THE CYLINDER AT WHICH TICK OF A WATCH CAN BE HEARD	
Metal wall.....	40 inches
Metal wall with sand finish paint.....	19 inches
Metal wall with sponge finish paint.....	18 inches
Metal wall with cork finish paint.....	14 inches

"It will be noted from the above results that all of the finishes reduced the carrying properties of the sound over 50 per cent. The amount of sound absorbed will, of course, depend upon the thickness of the paint, the roughness of surface, porosity, and other similar data.

"In a church building that has recently come under our observation the acoustical properties proved to be very unsatisfactory. A reverberation or undue prolongation of the sound existed, and, in addition, echoes were set up. Speakers found their utterances thrown back at them, and auditors all over the house experienced difficulty in understanding what was said. After the decoration of the auditorium with a soft lithopone flat wall paint, it was the consensus of opinion that the acoustics had been very materially improved.

"Another instance where we have been privileged to see the effect of paint was in the dining-hall of a large Eastern country club having a high arched ceiling. A perfect babel of voices prevented conversation during the dinner-hour. The ceiling and walls were given two additional coats of paint, and stippled. Marked improvement was noted.

"When the surface of the walls and ceilings of a certain auditorium where the reverberation was excessive were changed from a smooth plaster to a rough plaster surface created by the circular motion of a barbed trowel, and then painted and stippled, the reverberations were materially reduced.

"That the application of any type of interior paint will greatly lessen reverberation, there can be no doubt. To date there is apparently but little information regarding the sound-transmitting properties of various paints.

"The value of auxiliaries to acoustics, especially the subtler ones, such as paint, are often underrated, since the benefits they produce are less self-evident than the injuries resulting from great defects. If an auditorium is free from echo, the architect is apt to forget to inquire whether music sounds pleasant or speakers feel at ease. The architect who wishes to accomplish most should remember that it is within his power to determine, by the aid of acoustical paint, whether his rooms shall be good or bad music rooms, and whether his churches and auditoriums shall be the joy or the bane of the speakers who use them."

BURNING METAL UNDER WATER—A smashed submarine water-main in New York harbor was repaired with the electric torch recently, by methods borrowed from marine salvage practise, we are told by *The Engineering News Record* (New York). Last month a section of the 36-inch subaqueous cast-iron pipe line delivering Catskill water from Brooklyn under the Narrows to Staten Island, was broken by the spud of a dredge at a depth of 50 feet, and the problem was to remove the damaged section, replace it and get the line back into service. We read:

"The novel and outstanding feature of the operations was the use of an under-water electric torch for cutting out the broken section of pipe, which had a minimum thickness of 1½ in. To have attempted this work by drilling or other cutting methods would have been a slow and tedious process. With the electric torch, however, the damaged section of pipe had been removed nine days after the burning began.

"In ordinary water-works practise such methods as were employed on the Narrows siphon will rarely be used, but the under-water cutting of metal has many other engineering applications, and the effectiveness of the tool developed for such work has been demonstrated not only on the Narrows siphon job but on a number of ship-salvage operations. It was for the latter type of work, in fact, that the electric torch was primarily developed. It was employed in salvaging the steamship *St. Paul*, which turned over on her side at a North River pier in New York, April 25, 1918; here the under-water torch was used to cut large drainage holes between compartments. Again, in raising the

army transport *America*, which listed and sank at her pier October 16, 1918, drainage holes were cut under water through a number of bulkheads. While both rolled and cast steel have previously been cut under water by the electric torch, the Narrows siphon work represents the first successful submarine burning of the much more refractory material, cast iron."

DOES TOBACCO MAKE ONE TIRED?

THE EFFECTS of tobacco upon the efficiency of persons engaged in strenuous mental occupation have recently been studied at Stanford University, California, by J. P. Bomberg and E. G. Martin, says *Good Health* (Battle Creek, Mich.):

"Telegraph operators were selected as the subjects. As all were smokers, the comparisons were made not between smokers and non-smokers but between heavy smokers and light smokers. Men who smoked much of the time when off duty were regarded as heavy smokers. Those who smoked two or three cigarettes before work at noon and after work, or smoked two pipes or one cigar a day were considered as light smokers. None of the operators smoked when at work. There was also a group of women who were non-smokers whose performance might be considered as establishing a standard for non-smokers, altho this is hardly fair, for the reason that it is reasonable to expect of the average man a greater degree of endurance than that of the average woman. The results of the research showed the relative efficiency of the heavy smokers, light smokers and non-smokers to be as 38 for the heavy smokers, 40.1 for the light smokers and 46.6 for the women. From this it appears that the efficiency of heavy smokers was 95 per cent as compared with the light smokers and 80 per cent, as compared with the non-smoking women. This is certainly a bad showing for the smokers."

In this connection a process for rendering tobacco innocuous, while still remaining agreeable, is of interest. The *Bibliothèque Universelle* (Paris) says that it has been strongly recommended by a French physician to a medical committee at Bouches-du-Rhône. We read:

"This process is simplicity itself, consisting merely in adding to the tobacco the stamens of the little plant known as 'colt's-foot.' Dr. Ambial declares that he can smoke thirty cigarettes a day of this mixture without inconvenience. The only change noticeable in the tobacco, which retains its aroma perfectly, is that it seems to acquire some resemblance to Oriental tobacco."

WHAT PLANT IS THIS?—Many of us, writes Herbert W. Faulkner of Washington, Conn., in *The Guide to Nature* (Sound Beach, Conn.), have seen flowerlike snow crystals, but who has ever found a specimen of this strange and beautiful plant, pictured in the illustration above, which he discovered in the wintertime? He continues:

"My nephew brought it in to me from a winter's walk along the railway, and I at first mistook it for seaweed dried under pressure, and was much surprised to discover that the beautiful and delicate spray is made of steel. My nephew found many of these 'plants' on the snow close beside the rails, where the wheels of heavy locomotives had shaved off thin scales of steel which had curved and twisted into exquisite forms strangely imitating mosses or seaweeds with all their beauty and charm. Of course these steel shavings are frequently forming unobserved and soon dissolve in rust, but in winter they are easily seen upon the white snow."

ASTONISHING GROWTH OF THE RADIOTELEPHONE

AN ARTICLE BY MR. ARTHUR RUHL, in *Leslie's Weekly* (New York), records the writer's feelings after hearing his first radio concert, and gives a popular account of the amazing recent growth of interest in radio, which Mr. Hoover is quoted as describing as "one of the most astounding things that have come under my observation of American life."

Under a picture that shows a family group of three generations "listening in," we find a caption which summarizes the situation thus: "For a time interest in the wireless telephone was confined to a few sapient scientists who talked a jargon that failed to arouse any enthusiasm with the ordinary mortal. Then the small boy suddenly discovered that he could have a world of fun with a 'radio' telephone. Presently the small boy's elders became interested. Men, women and children caught the wireless fever, and as a result to-day there are in this country over 600,000 persons who own apparatus with which to receive wireless messages."

Mr. Ruhl gives us illustrations of the reaction of some of the listeners to the messages that come to them out of the air. For example:

"An Englishman, employee of a power company buried somewhere in the Canadian snows, wrote the other day to the American company which 'broadcasts' a daily wireless-telephone service—news, music, sermons, crop and weather reports and so on—from Newark, N. J.:

"I stepped outside the shack for a while, while they were listening to you inside. It was a cold, clear, bright night, stars hanging like jewels from the sky, five feet of snow, 42 below zero, not a sound but the trees snapping in the frost, and yet, if everybody only knew it, the air was full of sweet music.

"I remember the time when to be out here was to be out of the world—isolation complete. Not a soul to hear or see for months on end. Six months of snow and ice, fighting back a frozen death with an ax and stove wood, in a seemingly never-ending battle.

"But the long nights are long no longer—KDKA (call name for one of the transmitting stations) and WJZ are right here in the shack shortly after sundown, and you come in so plain that the dog used to bark at you, even tho I had the headphones clamped tight on my head. He does not bark any more. He knows you the same as I do—just pricks up his ears at first, then sits blinking at the bulbs and listens. . . ."

"In the offices of the 'broadcasting' companies you will find hundreds of letters of this sort—not so eloquently expressed, perhaps, but each telling, in its way, how magic came out of the air to people listening scores of hundreds of miles away. There are letters full of technical jargon which the writers themselves wouldn't have understood a year ago, probably, and which the greater part of the intelligent public wouldn't understand to-day

—the use of 'broadcast' as a verb is a matter of recent months. There are letters from invalids who listened to concerts or sermons from their beds; from farmers or farmers' wives, grateful for news of market prices; from ships' officers at sea; and from the American small boy, whose interest in the wireless telephone is so important an element in the development both of the telephone and of the small boy himself, that the Government, the other day, in the person of Mr. Hoover, announced its intention to protect it.

"The present popularity of the wireless telephone began with the establishment of powerful 'broadcasting' stations which send out a regular daily program of news, special talks of various sorts, sermons and music. The waves are flung out into space, they spread in concentric circles just as the waves spread on a quiet pond when a stone is flung into the water, and all the individual has to do is to hang up his aerial wire, attach it to his receiver and anything he can pick up is his. No thought or bother, but something going on every hour on the hour, and in the evenings a regular concert.

"About one-tenth of the population of the United States can be served by WJZ (Newark, N. J.)—by its everyday, normal broadcasting, that is to say, and not considering the chance conditions that permit messages to be picked up somewhere in the Pacific. Among the other well-known stations are KDKA at East Pittsburgh; WBZ at Springfield, Mass.; KYW at Chicago (all these Westinghouse); 1XE (Amrad) near Boston; WDW (Radio Corporation), Roselle Park, N. J.; 6XG (Atlantic Pacific) at San Francisco; 6XG (Meyberg) at San Francisco, and 6XAK (Meyberg) at Los Angeles.

"There are stations at various colleges. The physics department of the University of Wisconsin broadcasts over a radius of sixty miles in broad daylight and further at night. (Radio waves carry better at night than in the daytime and better in winter than in summer). The University sends out weather reports, market and other news of special interest to farmers, concerts and so on, and it has issued mimeographed forms so that the receiver can jot down the information picked up with a minimum use of time.

"A typical week's program broadcasted from WJZ recently included a Sunday sermon, stories for children, talks on such varied subjects as play-writing and hygiene of the mouth, 'how to make a house into a home,' and writing scenarios for the movies and all sorts of vocal and orchestral music. Naturally most of this station's broadcasting is picked up in the New York neighborhood by people with inexpensive home receiving sets. When the distance is greater than fifty miles, a set with what is called a 'vacuum tube detector' instead of the cheaper 'crystal detector' is generally necessary, and such a set may cost anywhere from \$50 up. As the distance increases there must be amplifying apparatus and other refinements. Roughly speaking, and considering comparatively short distances, it is said that the cost of wireless telephone receiving apparatus is about \$1 for every mile of distance from the transmitter."

SECRETARY HUGHES ENJOYING A MUSICAL NUMBER

On the radiophone outfit recently installed on his desk in the State Department.

THE RADIOTELEPHONE ON THE FARM

IN AN ARTICLE in *Wallace's Farmer* (Des Moines, Iowa), Mr. A. M. Price calls attention to the advantages of radio for the residents of rural districts, and incidentally shows that the Middle West is well in the van—as it is wont to be in worth-while matters—in the conduct of that newest form of public-utility, radio broadcasting. In familiar style he thus addresses his readers:

"How would you like to sit in your own living-room, after the chores are done, and be able to talk to a far-distant friend or relative; or listen to a lecture being delivered by some prominent speaker in a distant city—Chicago, New York, or Denver, perhaps; or enjoy a good opera performance being given in Chicago; or listen to the music of an orchestra or band playing in St. Louis or St. Paul; or, perhaps, move back the furniture, roll up the rugs and dance to the music which has its origin many miles away?

"How would you like to know every evening what kind of weather the latest returns of the Weather Bureau indicate that the morrow will bring; what the hog market is, the egg market, or the corn market; in fact, what the closing price of the day happens to be on any product you have for sale?

"The government bureaus are cooperating with the needs of the farmer by sending out daily weather forecasts and storm warnings, market reports and correct time signals.

"In addition to the advantages of the radiotelephone just mentioned, there are numerous other advantages. The radiotelephone brings the world to the operator's finger-tips. He may listen to the news of a flood in Colorado, a train wreck in New York, a new attempt to go over Niagara Falls in a barrel, or whatever the latest news may be; relatives and friends living miles apart may keep in close touch with each other. Phonograph, instrumental or vocal music is as easily transmitted as the human voice, and all may be heard with the same set of receiving instruments.

"There is a certain grocer in Des Moines, Iowa, who talks to his customers by radiophone, giving them prices on staple goods and advertising his special sales. Many people within a good radius listen to his reports, spread the news to their neighbors and then go to take advantage of the special sales.

"Operas, orchestra music, band concerts and lectures may be heard without the trouble and expense of going to the theater, auditorium or lecture-hall. If one has a knowledge of the International Morse code, many additional things of interest may be heard by using the same instruments as for the radiotelephone.

"The following is a partial list of the stations operating regularly and which can be heard in the Middle West. The government stations at Washington, Chicago and New Orleans send out correct time signals, news and weather forecasts; the Iowa State University station at Iowa City and the Iowa State College station at Ames work during the evenings; general news items transmitted twice daily and musical concerts sent out Sundays is the program from the Denver station; the Nebraska State University station at Lincoln sends out concerts every evening."

The suggestion that the farmers of Iowa and Nebraska may listen to records sent from New York, Washington, New Orleans, or Denver would imply that the Middle Westerner is expected to use a multiplex-vacuum-tube radio equipment of the most approved model. And why should he not? One recalls that the value of farm acreage in Iowa more than doubled in the

decade 1901-1910. The Hawkeye farmer has but to "cleave to his acre" to attain opulence, and with radio equipment, as with other labor-saving and pleasure-giving mechanisms, none but the best should be good enough for him. Then, too, in the matter of far-listening he may hope to emulate the example of Dr. Taylor, of the University of North Dakota, one of whose specialties is the picking up of messages from Europe on one hand and Japan on the other.

COMBINING RADIO AND WIRE TELEPHONY

THE NEWSPAPERS VERY APPROPRIATELY gave a good deal of space a few weeks ago to accounts of a feat in radiotelephony that is regarded as the augury of a new era in practical communication between ship passengers and their friends ashore. The distinctive feature of the episode consisted of the combination of ordinary telephone and radiotelephone, permitting a direct conversation between an inland telephone station in Connecticut and a steamship three hundred and seventy miles out from the port of New York. The New

York *World* gives a graphic diagram which shows the channels of communication in both directions; and the Pittsburgh *Sun* makes the following suggestive comment:

"When the president of the American Telephone and Telegraph Company, from his home in Connecticut, conversed with the captain of the United States liner *America*, 370 miles out from New York, the highest pinnacle apparently was reached in the development of wireless communication. The imagination can not go much farther without accepting telepathy as being among the practical possibilities. There will be great improvements, of course, in

Courtesy of the New York "World."

radiotelephony, but no radical change in the essential features seems likely.

"It is estimated that 200,000 persons heard the conversation between the telephone company officer and the captain of the steamer. They were amateur radio operators who 'listened in.' The absence of privacy in radio communication is objectionable, and may prevent its wholly superseding the 'old-fashioned' telephone and telegraph.

"Plans are already being made to put telephones into the staterooms of steamers, and the American Telephone and Telegraph Company and the Radio Corporation of America announce their willingness to connect land telephone subscribers with ships either in the Atlantic or Pacific oceans as soon as the public demands it. Such conversations soon will become commonplace.

"The time has arrived when the nomenclature and terminology of wireless communication should be revised and simplified. For wireless or radiotelegraphy and telephony there should be substituted a single short word. Appropriate verbs meaning to send or receive such a message also should be coined. The mistakes made in coining names for other recent inventions should be avoided. The automobile was first called the 'horseless carriage.' 'Automobile' is an unsatisfactory substitute because its length causes variation in the pronunciation, some persons placing greatest emphasis on the first syllable and others on the penult. 'Aeroplane' was also an awkward word, generally mispronounced. The War Department did well to change it to 'airplane.' It is to be hoped that such errors will not be made in devising the terminology of wireless communication."

A LIFE-BOAT EQUIPPED WITH RADIO

WE HAVE HAD OCCASION to note that there is a striking tendency in modern radio practise to get away from the sky-high antenna. For receiving apparatus in particular, it is quite feasible to do this, provided you have an up-to-date equipment of vacuum-tube amplifiers. The so-called loop antenna is becoming increasingly popular,

and numberless amateurs are experimenting with plans to cut out the aerial. And not the amateur only. The *New York Times* gives an account of a successful effort made by the United States Coast Guard Service in cooperation with the Bureau of Standards to apply a modification of the loop antenna idea to the equipment of motor life-boats.

"Heretofore the principal objection against the use of radio by life-boats was that the apparatus was too bulky and projected over the deck level of the boats, and as most of the rescue work is performed in stormy weather its installation was deemed impracticable and unsafe. No loose wires above, in or under the boats is permissible, since these would interfere with the proper handling of the boats and the throwing of lines. For this reason the installation of a small antenna of the ordinary elevated type, even a short distance above the deck, would be very undesirable.

"After considerable investigation it was decided that a coil antenna offered the best prospects for success. A coil antenna need not be insulated from the earth to give good results. Two vertical pipes grounded at each end and having a connection made across their upper ends have been used successfully for this purpose, and several years ago two members of the staff of the Bureau of Standards developed a coil antenna for use on submarines, consisting of a single wire elevated a short distance above the submarine and connected at each end to the metallic hull of the vessel. This constituted a single-turn coil antenna of which the hull formed a part, and successful communication has been carried on with a submarine so equipped.

"A similar arrangement was adopted on the motor life-boat for the Coast Guard. The boat on which the installation was made was thirty-six feet long, driven by a gasoline engine and was equipped with a heavy metal keel. The receiving and transmitting set was installed on the boat as far forward as possible and from it a wire was run forward connected to the keel, while two other wires, heavily insulated, were run aft along the guards and also connected to the keel. A particular kind of coil antenna was thus formed, of which the keel constituted a part.

"This arrangement was satisfactory from a navigating point of view. The transmitting apparatus used at the station and on the boat were identical and consisted of a 5-watt radio telephone set. The wave-length used for transmission from the boat was 380 meters and that used for transmission from the shore station was 675 meters. The receiving equipment used included an amplifier employing three stages of radio-frequency amplification and two stages of audio-frequency amplification and was specially designed for the wave-length used. This apparatus as installed on the boat was extremely compact."

It is said that the test has proved so satisfactory that a number of the more important Coast Guard Stations will soon have radio telephones installed, enabling them to keep in constant communication with boats engaged in rescue work. Thus radio registers another practical triumph.

A RECEIVING-STATION WITHOUT AERIAL

THE AERIAL IS THE ONLY PART of a radio outfit with which the average layman has personal acquaintance. It is also the part the installation of which the novice finds most bothersome. The beginner is assured that he can not do without it; but there is a growing body of evidence that any fairly accomplished amateur, equipped with the modern type of regenerative receiving outfit, may garner messages with a compact tuning coil, omitting the aerial to which this apparatus is usually attached. In *Wireless Age* (New York), Mr. Lee Sutherlin tells how he has personally accomplished this feat.

"These are days when so many things are being done in radio telegraphy and telephony that most of us are inclined to take much of the new development as a matter of course. If we consider all of the minor details of receiving circuits we soon find that there are scores of different ones. The exact circuit to be used in any case usually depends upon the apparatus at hand.

"The accompanying diagram shows a circuit which can be made up by using a small amount of relatively simple apparatus, to be used without an aerial. The values of the constants of the circuits are the same as those used in any ordinary short-wave receiver with one stage of audio amplification. It is not necessary to use separate 'A' batteries as shown. The tuning is accomplished by varying L (inductance) in steps and making fine adjustments with C (variable condenser). The ground employed was the water pipe of a local heating system.

"Using the above circuit, the writer, located just outside of Washington, D. C., was able to hear the concerts sent out by KDKA, the broadcasting station of the Westinghouse Electric and Manufacturing Co., at East Pittsburgh, Pa. KDKA was using 650 watts in the antenna. During the past year while located in Pittsburgh, Pa., I often heard the high-power stations of the East Coast and Canada with a single tube and without an aerial."

NEWS BY RADIO FOR RAIL PASSENGERS—The Chicago, Milwaukee and St. Paul Railway, we read in the *New York Evening Post*, has equipped its trains with a radio system for the benefit of passengers. It seems that arrangements have been made for the installation of complete radio systems in the club cars of the Pioneer Limited trains between Chicago, St. Paul and Minneapolis. All news of the day will be received.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

OUR LIMPING CIVILIZATION

AMERICANS MUST LOVE to have their ears boxed by foreigners, else their newspapers would not be so hospitable to the "opinions" of foreign visitors. In one issue the New York *Herald* has four different articles dealing with different phases of American civilization from which one might derive the conviction that such a commodity has no existence in fact. Our critics in these cases are British and French. One of the former declares that "any citizen of the United States who strives to be an artist in his own land finds himself practically without patronage for the simple reason that Americans in general have no critical faculty whatever." This is a bouncer and may be considered in the light of the fact that Mr. C. R. W. Nevinson, who makes it, complains that he couldn't sell his pictures here. Of course, he hurriedly goes on with a magnificent disclaimer: "Any Americans who have the idea that I am merely annoyed by a lack of financial success among them are quite wrong; on the contrary, I regard that failure as a splendid compliment." Here is even more critical magnanimity:

"It is they who are annoyed that it should have occurred to a stranger to go out and paint New York, the most wonderful city in the world, when American artists were being driven across the Atlantic to paint old bits of Paris.

"My!" they said to themselves in wrath, 'that you should have painted *our* city!'

"I am, then, not in the least bit prejudiced against the United States. I still believe that their holy city is the most wonderful city in all the world. I think that American architects are the only architects we have. I think that Americans have the opportunity of being great sculptors.

"Their Russian and German element are keen supporters of music. The population in general has a fine feeling for literature. And when one comes to the art of living, I agree that the American hotel is an admirable institution. Yet just as they have nothing in the United States quite like the quiet dignity of our Claridge's so in pictorial art the American citizen must come to Europe, and particularly to London, if he is to keep abreast of his own generation.

"They see that for themselves in so far as the acquisition of paintings of another day goes. Thanks to English buyers who spend most of their time in Europe, America has now many art collections which I willingly grant are first-rate. Yet because of that lack of a living critical faculty they will only buy the gilt-edged dead. They are unaware that in the world to-day there are several artists as good as Degas, the equal of Monet.

"Here emphatically they have lost their courage. They are afraid to buy what they like; they rely entirely on the auction-room value. To read the American art news is like reading our *Financial Times*. The American art critic has no use for a picture which does not tell a story. . . .

"An explanation of the death of the critical faculty in American art is that nobody has the facilities to see modern paintings.

They have facilities to read books. They have patronage for architects and sculptors. They have facilities for the illustrator; for the painter—no. There is no system of distribution; in all the big cities of America outside New York there are not more than fifty dealers. Facilities do exist, scholarships and art schools, and so forth, for driving a man into art, but nothing is done for him when he ought to be earning his living.

"They will say nice words in praise of American artists and they will support the growing chauvinist movement for American art. But they will not buy American pictures; that is the last step that occurs to anybody. In this respect the women are more responsible than their men.

"The absence of a critical faculty not only impels Americans to trust the auction room, to invest in the gilt-edged dead, to avoid their own native talent. It has the most alarming consequences for the artists themselves. The real artists of New York, by whom I mean the adventurers in art, the creators, have to earn their living as draymen or waiters, achieving their intellectual work when they are dead beat with manual labor."

Perhaps Mr. Nevinson wishes to be taken as speaking "ironically" for we find in his "fare-

well to America," printed in the London *Nation and Athenaeum*, this amid much of a similar nature:

"Good-by to the land where grotesque exaggeration is called humor, and people gape in bewilderment at irony, as a bullock gapes at a dog straying in his field! Good-by to the land where strangers say 'Glad to meet you, sir,' and really seem glad. I am going to a land of ancient speech where we never say we are glad to meet a stranger, and seldom are; where humor is understatement and irony is our habitual resource in danger or distress; where children are told they are meant to be seen and not heard, where it is 'bad form' to express emotion, and suspenders are a strictly feminine article of attire. Good-by, America! I am going home."

Turning to a French critic, we find that Professor Albert Feuillerat says something of the same kind of American students. Residing temporarily at Yale he finds that "in things of the mind the American student is too docile." His faith in his

Courtesy of the New York "Sunday Herald."

"UNPREJUDICED AGAINST THE UNITED STATES."

Mr. C. R. W. Nevinson, a British artist, whose works did not sell here, avers that "Americans in general have no critical faculty whatever."

teacher is so great that it "blunts the critical sense and the desire for originality." Writing in the *Revue des Deux Mondes* (Paris) of his "Six Months at Yale University" he says:

"I have sometimes wished to encounter more resistance to my ideas, less admiring submission. It is a curious thing, these young men, capable of throwing themselves madly into battle, these born adventurers who find fierce delight in surmounting real obstacles, are almost pusillanimous when they have to engage in a struggle with ideas.

"That comes without doubt from their being trained to learn

origin but of European training and alliance. She is Marquise Clara Lanza, daughter of Surgeon-General Hammond of the Union Army, and a friend and collaborator of George Moore. She writes thus of our present-day school of realistic fiction:

"What passes for realism in fiction has all the earmarks of a pose. It is modernism gone mad. It is not a truthful exposition of life, nor does it give us anything worth while. Select a batch of the most widely read and discusst novels of recent publication—'Main Street,' 'Erik Dorn,' 'Moon Calf,' 'Cytherea,' 'Brass' and those much lauded English importations, 'Ursula Trent,' 'Coquette' and 'Dangerous Ages'—and what do we find? Not one fine or noble character, not a single sentiment reflecting the higher and better emotions of the human heart. The best of the lot is perhaps 'Doc' Kinnicott in Sinclair Lewis's 'best seller,' who at times arouses in us something akin to admiration. But as a whole they are a sorry crowd. The women, when they are not insufferably dull or neurotic, are pleasure-loving dolls without sufficient moral stamina to prevent their toppling headlong into the first pitfall that yawns before them. On every page Sex stalks triumphant. The men believe in nothing. They are superegoists, devoid of ideals and aspirations, hard, arrogant and vicious. All, men and women alike, are soulless, spiritually dead, disillusioned and weary of existence before they have begun to live. We search vainly for the refreshing touch of humor so prized in the novelists of old, and we fail to sense that redeeming breath of genius that renders the author a law unto himself.

"Much has been said and written concerning the superior workmanship displayed by these young writers, but, with one or two exceptions, I have not been able to discover it. The style of 'Main Street' is that of a reporter on a daily paper, correct enough, but totally lacking in distinction or grace. In 'Erik Dorn' it is jerky, blazing and sputtering along like a pack of firecrackers to which a lighted match has been applied. In 'Cytherea,' with its two sharply contrasted types of womanhood—the mother and the harlot—which is the whole book, the sentences are often so clumsily constructed that one has to read them over several times before the author's meaning can be grasped. In 'The Narrow House,' tremendously praised, we are introduced to the most disgusting family conceivable, described in choppy syllables, and with a *Leitmotif* that impels the various members to dash up-stairs at stated intervals and cast themselves upon beds and chairs."

COMING OF THE GUITRYS—Despite the great tide of travel to France, and America's supposed love for the French people, the art of the French stage has never gained a strong popularity with us. But managers are courageous and a new venture is promised for next season. If Lucien Guitry and his son Sacha come before the American

public next season we shall see, says the *New York Herald*, "two of the most beloved actors of the Paris stage of to-day." For—

"They represent the theater of France in its most modern manifestation. The senior Guitry has never been seen here. The son is known to America through the performance of his plays. David Belasco has produced in his inimitable fashion 'Deburau' and 'The Grand Duke,' and before these two works 'Sleeping Partners,' a London adaptation of 'Faisons un Rêve,' had been seen. So the dramatic work of Sacha Guitry is already fairly well known here.

"If these actors are accompanied by a selected company of French players, the modern theater of Paris will be well represented before our public. A really typical series of performances in French has not been seen here in some years. The seasons of the Vieux Colombie were scarcely characteristic of the French theater of the day. Jacques Copeau had a number of revolutionary, if interesting, theories which had not even taken root in the theater of his own land before they were transplanted to the sandy soil any enterprise in a foreign tongue must always find in New York. He has reopened his Playhouse of the Old Dove Cote on the banks of the Seine and the French public is said to be

"MY! THAT YOU SHOULD HAVE PAINTED OUR CITY!"

Said Americans to Nevinson, astonished at his painting New York.

rather than to think. It is a tendency of education which when pushed to excess reacts against the end sought. In all stages of education students are urged not to lose sight of the real. Whether in a drawing, in mathematics, in history, always the same desire appears to make knowledge of practical utility. All that is purely bookish is condemned, all that is based on observation is lauded. Thus is developed little by little the idea that in all mental work the facts are the essential thing, that without them the thought is of no consequence. A great truth in itself, but one which leads by a treacherous descent to the error of supposing that the facts are more important than the thought, that they are the only things that count.

"The best among the students rebel against this narrow dogma; a great number, I fear, accept it implicitly as indisputable. One sees it in the avidity with which in newspapers, in lectures the public seeks concrete facts, anecdotes, in short, everything that is called information. One sees it in the taste for statistics which is general, and in this art Americans are past masters. Now what is the pursuit of statistics but the idolatry of facts erected into a science?"

A third protestor, served up by the *Herald*, is of American

KRAZY KAT.

NO BUSINESS

—Herriman in the New York Evening Journal.

growing fonder of his combinations of the literary drama and a new scheme of decoration.

"Maurice Grau, who lived much of the time in Paris, never grew weary of exploiting the stage art of France, whether it happened to be lyric or dramatic. Under his management, Sarah Bernhardt made all her appearances in this country so long as he lived. Then he was tireless in importing other favorites, including Jean Mounet-Sully, Jane Hading, Gabrielle Réjane and Constant Coquelin. There was a certain degree of idealism in these efforts, since Sarah Bernhardt alone repaid financially his own outlay.

"To this day she holds the distinction of being the only actress playing in a foreign tongue who ever met here with any considerable degree of material success. If any other distinguished visitor came near to sharing this fame it was Eleonora Duse. For the other artists there was every kind of appreciation except that which expresses itself most effectively at the box office.

"Times have changed and it may be that the theater-going public of the day is sufficiently cosmopolitan to support a not too extended season of plays in French. Knowledge of the language is every year more wide-spread. There is increasing interest in the theater in every form. So it may be that the visit of these players will rival Mme. Bernhardt's unique achievement."

A JAZZ BALLET

REAL AMERICAN BALLET has made a beginning in a jazz composition that can't be fox-trotted. This is not saying that there have been no other attempts at American ballet. When Henry Gilbert wrote the "Dance in the Place Congo" there was a glorification of an old New Orleans ritual, but critics found the music itself not so far unrelated to some of its European congeners. Europe could lay no claim to John Alden Carpenter's "Krazy Kat" ballet, for the scenario found its birth in the comic strip that George Herriman contributes to the *New York Evening Journal*, and the jazz element of the music is American *sui generis*. When the Adolph Bolm Ballet organization gave some recent demonstrations of this work the audience grinned at the "funny noises that were meant to be funny." There was "nothing arty about this exhibit," says Deems Taylor, writing in *Vanity Fair* (New York), and singling himself out from his brother critics as almost the only one who liked the Carpenter ballet. Of course—

"You know 'Krazy Kat,' don't you—that classic of the comic 'strip' created by George Herriman, wherein the traditional relations between cat and mouse are reversed, and *Krazy*, he of the indeterminate gender, is perpetually being beamed with a brick by *Ignatz Mouse*? It is of what might be called the interecine school of humor: either you are pro-Kat, and pity the antis, or you are anti-Kat, and *conspuez les pros!* It's like Alice in Wonderland or French oysters: you worship or loathe. Carpenter's ballet was obviously the work of a pro. *Krazy* and *Ignatz* and *Officer Pup* and *Joe Stork* were all there, amid scenery devised by the master hand of George Herriman himself. The plot involved *Krazy's* preparations for a Grand Ball, the coming of *Ignatz Mouse* disguised as a katnip merchant, *Krazy's* undoing by a sprig of katnip, and his final beaming at the hand—and brick—of *Ignatz*.

"The music critics didn't like it much. Several of them had never heard of *Krazy Kat*, and displayed a disposition to lecture

the composer for wasting his time on such lowbrow material. And yet . . . I don't know. Perhaps some of us, that afternoon, realized a little more clearly just what 'American' means. For the ballet, and Carpenter's setting, are utterly of America. No composer of any other nationality would have chosen just that subject, and only Stravinsky, in all the world of music could have written as good a score for it.

"I heard one listener remark contemptuously that he could hear 'that sort of thing' done better at the Music Box Review or any vaudeville house. But he couldn't. The 'Krazy Kat' score, for all its broad burlesque—its vulgarity, if you like—is a logical, well-developed piece of dramatic composition. Its themes are low comedy, but what makes them effective is the immense technical skill with which they are handled. The orchestra is small, and the instrumentation is jazzy; but it is sophisticated jazz. Only a man who had orchestral timbers at his finger-tips could have produced such grotesque tone colors with such limited means.

"Not that we need take 'Krazy Kat' too hard. Dadaism is as demoralizing as highbrowism, and jazz isn't going to be the salvation of American music any more than Bud Fisher is going to be the salvation of American painting. But 'Krazy Kat' is good fun, and no more to be sniffed at than 'Gianni Schicchi' or 'Petrushka' or 'The Barber of Seville.' Its composer is one of the most interesting people in American music to-day."

Mr. Carpenter, dubbed by Mr. Taylor as "America's first dramatic composer," is also described as "probably the only ship chandler in the world who writes music." We read of him further:

"He is vice-president of the firm of George B. Carpenter & Sons, Chicago, Ill., Mill, Railway & Ship Supplies, and has been with the concern (it was his father's) ever since he graduated at Harvard in 1896. Most of his musical education was received in this country. His mother was a musician, and he studied the piano with her. At Harvard he worked under John Knowles Paine, and in 1906 he studied composition for a while with Edward Elgar, in Rome. The bulk of his training, however, he credits to Bernard Ziehn, of Chicago, with whom he studied from 1908 to 1912.

"He wrote a couple of albums of children's songs, one of which, 'Improving Songs for Anxious Children,' published in 1907, is still widely popular. But the musical world first sat up and stared at him in 1914, when he published 'Gitanjali,' his admirable collection of Tagore settings for solo voice. A year later he invaded the orchestral field with his suite, 'Adventures in a Perambulator.' The Chicago and New York Symphony orchestras both played it, and later it found its way to Europe. In 1916 came a 'Concertino' for piano and orchestra, and 'Waterecolors,' another song collection, this time with lyrics from the Chinese. In 1917 his first symphony was played at the Norfolk (Conn.) music festival, and in 1919 the Chicago Opera Association produced his longest and so far most important work, the ballet-pantomime, 'The Birthday of the Infanta.'

"He has literary gifts of a high order. He wrote a long program note for 'Adventures in a Perambulator,' and the printed scenarios of the 'Birthday of the Infanta' and 'Krazy Kat.' They all display an English style of limpid clarity, a keen sense of words, and a delicacy and charm of humor that makes them good reading anywhere. His music sounds French until you analyze it, when you discover that it sounds like Carpenter. His wife wrote the lyrics of some of his songs, and is a designer of stage decorations."

MRS. ASQUITH—AS WE SEE HER AND SHE SEES US

MARGOT IS POSED as "trouble," and the trouble with her, from the American view-point, is that she came "to sell something at a high price without having anything to sell." Thus the *St. Louis Star* puts itself in line with one of her charges against America that it is "too much occupied with material interests." Its next sentence might cause her to revise her statement about the chivalry of American men—granting that a man wrote the editorial. It reads: "She will no doubt admit that she is not worth \$2.50 to look at, and after

BOLM AS THE KRAZY KAT.

Who is credited with helping "some of us to realize just what 'American' means."

reading an account of her talk she discloses no message that is worth \$2.50 to listen to." This is said of the woman who provided at least one international topic, her view of the failure of prohibition in this country, and who charged the press with inaccuracy in reporting her. Opinions upon this remarkable woman were sought by us from the press of the various cities she visited, and the symposium here presented is furnished from these eye-witnesses of her tour. St. Louis seems to have subjected Mrs. Asquith to one of her most trying tests, and while it charges her with impertinence as a lecturer it grants she is a sport as a woman. The *Star*, first of all, finds some excuse for her in the shortcomings of her predecessors.

"To an extent the lady is suffering from the flood of British lecturers that have preceded her in recent months. After spending good money listening to resonant platitudes from a Chesterton, tricky transparencies from W. L. George, and mildewed explanations of British failures in the Great War by former army officers and writers, the American people are inclined to cry enough.

"At that Mrs. Asquith gave St. Louis a fine exemplification of good sportsmanship and nerve. At the Odeon Tuesday night she faced an expanse of vacant seats and a callous frigidity that would have unnerved a gasoline-circuit *Hamlet*, yet she didn't bat an eye and went about her business as if addressing an overflow meeting at Albert Hall in London. Long after America has forgotten what Mrs. Asquith said or tried to say, it will remember her as a spunky woman and a courageously truthful one."

St. Louis makes amends in this tribute for what it did for the lady as she appeared before them. Quoting from the *Star's* account:

"The Auditorium was glaringly lighted so that the vast stretches of vacant seats seemed to stare and taunt. . . .

"At this torturing moment on walked the Englishwoman, once the toast of thousands and now the subject of conversation for many more.

"That instant seemed to shriek.

"What had happened? Mrs. Asquith must have known. Each member of the audience sensed it.

"Margot Asquith's reputation had overtaken and overwhelmed her. The hundreds of newspaper dispatches which have been drifting into St. Louis had surrounded her with a grotesquerie of false impressions and misquotations. If a rhinoceros with fangs had lumbered onto the stage, he could not have satisfied the expectancy which every one of Margot Asquith's hearers entertained.

"The atmosphere of disappointment seemed to coagulate into lumps and drop upon the consciousness of the audience with painful thuds. Two dollars and fifty cents for this!

"Lady Asquith seated herself in a chair, smelled her bouquet of roses which should have contained smelling salts, and smiled at City Counselor Caulfield as he began his speech of introduction.

"Women in the audience settled back with half-malicious, half-pitying nods of their heads. Margot Asquith is not beautiful.

"When she arose to speak her draped gown of gray velvet betrayed a suffering spareness of embonpoint. The lights were cruel. They would have been devastating to any woman.

"Thus with every possible element against her, Lady Asquith began her lecture on 'People, Politics and Events.'

"Before she had progressed very far, every literate person in the Odeon knew that she was not going to be able to do the impossible. The simile of a partially squeezed lemon inevitably arrayed itself against her. Her acidity had been tasted before. She would draw laughter, but it would be of the reminiscent sort. Only those who had not read her autobiography nor seen a paper for three years could be startled.

"Yet, imperceptibly, as she continued with her lecture, the tension eased. Those in the audience saw that she did not flinch, that her poise never lessened for a moment. Confidence in her returned; then shame at one's own criticism crept in, then admiration at the pluck of a thoroughbred; then interest and, finally, the hard-wrung tribute that here was a woman of situation-proof courage.

"She was fine. In her own British terms, she was sporting."

Mrs. Asquith's references to Prohibition have naturally called out more comment than what she has said on any other topic. She came to us believing we had "made a splendid try," but her travels convinced her that we had created drunkards among the young. She says that such a thing as a girl drunk at a ball in Europe is unheard of, and the *Louisville Courier-Journal* retorts:

"Unheard of? By whom? A writer for a British weekly, whose article is reprinted in this country by the *Living Age*, declares that 'whether we like it or not' the cocktail-drinking girl in England is a social element whose existence must be admitted, as she is everywhere in evidence.

"The British student of social tendencies cites as ridiculous the argument of a puritan in England that reports of drinking among girls must be exaggerated, and proceeds to prove to his own satisfaction that there is little exaggeration, and much drinking among girls."

The *Columbus Dispatch* enters a denial:

"If there had been any sudden plunge into such wide-spread excesses as Mrs. Asquith let herself be persuaded to believe, it would indicate an essential rottenness of American character dating further back than the passage of the Eighteenth Amendment and the enforcement laws. Mrs. Asquith's fellow-countryman, Lord Lee, at the head of the British Admiralty, was not too emphatic in declaring her hasty generalization to be 'as ludicrous as it was cruel and untrue.'"

Charging her with speaking without distinguishing between hearsay gossip and facts, the *Grand Rapids Herald* remarks:

"At best it is difficult to consider Mrs. Margot Asquith seriously. Her whole career in the limelight has been so ludi-

crously remindful of both a movie actress crying for the front-page and a politician groping for burning issues that her prominence may be attributed more to notoriety than fame. Her sex has permitted Mrs. Asquith to say and do many things, for which a trousered male would be lampooned and perhaps ridden out of town on a rail."

The retort of the *Syracuse Post* is exprest thus:

"Americans would perhaps generalize about England as visiting Englishmen generalize about America if the English had the patience to hear American critics lecture them from the platform as we constantly submit to lecturing from Englishmen who know little about us.

"America is no more to be judged from what she understands than England is to be judged by Margot Asquith."

That the English visitor did not pretend to speak for the whole of the country is seen by the *St. Louis Post-Dispatch* which pays tribute to her in this way:

"In a material sense the people whom Mrs. Asquith meets are the larger beneficiaries of law and order and the inviolability of vested rights. If any class might be expected to obey the law for the law's sake it is the class that entertains and is entertained by Mrs. Asquith. Her verdict, then, is really the judgment of 'our best people.' It may be faulty, inaccurate, obtuse, but there it stands—derision of the law by our elegance and culture.

"We do not know how profound a 'social student' Mrs. Asquith's London critic is; but if he knows the rudiments of sociology he ought to be disheartened by the substance of Mrs. Asquith's conclusion, which is that prohibition has made lawlessness fashionable in the United States."

In another vein speaks the *Duluth News-Tribune*:

"However warped and foolish as some of Mrs. Asquith's judgments may be, she expresses one criticism that may well receive the consideration of every one. She says we take no personal interest in our sick and crippled soldiers. It is not money gifts she particularly refers to, but the fashion of England, France and Canada to visit, entertain, provide outings and generally make much of the men who were wounded in our service.

"One of the first places she desired to visit in America was the hospitals provided for the care of disabled soldiers. In Chicago, she found the hospital full of sick and disabled men, who were lonely and forgotten. It was her thought that those who had large homes near that city could entertain some of these men and provide pleasures for others."

Mrs. Asquith's reception in Canada seems to have been even less cordial than that accorded her in the United States—perhaps because they felt freer to criticize members of their own family, even if distant relations. The *Ottawa Journal* is thus irritated:

"'Margot,' unquestionably, is clever, brilliant, vivacious, and daring. Nature has endowed her with a beautiful voice; she is not without charm. But when a woman, whose intimate acquaintances have included Gladstone, Tennyson, Rosebery, Meredith, Morley and Lloyd George—to select a few at random—comes before a Canadian audience and talks the childish tosh which Margot Asquith talked on Wednesday night, there is but one inference. It is that she suspected her audience to be composed of primitive illiterates."

The *Citizen* of the same city speaks more in pity than in anger:

"She is the true aristocrat, the product of generations of culture and exclusiveness, the ultimate answer of a life that is sheltered, refined and set in certain ways. . . .

"But to those unversed in the ways of life among the English governing class, a feeling must have come that existence as pursued by Margot Asquith and her circle is one strangely aloof from realities, essentially trivial, detached and ineffectual. There must have arisen a suspicion that the gentlefolk of Britain take to politics, diplomacy and poetry as a diversion from gossip, love-making and scandal over teacups. The paths of the 'best people' are far removed from the main highway of life; such representatives as Margot Asquith and Colonel Ropington write the 'indiscreet' diaries that are so naive, and thus vouchsafe ordinary mortals a peep at their goings-on. Is it worth while? But these apprehensions may be all wrong. Perhaps that is but one side of the picture—and the only side that Margot prefers to disclose."

Toronto presents a divided front. *The Star Weekly* represents the city as "charmed by this wonderful little woman, with her smile, and her range of subjects on which she can talk with a vivacity and originality all her own." But the *Evening Telegram* writes:

"The Asquith visit was farce-comedy in so far as that visit began and ended with the lady's lecture. The Asquith visit was a tragedy in so far as that visit exalted one of the most common-minded and thoroughly undesirable types of women in the annals of British public life. Nature made Mrs. Asquith brilliant principally in her defiance of the restraints of good taste, good feeling and good sense. These restraints would suffice to keep far more gifted women than Mrs. Asquith from attempting to shine with the brilliance of a stupidity that mistakes stupidity for smartness. The parade of Mrs. Asquith in search of gate money is a humiliation to Britishers."

Clifford Baker of the *Montreal Herald* turned the speaker's words against herself in this adaptation: "I do not know if they interested her, but they did not interest me." Vancouver was too far away to draw the visitor, but it looked on with interest to the reactions she caused in the places she visited, and in its *World* writes:

"Probably the correct summing up of her rather complex make-up, which would appear to render her regardless of criticism, which allows her to combine what, on the surface at any rate, would appear to be intense egotism with an astonishing astuteness of judgment of men, women and things, is that she is an utterly natural woman who says what most brilliant women only allow themselves to think. Of course such a summing up will not for a moment be admitted by most women as a correct one."

On the eve of her departure Mrs. Asquith turned to take a final survey and spoke before a New York audience on "my American experiences." She finds our landscape marred by billboards, which to her "indicate a trick of commercializing nearly everything." She also complains that Americans have a habit of doing something all the time, which make life "like the movies." "It cultivates the intelligence as against the intellect." She reaffirms that Prohibition is a danger to the young. As the press reports her, she said: "Being a fanatical temperance reformer myself, I came over here expecting to find everybody here happy and sober. Happy I find them." But being an outsider, she has no wish to be critical, and is "obviously determined that the friendliness she has encountered shall over-balance whatever else lingers in her memory of her American tour." In the *New York Herald* she is reported as saying:

"I have been living chiefly in hotels and elevators. But I have seen your reporters and a great many of them. Tho perhaps a little lacking in awe they have been marvelously generous, loyal and good to me. Also the hotel managers. They have even offered me things that are forbidden. The subjects interesting the reporters most seem to have been Princess Mary's underclothes and Prohibition.

"In the wet cities I was attacked for saying that I was a prohibitionist. When I went into the dry cities they were very angry at me because I said the Prohibition law did not work fairly between rich and poor. But I suppose it works differently at different places."

Mrs. Asquith does not see how it would help the poor to see the Prohibition law "broken all the time," remarking:

"I think that the law may have to be modified, but I'm not here to preach to you. Of course the power of the saloon has been broken and in that way it is a very fine thing. But I do not think it has worked out exactly in the way it was meant."

Mrs. Asquith praises highly the spirit and work of the Washington Conference, and says the interests of her country and ours lie in "sticking together," adding:

"You have vitality, generosity and genuineness of character. I have learned to know and love you. I like to feel that you have something of the same feeling toward us."

RELIGION-AND-SOCIAL-SERVICE

THE PRESIDENT'S APPEAL TO HALT LAWBREAKING

VIEWING DEFIANCE OF THE LAW as a national peril, President Harding recently declared in an address before a Washington Bible class that the Church can render no higher service now than to exert its utmost influence in behalf of "frank and willing obedience to the law of the land." The address is widely quoted and commented on in the press, one paper emphasizing it as coming from "an American, a believer in God, who is alarmed at the growth of religious intolerance and laxity of morals throughout American life." Without stressing alarmist expressions, or referring explicitly to the crimes that fill the front pages of the newspapers, President Harding asserted that "we must nevertheless recognize that there is a very apparent tendency to a lighter and more frivolous view of the citizen's relations to both the State and the Church." Looking first at the state of our moral and spiritual foundations, the President takes this serious view:

"There is a good deal of loose talk nowadays about the cause of the spiritual demoralization of the community, which it has become popular to attribute to the abnormal conditions that were incident to the war. But in fact the war is not wholly to blame. Before the war started or was dreamed of we were already realizing the tendency toward a certain moral laxity, a shifting of standards, a weakening of the sterner fibers.

"I think we should do well to recognize that intellectual and moral evolution of the community. It would be a grievous error to allow ourselves to feel too confident that this is only a temporary and passing aspect."

Contempt for law President Harding finds to be all too prevalent, and he asserts that "we can hardly hope for a restoration of the old ideals in religion and in moral conduct so long as this tendency to disregard for the law shall continue." Furthermore, he continued—

"Whatever breeds disrespect for the law of the land, in any particular department of our community relations, is a force tending to the general breakdown of the social organization. If people who are known as leaders, as directing influences, as thoroughly respected and respectable members of society shall in their respective communities become known for their defiance of some part of the code of law, then they need not be astonished if presently they find that their example is followed by others, with the result that presently the law in general comes to be looked upon as a set of irksome and unreasonable restraints upon the liberty of the individual. . . . Our only safety will be in inculcating an attitude of respect for the law as, on the

whole, the best expression that has been given to the social aspiration and moral purpose of the community.

"Unless we can accomplish this, in the domain of citizenship, and thereby sustain enforcement, we may well feel that the outlook is not encouraging for the achievement of those loftier spiritual purposes to which the Church is devoted. . . .

"The failures of the past invariably have been preceded by contempt for the law, by spiritual paralysis and moral looseness, all of which had their earlier reflex in the weakened influence of the Church. We know the helpful, exalting influence of our religious institutions. We shall be made stronger as they become stronger, and we shall ever find greater pride and greater security in the nation which righteousness exalteth."

This message, says the Cincinnati *Commercial Tribune*, is "both a compliment and a challenge. The purport of it is that the province of the Church—all churches—is to create such atmosphere of reverence for the eternal laws of righteousness as will inspire uniform wholesome respect for upright Government." Respect for the laws of the land, asserts the Pittsburgh *Gazette-Times*, "is simply self-respect. The lawbreaker insults the good citizen. The President appeals to the latter to stand up for themselves and their rights." He sees, "as every sensible man must," affirms the Rochester *Post-Express*, "that right, religious feeling, reverence for the law of God, is the strength of the

Republic. . . . His position will give strength to a plea that might otherwise not be heard."

However, the violation of a statute is not always synonymous with bad morals, thinks the Democratic Brooklyn *Eagle*, asserting:

"The fact is, of course, that just as Protestantism subjects every part of the Holy Writ to individual interpretation democracy subjects every law to individual analysis. Obedience may or may not be within the range of compulsion. 'Respect' is never within that range. The man who does not respect a law because he has contempt for the way it was put on the statute book, because he feels sure the people never wanted it and were misrepresented in its enactment, obeys, if he obeys at all, under protest. He sympathizes with those who do not obey. He would rebel if that were worth while. No sacrosanctity of law as law enters into his mind.

"No, if we have a frivolous view of law, frivolous lawmakers are responsible for it. To do something to check the frivolity of lawmakers is the privilege of President Harding's position. That is a thought to which he can not give too careful or too prayerful attention."

BUT IT WEAKENS THE WHOLE STRUCTURE.

—Gale in the Los Angeles Times

THREE GENERATIONS OF SWEDISH-AMERICAN FARMER FOLK SINGING THE "MESSIAH."

For forty years the Lindsborg townspeople have celebrated Easter by singing Handel's famous oratorio.

SINGING THE "MESSIAH" IN KANSAS

AS OBERAMMERGAU LIVES for the Passion Play, so does Lindsborg, a little Kansas town, live for the "Messiah," which has been sung there every Easter for the last forty years. The religious festival, as with the Bavarian drama, is a community affair in which all the townspeople are interested, and when it is considered that Madame Schumann-Heink received for her appearance a fee representing a tax of 75 cents on every man, woman and child in the town, it makes the efforts of large cities to maintain a season of grand opera seem "small and futile." To the public, adds Charles Moreau Harger in *The Dearborn Independent*, "it means a single concert; to the community it is an expression of its life. The rendition of the famous oratorio once a year is an incident, the preparation that has led up to it is an education." Five hundred voices, we are told, take part in the chorus; forty pieces are in the orchestra—all from the little town of 2,000 inhabitants and the farms adjoining. But the festival is known far beyond the borders of Lindsborg, and every year, we are told, people journey hundreds of miles to attend.

Hearing the "Messiah" sung in the Crystal Palace, in London, in 1879, a Lindsborg townsman is said to have conceived the idea of making it an annual religious event in America, and in December, two years later, a choir of one hundred voices gave the first rendition of Handel's masterpiece in the Kansas town. At Easter, 1882, the first public appearance attracted the people of the surrounding towns, and every Easter since, we are told, has seen a steadily growing interest reaching over the entire Southwest. With the enthusiasm of the impressed observer, the writer tells us that—

"The Lindsborg chorus is an artistic body that would inspire the respect of any community. It has splendid routine. Many of

the singers dispense with the score and rely on memory. Why should they not, since many of them have been singing the 'Messiah' for a quarter of a century, and some who took part in the first performance forty years ago still retain their places in the chorus. It is rather a family affair, this choir of Swedish-American farmer folk, and it is no uncommon thing for three generations to be represented. From the bass section more than one grandfather has heard the voices of his daughter and granddaughters among the sopranos and altos.

It is not surprising, therefore, that this chorus attains a tone of surprising unity, and that in all matters of rhythmic and intervallie precision it is unsurpassed. The quality of the tone is beautiful. In all massive effects it is of overwhelming sonority. The sopranos are remarkable for the purity, the flexibility, and the smoothness of the tone produced and the confident ease with which they approach trying altitudes of pitch. The contraltos share the delicious sympathy of tone quality common to most American choruses. The tenors achieve brightness and aggressiveness, and the basses are splendidly sonorous.

"This cooperation of 25 per cent. of the town's population has its vivifying effect on the social and religious life. The service comes from the heart. The organization is a purely voluntary one. It has no constitution or by-laws. Each year secretaries and other officers are elected. These officers formulate the rules for the year. No member receives any compensation. On the other hand, virtually all buy season tickets for the festival. The proceeds, if any, at the end of the festival go directly into the college treasury."

Practise for the great festival begins the first week in January

and continues with twice-a-week rehearsals until Easter week. On the eventful day, we are told, the chorus is reinforced by famous artists brought there to carry some of the great solo parts and give recitals, which are a part of the week's program. Among the artists and organizations that have appeared at the little Kansas town, says the writer, are:

"New York Philharmonic Orchestra, Elman, Nordica, Ysaye, Schumann-Heink, Claussen, Galli-Curei, Sombrieh, Galski, Hempel, Fremstad, Gates, Nielsen, New York Symphony Orchestra, Middleton,

PRAIRIE FARMERS THRONING TO THE ANNUAL FESTIVAL.

The great Easter event, a community affair in which 500 voices take part, is said to attract people from hundreds of miles around every year.

Pablo Casals, Anna Case. This year's headliners are Margarete Matzenauer, noted contralto, and Ricardo Stracciari, baritone. These soloists from New York will assist in the renditions: Marguerite Ringo, Mildred Byars, Charles Stratton, Frank Cuthbert. There also will be a Mid-West musical contest for girls' glee clubs and individual excellence in piano, organ, voice and expression, for which there will be liberal cash prizes.

"The 'Messiah' has been sung by many persons the world over, but it is doubtful if the choruses were ever better sung than when these trained voices, rehearsed for a year, burst forth in divine harmony. They sing it with the scriptural words in their hearts—it is a praise anthem to the God who had prospered them and kept them together. 'Comfort ye,' is the message. 'Comfort ye, my people, saith your God. Speak ye comfortably to Jerusalem and cry unto her that her welfare is accomplished. The voice of him that crieth in the wilderness, Prepare ye the way of the Lord . . . Every valley shall be exalted, and every mountain and hill made low, the crooked straight and the rough places plain.' Thus sang the tenor.

"Then the promise came in the rushing tide of voices from the chorus: 'And the glory of the Lord shall be revealed, and all flesh shall see it together, for the mouth of the Lord hath spoken it.'

"The wonderful 'Hallelujah' has spread its benediction, and the great audience goes out into the night softened and enthralled.

"The 'Messiah' is in a sense an institution of Kansas. Jens Stensaas, treasurer and manager of Bethany college and of the 'Messiah' for twenty years, believes that yet greater things are to come. 'The chorus has made Lindsborg the most musical community in the country,' he said."

HEALING THE MAORIS BY FAITH

INTERPRETING CHRISTIANITY to suit his own ideas and what he believes to be for the best interests of his people, Wiremu Ratana, a Maori faith-healer, is reported to be doing an influential work among the aborigines of New Zealand and to be effecting cures which have the appearance of the miraculous. Discarded implements of the halt and maimed are said to testify to the reality of his cures, and his name has become a household word even among the white people. Indeed, we are told by an enthusiastic admirer, the Maori's reputation has spread to all parts of the world, and during the last twelve months he has received more than 80,000 letters appealing to him for advice and assistance, much, we are told, to his embarrassment, for he has consistently shunned all publicity and advertisement.

Ratana is a typical Maori only in that he is a type of all that is best in the Maori race, writes a correspondent to the *Manchester Guardian*; and, strangely enough, "he rather reminds one of the benevolent English squire of the olden days—the country gentleman." Ratana makes no distinction whatever of sect or creed of Christianity, and holds that it is possible to reach God by many roads if only there is faith, says the correspondent, who goes on:

"Ratana regards it as his chief mission to eradicate from the minds of his people that superstition—the sinister growth of ignorance and tradition—named *tohungaism*, or witchcraft, which in spite of schools and education continues to hold down the Maori people. There is a certain naïveté in his challenge to the *tohungas* or witch doctors to show miracles such as he believes God performs through him. No *tohunga* has come forward, and the prestige of Ratana—his *mana*, as the Maori puts it—continues to wax. His 'Book of Cures' now contains the signatures of more than nineteen thousand Maoris, testifying to the efficacy of the healing. At the Christmas gathering at his home a perfect forest of sticks and crutches and all kinds of appliances for the lame, halt, and blind was displayed, among them the steel spinal jacket of Miss Laura Lammas, of Nelson, his most famous *pakeha* cure. For eighteen years she lay bedridden with an affliction of the spine. She wrote to Ratana and received his letter of faith. One Sunday, so it is said, she felt a thrill run through her and she rose from bed and walked. She went up to Wanganui at Christmas to thank Ratana, and on the way spent

a day or two in Wellington walking about the streets like any ordinary person.

"There have been some failures and relapses, and Archdeacon Williams, of the Anglican Church, one of the Williams family intimately connected with the Maoris for two or three generations, and great landowners in New Zealand, has criticized Ratana, but the fact remains that he has become the leader of his people and has dedicated his life to their regeneration. His work among them, void, as it is, of all self-interest, may mean a new future for the best of the dark races."

THE CLEAN-HEARTEDNESS OF YOUTH

STOCK STORIES AND STANDARDIZED HORRORS about the wildness of modern youth have led many to regard the future with pessimism, and it is heartening to find that an educator of many years' experience is convinced that the boy of to-day "is just as good, just as high-minded, potentially as decent and as splendid as boys ever were," tho "he is up against it hard the way things are in society to-day." Such is the opinion of Dr. Alfred E. Stearns, Headmaster of Phillips Academy, Andover, Mass., as exprest in a recent address before the New York Yale Club. In fact, Dr. Stearns says that among many boys he has talked with he has found, almost without exception, an innate repugnance to the outward frivolity and disregard of law about them, to which, nevertheless, they feel required to conform. "I am as amazed as anybody is who deals with boys at the splendid and eager response one gets from the boys themselves, if you will call a spade a spade and an ace an ace, and don't beat around the bush," says Dr. Stearns, as he is quoted in press reports; and he believes that the same will be found true of girls, if the matter were taken up with them. Some of the young men, Dr. Stearns finds, "admit that the fault is with them and they are making a fairly decent showing, but they can not be expected to end all the conditions that exist." Some of the influences which they are up against lie "in the form of the movies, in the form of modern literature—which is nothing but hash and rehash of the old sex problem, which the author of 'The Mirrors of Downing Street' says is not even lust; it is lust in a state of degeneracy." Unfortunately the influences which should help and guide young people are often lacking. Religion does not have a hold on our children, says Dr. Stearns, because

"It is pretty nearly gone from the family life, unless it is simply an outward expression or manifestation, and it is very difficult to get young people into church or under its influence when the parents stay away and scoff at the church. When one goes into social life there is nothing there to tell a boy that he should believe that womankind as a whole is pure and modest and high-minded and far better than he is, and demands of him, for his own sake and for hers, that he shall live clean and meet her on an equal plane.

"Those are the ideals to which we anchored in our youth; but there is nothing in the painted, barebacked girl that a boy generally meets in modern social life, with all her extravagances and her eccentricities, however superficial they may be—and I believe that in the majority of cases they are superficial—but there is nothing to indicate to the boy that that is what the woman expects and demands of him. The boy can not anchor to that.

"I have never talked with boys that they did not come back and come back splendidly, and admit those things. They were ready and glad to do anything they could to establish better and finer standards and ideals and conditions, but they tell me again and again, 'Mr. Stearns, even our parents do not set a proper example; even our parents appear to ignore these things.'

"Gentlemen, that is all I want to leave with you, that if you expect your boys of the coming generation to be the kind of men you would have them be, every one of you then prove a little more that you want to help to set these things right and to re-establish old standards of morality, to which the boys can anchor. If necessary, be willing to make a little sacrifice, as our parents did for us, that we might be bigger and better, in order that they may enjoy what we enjoy as the result of those same sacrifices on the part of our elders."

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

Good news about beans!

You can eat all the Campbell's Beans you want! They are so wholesome and digestible you don't have to curb your appetite. They're slow-cooked, thoroughly cooked, cooked to taste better and agree with you. And so delicious with their spicy tomato sauce that you'll be glad you can indulge yourself freely.

12 cents a can

Except in Rocky Mountain States and in Canada

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

IF THERE is a suggestion here of Spoon River, it only proves, perhaps, the universality of that genre which we once thought so original. New World—old world—human nature's the same. The *London Mercury* has this and also an essay on Hardy as a poet:

VOICES FROM THINGS GROWING

BY THOMAS HARDY

These flowers are I, poor Fanny Hurd,
Sir or Madam,

A little girl here sepulchred.
Once I flit-fluttered like a bird
Above the bents, as now I wave
In daisy shapes above my grave,
All day cheerily,
All night eerily.

I am one Bachelor Bowring, "Gent,"
Sir or Madam;
In shingled oak my bones were pent;
Hence more than a hundred years I spent
In my growth of change from a coffin-thrall
To a dancer in green as leaves on a wall,
All day cheerily,
All night eerily.

I, these berries of juice and gloss,
Sir or Madam,
Am clean forgotten as Thomas Voss;
Thin-urned, I have burrowed away from the moss
That covers my sod, and have entered this yew,
And turned to clusters ruddy of view,
All day cheerily,
All night eerily.

The Lady Gertrude, proud, high-bred,
Sir or Madam,
Am I—this laurel that shades your head;
Into its veins I have stilly sped;
And made them of me; and my leaves now shine,
As did my satins superfine,
All day cheerily,
All night eerily.

I, who as innocent withwind climb,
Sir or Madam,
Am one Bet Greensleeves, in olden time
Kissed by men from many a clime,
Beneath sun, stars, in blaze, in breeze,
As now by glowworms and by bees,
All day cheerily,
All night eerily.

I'm old Squire Audley Grey, who grew,
Sir or Madam,
Aweary of life, and in scorn withdrew;
Till anon I clambered up anew
As ivy-green, when my ache was stayed,
And in that attire I have long time gayed
All day cheerily,
All night eerily.

And so they breathe, these growths, to each
Sir or Madam,
Who lingers there, and their lively speech
Affords an interpreter much to teach,
As their murmurous accents seem to come
Thence hither around in a radiant hum,
All day cheerily,
All night eerily.

CARL SANDBURG celebrates Chicago in a poem, too long for full quotation, from the *New Republic*. Here is his account of how the city got its name. From which he turns to Whitmanian evocations:

THE WINDY CITY

BY CARL SANDBURG

Early the red men gave a name to a river,
the place of the skunk,
the river of the wild onion smell,
Shee-caw-go.

Out of the payday songs of steam shovels,
Out of the wages of structural iron rivets,

The living lighted skyscrapers tell it now as a name,
Tell it across miles of sea blue water, gray blue land:
I am Chicago, I am a name given out by the
breaths of working men, laughing men, a child, a belonging.

So between the Great Lakes,
The Grand De Tour, and the Grand Prairie,
The living lighted skyscrapers stand,
Spotting the blue dusk with checkers of yellow,
streamers of smoke and silver,
parallelograms of night-gray watchmen,
Singing a soft moaning song: I am a child, a belonging.

How should the wind songs of a windy city go?
Singing in a high wind the dirty chatter gets blown
away on the wind—the clean shovel,
the clean pickax,
lasts.

It is easy for a child to eat breakfast and pack off
to school with a pair of roller skates,
buns for lunch, and a geography,
Riding through a tunnel under a river running
backward,
to school to listen . . . how the Pottawattamies . . . and the Blackhaws . . . ran
on moccasins . . .
between Kaskaskia, Peoria, Kankakee, and
Chicago.

It is easy to sit listening to a boy babbling
of the Pottawattamie moccasins in Illinois,
how now the roofs and smokestacks cover
miles
where the deerfoot left its writing
and the foxpaw put its initials
in the snow . . . for the early moccasins . . .
to read.

It is easy for the respectable taxpayers to sit in the
street cars and study the faces of burglars,
the prison escapes, the hunger strikes, the
cost of
living, the price of dying, the shop gate bat-
tles of
strikers and strikebreakers, the strikers killing
scabs and the police killing strikers—the
strongest—
the strongest, always the strongest.

It is easy to listen to the haberdasher customers
hand
each other their easy chatter—it is easy to die
alive—to register a living thumbprint and be
dead from the neck up.

And there are sidewalks polished with the foot-
falls of
undertakers' stiffs, greased mannikins, wear-
ing up to-the-minute sox, lifting heels across
doorsills,
shoving their faces ahead of them—dead from
the neck up—proud of their sox—their sox
are the last
word—dead from the neck up—it is easy.

Lash yourself to the bastion of a bridge
and listen while the black cataracts of people
go by,
baggage, bundles, balloons,
listen while they jazz the classics:
"Since when did you kiss yourself in
And who do you think you are?
Come across, kick in, loosen up.
Where do you get that chatter?"

"Beat up the short change artists.
They never did nothin' for you.
How do you get that way?
Tell me and I'll tell the world,
I'll say so, I'll say it is."

"You're trying to crab my act.
You poor fish, you mackerel,
You ain't got the sense God
Gave an oyster—it's raining—
What you want is an umbrella."

* * * * *

SINCE Shaw and Meredith have written novels to celebrate pugilism, a rhymster may be pardoned for putting the subject into a sonnet. The *Milwaukee Journal* thinks so:

TO A PUGILIST

BY CHARLES WINKE

Swift gliding through the rounds, I see you still
Under bright lights, your glistening body wet
And dripping like a swimmer's, with the sweat
Of your great toil; and as the furious mill
Grinds fiercely on, I marvel at the skill
With which you flit from danger, hard beset
By your blood-covered foe. Tireless, you fret
Him with your well-aimed batteries until,

Conviction forming with the conflict's trend,
Thrilled by your sure, compelling mastery
Of thought and action timed to fine accord,
The crowd acclaims you victor ere the end,
Which comes, at your swift choosing, suddenly,
With lightning blows that numb like piercing
sword.

This is a twentieth century version of "Gather Ye Rosebuds." The breathlessness of it compared with that old seven-teenth century admonition makes one wonder how the future will express the idea. It is from the *Nation* (New York).

PAUSE

BY ANN HAMILTON

Quick, for the tide is sifting down the shore,
Water and wind and vapory lift of spray—
Flowing of light with darkness through the door,
Sun or moon at the window, night and day—
Quick, while the shadow tangles in and out
Over this threshold that the rain has worn,
Whisper or threaten, trust or pray or doubt,
Still will some men be dead, and some be born;
Give me your eyes unmasked, and wonder well
How we are brief antagonists of Fate.
Friendship? But what is friendship? Can you
tell?

Look at the hinges rusting on the gate;
Quick then, this breath, while we believe we
know—
Kiss through your laughter, kiss again—and go.

THE *Living Age* helps us to these verses from the *London Sunday Express*. They are, it says, "almost as free as the author's literary ethics:"

NATURE-FAKING UP-TO-DATE

"I must have a little money
For my simple pleasures,"
Sighed the city poet,
In his garret.

He bought for a penny
A book of botany,
And began to write.

He announced, by way of introduction,
That spring was coming,
And then hunted in the index,
Found a long name,
Looked at the picture of it,
And said it was sure to blossom soon.

They called him a Nature Poet;
"Wordsworth," they said,
"With a touch of John Clare;
Or Ledwidge, with a hint
Of W. H. Davies."
(Reviewers are so learned.)

He made twenty-three shillings,
Indulged in his simple pleasures,
And died of Russian tea
In a filthy cabaret.

The author of the book of botany
Turned in his grave
Twice.

IZZY, THE BUSY RUM SLEUTH, AND HIS DIZZY LIFE

IN THE POPULOUS rum-running circles around New York City, the name of Izzy Einstein has become an epithet of terrible meaning. No other prohibition agent has been half so successful in collecting illegal liquids, and landing the possessors in jail. He is a new type of detective, it appears, produced by the dry age, and in his hands the ancient and more or less honorable art of sleuthing has shown new and dazzling developments. Izzy Einstein stands forth with his trusted lieutenant, Moe Smith, says a journalistic appreciator of the metropolis, "as the master hooch-hound, alongside whom all the rest of the pack are but pups." Next to Volstead himself, Izzy Einstein represents all that is good or bad, depending upon the point of view, in the matter of prohibition. He is ruthless, cold, clever, and horribly unsympathetic. He has been known to play on his violin until the gentler feelings of a large-hearted restaurant proprietor were so stirred that a drink was proffered, whereupon Izzy at once added another arrest to the thousands for which he is responsible. There is hardly a dealer in wet goods within fifty miles of the metropolis, says Truman H. Talley, writing in the *New York Times*, "who doesn't keep a weather eye out for 'that Izzy Einstein,' whose seven-league methods have played havoc with the bootleggers, and whose next exploit is awaited among that gentry about as eagerly as the plague." Mr. Talley proceeds, in appreciative vein:

The failure of most plainclothes men to disguise their true status is almost notorious. A "bull" is a "bull," the crooks say, whether in uniform or not. Whether it is poor stage management or bad acting, the cop in civilian attire and the agency detective usually stand out as tho wearing a Cardinal's hat, and it was to the task of effectively overcoming that traditional fault of sleuthing that Izzy bent his energies when he left Postal Station K and joined the rum squad. He decided upon a category of true-to-life disguises that would fit him for all the avenues, highways and alleys in the labyrinth he was entering, and, like the true actor rehearsing for a long run, he not only learned his parts but grew into them. He became a man of parts. He prepared himself to move in high, low and medium circles—on the excellent theory that the taste for liquor and the desire to sell it are no respecters of persons—and in all those circles he has since been whirling with rapidity and a quick-change adeptness.

"Dress clothes for Broadway and overalls for the water-front," Izzy says in partial explanation of his method, but that by no means tells the story. For all his careful self-training in the false-whiskered art, Izzy is blessed with a foundation admirably fitted for the deceptive trimmings he assumes. Heavy-set, smiling, broad-faced, an earnest and convincing talker, a man who looks you straight in the eye as beguilingly as a shrewd poker player with at least four aces, he would appear upon brief observation

to be the quick-sale type of merchandise dealer—an energetic business builder, perhaps.

To others, in a change of clothing, a marked resemblance to the neighborhood butcher or grocer might be noted. He might be a manufacturer of garments. To hear him talk of automobile accessories, or kindred subjects, would not be surprising. He is the twin of many a merchant. He literally looks the part of New York's man in the street. Yet tho in every-day attire and

for purposes of getting evidence on the average New York saloon he may appear to be a composite picture of all the city's delicatessen dealers, he becomes the husky hunk in his rough duds when he sallies into longshoreman territory. That done, and, presto, he is faultlessly accoutered for an evening's round of the gay jazz palaces, where he appears to be nothing so much as the man who has just put through a big deal and wishes only to celebrate his success, regardless of expense.

A day with Izzy would make a chameleon blush for lack of variations. Up with the milk strikers and car crews, along the docks in the morning hours of ship-to-truck loading, in and out of the best and the worst of noon-hour lunch bars, on one or more of any number of special coups in the afternoon, to the restaurants in and near New York for dinner, and an evening devoted to social and semi-social events where flask, private stock and cellar contribute to the festivity—his day is just one booze complex after another.

No stock is too small and no still too large for Izzy to tamper with and tap. Even the sum total of his conquests is so great that he has long since lost track of it. So crowded with seizures and confiscations has his career been that he remembers only some of the notable ones. Two thousand

cases of whisky and 367 barrels of wine constituted one little haul. A 700-case seizure of whisky he mentioned as another trifle.

One of his earliest exploits, in which he takes pride even tho the haul was slight, occurred last Fourth of July when New York's great wet parade was held. Not only did Izzy march with the wets—

He followed some of them into the by-paths, with devastating effect on the unsuspecting dealers in the very article for which the demonstrators were perspiringly parading. In one of the drug stores at which he stopt he asked for a half-pint. It was sold him. He stuck it in his pocket and sauntered leisurely toward the door. Some wares caught his eye. He casually looked them over. Nothing precipitate about Izzy. A minute or two elapsed after the purchase of the flask, and to all intents and purposes the purchaser was about to go on his way. The cautious druggist called to him as his hand was on the door.

"Come back, friend, and I'll sell you some real stuff," the druggist called out. Izzy turned. "I wasn't sure who you were when you came in and I gave you colored water. You might have been a prohibition agent, and I have to be careful. But you haven't tried to pinch me, so I guess you're all right."

Whereupon the druggist took back the decoy bottle and gave

IN ONE OF HIS MULTITUDINOUS DISGUISES.

A photograph of Izzy Einstein, the famous rum sleuth, is hard to obtain, but this one is said to look much like him—as he looked once, for a short time. His astonishing success is attributed largely to the fact that he can "make up" like anything from a longshore laborer to a society man, and carry the part, too

Take the Trial Balance out of the Shadow of the Pen

KEEPING books on the Underwood provides the trial balance almost *automatically*. The figures are ready on the *first of the month*—without overtime, without error.

On-time balances mean prompter collections, quicker turnover, larger profits.

Underwood accounting gives a *daily* balance on *every* account. The work is proven as it is done. At short notice, the Executive can get an exact statement of the condition of the business; a statement including the transactions *of that very day!*

The Underwood Bookkeeping Machine lifts the Shadow of the Pen from Industry. Result: clear vision, surer control.

35 x 5 —Non-Skid Cord	51.50

English. He is at home with almost any one, whether on the water front, on the East Side, or with laborers in any part of the city or State. Only recently a vast lumber camp area in northern New York near the Vermont border was cleaned of bootleggers largely by virtue of his ability to mingle with and make friends of all classes and nationalities of the workers. Izzy's best rôle, however, seems to be that of salesman. As a salesman, we are assured:

No one can compete with him, for his prices are low, which is the open sesame to the "hootch hatch." As a cigar salesman selling smokes at \$35 a thousand that he said were worth nearer \$2,000 a thousand—and were worth enough more than he asked for them to serve as bait—he and his playmate Moe brought word to a series of up-State hotels. Getting friendly with the cigar clerks and in some instances through the clerks with the hotel managers, the business of learning the hotel's and even the town's liquor secrets was only a matter of a hint. Worthy and fair-priced salesmen that they were, there was no reason why they shouldn't be shown a little courtesy and hospitality. Then the clean-up.

As a pickle salesman, Izzy trapt many a saloon owner and grocer who thought the drummer's reasonable prices warranted a return favor. In one instance Izzy's low pickle prices prompted the trusting grocer to offer him a drink of his best Scotch, also at a price correspondingly reduced—and the grocer at once suffered the consequences.

"Can I have a pen and ink?" Izzy asked. "My friend wants to write me a check for my car out there that I just sold him."

Indeed he could. The check was filled in and handed over.

"Well, brother," remarked Izzy to his companion, "I wish I could send you on your way with my car—I mean your car—with something better than beer. She's a good car and if it wasn't for bum business in the shop I'd never sell it at that price——"

The talk ran along, but the emphasis on the meagerness of beer had not been without its effect. They looked like "safe" customers. Would they like something better than beer? Would they?

To make a long story short, that trick worked in about six places before Izzy and Moe decided word of it might have become unnecessarily noised about.

Street-car conducting seems remote from bootlegging, yet the tip that saloons near certain car barns were doing rush business took Izzy there. He appeared bright and early one morning dressed in all the regalia of a B. R. T. employee. He entered a saloon and laid a \$5 bill on the bar.

"Can you give me a lot of change for this?" he asked. "I need it for my run."

The bartender also had use for small change.

"Why don't you buy a drink?" he asked. "That's the way to get change."

Izzy ordered a glass of beer.

"Why don't you take a good drink?"

Izzy ordered whisky. He got \$4.25 in change. The bartender got arrested.

Izzy doesn't crowd his victim. He doesn't beg for a drink.

Once on an out-of-town assignment, given on the basis of complaints against a certain general storekeeper, Einstein arrived on the scene with a full line of teapots. The merchant knew his business and when Einstein quoted his prices, a purchase at a considerable saving was made. The storekeeper ordered 500 teapots, worth at wholesale about \$1,000, for \$750. Gratitude—Drink—Arrest.

Izzy's chief once handed him what the chief thought might prove a tough job. Complaints had come in from an up-State town concerning a flood of home-made liquor. There was no clue as to its source, tho the local investigation had convinced the complainants there that the stuff was not being shipped in. Izzy is not addicted to such fiction-detective expressions as "simple," but his actions are as much to the point. He went to the town. He looked around. cursory examination revealed nothing. He went to the station agent. No booze shipped in there or he would know it. Izzy asked for a record of freight received. He found several entries concerned with raisins. He took the name. In an hour he had arrested a farmer living just outside the town and had confiscated an enormous still.

Izzy and Moe once became prosperous looking farmers and for a few days went to the places of farmers near Bethel and Monticello against whom complaints had been made. There they represented themselves as men looking for property to buy. The places were not for sale, but the upshot of the agricultural and kindred conversations they struck up was the seizure of numerous stills.

One day early in their career as a team Izzy and Moe alighted from an auto in front of a saloon in upper Broadway. They

sauntered in and walked to the back end of the bar near the proprietor's desk.

"We don't sell whisky," was the sharp reply.

"All right, give us beer," was Izzy's conciliatory reply.

They got their beer and they had no sooner consumed it than they were told they might have whisky—the inheritance of the meek.

"It takes a little finesse," Izzy admitted, in recounting the incidents of his exciting year or more of prohibition work. "The main thing, it seems to me, is that you have to be natural. The hardest thing an agent has to do is to really act as if he wanted and needed a drink. That doesn't mean you can walk in with the stock excuse of a toothache. They've got stung on that story so many times a man could roll over and die of it on the saloon floor and never get a drop.

"But maybe I'd better not tell you exactly how it's done—it's dangerous information these days."

A POST-OFFICE WITH "SOMETHING TO SELL"

WHY SHOULD A UNITED STATES POST-OFFICE go out after more business? It has no competition, and any increase in its activities, it might appear, would have to come merely because people had more letters to mail. There is a postmaster down in Nashville, Tennessee, however, who believes that post-offices ought to do more business, and who seems to have proved his point. His story is important because the business efficiency which he put into the Nashville office may have a moral for the whole country. He started with an idea. "I felt I had something to sell," is his way of putting it. "I became convinced that the business public were not taking advantage of the postal service, and I believed that, if a proper understanding could be created between the business men and the postal officials, it would be very helpful in increasing their business, and also help us in increasing efficiency in the post-office." Therefore this postmaster, Charles A. McCabe, undertook to put his office on "a real business basis." He prepared a number of circular letters to the business men of Nashville and vicinity. He suggested that Nashville might get business then going to other cities, if its merchants only used their post-office more, and with better judgment. It thus appears that, even tho the United States post-office is a monopoly, there may be a healthy sort of competition between its various branches. Here is a typical letter sent out by Postmaster McCabe, illustrating both his epistolary style and several of his points of view:

MR. NASHVILLE BUSINESS MAN:

"BABE" RUTH, "IDOL OF URCHINS," "FRENZY OF FANS," with his mighty bat, knocked the Yanks into the limelight, "copped" half the sporting page, and "landed" a pennant.

IT'S THE "PEP THAT POUNDS THE PILL"

that made "Babe" famous and enthroned him in the heart of every fan—whether he be a mighty, dignified colossus of capital or a happy-hearted newsboy of the street.

"BABE" AVERAGES A HOME-RUN EVERY THIRD DAY, but Nashville's new star, "The Pan-American Express," "Bambino of Swat," in the Dixie League of business, knocks 'em every day, rain or shine.

"GRANT" RICE, SHARPEN YOUR PENCIL—

Crowds of letters, tied in orderly packages, begin to assemble in the street letter-boxes at 3:00 P.M.—speeding autos usher them to the post-office, where highly trained clerks seat them in the boxes of the cases.

PAN-AMERICAN AT THE BAT KNOCKS HOME RUN EVERY DAY to Atlanta, Birmingham, Montgomery, Pensacola, Mobile, Memphis, Laurel, Hattiesburg, Lumberton, Tupelo, Piedmont, Anniston, Pell City, and over one hundred smaller towns in Alabama, Georgia, Mississippi, and Florida by reaching them on the morrow, in time for the first carrier delivery.

SOME SAFE HITS—

We reach Jackson, Miss., 7:50 A.M.; Troy, Ala., 8:05 A.M.; Opelika, 8:51 A.M.; Selma, 9:10 A.M.; Vicksburg, Miss., 9:30 A.M.; Baldwin, Fla., 9:30 A.M.; Lake City, Fla., 10:58 A.M.; New Orleans, La., 11:00 A.M.; Delta, Fla., 11:50 A.M., and a

half thousand smaller towns before noon. (Note—To New Orleans via N. O. & N. E. R. R.)

BASE ON BALLS—

We reach Shreveport, La., at 3:55 P.M.; Alexandria, La., 6:30 P.M.; Tallahassee, Fla., 3:30 P.M.; Houston, Texas, 10:35 P.M.; and a thousand small towns in the early afternoon, never possible before.

THE "DIXIE LEAGUE BUSINESS PENNANT" TO NASHVILLE—

With the Pan-American Express "batting" for Nashville, we reach the Western part of Mississippi, all of Alabama, Florida, and Georgia many hours ahead of Memphis, knocking "home-runs" while Memphis "strikes out."

WHEN WE PLAY ATLANTA IN THE FIELD—

of Alabama, Mississippi, Texas, and Louisiana, with the "swatting Pan knocking 'em all over the lot," it is simply a "slaughter" and "a shame to take the money."

WHEN WE PLAY NEW ORLEANS—

in the field of North and West Mississippi, all of Alabama, Florida, and Georgia, it is just "good-night" for we cover the field before they get started.

NO PENNANT IS WON UNLESS THE FANS SUPPORT—

The Pan-American Express is Nashville's best business bet since the Powder Plant. It gives us the advantage in the cotton country over every rival city in the South, but you can't reap the benefits with letters mailed late.

LET THE PAN-AMERICAN, "THE 'BABE' RUTH OF MAIL TRAINS"—"BAT" FOR YOU IN DIXIE-LAND. Remember this: No one but a "Bush Leaguer" drops his letters loose in the box, as it takes good team work to "land" a pennant.

LET EVERY BUSINESS FAN SUPPORT THE TEAM BY

TYING LETTERS IN BUNDLES AND MAILING EARLY

MAIL ALL LETTERS FOR THE "PAN" AT THREE P.M.

This Nashville postmaster frequently reports on his business to the men who use it, and who might be more interested in the workings of it than they are. He gives them some pointers and some "horrible examples" in the following letter:

MR. NASHVILLE BUSINESS MAN:

OBSERVATIONS AT THE POST-OFFICE

On a recent Monday there was received at the post-office from a very prominent business house about 20 parcels address to near-by towns. This house received these orders on Saturday morning and all orders could have gone forward on the early afternoon trains Saturday and the goods could have been in the customers' hands just 48 hours, or two days sooner. Was this your house? Are you losing business by such methods? INVESTIGATE!

HERE'S ANOTHER, EVEN WORSE

On a recent Tuesday, a certain business house whose manager is a man of splendid business acumen, his house enjoying a large mail-order business, sent 65 parcels to the main post-office at 9:00 A. M., all address to near-by post-offices. These orders came in Monday morning, were filled Monday evening, and notwithstanding the fact that the house is within two blocks of the post-office, delivery was not made to the post-office until Tuesday, too late even for the morning trains. This man penalized his day's business 24 hours on the question of prompt service because one point of his business is weak. This weakness is, in the final analysis,

A BUSINESS DISEASE

and finally will bury any business so affected unless prompt and efficient remedies are applied. The mission of the Nashville post-office, as exhibited in these letters, is to help Nashville business. We are "specialists" in our line and propose to offer remedies for certain business ailments with which we are familiar.

PSYCHOLOGY

treats of the science of the mind. All successful business men are more or less versed in its secrets. Mail-Order Houses' largest salaries are freely paid to men who have mastered and can apply this science.

AND THAT'S WHY

certain large houses in the East and North have impressed the thought on our people who should be our customers that their goods are better and cheaper while we sit by watching the gold flow out and the goods pass in.

THE ONE BIG REMEDY

Give the people service. Try to please. Don't you know that people in small towns know that you can send goods to them on evening trains? They reason that if they can come to town on the morning train, do their shopping and return on the evening train, that something is certainly wrong with Nashville when an order and a parcel can't travel that same route. They reason that you don't care and that is the big reason that Nashville has failed to sell the 750,000 people in middle Tennessee.

LET THE COUNTRY FOLKS KNOW

that you appreciate their business, that mail orders receive the same attention as a person, and that you will send all mail forward on the early afternoon train, giving them as good service as you do the town folks.

THAT KIND OF SERVICE CAN'T FAIL COOPERATE. PLACE ALL LETTERS POSSIBLE IN STREET LETTER BOXES BY FOUR P.M. TIE IN BUNDLES. DROP IN PARCEL COMPARTMENT OF STREET MAIL BOXES REMEMBER THIS IS YOUR POST-OFFICE

The Nashville post-office, like many other post-offices all over the country, was being clogged by mail dumped in at certain hours. Since the post-office is, in reality, an extension, a real part, of the business organization of any man who uses the mails, the business men of Nashville were thus injuring their own prospects. This letter from Mr. McCabe puts the matter up to them:

MR. NASHVILLE BUSINESS MAN:

You are certainly interested in your mail! When you pay postage for service, you expect the best. . . .

BUT

are you lending your aid to get the best service. . . .

BY

signing and mailing letters that are ready at noon, and at intervals thereafter?

REMEMBER THAT

60% of all letter mail received in the twenty-four-hour cycle comes in from 5 P. M., to 9 P. M.

You can help to distribute this peak load by sending to the letter-boxes the mail that is ready on your desk during the day!

If you contribute your part to the scheme, all letter mail can connect with the 8 P. M., trains for points in Ohio, Pennsylvania, Indiana, Michigan, Illinois and the whole West and Northwest.

The post-office is asking your aid that you may get the best service possible!

Will you kindly see that your house keeps your letters on the move to the post-office?

There was another little matter in which improvement was possible, even tho it is a safe bet that few business men in Nashville or in any other part of the country ever had it called to their attention. Mr. McCabe presents the facts in this snappy fashion:

MR. NASHVILLE BUSINESS MAN:

You are naturally interested in the economy of time as it affects your business mail.

DID YOU KNOW

that if you tie a string around your package of letters and

PEP FOR THE POST-OFFICE.

This is Charles A. McCabe's prescription, and he has tried it out with a number of excellent results in Nashville, where he is the postmaster.

This cut shows a crate properly designed to carry the same merchandise as the crate opposite. The boards leaning against the crate represent the saving made by proper construction. At the same time the three-way corner, and proper bracing, make it a much stronger crate.

A typical crate. More lumber than necessary used, as shown by the crate opposite; weak corner construction; ineffective bracing. The kind of crate that makes for delayed shipments, damage claims, poor collections, dissatisfied customers.

A \$100,000,000 Annual Packing Loss—Most of It Saveable

HERE are two facts of significance to every shipper in the country.

That in twelve cities in a single month a freight inspection bureau was obliged to refuse or repair 43,738 packages received by carriers unfit for shipment.

And that, in spite of such rigid inspection, the railroads of the country in 1919 paid out \$103,000,000 in claims on lost and damaged freight.

What is responsible for this condition?

THE PACKING of goods looks like a simple matter. Just two problems to meet:

1. To build an economical crate of the right size.
2. To make it strong enough to stand the jolts and bumps of shipping and to protect the contents.

Such an obvious thing that few shippers have questioned whether it was being done right—perhaps not knowing that proper crate construction is no longer a matter of guesswork but is based on definite engineering principles. The U.S. Forest Products Laboratory and other agencies have contributed much in this development.

The Weyerhaeuser organization has for years been at work on this problem—collecting and analyzing the facts,

so that every foot of lumber it sells for crating purposes will deliver 100% service and at the same time effect the greatest saving for the shipper.

AS A RESULT, this organization now offers to industrial executives a service that not only tells how to cut ship-

ping costs and losses, but also includes the designing of crates to fit, in each case, the product to be packed.

Here is a service that has, in one instance, saved a manufacturer 10% in his crating lumber costs, 5% in labor costs, and 3% in freight costs; and through his ability to deliver his goods in uniformly better condition, speeded up his collections and increased his sales.

LUMBER is the standard material for shipping containers. For this purpose this organization offers to factory and industrial buyers, from its fifteen distributing points, ten different kinds of lumber, of uniform quality and in quantities adequate to any shipper's needs.

A booklet outlining the principles of crate construction and explaining the personal service of Weyerhaeuser engineers will be sent on request to manufacturers who use crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 S. La Salle St., Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Roberts Sts., St. Paul; and with representatives throughout the country.

Weak Crate Corner Construction

The corner is the weakest part of the ordinary crate. This illustration shows a common method of crate corner construction in which the lumber is not used to maximum advantage. Nails driven into end grain have comparatively low holding power. This type of crate corner also lacks the bracing effect obtainable, with the same amount of lumber, nails and labor, in the approved "Three-way" corner illustrated below.

The racking and pulling apart of the ordinary crate corner is responsible for much of the damage to goods in shipment.

Strong Crate Corner Construction

This simple method of fastening together the corners of a crate requires no more lumber, is no more expensive to put together, yet is many times stronger than the method shown above.

In the better "Three-way" corner, each member is nailed to another member and has the third member nailed to it, making it very difficult to destroy the crate with ordinary handling. Note that all nails are driven into side grain. The distinguishing feature of this "Three-way" corner is that each member is held by nails or bolts in two directions. There are 16 ways to build this "Three-way" corner.

Make Every Month Perfect Package Month

WEYERHAEUSER FOREST PRODUCTS SAINT PAUL • MINNESOTA

Producers of Douglas Fir, Pacific Coast Hemlock, Washington Red Cedar and Cedar Shingles on the Pacific Coast; Idaho White Pine, Western Soft Pine, Red Fir and Larch in the Inland Empire; Northern White Pine and Norway Pine in the Lake States

drop them in package box, it will save a lot of time in arranging them for the canceling machines?

WHY

not keep them in orderly fashion, as they certainly must be when you have sealed and stamped them, and send them to the post-office in that manner?

A BIT OF STRING HELPS BUSINESS.

By tying up letters in neat bundles, among other expedients, Nashville merchants have been able to cut down postal delays, increase their own efficiency, and save expense for their post-office.

JUST THINK

how a little thoughtful act of this kind on your part will assist in helping your mail to catch an early train.

MAIL TRAINS DON'T WAIT

We must be on time. Won't you assist the post-office to give your letters the best service possible?

DON'T FORGET

to keep the mail coming to us. Just take those letters that are ready and send them to the mail-box at intervals during the day.

What business man ever gives more than a passing thought to the particular trains on which his mail, for better or for worse, goes out to his customers? Mr. McCabe points out that train times have a good deal to do with successful business. He announces, in one of his recent bulletins:

MR. NASHVILLE BUSINESS MAN:

THE PAN-AMERICAN, GOING SOUTH, THE NEW TRAIN, the "Aristocrat" of L. & N. passenger trains, the last word in speed and service, leaves Nashville daily at 5:03 P. M. This is not a regular mail train, but Nashville makes pouches on Birmingham, Montgomery, Mobile, Pensacola, and several important mail trains West out of Birmingham.

NASHVILLE'S BREAD AND BUTTER

territory is reached through these connections, with a gain of one day letter delivery over the old night trains.

CONNECTION AT BIRMINGHAM

This train reaches Birmingham, at 10:20 P. M., and makes all the midnight mail connections, giving Nashville a wonderful advantage over other Southern cities competing in this same area.

ADVANTAGES AT MONTGOMERY

Three splendid connections out of Montgomery to the Southeast, South, and Southwest, possible only through this train, cover a large territory.

GAIN A DAY TO DIXIE

with your business letters; get them in the street letter-boxes by 3 P. M., or in the Main Post-office by 4 P. M., and they will be on the train, South-bound, by 5:03 P. M., gaining for you the same business advantage in time delivery of your letters on to-morrow in Dixieland as enjoyed by Memphis, Atlanta, Birmingham, Chattanooga, Mobile and New Orleans.

THE HEART OF THE COTTON COUNTRY

in Georgia, Alabama, Florida, Louisiana, Mississippi and Texas, is yours now, on equal footing with all Southern competing cities, from Memphis to New Orleans, even distant competitors like St. Louis, Dallas, Savannah, and Charleston will have to look to their laurels.

BUT WHAT'S THE USE?

If you don't take the advantage; what good can you derive from this magnificent train of speed and service, if you do not get your mail to the post-office? A letter mailed is worth a hundred that failed!

GET READY FOR MUSCLE SHOALS TRADE

Let Nashville get on her tip-toes like the jockeys fighting for the inside position next to the fence; every inch counts in the finish; only one horse can possibly win.

DON'T BE AN "ALSO-RAN"

Study your schedules, finish and mail such letters as go by the next train, and impress upon your office force the importance to your business of getting your mail to the post-office promptly, TIED IN BUNDLES, so we can handle quickly to the departing train. For connection to the train, mail your letters in street letter-boxes in the business district, by 3 P. M.

Mr. McCabe lately took stock of the changes which his little campaign has brought about in his own office. The improved business of Nashville business men is a matter, of course, on which figures are not available. "Being a business man myself," says Mr. McCabe, introducing his report:

I knew that most business men had to be shown, and I realized

NEAT PACKAGES AND PRE-CANCELED STAMPS.

The post-office is a business adjunct of every man using it, asserts Postmaster McCabe. By helping to make it more efficient, as, for instance, by using precanceled stamps, they boost their own business.

that the mere requesting of the business men to cooperate with us was not enough and that we would have to, in some way, show them that we had something to sell them, something that they were already buying but that on account of their lack of knowledge of what they were buying they were not getting anything like the results that they could get; so that I came to the conclusion that we would write a series of letters calling attention of the business men to the possibilities of the service and

"The Gulbransen is part of our family"

"Mother, Father, Mary, myself and the Gulbransen—that's our family. And I'm the song leader!

"The Gulbransen is our pal. All play it well—all differently, according to our ideas. It holds us together—makes 'Home Sweet Home' sweeter!

"Mother sings the old love songs and hymns, to her own accompaniment.

"Father delights in playing plantation melodies and marches.

"Mary and I play popular airs.

"And how quickly we learned with the aid of Gulbransen Instruction Rolls! Such a musical education would certainly have cost us a fortune—to say nothing of many hours."

* * *

The Gulbransen is bringing new joys into thousands of homes. Gulbransen Instruction Rolls—the modern method of playing—teach you to play any selection correctly—from popular airs to grand opera. For quick proof try the three tests shown below.

*Barrett
Everlastic
Roofings*

Roofs of Striking Beauty at Little Cost—

An artistic colorful roof! Nothing adds so much to the charm of a home, be it cottage or mansion.

Yet a roof of striking beauty—of Barrett Everlastic Shingles like the one pictured—is very inexpensive. It is moderate in first cost and practically free from maintenance expense.

Barrett Everlastic Shingles are reinforced on the weather-side with an everlasting mineral surface in fadeless natural colors—either a cool green, or a warm cheerful red. And on the under side a “seal-back” of special waterproofing compound stubbornly resists the deteriorating action of air and moisture.

The four styles of Barrett Everlastic Roofings briefly described at the right—two kinds of roll roofings and two forms of shingles—include roofing suitable for any type of steep-roofed building. They are all moderate in price, easy to lay, and soundly economical.

Be sure you get a Barrett Everlastic brand.

Illustrated booklets of the four styles free on request

The *Barrett* Company

New York	Chicago	Philadelphia	Boston	St. Louis	Cleveland	Cincinnati

THE BARRETT COMPANY Limited
 Montreal Toronto Winnipeg Vancouver St. John, N. E. Halifax, N. S.

Four Styles

Everlastic Multi-Shingles. The newest thing in roofing—four shingles in one. Tough, elastic, durable. Made of high grade waterproofing materials with a red or green mineral surface. When laid they look exactly like individual shingles and make a roof worthy of the finest buildings. Weather and fire-resisting. Need no painting.

Everlastic Single Shingles. Same material and art-finish (red or green) as the Multi-Shingles, but made in individual shingles; size, 8 x 12 1/4 inches. A finished roof of Everlastic Single Shingles is far more beautiful than an ordinary shingle roof and, in addition, costs less per year of service.

Everlastic Mineral-Surfaced Roofing. The most beautiful and enduring roll roofing made. Surfaced with mineral in art-shades of red or green. Very durable, requires no painting. Nails and cement in each roll.

Everlastic “Rubber” Roofing. This is one of our most popular roofings. Thousands upon thousands of buildings all over the country are protected from wind and weather by Everlastic “Rubber” Roofing. It is tough, pliable, elastic, durable and very low in price. It is easy to lay; no skilled labor required. Nails and cement included in each roll.

pointing out to them what they were losing by not taking advantage of the service that we were ready to give them if they would just help us a little bit.

The result of this campaign has really been wonderful, and we now have the cooperation of the business public.

To show you how it has succeeded, below you will find a table showing conditions in March, 1920, and March, 1922:

	March 1920	March 1922
Percentage of letters received tied in orderly packages from mailers.....	10%	55%
Percentage of letter mail received after 6:00 P.M. (considered late mailing) reduced from.....	50%	to 38%
Percentage of circular mail and catalogs tied in orderly packages.....	15%	98%
Pre-canceled stamps affix to Parcel Post mail.....	15%	90%
Pre-canceled stamps affix to circulars and catalogs.....	20%	95%
Percentage of circulars and catalogs separated to towns and states.....	10%	60%
Permits issued for use of the pre-canceled stamp.....	146	525

We have proved that in most of the little towns within a radius of 75 miles of Nashville, mail and packages can be delivered on the same day, if mailed on the early afternoon trains.

I am strongly of the opinion that if work similar to ours was carried on in all of the post-offices of this country it would not only be a great service to the business public but would also greatly reduce expenses in the Post-office Department.

GANDHI, ENEMY OF WESTERN CIVILIZATION

LOVE YOUR ENEMIES; if you can not love them, pardon them and never retaliate against them." Do not resist evil, for "by thought, word or act you must not injure your adversary." If your adversary, refusing to follow this rule, subjects you to great suffering and loss, "rejoice in the suffering and loss and court them; if you can not rejoice in them, pardon them and never retaliate against them. Force is wrong and must go under."

These are said to be a few of the ideas that inspire Mahatma Gandhi, now in prison for stirring up the Indian populace against British rule. Gandhi hates British rule, however, chiefly because he hates all rule and he is said to have declared that, "the merit of the British Government is that it governs least." This sentiment was expressed by the Indian leader, it is true, in the days before the said Government changed its ideas and began to rule India with a stronger hand, putting Gandhi into jail as one of the first steps in its program. Political leaders, both in England and in India, are wondering whether opposition to British Government in India will continue along the "non-violent" lines advocated by Gandhi, now that the leader is in jail. Previously, the Mahatma has been able to curb the tendency to violence in his followers by fasting for a certain number of days. This form of self-chastisement on his part, it is said, usually brings the turbulent persons to time.

The man's real and final objective is a "radical reform of mankind. He avows himself an implacable enemy of western civilization," asserts a fellow Indian, Srinivasa Sastri, who differs with Gandhi politically but is said to be his friend. Sastri, who was the Indian member of the British Delegation to the Washington Conference on Disarmament, is himself a qualified believer in western civilization, and thinks that India might fall into a state of promiscuous trouble if British rule were removed. But he tellingly quotes against our civilization those of Gandhi's precepts which sound very much like the Christian Gospel which that same western civilization professes to believe in. In addition to the counsel of returning good for evil already quoted, Gandhi believes, according to Sastri, that "nobody is entitled to possess more than is necessary for the moment. To hold in excess of the need is to be guilty of theft. He and his wife have given away all their property—he practised law for many years with success—

and now own nothing beyond the clothes they wear and a change or two and maybe a bag or box to contain these." A number of Gandhi's sayings have been collected by *The Survey* (New York). Beginning with this reference to America as a "horrible example," they run:

The greater is the possession of riches, the greater is the moral turpitude. . . . That you can not serve God and Mammon is an economic truth of the highest value. Western nations are to day groaning under the heel of the monster god of materialism. Mere moral growth has become stunted. They measure their progress in pounds, shillings and pence. American wealth has become the standard. She is the envy of other nations. I have heard many of our countrymen say that we will gain American wealth but avoid its methods. I venture to suggest that such an attempt if it were made is foredoomed to failure.

The force of love is the same as the force of the soul or truth. We have evidence of its working at every step. The universe would disappear without the existence of that force.

It is easier to win an ignorant fanatic from his error than a confirmed scoundrel from his scoundrel issue.

Fearlessness is the first thing indispensable before we can achieve anything permanent and real. Let us fear God and we shall cease to fear man. If we grasp the fact that there is a divinity within us which witnesses everything we think or do and which protects us and guides along true faith, it is clear that we shall cease to have any other fear on the face of the earth, save the fear of God.

Our Scriptures seem to teach that a man who really practises *Ahimsa* (Harmlessness) in its fullness has the world at his feet; he so affects his surroundings that even the snakes and other venomous reptiles do him no harm.

In its positive form, *Ahimsa* means the largest love, the greatest charity. If I am a follower of *Ahimsa*, I must love my enemy. I must apply the same rules to the wrongdoer who is my enemy or a stranger to me as I would to my wrongdoing father or son. This active *Ahimsa* necessarily includes truth and fearlessness. A man can not deceive the loved one, he does not fear or frighten him or her. Gift of life is the greatest of all gifts; a man who gives it in reality disarms all hostility. He has paved the way for an honorable understanding. And none who is himself subject to fear can bestow that gift. He must, therefore, be himself fearless. A man can not then practise *Ahimsa* and be a coward at the same time. The practise of *Ahimsa* calls forth the greatest courage. It is the most soldierly of a soldier's virtues.

If the world believes in the existence of a soul, it must be recognized that soul force is better than body force—it is the sacred principle of love which moves mountains. On us is the responsibility of living out this sacred law; we are not concerned with results.

We should not encourage the thought that one has to work because he will be honored. Similarly, if public men feel that they will be stoned and they will be neglected let them still love the country; for service is its own reward.

Passive resistance is an all-sided sword; it can be used in any way; it blesses him who uses it and him against whom it is used without drawing a drop of blood; it produces far-reaching results. It never rusts and can not be stolen. Competition between passive resisters does not exhaust them. The sword of passive resistance does not require a scabbard and one can not be forcibly dispossessed of it.

True religion is not formal religion or customary religion, but that which underlies all religions—a religion which brings man face to face with his Maker.

A servant of the people can not accept honors. He is supposed to have consecrated his all to the people and I could not secrete all that you have given me to you. One who has made "Service" his religion can not wish for honors. The moment he does so, he is lost. I have seen that some are inspired by the lust of help, some by the lust of fame. The lust of help is sordid enough, but that of fame is even more so. The misdeeds that the latter leads a man into are more wicked than those into which the former leads him.

Rejection is as much of an ideal as the acceptance of a thing. It is as necessary to reject untruth as it is to accept truth. All religions teach that two opposite forces act upon us and that the human endeavor consists in a series of eternal rejections and ac-

ceptances. Non-cooperation with evil is as much a duty as co-operation with good.

An India awakened and free has a message of peace and goodwill to a groaning world.

Gandhi's war against civilization, particularly against the existing system of British Government, is conducted according to the foregoing principles. The logic behind his campaign is thus summed up by Sastri, his political opponent and personal friend, in *The Surrey*:

Since western civilization and the existing system of British Government have to be got rid of, we must have nothing to do with either offspring of Satan; we must first cut off our connection with those large and powerful institutions by which they enslave us. These are schools, courts, legislatures. Withdraw children from schools, sue not for justice in courts, and avoid the polling-booths. Machinery being another invention of Satan and mills being the mainstay of British domination in India, boycott both, cease to import foreign cloth, and erect a spindle in each home. The motion of the *Charka* (spinning wheel) has mystic properties, its music chastens the soul, and its products most adorn the human form, especially the female form. These principles and courses of action have more or less permanent validity because the war against modern civilization must be expected to be of indefinite duration. It is a picked body, however—namely, the members of the *Satyagrahasrama* in Ahmedabad—who are engaged in this exalted enterprise and owe lifelong allegiance to these principles and courses of action. The numerous levies now fighting in India under the flag of non-cooperation are enrolled only for a single campaign and may lapse into the common grooves of life as soon as the British Government has been brought to its knees and has consented to change its basis. In the intensive operations of this campaign it may become necessary to resort to civil disobedience of selected laws and non-payment of taxes. But, whatever the severity of the measures which such action may provoke the authorities to adopt, non-cooperators are precluded from the slightest infraction of the commandment as to non-violence.

To understand Mr. Gandhi's view of life, attention must be fixed on the rules he has laid down for the regulation of his Ahmedabad institution. Its name, *Satyagrahasrama*, means the hermitage of the determined practise of truth or the abode of soul-force. The *asrama* is still small. It has had no real chance of proving its vitality, for ever since its establishment other things have claimed the energies of its founder. But the attainment of its objects is conditioned by the increase of its numbers and the acceptance by the community at large of those austere ideals which are at present exemplified in the lives of a few apostles. No estimate can be formed of the prospective influence of the new gospel without an examination of its real nature.

Truth in the highest sense is possible only where the individual enjoys complete freedom. All forms of force or coercion are thus at once barred. Compulsion, authority, government—these are anathema maranatha to one who at bottom is a philosophical anarchist. In fact, he describes the essence of his doctrine sometimes as love, sometimes as truth, sometimes as non-violence (*ahimsa*); these terms are, in his opinion, interchangeable. No organized government, in the ideal world, is justifiable. The merit of the British Government is that it governs least. Even a family and a school must trust entirely to the power of love and moral reasoning.

"M. K. Gandhi is an ascetic in the rôle of the political leader—the apostle of a unique revolution," says S. K. Ratcliffe, and thus sums up, in the same magazine, the recent activities of the man which have finally resulted in his arrest:

For two years past he has been preaching the implacable doctrine of non-cooperation: an absolute boycott of the British Government as the road to immediate freedom for the Indian people. He commands his followers to withdraw their children from government schools and colleges, to abandon the law courts, to return their decorations, to abjure the use of foreign goods and burn every yard of foreign cloth they possess—while refraining from violence of any and every kind. The proclamation of his doctrine in its absolute form came with the revelation (as Gandhi believed it to be) of the "satanic" character of the British power and of western materialism in the massacre of Amritsar in the Punjab by Brig.-Gen. Dyer (April, 1919). Since then Gandhi has completely dominated the Indian National Congress at successive sessions—in Calcutta, Nagpur, and Ahmedabad and the sweep of non-cooperation throughout the country has been marked by incessant bonfires of foreign cloth and by the spectacular boycott in many cities of the Prince of Wales's tour.

"PUTTING OVER" THE UBIQUITOUS AD

HOW DOES THE BUSY ADVERTISING MAN so improve each shining hour that the products of his genius frequently eclipse the pure reading matter for which magazines and newspapers are supposed to exist? The art and ingenuity displayed in modern advertising copy were never attained without plenty of that hard work which is said to constitute nine-tenths of genius. Organization, the deep thought of dozens of bright young men and men who stay young, is responsible for that handsome youth in the new spring suit, set before your eyes to the accompaniment of a few chaste lines of letter-press which touch your heart, vanity and pocketbook at the same time. No one man, but an agency, in all probability, was responsible for that "full page in color" which will alter the ideas of thousands of citizens as to what they ought to eat for breakfast. "The chief exponent of advertising," writes an expert in the art, Earnest Elmo Calkins, in a little volume on "The Advertising Man" (Scribners), "is the advertising agency." There are at least five hundred such organizations, we are told, and fully ninety per cent. of all advertising, except retail, is prepared and placed by them. Mr. Calkins informatively proceeds:

The advertising agency is a group of men of various attainments, selected for their proficiency in certain lines, and bound together by an organization depending more on the temperaments of its different members than is customary in most business groups. The simplest organization that can exist and perform the work of an agency should be equipped to investigate markets, prepare an advertising plan, select mediums, execute the plan (prepare advertisements with the necessary copy, art work, and printing), place that advertising in the mediums, and check up its insertion. Nor can any agency wholly ignore the necessity of getting new accounts from time to time in order to insure a healthy growth. So the advertising agency consists of the following major departments:

1. Commercial research (trade investigation).
2. Plan (creative work, visualizing).
3. Mediums and rates.
4. Copy.
5. Art, including layout and typography.
6. Placing and checking.
7. Soliciting or business getting.

The names do not greatly matter. These are the usual ones, but other terms are used, and none of the titles are as exactly descriptive as they might be. I have called them departments. They represent work that must be done, but a department may be a single man, or a group of men. And in the case of smaller agencies one man may be a group of departments. Indeed, it generally happens that all the members of the staff are to some extent interchangeable. Each is an advertising man. Each knows something of the others' work. The research man is an advertising man with a strong leaning toward statistics. The art director is an advertising man with a feeling for design. It is difficult to draw hard-and-fast lines between the departmentalized jobs, to say just where making the plan divides itself from the selection of mediums, on one hand, or from the making of layouts, on the other. One of the charms of agency work is the association, the interchange of ideas, the discussions, the constant novelty that renews the interest. The best agencies are those in which the members of the staff, otherwise well equipped, are temperamentally adapted to each other. This intellectual team-work has sometimes been described as the composite man.

The research department, also called market investigation, is that part of the agency's work which digs up facts on which to base an advertising campaign. Advertising is not launched blindly, but is intended to accomplish a certain definite, predetermined result; as, for instance, introducing the goods into a new territory, increasing sales in an old one, driving out competition, or teaching people a new habit. The first thing is to learn everything about the prospective territory. What is its population? How many are native-born, literate, white? How many earn enough to afford the article advertised? What is the standard of living? How many own autos? How many pay income tax? How many own their homes? These are some of the things the investigator starts to find out. He gets data from government reports, tax lists, sales sheets, census, and house-to-house canvass. By similar methods facts about dealers are collected. A study of the advertiser's products is likewise made—price, demand, competition; how manufactured, packed, shipped; how distributed, jobber, or direct

THE TIRE COMPETITION OF TOMORROW

THERE has been more advance in the art of tire making in the past five years than in almost any other one thing.

That so many of these advances originated with the makers of U. S. Tires is perhaps aside from the point. The concern of the car-owner himself is how he is going to benefit.

* * *

If tire manufacturers make no attempt to outrival each other in *quality*, where does the tire user get his consideration?

The makers of United States Tires urge upon *everybody*—manufacturer and dealer alike

For the production of United States Tires there is erected and operating the greatest group of tire factories in the world.

A leadership that has recorded itself with the public. The outstanding example of what faithful quality and sound economy can do when it is patient enough to prove itself to a whole nation.

United States Tires
are Good Tires

Try a pipeful or two direct from the factory

Not that it will be any better than the Edgeworth you buy in a store, but we want you to have your first Edgeworth smoke at our expense.

You may repay us by finding that Edgeworth just suits your taste. And if it doesn't—for there are some few men to whom Edgeworth is not just the thing—there's no harm done.

We are glad enough to send free samples in the same spirit that we'd hand you our pouch if circumstances permitted. We wish it were possible to save you even the little trouble of writing for Edgeworth.

Edgeworth is a likable smoke. Men who have tried it and found it to be the right tobacco for them never think of smoking other tobaccos. They'll tell you there are many good tobaccos—and there are. And when you offer them your pouch with "stranger" tobacco in it, they may use up a pipeful just to be friendly.

But notice how quickly they get back to their beloved Edgeworth!

Day after day Edgeworth fans write to us. They tell us human little stories, friendly anecdotes centering around Edgeworth. Often it is the number of years they have smoked Edgeworth that prompted them to write.

Knowing how hard it is for the average man to write letters, we consider these unsolicited messages the greatest tribute to Edgeworth we could possibly

have—greater even than the increasing sales. It gives the business of making tobacco a pleasure that runs through the whole gamut—from factory executive to the smoker in the backwoods.

If you have never tried Edgeworth, let us repeat our offer, "Try a pipeful or two direct from the factory." All you have to do is to write "Let me try a pipeful or two" on a postcard, sign your name and address and send the postcard to us. The address is Larus & Brother Co., 5 South 21st Street, Richmond, Va. If you want to add the name of your tobacco dealer, we'll make sure that he has Edgeworth in stock.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

PERSONAL GLIMPSES *Continued*

to retailer, and where. The facts sought depend on the nature of the problem. The data collected are sifted, tabulated, classified, and diagrammed. The real professional work of the man in charge of this department comes in making the right sort of deductions from this information.

The man who would be successful in such a department requires first a thorough acquaintance with business and the methods by which business is done. He must have a good head for figures and a liking for statistics. He must be unusually observant. The usefulness of such a man to his agency and the clients of that agency hinges almost entirely on his ability to read in a sales sheet or the report of an investigator those things which are not obvious to the casual observer, or, frequently, to the manufacturer himself.

A single instance will be enough to show how useful such work can be in developing sales. A large tire company sold through branch offices. Each branch was responsible for a territory, consisting of one or more States. The branch was responsible for all the trade secured in its territory. When a list of the branch offices was made, showing the amount of business done by each one in its territory, the Chicago branch led all the rest. A casual study of this report would lead one to think that the Chicago branch was the best. The head of the research department was not satisfied with this superficial showing. He had special investigations made, to show him the amount of business which could be done in each district. By means of the registration of automobiles and trucks, he was able to determine just how many possible customers there were. Then he compared the possible customers—that is, the potential market—with the actual market sold by each branch, and put it in the form of a graphic chart. A single glance revealed the fact that the Chicago branch, instead of being first, was eleventh. That is, ten other branches came nearer supplying the possible demand for tires in their territories than the Chicago branch. The Chicago territory was too large; one branch was not sufficient to take care of it. So it was subdivided into three branches, which greatly increased the sales made in that territory.

Such work appeals to the scientific mind. It is the exact opposite of the plan department, where so much depends on imagination. It deals with what is, while the plan department considers what might be.

The plan department comes next in chronological order, but in importance it is first. On the data developed by the research department, with the help of the rate, art and typographical departments, the complete advertising campaign for a client is prepared. The plan department is sometimes an individual and sometimes a committee. Into the plan goes all that the staff of the agency has in the way of advertising experience.

Two objects are aimed at in the formulation of the plan. One is its presentation to the advertiser—the client—for discussion and approval. The other is to serve as a program for carrying it out.

A plan covers a year or more. Its form is a typewritten book, illustrated with rough sketches, diagrams, charts, whatever will most effectively show what is going to be done. In this part of the work the help of the visualizer is called in.

Sometimes the visualizer is the layout man, but anyway he is a man handy with a pencil. While he talks he draws pictures. If anything can be made clearer by illustration, that point is illustrated. A finished plan reaches the proportion of a good-sized book; sometimes several.

While the plan is in preparation, with constant need of consultation with the client, a contact man is selected. The contact man is the one who during the life of that account will be the go-between between the agency and its customer. He may be likewise the account handler, that is, the man who has general supervision of the execution of that particular account. This is usually the arrangement which gives the best results and causes the fewest lost motions. But the selection of contact man is often a matter of temperamental adaptation. The contact man works with the advertiser, his sales manager, advertising manager, and frequently his salesmen. He ought to have the qualities of a good mixer. The account handler must be a man of broad advertising experience, a good executive, with sufficient initiative to start things in time and keep ahead of the needs of the account. When the two groups of qualities are found in one man, the two kinds of work may be most happily combined.

This all sounds more complicated than it really is. To tell the truth, there must be a certain amount of elasticity about an advertising agency. Organization there must be, of course, but an advertising plan does not march through an agency in orderly progress like a flivver through an automobile factory. In a profession in which the creative faculty must be exercised, where one must sometimes wait for an inspiration, or "dig up the big idea," as an advertising man exprest it, some allowance must be made for the creators. Some departments, however, such as rate, placing, checking, and billing, go on with the clocklike regularity of a bank, and there is likewise an established routine for all the other functions, subject, as the timetable says, to change without notice.

The plan describes what the advertising expects to do and how it will do it. It divides up the appropriation and allots it to different parts of the work. It lists the mediums and indicates the size and frequency of the advertisements. It determines the prescription by which the copy shall be written. It exhibits layouts suggesting the physical appearance of the advertisements, posters, cards, window displays to be used. It outlines the work on the dealer.

It covers much more ground than is indicated here, all depending on the nature of the account. When it is finished it is a graphic and vivid picture of the advertising activities of the client for whom it is prepared. It corresponds in its preparation and use to the architect's preliminary sketches, perspectives, and elevations, which are not for the contractor to build by but for the judgment and approval of the client.

The plan is sometimes printed or otherwise reproduced for the purpose of merchandising the advertising. It is necessary for the salesmen and the dealers to know what it is all about, so that their efforts may work with, instead of against, the advertising. This explaining of the advertising plan to those engaged in selling the goods is called merchandising the advertising. In this connection the dealer tie-up is also considered. Advertising matter for the dealer's own use about the manufacturer's goods is furnished, and its

use urged and demonstrated. For this work upon the dealer the advertiser's salesmen are used. Thus they become to this extent part of the advertising work, and the value of the relation of the contact man to the salesmen is demonstrated.

The advertising manager is perhaps the king pin of the firm which advertises. We are giving a brief glance at his work, through the kindness of Mr. Calkins:

If more attention is given to him than to the representative, it is not because the latter is not a desirable and interesting occupation. But the knowledge of advertising which makes the representative successful is the same as that employed by the manager and the agent. So the accomplishments described in this and the next chapter may be understood as desirable also for the man whose temperament is better adapted to selling a tangible commodity like space, while essential to the one who sells advertising space.

We will take for instance the advertising manager of a large manufacturing business employing all avenues of publicity. The manager for a smaller concern has similar activities. He must do some of those things, or all of them to some extent.

The company manufactures a line of food products. These products are sold through grocery stores to the consumers. That is, the company has two sets of customers, the grocers who buy the products for sale at a profit, and the ultimate purchasers who consume them. The products are sold to the grocers by an army of eight hundred salesmen. The salesmen are directed by a sales manager and his assistants. In each of the large cities there is a sales branch and a warehouse. The branch manager is responsible for the sales in his territory, and has assigned to him a certain number of the salesmen for this purpose. The products are sold in one hundred and fifty thousand grocery stores; that is, they are well distributed.

The advertising of such a house amounts to more than a million dollars a year. Newspapers, magazines, street-cars, billboards, painted signs, window displays, store demonstrations, moving-picture films, and printed matter are used to reach and sell the consumer. Trade papers, printed matter, letters, salesmen, and missionaries are employed to reach and sell the grocer. Missionaries are traveling men who do not sell goods, but who help the grocer to keep his stock well arranged, put in window displays, create good-will for the house, and report trade conditions to the sales manager.

Attached to the sales department is the advertising department. In a business of this magnitude it would consist of an advertising manager with a staff of twenty-five or even fifty assistants. Most of these assistants are clerks performing clerical work. But each of them has an opportunity to learn something of advertising. The professional assistants of the advertising manager might be the man in charge of window-dressing, the trade-aid departments, the editor of the house organs, and sometimes artists and writers. The trade-aid department busies itself with methods for helping the grocer sell the advertiser's goods. House organs are magazines or newspapers distributed free. They are really advertising disguised in the form of matter helpful to the customers. In some companies there is a house organ for the consumer, one for the trade, and one for the employees. A press agent is frequently employed. He supplies the

Smooth Driving in Heavy Traffic

When you sit at a Ford wheel and press your pedals—it's a wonderful feeling to have it glide out of low into high, and when the traffic is halted, to stop easily—smoothly.

That's the way the Ford was meant to run—and it will run that way when it is properly lubricated.

You haven't been using the right oil in your Ford unless you've used "F" Autoline for Fords, because no other motor oil keeps the linings of your brake and transmission bands pliant and in condition to grip the transmission drum evenly. That's the way "F" Autoline Oil stops "chattering." "F" Autoline Oil makes smooth driving.

Don't risk a penny. Get your Ford dealer or garage man to drain your crank case of old oil, and put in "F" Autoline Oil. If your Ford "chatters" after that, your money will be refunded. That's how confident we are that you will find satisfaction. "F" Autoline will not clog the oil line. It costs no more.

An authorized Ford dealer writes: "By the use of this oil, the chatter of transmission bands has been entirely eliminated and there has been quite a noticeable change in the running of the motor."

We have specialized on lubrication-problems for 90 years. We are the makers of "OO" Autoline—one of the few oils recommended in the Franklin Owners' handbook for use in Franklin Cars.

Look for the red Autoline Oil sign that points the way to a dealer or garage that sells "F" Autoline Oil for Fords.

Dunlop 162
The best ball to play with. Smaller size. 85c each.

Dunlop "D"
The most durable ball to play with. Medium size. 85c each.

Dunlop Magnum
The easiest ball to play with. Large size. 85c each.

Dunlop Warwick
The cheapest of good balls to play with. Medium size. 70c each.

**NOW
85¢**

The Choice of Particular Players

Here's the golf ball that Amateurs and Professionals, the world over, have depended upon for its *sure* playing qualities throughout more than fifteen years.

Today, as a perfected product of skilled workmanship, the Dunlop ranks as the leading imported golf ball, both in volume of sales and the general spread of its popularity.

This Year's Price 85 Cents Each

During the last two years the regular price of *standard* Dunlop balls has been \$1.10 each. This season we are pleased to announce a price recession, which makes the Dunlop 162, the Dunlop "D" and the Dunlop Magnum obtainable at 85c each. The *Warwick* will retail at 70c. Everything considered—including the playing qualities, durability and dependability—we believe that the buyer of golf balls will find the Dunlop range provides for the truest economy.

You Can Get Dunlops If You Ask For Them

Many players accustomed to the use of Dunlop golf balls have sometimes found it difficult to obtain their favorite brand. No need for being without Dunlops this season. A liberal supply is available, and there is no reason for taking a substitute article. Sometimes though, you may have to insist on Dunlops to get them. If you don't find Dunlop balls in stock, please write us, giving the name of your club.

PERSONAL GLIMPSES Continued

newspapers with information about the business that is of enough intrinsic interest to be run as news. The writers prepare copy for the house organs, and for such advertising as is not prepared by the advertising agency of the business. The artists design labels and packages, arrange window displays and exhibits, and advise as to the artistic physiognomy of the business and its products. Sometimes there is a staff photographer, and if there is a print-shop the foreman is also a member of the advertising staff.

If you will conceive of each of these men with a stenographer, a chief clerk, and an office-boy, you will get an idea of the personnel of a modern and complete advertising department.

Over the activities of this department the advertising manager presides. He is undoubtedly able himself to perform all of the duties of his assistants, and in a smaller business he would perform all of them. But in so vast a business as I am describing his work would be executive, seeing that his assistants perform their work properly, consulting with each in turn, and holding conferences with the officers of his company, especially with the sales manager and with the agency which handles the advertising of his company.

He and his department are responsible, jointly with the agency, for the success of the advertising. He discusses the appropriations, plans, copy, and designs with the agents, O. K.'s lists of mediums and proofs of advertising, and then sees that the part of the campaign which his department is to execute is carefully carried out.

Some of the functions are better performed by the agency and some by the advertising manager. In a general way the agency looks after the advertising to the consumer, and the advertising department that to the trade. But that is not an iron-clad rule. Still the advertising manager is in closer touch with the trade than the agent through his contact with the sales manager and the sales force.

Among the functions of the advertising manager is that of "merchandising" the advertising; that is, explaining it to the selling organization of his own company and to the grocery trade. Elaborate exhibits, with charts and diagrams, are prepared. The advertising manager attends salesmen's conferences and grocers' conventions for this purpose. He sees that branch offices are supplied with promotion material, and coaches salesmen in securing window displays and getting the grocers interested in the advertising. It is necessary to teach grocers to arrange their stock properly, to dress their windows and keep them clean; to use advertising for their own advantage; in short, to become better grocers than they naturally are, in order that the manufacturer may have better outlets for his goods. Nearly all the improvements in the methods of the lesser retail trades have been inspired and developed by manufacturers who advertise.

Such a position as the above represents the best in this field. The work is executive in character and carries the authority and salary of an executive. Some advertising managers are vice-presidents or directors in their companies, and frequently become sales managers. In some instances the advertising manager is the head of the business.

DUNLOP

CREOLES OUTSIDE THE COLOR LINE

IT is possible to speak of a "Creole negro," but it is quite wrong to use the phrase "negro Creole," and between the two expressions lies a difference, Southern writers assure us, which Northerners have been slow to distinguish. A recent article, published in *Leslie's Weekly* and reprinted in part in these columns, mentioned that "Louisiana has more ramifications of the 'colored' lines than any other State, largely because a great part of the negro population there speak a French patois. They call themselves Creoles, and are almost without exceptions Catholics, and mostly mulatto." They are quite wrong to call themselves Creoles, even tho there are admittedly a certain number of cases of mixed Creole and negro blood, objects the *New Orleans Item*, which points out the misconception in the following informative editorial:

Creole, in the original and general sense of term, was the term applied to the children of citizens of Romance nations who were born in colonies. Creoles were natives of the colonies, but their race was the race of the homeland of their parents—usually Spanish, French or Italian. It afterward came to be applied to the descendants of these colonists. In some places, like Louisiana, it persists long after the colonies have passed out of the possession of the countries from which the Creoles derive their descent.

Instead of signifying persons of the pure or mixed blood of the original stock of the colonies—Negro, Indian, Arab, or what-not the term Creole was employed for the very opposite purpose. It was to distinguish persons born in the colonies to the pure stock of the European settlers from persons of original native strains.

Here in Louisiana a "Creole" has never been anything but a descendant of the original French and Spanish settlers born in Louisiana instead of in France or Spain. The name has clung, by the very strength of its ancient associations, tho Louisiana has been under the Stars and Stripes more than a century.

One dictionary says that the term was once applied to negroes born here in order to distinguish them from negroes brought from Africa. We have never heard it used in that sense. Such usage must have died out as soon as the slave trade ceased.

The word has naturally come into use as an adjective, for the Creoles retain many of the customs, methods, and characteristics of their ancestors, some of which are attractive and charming. The word Creole is thus ascribed to anything peculiar to the Creoles or belonging to them in any particular way. When one says "Creole negro" nowadays he means a person of that race who springs from a line associated with the old white Creoles, who speaks their French, and follows the customs and methods he has learned from them.

We thus speak of Creole gumbo, or Creole cooks and cookery in general—which is about the best in the world—of Creole vivacity, Creole music, or anything else that the user of the term conceives to be proper to the sprightly men and beautiful women with old French and Spanish names who form a large and important part of our body politic, but continue to betray, even to this distant day, by an occasional accent in their excellent American-English, their relationship to their ancestors from France and Spain.

DEPEW'S MEMORIES OF ROOSEVELT—AND OTHERS

A MEMORY WHICH "GOES BACK," in its possessor's words, "for more than eighty years" has produced the material for a book of reminiscences, whose scope extends from the opening of the Civil War to the present day. Chauncey M. Depew, now in his eighty-seventh year, has been called "an American institution." Like the man in the popular song, he knew everybody and they all knew him. His book contains intimate little glimpses, mostly such as might be used to adorn an after-dinner speech, of Lincoln, Grant, Seward, Conkling, Blaine, Cleveland, Greeley, Russell Sage, Commodore Vanderbilt, George William Curtis, Colonel Watterson, Mark Twain, Robert Ingersoll, Theodore Roosevelt, Joseph Jefferson, and Richard Mansfield, to mention only a few. Of Roosevelt's entry into public life, which came about, it appears, in the initiative of a discerning ward politician, Mr. Depew reminisces in this chatty way:

One of the interesting characters of New York City was Frederick Gibbs, who was an active politician and a district leader. Gibbs afterwards became the national committeeman from New York on the Republican national committee. When he died he left a collection of pictures which, to the astonishment of everybody, showed that he was a liberal and discriminating patron of art.

Gibbs had a district difficult to manage, because, commencing in the slums, it ran up to Fifth Avenue. It was normally Democratic, but he managed to keep his party alive and often to win, and so gained the reputation that he was in league with Tammany. He came to me one day and said: "Our organization has lost the confidence of the 'highbrows.' They have not a great many votes, but their names carry weight and their contributions are invaluable in campaigns. To regain their confidence we are thinking of nominating for member of the legislature young Theodore Roosevelt, who has just returned from Harvard. What do you think of it?"

Of course, I advocated it very warmly. "Well," he said, "we will have a dinner at Delmonico's. It will be composed entirely of 'highbrows.' We wish you to make the principal speech, introducing young Roosevelt, who, of course, will respond. I will not be at the dinner, but I will be in the pantry."

The dinner was a phenomenal success. About three hundred in dress-suits, white vests, and white neckties were discussing the situation, saying: "Where did these stories and slanders originate in regard to our district, about its being an annex of Tammany and with Tammany affiliations? We are the district, and we all know each other."

Young Roosevelt, when he rose to speak, looked about eighteen years old, tho he was twenty-three. His speech was carefully prepared, and he read it from a manuscript. It was remarkable in the emphatic way in which he first stated the evils in the city, State, and national governments, and how he would correct them if he ever had the opportunity. It is a curious realization of youthful aspirations that every one of those opportunities came to him, and in each of them he made history and permanent fame.

Depew was among those who felt that Roosevelt had buried himself when he was elected to the Vice-Presidency. Then came the tragedy which was his opportunity, and the Vice-President

stept into the Presidency. Mr. Depew thus gossips about Roosevelt in his new office:

Senator Hanna was accustomed to have a few of his colleagues of the Senate dine with him frequently, in order to consult on more effective action upon pending measures. President Roosevelt, who knew everything that was going on, often burst into Hanna's house after dinner and with the utmost frankness submitted the problems which had arisen at the White House, and upon which he wished advice or, if not advice, support—more frequently support.

Any one who attended the morning conferences, where he saw Senators and members of the House, and the public, was quite sure to be entertained. I remember on one occasion I had been requested by several of his friends, men of influence and prominence in New York, to ask for the appointment of minister to a foreign government for a journalist of some eminence. When I entered the Cabinet room it was crowded, and the President knew that I was far from well, so he at once called my name, asked how I was and what I wanted. I told him that I had to leave Washington that day on the advice of my doctor for a rest, and what I wanted was to present the name of a gentleman for appointment as a minister, if I could see him for five minutes.

The President exclaimed: "We have no secrets here; tell it right out." I then stated the case. He asked who was behind the applicant. I told him. Then he said, "Yes, that's all right," to each one until I mentioned also the staff of the gentleman's newspaper, which was one of the most prominent and powerful in the country but a mere critic of the President. He shouted at once: "That settles it. Nothing which that paper wishes will receive any consideration from me." Singularly enough, the paper subsequently became one of his ardent advocates and supporters.

On another occasion I was entering his private office as another Senator was coming out of the Cabinet room, which was filled. He called out: "Senator Depew, do you know that man going out?"

I answered, "Yes, he is a colleague

of mine in the Senate." "Well," he shouted, "he is a crook!" His judgment subsequently proved correct.

Mr. Roosevelt and his wife were all their lives in the social life of the old families of New York who were admitted leaders. They carried to the White House the culture and conventions of what is called the best society of the great capitals of the world. This experience and education came to a couple who were most democratic in their views. They loved to see people and met and entertained every one with delightful hospitality.

Roosevelt was a marvel of many-sidedness. Besides being an executive as Governor of a great State and administrator as civil-service commissioner and police commissioner of New York, he was an author of popular books and a field naturalist of rare acquirements. He was also a wonderful athlete. I often had occasion to see him upon urgent matters, and was summoned to his gymnasium, where he was having a boxing match with a well-known pugilist, and getting the better of his antagonist, or else launching at his fencing master. The athletics would cease, to be resumed as soon as he had in his quick and direct way disposed of what I presented.

Horseback riding was a favorite exercise with him, and his experience on his Western ranch and in the Army had made him one of the best riders in the world. The foreign diplomats in Washington with their education that their first duty was to be in close touch with the chief magistrate, whether czar, queen,

Chauncey M. Depew, now in his eighty-seventh year, has just published a book of reminiscences which sustains his reputation as the foremost after-dinner speaker of the country.

HOME OF BEAUTY HOUSE NO. 102

Designed by Floyd Yewell, Architect

This illustration shows Home of Beauty No. 102, built by Mr. J. C. Breckon at Denver, Colorado. Mr. Breckon says: "The house has caused much favorable comment. I consider it an extremely artistic little house." The interior is just as distinctive as the exterior.

Substantial Homes

MORE and more home-builders are coming to realize that the Face Brick home gives them the utmost of utility, strength and beauty, at the greatest ultimate economy.

Whether your home is to be large or small you will be interested in the many advantages Face Brick offers you.

Face Brick, with its wide range of color tones and textures, has almost limitless artistic possibilities. Through durability and fire-safety, and by reducing repairs, depreciation, insurance rates and fuel costs to a minimum, it gives you, in the long run, the cheapest house you can build.

You will find a full discussion of these matters in "The Story of Brick," an artistic booklet with numerous illustrations and useful building information. Sent free on request.

"Face Brick Bungalow and Small House Plans" are issued in four booklets, showing 3 to 4-room houses, 5-room houses, 6-room houses, and 7 to 8-room houses, in all

ninety-two, each reversible with a different exterior design. These designs are unusual and distinctive, combined with convenient interiors and economical construction. The entire set for one dollar. Any one of the booklets, 25 cents, preferably in stamps.

We have the complete working drawings, specifications and masonry quantity estimates at nominal prices. Select from the booklets the designs you like best and order the plans, even if you are not going to build now, for their study will be not only interesting and instructive, but helpful in formulating your future plans.

You may want "The Home of Beauty," fifty designs, mostly two stories, representing a wide variety of architectural styles and floor plans. Sent for 50 cents in stamps. We also distribute complete working drawings, specifications and quantity estimates for these houses at nominal prices.

Address, The American Face Brick Association, 1134 Westminster Building, Chicago, Illinois.

Majestic Mount Robson,
Alt. 13,069 feet

Jasper Park and Mount Robson Park embrace the scenic mountain wonders of the Dominion. Canadian National Railways cross the Rockies at the lowest altitude, the easiest gradients and in view of Canada's highest peaks.

PERSONAL GLIMPSES

Continued

king, or president, found their training unequal to keeping close to President Roosevelt, except one, and he told me with great pleasure that tho a poor rider he joined the President in his horseback morning excursions. Sometimes, he said, when they came to a very steep, high, and rough hill the President would shout, "Let us climb to the top," and the diplomat would struggle over the stones, the underbrush, and gullies, and return to his horse with torn garments after sliding down the hill. At another time, when on the banks of the Potomac, where the waters were raging rapids, the President said, "We will go to that island in the middle of the river," and immediately plunged in. The diplomat followed and reached the island after wading and swimming, and with great difficulty returned with sufficient strength to return home. He had an attack of pneumonia from this unusual exposure, but thereafter was the envy and admiration of his colleagues and increased the confidence of his own Government by this intimacy with the President.

The President's dinners and luncheons were unique because of his universal acquaintance with literary and scientific people. There were generally some of them present. His infectious enthusiasm and hearty cordiality drew out the best points of each guest. I was present at a large dinner one evening when an instance occurred which greatly amused him. There were some forty guests. When they were seated, the President noticed four vacant chairs. He sent one of his aides to ascertain the trouble. The aide discovered an elderly Senator standing with his wife, and another Senator and a lady looking very disconsolate. The aged Senator refused to take out a lady as his card directed or leave his wife to a colleague. He said to the President's aide, who told him that dinner was waiting and what he had to do: "When I eat I eat with my wife, or I don't eat at all." The old gentleman had his way.

The President had one story which he often told, and with much glee. While he was on the ranch the neighbors had caught a horse thief and hung him. They soon discovered that they had made a mistake and hung the wrong man. The most diplomatic among the ranchers was selected to take the body home and break the news gently to his wife. The cowboy ambassador asked the wife: "Are you the wife of—?" She answered "Yes." "Well," said the ambassador, "you are mistaken. You are his widow. I have his body in the wagon. You need not feel bad about it, because we hung him thinking he was the horse thief. We soon after found that he was innocent. The joke is on us."

Frequently a single page of Mr. Depew's reminiscences will glow with the reflected glory of half a dozen illustrious names. In his chapter headed "Recollections from Abroad," he tells of Gladstone's enthusiastic mention of Abram B. Hewitt, and proceeds:

It was my fortune to know Mr. Hewitt very well for many years. He richly merited Mr. Gladstone's encomium. He was one of the most versatile and able Americans in public or private life during his time. His father was an English tenant-farmer who moved with his family to the

United States. Mr. Hewitt received a liberal education and became a great success both in business and public life. He was much more than a business man, mayor of New York or a congressman—he was public-spirited and a wise reformer.

Mr. Hewitt told me two interesting incidents in his career. When he visited England he was received with many and flattering attentions. Among his invitations was a week-end to the home of the nobleman upon whose estates his father had been a tenant-farmer. When Mr. Hewitt told the nobleman, who was entertaining him as a distinguished American, about his father's former relations as one of his tenants, the nobleman said: "Your father made a great mistake in giving up his farm and emigrating to the United States. He should have remained here."

Mr. Hewitt said: "But, my lord, so far as I am concerned I do not think so."

"Why?" asked his lordship.

"Because," answered Mr. Hewitt, "then I could never have been a guest on equal terms in your house."

Mr. Hewitt was one of the foremost iron founders and steel manufacturers of the country. At the time of our Civil War our Government was very short of guns, and we were unable to manufacture them because we did not know the secret of gun-metal.

The Government sent Mr. Hewitt abroad to purchase guns. The English gunmakers at once saw the trouble he was in and took advantage of it. They demanded prices several times greater than they were asking from other customers, and refused to give him any information about the manufacture of gun-metal.

After he had made the contract, with all its exorbitant conditions, he went to his hotel and invited the foreman of each department of the factory to meet him. They all came. Mr. Hewitt explained to them his mission, and found that they were sympathetic with Mr. Lincoln and his administration and the Union cause. Then he told them of the trouble he had had with their employers, and the terms which they had imposed. He asked them all about the manufacture of gun-metal. Each one of the foremen was very clear and explicit as to his part, and so when they had all spoken Mr. Hewitt, with his expert knowledge of the business, knew all the secrets of the manufacture of gun-metal, which he, of course, gave to the Government at Washington for use in the several arsenals and shops.

"Now," he said to his guests, "you have done me a great favor. I will return it. Your company is obliged by the contract to deliver this immense order within a limited time. They are going to make an enormous amount of money out of it. You strike and demand what you think is right, and you will get it immediately."

The gun company made a huge profit but had to share some of it with their workers. It was an early instance of the introduction of profit-sharing, which has now become common all over the world.

One of the most interesting Englishmen, whom I saw much of both in London and in the United States, was Sir Henry Irving. The world of art, drama, and history owes much to him for his revival of Shakespeare. Irving was a genius in his profession, and in private life perfectly delightful.

He gave me a dinner and it was, like everything he did, original. Instead of the usual formal entertainment, he had the dinner at one of the old royal castles in the country, which had become a very exclu-

sive hotel. He carried us out there in coaches.

The company of authors, playwrights, and men of affairs made the entertainment late and the evening memorable. Returning home on the top of the coach, the full moon would appear and reappear, but was generally under a cloud. Irving remarked: "I do much better with that old moon in my theater. I make it shine or obscure it with clouds, as the occasion requires."

I received a note from him at the time of his last visit to the United States, in which he said that a friend from the western part of the country was giving him a dinner at Delmonico's to precede his sailing in the early morning on his voyage home. The company was to be large and all good friends, and he had the positive assurance that there would be no speaking, and wished I would come.

The dinner was everything that could be desired. The company was a wonderful one of distinguished representatives of American life. The hours passed along rapidly and joyously, as many of these original men contributed story, racy adventure, or song.

Suddenly the host arose and said: "Gentlemen, we have with us to-night—" Of course, that meant an introductory speech about Irving and a reply from the guest. Irving turned to me, and in his deepest and most tragic Macbeth voice said: "G—d—his soul to h—!" However, he rose to the occasion, and an hour or so afterwards, when everybody else had spoken, not satisfied with his first effort, he arose and made a much better and longer speech. He was an admirable after-dinner speaker as well as an unusual actor. His wonderful presentations, not only of Shakespeare's but of other dramas, did very much for the stage both in his own country and in ours.

Those who heard him only in his last year had no conception of him in his prime. In his later years he fell into the fault, so common with public speakers and actors, of running words together and failing to articulate clearly. I have known a fine speech and a superior sermon and a great part in a play ruined because of the failure to articulate clearly. The audience could not follow the speaker and so lost interest.

Sir Henry told me a delightful story about Disraeli. A young relative of Irving's took orders and became a clergyman in the Established Church. At the request of Irving, Disraeli appointed this young man one of the curates at Windsor.

One day the clergyman came to Irving in great distress and said: "The unexpected has happened. Every one had dropt out, and I have been ordered to preach on Sunday."

Irving took him to see Disraeli for advice. The Prime Minister said to the young clergyman: "If you preach thirty minutes, Her Majesty will be bored. If you preach fifteen minutes, Her Majesty will be pleased. If you preach ten minutes, Her Majesty will be delighted."

"But said the young clergyman, "my lord, what can a preacher possibly say in only ten minutes?"

"That," answered the statesman, "will be a matter of indifference to Her Majesty."

Sir Frederick Leighton, the eminent English artist, and at one time President of the Royal Academy, was one of the most charming men of his time. His reminiscences were delightful and told with rare dramatic effect. I remember a vivid description which he gave me of the wedding of one of the British royalties with a German princess. Sir Frederick was one of the

New York Central waterfront terminals handle one-fourth of all the foreign commerce at the port of New York.

Service that Reaches Around the World

NEW YORK CENTRAL traffic is nation-wide and world-wide in origin and destination.

Over these 15,000 miles of railway are carried day after day one-tenth of all the rail-borne commerce of the country—products of an infinite variety moving from the great producing sections into the markets of the world.

Commerce naturally follows this east-and-west artery—the route of the *Twentieth Century Limited*—because it is the water-level route from the Mississippi Valley to the Atlantic seaboard through the heart of industrial America, and one of the world's great highways of trade.

For the convenience of shippers and travelers, New York Central service offices are established throughout the world. In the United States representatives of the freight and passenger departments are located in seventeen cities off the Lines; while abroad the American Express Company represents the New York Central Lines in forty-four of the principal capitals and ports of Europe, South America and Asia.

Back of each of these traffic representatives are the resources of a great railroad system, constantly seeking to maintain the highest standards of public service.

large and distinguished delegation which accompanied the prince.

The principality of the bride's father had been shorn of territory, power and revenue during the centuries. Nevertheless, at the time of the wedding he maintained a ministry, the same as in the Middle Ages, and a miniature army. Palaces, built centuries before, housed the Cabinet.

The Minister of Foreign Affairs came to Sir Frederick and unbosomed himself of his troubles. He said: "According to the usual procedure I ought to give a ball in honor of the union of our house with the royal family of England. My palace is large enough, but my salary is only eight hundred a year, and the expense would eat up the whole of it."

Sir Frederick said: "Your Excellency can overcome the difficulty in an original way. The state band can furnish the music, and that will cost nothing. When the time comes for the banquet, usher the guests with due ceremony to a repast of beer and pretzels."

The Minister followed the instructions. The whole party appreciated the situation, and the minister was accredited with the most brilliant and successful ball the old capital had known for a century.

PLANS AND SPECIFICATIONS OF THE NEWSPAPER MAN

A NEWSPAPER MAN, that is to say, a man who spends his time as reporter, editor, critic or publisher, is set apart from all the other sons of Adam by the possession of a particular gift. This at least is true on the authority of that veteran journalist, Talcott Williams, Emeritus Professor of Journalism and Director of the School of Journalism, endowed by Joseph Pulitzer in Columbia University. Professor Williams assures us that "Any man who has health, strength, physical and mental, average ability, industry, and an untiring will, can garner a fair harvest in divinity, law, medicine, engineering, or business. The top may not be his, but a fair, commodious middle can be won in which and on which he can live in comfort all his days and leave a shapely tombstone in a lot, with room for a growing and surviving family." But this, Professor Williams concludes sternly, is not true in journalism. A man may have all the virtues enumerated above, and be able also to write, and still remain forever outside the pale wherein the true newspaper man leads his comparatively blissful existence. This "something else" which makes the newspaper man is more or less a mystery, it appears, but, as basic and necessary qualifications leading up to the final gift, Mr. Williams presents a list of personal equipment. These specifications appear in one of the chapters of his little book, "The Newspaper Man," (Scribner's):

Certain things are more necessary. Men can succeed without any of them. In a day when prowess in war turned on the phys-

ical equipment demanded by spear, mace, sword, and bow, the greatest soldier of a thousand years was Genghiz Khan, blind in one eye, lame in his left leg, short in his right arm. He had probably had a very severe case of infantile paralysis; but he is the only man that ever lived who drove the red plowshare of war from the Mediterranean to the Yellow Sea. So in all callings. I can but take up and present the average demand and the general chance.

Early in newspaper work, personal access or address is important, tho able, well-equipped men win without this. Any physical lack, lameness, hard hearing, deficient eyesight, imperfect enunciation count in all callings. All have been surmounted, but I judge from experience and observation that they are more of a handicap for the newspaperman than for other callings which demand education. There are places in the law office for the man who can collate cases, in medicine for the laboratory worker, in engineering for desk work, in the clergy for social service. The newspaper office is more exacting. "There are no fans in hell," runs an Arab proverb.

Newspaper life is necessarily a strain on health. The morning newspaperman for years of his active life will be in his office until 1 A. M. always, and often until 2. He works under pressure. He is, in his opening years, as a reporter, necessarily irregular in his meals. This irregularity hits the evening newspaperman who has as well to meet the pernicious habit of early rising in a community whose hours of rest and relaxation run to midnight. Newspaper life is much more irregular than it needs to be, but I am not giving advice for the few perfect and generally dull souls who are orderly in their twenties, but for those who, in the ginger years, bite off all they can chew and sometimes more. No man and no woman ought to turn to the newspaper who is not all sound and well, with a strong constitution, having enough self-control not to eat twice what has disagreed once. The habit of care for the minor protection of health needs to be cultivated. All the higher callings have their nervous strain, but the newspaperman rivals the doctor and the engineer in sudden physical strains and demands which tax all a man's strength.

When I entered the city room of the *New York World* in September, 1873, nothing startled me more than the appalling youth of those about me, of my superiors in particular. The appalling youth of the American newspaper office comes home to me even more in 1921 than in 1873, and its abiding presence is adequate evidence of the strain of the newspaper. Insurance occupation tables as yet throw little light on the mortality of the calling, but with the conspicuous exceptions of Franklin and Bryant, the notable members of the calling have reached no great age, an additional proof that the vocation requires sound health for success.

Address, the writer insists, is the foremost quality the newspaperman needs in his work. It is a grievous handicap for him if he does not easily remember faces and names. To have this gift is a perpetually recurring advantage. By careful inquiry, checking off successive experiences, Dr. Williams goes on:

I found that Hiram Calkins, conspicuous in New York State for his newspaper knowledge of men and parties from 1855 to 1890, knew by name and countenance at least 50,000 individuals. He could scarcely

HARTMANN

THOSE who know value have always recognized the intrinsic worth of the luxurious conveniences, outstanding durability, and the satisfying beauty of Hartmann Wardrobe Trunks. The Hartmann Trunk Company has never compromised with quality. It has always built to the highest standard and then set the lowest price commensurate with that quality.

The constantly increasing demand for Hartmann quality, and the lower cost of even the select material out of which the Hartmann is built, gives you today even a greater dollar for dollar value than ever before. In addition there are many patented conveniences in the Hartmann, which can be found in no other trunk.

Before you buy any trunk at any price, in justice to yourself, see the new Hartmann cushion top Gibraltarized Wardrobe, and the luxurious Castle-Grande—the only trunk with an all-steel frame. Also ask to see Berth-High, the wonderful Steamer Wardrobe, and Hartmann's unique wardrobe suit case. Hartmann Cushion Top Wardrobes range in price from \$30 to \$200.

PERSONAL GLIMPSES *Continued*

stir in thronged ways without meeting some one he knew who could give him useful information in his field. Through a large part of the work of a newspaper man, success in acquiring news turns on a capacity to awake immediate confidence. The "good mixer," the man or woman who can lead a complete stranger to talk freely, profits by the capacity.

Mere joy in writing, mere desire to write, by itself, plays a relatively small share as an indication of fitness for newspaper work. Such a bent is usually subjective. It looks to self-expression. It is a turn toward authorship and not an enthusiasm for news. The man who has this passion to write only too often makes a nuisance of himself in the newspaper.

Facility and rapidity in turning out good clean copy is of the utmost value in the newspaper office. The typewriter has turned pen and pencil out of the newspaper. All copy has to be typewritten. A boy looking toward the newspaper ought to be using the typewriter before he is ten years of age, the earlier the better. Composition on the typewriter should be as easy, as exact, and as felicitous as with the pen, more so. The prime deficiency in the whole teaching of children in our schools is that they are allowed to use the pen when they ought to begin with the typewriter.

The habit and use of rapid reading is as important in the newspaper calling as the swift production of clean copy. A skilled man ought to be able to give a good abstract of a newspaper column of leaded nonpareil in ninety seconds. He should be able to give a fair outline of a sixteen-page newspaper, foreign and local news, the market, editorial page, special stories, and criticism in twenty minutes. Ten minutes more should give him all the small stuff and the run of the advertising. No beginner can do this, but he can begin training himself. There is no better specific preparation for service on a particular paper than reading its issues thoroughly for three months before. The neophyte will miss much; but he will also gain much. Ability to read fast, accurately, and retentiously is not a widely diffused gift. Some never gain it. Richard Watson Gilder, editor of the *Century* for many years, with ideal qualifications, said that Theodore Roosevelt and a newspaper worker were the two swiftest readers he had ever known, in the double test of covering ground and giving an adequate summary. For Roosevelt his amazing acquirement of knowledge very largely turned on his patient effort, from early in life, to read rapidly.

A swift, sound eye is needed, but it is not necessary, to swift, intelligent, adhesive reading. Dr. Williams recalls that:

Henry Watterson, blessings on him, had but one eye; it had a focal reach of about an inch, and yet he would shuck the news and sense out of a newspaper as quick as any journalist living. Joseph Pulitzer, whose eyes, alas, finally failed him, passed newspapers in four tongues through his mind, as the unbound sheaves are drawn through the great giant thresher, leaving the wheat behind.

The personal ability and equipment of the journalist needs to be supplemented by the assiduous reading of books. The

great journalists have been consuming readers. They read the newspaper in and out of season, and they read the solid informing books; not the single-volume things. The boy that yearns for the newspaper will read six or seven volume books that have the wide horizon and multifarious knowledge which gives perspective to the mind through life. This reading will be of no use, however, unless a man has a nose for news and the sensing mind which uses knowledge but never displays it.

The reference habit needs to be begun early. Pass no word, name, place, or event without getting it into its particular place. Do this with a Century Dictionary, steadily, habitually, continually, and you will pour the fertilizing stream over your mind like the waters of Old Nile, to furnish harvests for the future and the many.

Sustained attention which sees all, watches each, and notes every incident as it comes, some have by nature, all can acquire, as equipment. Once acquired, there is no part of the multifarious work of the newspaper which is not enriched by it in years to come.

The final supreme gift of the journalist is vision. The greater gods of the calling have all had this gift. They saw the battle from afar and caught victory with the eye of assured faith. James Gordon Bennett, the elder, deserved the severe condemnation of his own day, but even he had the vision of the many knowing what only the few had before possessed. Men of a wider range and a loftier prospect saw an ampler vision, and by the vision splendid were on their way attended, nor let it fade to the light of common day. So Franklin saw the triumph of democracy, and Corbett the fall of privilege. The vision cometh not with observation. It rests on supreme faith in the great tide of events, in the infallibility of the advance, in the certain triumph of the greater good, tho' all the power of hell be arrayed against it. This has supported newspapermen in the pillory and given strength to face death as they fought in the gates of the people with the alien enemies of the light, through long years to serve a gainsaying generation and see triumph at last.

This cometh only as men have early sought the vision, waited for it through years and never doubted the larger hope and the overreaching Providence which builds the shrine of the diviner future. With this all things are possible. Without this the journalist but wanders in a changing show, chaffers in the market place, and finds things new and old to no purpose and no result. Not in this spirit did He speak who saw afar the newspaper day when all things secret should be revealed and the housetop should proclaim what had been said as the jealous secret of the inner chambers of privilege.

Her Little Diversion.—They were talking about women friends.

"Do you see Emma often?" one inquired.

"Oh, yes, quite frequently," the other replied.

"Is she happily married?"

"Is she? I'll say she is. Why, that girl is so happily married she has to go to the theater for a good cry."—*Indianapolis News.*

Older Than the Oldest.—"Have they a family tree?"

"Mercy, yes! To hear them talk you'd think some of its branches were used as timber in building the *Mayflower*."—*Philadelphia Evening Bulletin.*

DOWN IN LOUISIANA

A SIMPLE STORY as to plot, but filled with a quiet charm and with real skill in the drawing of character and the picturing of a locality, "The Inheritance of Jean Trouvé," by Nevil Henshawe (Bobbs, Merrill & Co.), makes most pleasant reading. Books about Louisiana are scarce; we know very little of the people there, the French descendants of the original Colonists, or of the life in the "marshes," and yet these people and this life are singularly picturesque and individual.

The tale of Jean Trouvé concerns itself with a small lad whom we first discover in a boarding-house kept by a Madame Thérèse, a gentle and lovable soul who dearly adores the boy, left much alone while his father toils all day in some commission office for a small sum per week. The boy lives a lonely life in the big empty house, with the rare jaunts into the country with his father, and he fills the hours with imaginings. An old-fashioned lad this, in the French environment, where the echoes of the old city barely enter; where it is only at Mardi-Gras that the old house suddenly wakes up, and Madame Thérèse has all her rooms let, and everything is gay and lively for a few days. For the house on the Rue Bourbon is on the line of march, so the windows and balconies are at a premium.

Mardi-Gras was always a great time for the small Jean, who was then called John, John Marsh. But Mardi-Gras brings him his first great grief and loss. His father is stricken the very day of the procession, and dies shortly afterwards.

It is then that the adventures of John begin, and that he finds a new home and a new name and a life vastly different from the confined one of the boarding-house. There is a letter left behind by the dead father which contains certain instructions and some information. It appears that the boy is grandson to one of the richest planters in the State, General Marsh. His father had made a runaway match with one of the tenants of the estate, and had been disinherited by the furious old man. No communications had since passed between the two. But now little John was to be sent to this unforgiving old person, and, it was to be hoped, properly received by him.

But nothing of the kind happens. It is an evil little man who takes the boy from New Orleans to his grandfather's country, a man who hopes to get a good pourboire for his trouble. When the old gentleman rises in wrath and contumely and sweeps the two out of his office, Dugas turns on the boy. He tells him he will make him his servant, and when the lad demands to be returned to Madame Thérèse, as was the agreement, he strikes him.

But John is no fool, nor yet is he a coward, for all his inexperience and smallness. The boy has spirit. He has the blood of a long line of splendid planters in his veins, and is not the sort to be beaten. He flames at the blow, and frightens the sneak for a moment. But the man is too big for the boy to beat; he knows this in his heart, even in the moment's triumph; and that very night he runs away.

Fate throws him into the care of a couple of men from the marshes, fishers and trappers, fine open-air fellows, kindly and honest. They take him home, where he becomes one of the family; it is a family that has seen better days, but drink has brought Laval down, good and kind tho he is. He can not resist the stuff, and goes off on long sprees, that leave him broke and his repentances, tho genuine, fill neither the larder nor yet give his only child, a daughter, education or association such as she should have.

Of course any reader will guess how the book comes out. It does not matter here just how this happy and satisfactory end is brought about, nor what are the anxieties of Jean before he gets back his inheritance and wins his 'Toinette. It is not these things that keep you reading the book. It is the life there in the marshes, the hunting and fishing and the boats, and when Jean begins to work toward his ambition, that of developing into a planter, it is the enchanting portrayals of farm life, of the planting and growth of the cane. The wood-folk, that is to say the hunters and the trappers, have their own notions as to this planting, and the work it entails. Jean seeks to get them to work for him, but he has his troubles. When at last they do consent to help in the harvesting, they have to make a game of it. They pretended that they were attacking the cane. Some fought with single sticks, as tho in a duel. Others attacked a whole row with an abandon that promised badly for the final state of the crop. There were grumblers, however. "What," they inquired, "was the good of money

without comfort?" And what comfort could be had in working hard in summer weather? Was not a gun far more amusing as a companion than a hoe?

Yet this is America!

The book is a study of temperament. It is in Jean's blood to plant. There is an allure to him in broad acres that is like the call of the sea to a sailor, and when he turns to the work of his choice the land responds, as the brush responds to the hand of a born painter. A man who loves the good brown earth himself is writing. He knows these good and simple people with their Gallic humor and vivacity, their courtesy and kindness under rough clothes and circumstances. He has found delight in writing about them, and because of that he makes reading of them a delight. He has made a book of charm and truth.

A TRUE ROMANTIC NOVEL

SPRING is at the door, and with it stand Wanderlust and Romance and Youth and other sweet things, and most of us listen to the knocking they make and like the sound of it.

With our hearts keeping time to that rat-a-tat-tat while the rest of us is perforce bound to continue at the old routine, we will take up Mrs. Burnett's latest novel, "The Head of the House of Coombe" (Frederick A. Stokes & Co., \$2.00)—and some seven or eight years have elapsed since she has given us one—and find delight in a story that is shining with the true light of romance, that has a young heroine as beautiful as a fairy princess and as badly treated as a Cinderella, a stern, fine old lord who saves her from dangers, altho she hates him and thinks him evil, a wicked mother, and a lover who is everything that a Prince Charming should be. Poverty and riches stand side by side, and the path of true love is full of obstructions. Whether or not they are surmounted remains to be seen. For it appears that this particular novel is only half the story. The later half is to come next, and it is beyond any doubting that every reader of the first half will wait for the second half with considerable impatience and will buy it with delightful anticipations when it appears. Why the two books were not issued simultaneously is probably a trade secret that the layman can only ponder over and disapprove.

Mrs. Burnett is a real story-teller. She can create people whom you begin at once to love and to champion, and she involves them in circumstances that stir all your interest from the first moment and that hold it to the end. It seems likely that this book, for all its length, will prove one of the most popular she has ever written, and that is a generous prophecy, for she has long been a great favorite, and deserved to be such. She gets life into her pages, even if it be deeply tinged with romance. So many of our stern young critics fail to remember that life can be intensely romantic, and frequently is so. Mrs. Burnett does not for an instant forget this fact—her own life was and is romantic, and she has simply obeyed the adage to look in your heart and write of what you know when she has flung the rainbow hues of magic over the tissue of her tales.

In this book you are introduced to the mother of the heroine while she herself is still a young girl; in fact, "Feather" is and will remain young to the end of her existence. She is a marvelously well-done little creature. Without heart or brains, she is yet eminently fitted for the sort of life that attracts her. She is smart to the *n*th degree, exquisitely lovely, utterly selfish, expert in showing off her good and concealing her bad qualities, alluring, given to clever little speeches, empty but filling her hollowness with pleasant murmurs. She will always find some one to bear the burdens of life for her and allow her to play in the sun.

Almost all of this first part is given over to the life of "Feather." And yet under this life we watch the upgrowing of her little daughter, the neglected and hated child who is banished to the up-stairs regions and the servants, who does not even know that "the Lady Downstairs" is her mother, who is ill-treated and untaught, but who is none the less a personality. It is Lord Coombe who finds out just what is going on, by chance, and who sees to it that matters are altogether altered for the better. This man is the protector of Robin's mother—Robin is the quaint name of the little girl—and this shadow of evil the child somehow senses. At any rate, she takes a violent dislike to him, and continues in that mood to the end of the present volume, tho she comes to realize that Coombe is a friend to her.

The girl is eighteen at that time, with a strange life behind her, and in it one beautiful meeting, that occurred when she was but

in the United States

What happens when the explosion doesn't?

When one cylinder in a gas engine misses fire, there is more than a loss of power. The other cylinders must not only work without the one that misses, but must also fight the unexploded charge of compressed gas.

This compressed gas acts as an air-brake, and you know what that means.

Previously it has been hard to detect a missing cylinder that didn't miss regularly. This is especially true of engines with more than four cylinders.

But now, any man, amateur or expert, with Spark-C Ignition Tester can check up an ignition system in a few minutes and determine

whether or not every spark plug is firing properly.

Touch the plug with Spark-C and you can read the result in the little window in the side of Spark-C.

If the plugs are firing properly, the regular flash in the window will show it. If not, the dim flash or absence of any light will show the condition in the cylinder.

Get Spark-C Ignition Tester from your garageman or automotive dealer. Test your ignition system now—car, boat, airplane or stationary gas engine. Test it periodically. It will prevent waste of power. It will remove the invisible brake in the cylinder that sometimes misses.

REVIEWS OF NEW BOOKS *Continued*

a little thing under six. She had never been allowed to play with any children, for the nurse who had the care of her was of no mind to have her charge snubbed by the other nurses, and affairs did leak out. The lonely child took her walk, played solemnly by herself, and returned to the dingy nursery day after day. And then came the meeting with the happy, handsome boy, whose life had been a free and lovely thing under the care of a mother who adored him. The children loved each other, and for Robin it was the first entry of love into her life. When the boy was snatched away to his Scottish home without being allowed a good-by, both children suffered, and little Robin was seriously ill of it. The one bit of color and comradeship and gentleness and interest was gone—the quickly waking emotional side of her nature was suddenly made barren again.

It is in the London of some twenty or twenty-odd years before the War that the story opens, and it is that ordered, rich and useless part of the world's metropolis known as Smart London that makes the particular background. The next half of the book evidently plunges us into the London of the War and possibly into other places.

THE MISSING ACTOR

BASSETT OLIVER, the well-known actor, was missing. He had closed his engagement at Northborough on Saturday night and was to open at Noreaster, a neighboring town, on the following Monday evening. He left the hotel at Northborough at eleven o'clock on Sunday morning, had taken a ticket for Searhaven, a little village on the coast reached by a branch line, and that was the last heard of him. His failure to turn up at Noreaster for a rehearsal on Monday morning started an inquiry which elicited these facts, and consternation reigned in the company, where he was much liked. This is the agreeably thrilling opening of Mr. J. S. Fletcher's "Searhaven Keep" (Knopf, \$2.00), one of the best of his many good mystery stories.

A search party is organized, consisting of Stafford, the business manager; Rothwell, the stage-manager, and Copplestone, the author of the play in which Oliver was booked to appear, and their quest leads them at once to Searhaven, a picturesque little fishing-village, dominated by a fine old house on the cliff called Searhaven Keep, on account of the ruins of the old tower in its grounds. Copplestone learns that this estate belongs to Marston Greyle, who succeeded rather unexpectedly to the estate on the death of his uncle, and came to take possession from America, whither his father had emigrated some years before. He is not altogether English in his ways and is consequently regarded with some suspicion by the villagers. Copplestone, who takes the lead in the investigation, learns that Oliver has been seen in Searhaven, that, on learning the name of the owner of Searhaven Keep, he remembered having met him in America and, announcing his attention of calling on him, had entered the grounds of the Keep and had not been seen since.

The next incident throwing any light on the subject is Copplestone's interview

with a poacher who says he saw Oliver enter the ruins (he himself was hiding in the wood near by), and declares that he saw Squire Greyle follow him and come out alone some ten minutes later. This looks bad for the Squire, but on that same evening Copplestone is summoned to the Keep, for the body of Oliver has been found on the ground inside the tower—he had evidently fallen from the top, for the vines and brambles were broken where the body had plunged through. Then the question arises as to whether the death is accidental or not, and the search for the truth discloses so much in the way of plot that the reader is bewildered. Greyle suddenly disappears, and it is learned that he has drawn from the bank all the money that he had there, and has also offered the estate, which is not entailed, for sale. Then there is Chatfield, the estate agent, a most unpleasant person, who seems to have some hold over Greyle; there is his daughter Addie, a handsome successful actress; there is pretty Audrey Greyle, the girl who would succeed to the property if Marston died, and a number of lesser characters, all of whom have a share in the final clearing up. There is plenty of incident, both by sea and land, and the book may be heartily recommended as a thoroughly interesting and absorbing story. The discovery of the mystery hangs upon one of those chance happenings, big with results, that are so frequent in real life.

SPRIGHTLY TALES OF TERRORISM AND SCIENCE

LURED into The Villa of the Peacock (Richard Dehan, Doran Co., \$1.90) by a token he has given to a beautiful girl whose life he had saved in a railroad accident in Franco, King Aldobrando II of Donda is suddenly confronted by his double, Don Enrique Zabalsa, pistol in hand. The King resigns himself to die—yet through a caprice of the girl, and the ineptitude of Don Enrique, he walks unharmed from the villa, while his double perishes by the poisoned darts of the ambushed Terrorists.

Don Enrique was born wealthy, but of plebeian origin, and both he and his family paraded his resemblance to the King, accentuating it by copying the royal dress and mannerisms. As long as the King was young, he took advantage of the presence of his vulgar counterpart to mask his youthful escapes, but when he married, Don Enrique was banished to France. There, too, he aped royalty, and in jest the King had him created a nobleman, but, since he was the son of a sardine merchant, gave him for a coat of arms three sardines, argent, and a can-opener, gules. This insult Don Enrique swears to wash out in blood, and joins the Terrorists.

He agrees to undertake the assassination of Aldobrando, and returns to Donda accompanied by a girl whose Terrorism is as fervent as her beauty. She is infatuated with the unknown man who rescued her from a burning railroad coach, and believes it was Don Enrique, until she notices that he has blundered and marked himself with the rescuer's distinguishing scar upon the left arm instead of upon the right. From this she argues him a person of no capacity, and the plan for assassinating the King proves her right. Don Enrique proposes to lure the King to his old home, frighten him by flourishing a revolver, and then suddenly relent and allow him to go free after he has exchanged clothes with the conspirator. But the man who leaves

Folks Call Them Bubble Grains

Puffed Wheat and Puffed Rice are airy grains, flimsy as a snowflake. They are grains puffed to globules, 8 times normal size. So millions of folks who love them call them bubble grains.

But they are not mere tidbits, made only to delight you. That steam explosion makes them the greatest grain foods in existence.

Every food cell blasted

They are made by Prof. Anderson's process—shot from guns. Over 125 million steam explosions are caused in every kernel. Thus the whole grains, as never before, are fitted for easy digestion.

Thus they supply whole-grain nutrition, which everybody needs. Every element in the whole grain feeds.

Then they make whole grains enticing. These thin, crisp grains delight. They melt away into savory, nut-like granules.

That's what you want—you mothers. You want children to love whole grains. Then serve them Puffed Grains morning, noon and night, in all the delightful ways you can. They are both foods and confections.

Try melted butter on them for a change.

Puffed Rice Puffed Wheat

For breakfast, Puffed Rice with cream and sugar—the finest cereal dainty children ever get.

For supper, Puffed Wheat in milk—a practically complete food, made so children love it.

SWITCHBOARDS

TELEPHONES

Breaking Construction Records

Since 1920, faced with the greatest demand for service in telephone history, the Bell System has surpassed all previous records for the installation of new telephone equipment. In the last two years more than 1,000,000 additional stations have been added to the system by construction. This is equal to the entire number of telephones in Great Britain.

In 1921 alone, 450,000 new poles were placed—enough to make a telephone line from New York to Hong Kong. The aerial wire put into service in the same year, 835,000 miles in all, is enough to string 60 wires on such a telephone line.

1,875,000 miles of wire, enclosed in 1,500 miles of cable, were added to underground and submarine lines in 1921. New underground duct totaling 11,000,000 feet was constructed, this representing approximately 300 miles of subway. 69 new central office buildings and important additions were completed or in progress, and new switchboards with a capacity of many thousands of connections were installed.

This equipment added to the Bell System, great though it is in volume and value, represents but a small part of the vast property which enables the telephone on your desk to give the service to which you are accustomed. And to meet the increasing demands for new service, the work of construction goes on.

the house in Don Enrique's clothes is to be shot down by Terrorists ambushed in the shrubbery, while the false King will return to the palace and rule Donda in the interests of the Terrorists.

At the crucial moment, the King refuses to become frightened, to exchange clothing, or to reveal the Palace password. Knowing that the King has saved her life, the girl wrests the revolver from Don Enrique's hand, and compels him to walk out of the door in his own dress. As the King leaves, soon after, he hears a revolver shot in the house behind. He turns to investigate, reconsiders, shrugs his shoulders, and walks on.

This novelette gives the title to a collection of four similar tales and two short stories of the same character. In "The Formula of Brantin" a doctor of the underworld has discovered a drug which cures all craving for alcohol and drugs. As he is dying he bequeaths it to a young minister of the gospel, but perishes before he can disclose the key to the thieves' cipher in which it is written. The minister discovers the secret only after he has sunk to the gutter and become the confidant of thieves, but with the aid of Brantin's formula he recovers, and sweeps away the night life which has been so vividly described in the course of the story. In none of the tales is there any striving after probability, but all are ingenious, sprightly, and rapid in action.

AN ANCIENT ROMANCE

ALMOST a thousand years ago in the city of Constantinople an Empress fought for her empire and her lover, and it is her story that Eden Phillpotts tells in his historical novel, "Eudocia." (MacMillan, \$2.00.)

The tale is one of politics, of intrigue, of wits pitted against wits. The Empress is widowed, and may not marry again, and great men strive together for the power which they are determined she shall relinquish. But Eudocia is a great woman, and not easily fooled or frightened. She knows very well what is toward, and she also knows her friends from her enemies, tho the latter are well-disguised and the former maligned. She plays a great game and she loves with a mighty love, loves a man worth the loving. The outcome is interesting, even amusing.

Every once in a while Eden Phillpotts turns away from his own times and his countryfolk to wander about in forgotten centuries. But this particular venture is more allied to real history than his other jaunts. It is also rather more stiff and pretentious. The book is not without its thrills, for the contest between Empress and Villain is close and hard, and you can not guess who is to win. You want to know, and you want it to come out according to your sympathies. The author says of his comedy, for he calls it that, that it is perfectly applicable to men and women to-day, that neither these nor yet politics, intrigue, ambition, evil and right doing alter materially as the centuries pass. And this is true enough, and the fact makes for amusement. But somehow there is too much paraphernalia, too much talk set in the formal fashion of older times, and long-windedness that lingers to an ancient tune is doubly fatiguing. Mr. Phillpotts's other

books of early days when the world was younger are far more informal than this one on "Eudocia."

For all that, there is excellent character drawing and a certain splendor to the story. Pictures that glow with rich colors and a pomp that stirs the imagination are a part of the book. And there are threads of plot and counterplot that weave into a puzzling pattern. It is not very long, and it is not likely that having begun it one will be satisfied to leave it unfinished. There is a fascination in seeing the clever meet their match, in watching them walk into hidden traps, that is hard to beat. It is a joy to watch the strong and wicked used against themselves, to have their own plots work against them. And the book is full of this sort of interest.

But it is hardly the kind of book we have the right to expect from Phillpotts, and that is the reason it is not being treated with greater praise by the present reviewer. There is a kind of hollow reverberation to it, a great to-do about a slight matter. "What's all the shootin' for?" you feel like remarking.

A good enough novel for some casual writer is not good enough for Phillpotts. Or, if good enough for him in some casual mood, then it ought not to be put forth with a certain assumption of importance, and yet this assumption is decidedly present in "Eudocia." A story of intrigue in a picturesque setting it is; but it is not a mirror into which we may look and find the reflection of mankind in all times, as it assumes to be.

A GOOD WOMAN'S CHILDREN

IN spite of the wide-spread theory that women do not appreciate irony it is only they who will fully understand and enjoy Miss E. M. Delafield's latest book "Humbug" (Macmillan, \$2.00). It shows a state of things uncommon, if not long since abolished in this country and, according to modern writers, slowly disappearing in England—the intrinsic falseness of much that has been heretofore considered necessary in the bringing up of children. Yet if our own education has been on entirely different lines from that of Lily Stellingthorpe, still we of the older generation recognize many of the platitudes that were current in our young days, tho we may have been sufficiently fortunate to have escaped them.

The story deals with the life of Lily Stellingthorpe and the insidious sapping of her mental force and integrity by means of the atmosphere of pious insincerity that surrounds her from her youth. At its opening Lily and Yvonne are the only children of Mr. and Mrs. Stellingthorpe who are thus trenchantly described. "The mother . . . was a good woman, and had all a good woman's capacity for the falsification of moral values. Her husband was so constituted that it would not be unjust to describe him in identical terms." Yvonne, aged about ten, had nearly died in infancy of water on the brain and in consequence was very slightly deficient mentally. This her parents would never acknowledge, and consequently the poor child, subjected to the same tests and discipline as Lily, was unjustly treated, both in demands and punishments, an injustice which Lily, who loved her sister with a protective love, was the first to perceive and resent. When Yvonne finally dies the natural feeling of relief is of course suppressed, for Philip Stellingthorpe "was unable to refrain from exacting the due meed of conventionality that he took for a tribute to Yvonne's memory."

And this insincerity pervades the Stelling-

Better Cooking Less Cost

The Patented KEROGAS Burner uses ordinary kerosene and by mixing it with air and turning it to gas gives an intense heat which is concentrated just where you want it. A turn of a control wheel makes the flame as low or as high as you want it—and there is perfect cleanliness—no fumes, no smoke, no dust.

This concentrated heat, under control, means food perfectly cooked, delicious, appetizing. The Kerogas Burner burns 400 gallons of air to one gallon of oil.

The Patented KEROGAS Burner is made of one piece, all brass—is rust proof, leak proof—no complicated parts. Will give years of faithful service.

REVIEWS OF NEW BOOKS

Continued

thorpe family life. Nothing unpleasant is ever faced; the plain truth about any difficult subject is always evaded, and various shibboleths which no one has ever taken the trouble to investigate are handed out as unquestionable truths. When her mother is seriously ill Lily is sent to a neighboring convent, where a thoroughly artificial atmosphere prevails and where an attitude of false modesty, which forbids a recognition of the claims of the body, means an entire ignoring of the laws of hygiene, which has disastrous results on the children's health. Later, some years after her mother's death, Lily goes to boarding-school, one of the modern type, where the teachers were almost all selected for their skill in games and where, in consequence, the education was singularly inadequate. "History was imparted in the usual patchwork of dates, anecdotes and names . . . botany was an extra, natural history ignored, and plain needlework not taught. Mathematics . . . presented itself to the girls, as to the majority of feminine minds, as a compound of meaningless 'sums' that, if juggled with by a series of unrelated processes, might 'come out right' at the end. And so it goes. In every stage of Lily's life she seems to be surrounded by conventionalized humbug: she says what she thinks she is expected to say until all moral courage is gone and her mental integrity sapped. She looks with envy upon her young brother who has never been in the least affected by his father's mournful sentimentalities and who is a thoroughly modern small boy, cheerful, undemonstrative and self-sufficient. "He obviously did not believe that grown-up people were infallible. He held opinions of his own and expressed them freely. He was addicted to making personal remarks. He asked indiscreet questions."

When Lily is nineteen she is sent on a visit to her father's sister, Aunt Clo, a plain-spoken lady who has elected to live in Italy and who is one of the best characters in the book. For, plain-spoken as she is, Aunt Clo is a good deal of a humbug but as her pose is that of great honesty, she is more or less unconscious of it. She lives in a small village near Rome and during Lily's stay with her she hears continual refutations of many of the theories upon which she has been brought up, for Aunt Clo is extremely advanced and her opinions on marriage and various sociological questions connected therewith, and her frank discussions of the same fall upon Lily's timid mind like thunderbolts. Then comes the girl's love affair and marriage with a man a good deal older than herself. She doesn't know whether she loves him or not; she seeks counsel from various elders and gets no help or satisfaction from any of them, so finally takes the plunge and becomes Mrs. Nicholas Aubray.

What is the result? Well, it is very much like life—neither perfect happiness nor entire misery. Of course the story in the book is secondary; it is written with a purpose and scenes and incidents are selected with a view to illustrating the immense amount of humbug that has surrounded the conventional bringing up of a child up to this time, tho there is reason to believe that much of that has changed. Miss Delafield has brought to her task her acute sense of character, her satirical powers and her great skill in presentation which result in a most entertaining story and one which carries an important lesson.

A FEMININE HARDY

THAT incorrigible idealist, the compiler of the publishers' jacket, says, on the paper cover of "Joanna Godden" (Dutton, \$2.00), that its author, Sheila Kaye-Smith, is the foremost woman writer in England, and one is inclined to believe he is very nearly right. In the partition of that country by British novelists she has taken for her province the low marsh land in Sussex and Kent which borders the English Channel, a country largely given over to sheep-raising.

The story opens on the day of old Mr. Godden's funeral; on the reading of his will it is found he has left his farm of Little Ansore to his daughter Joanna, a fine, capable, up-standing young woman of about twenty-three, who causes a distinct sensation in the community by deciding to dispense with the services of a bailiff and manage the farm herself. This extraordinary proceeding is the sole topic of conversation at the bar of the Woolpack Inn, and many anecdotes are related, typical of Joanna's character, such as a reminiscence of the time when she "hit Job Piper over the head wud a bunch of oziars just because he'd told her he knew more about thatching than she did." The fact is also chronicled that, having knocked his hat into the dyke, she bought him a new one, the whole proceeding being extremely characteristic.

The story follows Joanna's career for some fifteen years; her failures and successes as a farmer; her lovers and her friends, and her experiences with her sister Ellen, thirteen years her junior, whom she loves in a hot-headed, injudicious way, sending her to a boarding-school that she may be "made a lady." This is a process that, in English fiction at least, is sure to prove disastrous, and Ellen is by no means improved by her school career. When she comes home, a finished product, it is to look disapprovingly upon Joanna's taste both in dress and house decoration, and she has not enough love for her sister to make her overlook such errors.

During these years Joanna has had lovers, Arthur Alce, a neighboring farmer, having been the most persistent of all. But Joanna has her ideals; youth and beauty appeal very strongly to her, and she finally engages herself to Martin Trevor, the son of a broken-down and decidedly disreputable gentleman of the neighborhood. It is a dream of happiness while it lasts but Martin succumbs to pneumonia and Joanna is left bereft and unhappy, tho the duties of her busy life occupy her until her sorrow becomes less acute. Ellen in the meantime finds life at the farm deplorably dull, and looking around for some one to marry, her eye lights upon Arthur Alce. She rather despises him for his faithfulness to her sister, but he is well-to-do, and it would be a triumph to take him from Joanna, so she begins her work. Joanna is pleased at the prospect. Circumstances throw Ellen and Arthur together, and finally the latter, urged by Joanna, offers himself to Ellen, who accepts him.

As is often the case in real life, it is the selfish egoist who wins the prize while the impulsive, generous-hearted woman stumbles along through many pitfalls and disasters, finally reaching a development, however, which the other never attains. So it is with Ellen and Joanna, but it would not be fair to the reader to follow their fortunes any further. The book is essentially one of characters—the pages are crowded with them, and this it is that constitutes the author's claim to eminence.

W. L. DOUGLAS

FOR MEN AND WOMEN

\$7.00 & \$8.00 SHOES

ALSO MANY STYLES AT \$5.00 & \$6.00

YOU CAN ALWAYS
SAVE MONEY BY WEARING

YOU RECEIVE FOR THE PRICE PAID

W. L. Douglas shoes are made of the best and finest selected leathers the market affords. We employ the highest paid, skilled shoemakers, all working with an honest determination to make the best shoes for the price that money can buy.

When you need shoes look for a W. L. Douglas store. We own 108 stores located in the principal cities. You will find in our stores many kinds and styles of high-class, fine shoes that we believe are better shoe values for the money than you can buy elsewhere.

Our \$7.00 and \$8.00 shoes are exceptionally good values. There is one point we wish to impress upon you that is worth dollars for you to remember. W. L. Douglas shoes are put into all of our stores at factory cost. We do not make one cent of profit until the shoes are sold to you. When you buy shoes at any one of our stores you pay only one small retail profit.

No matter where you live, shoe dealers can supply you with W. L. Douglas shoes. They cost no more in San Francisco than they do in New York. Insist upon having W. L. Douglas shoes with the name and retail price stamped on the sole. Do not take a substitute and pay one or two extra profits. Order direct from the factory and save money.

BOYS'
SHOES
\$4.00 & \$4.50

SCIENCE • AND • INVENTION • CONTINUED

HOW CLEANING CLOTHES KILLS GERMS

DISEASE GERMS ARE DESTROYED and removed by the processes now commonly used to clean and renovate the clothes we wear. This has been demonstrated by a series of experiments carried out recently at Mellon Institute, Pittsburgh, as we are informed by Joseph M. Kesslinger in the *Pittsburgh Dispatch*. Altho it is universally known, says Mr. Kesslinger, that dry-cleaning removes dirt and stains from garments, apparel and household articles, few are aware of the significant rôle this method bears in checking epidemics of tuberculosis, diphtheria, typhoid fever and every other disease known to mankind. He continues:

"The reason for this lack of information is quite natural. The investigation has only recently been concluded by the International Technical Society of Cleaners and Dyers at the Mellon Institute of Industrial Research of the University of Pittsburgh. The success of this inquiry will be a huge factor in maintaining the health of the Nation.

"Doughboys who returned from overseas following the conclusion of the war will remember with a shudder the effect of the 'de-lousing' machine upon their uniforms. Many will recall how utterly their military clothes were ruined and still others will recollect that it was only their foresight in having them prest immediately following the fumigation process that rendered them fairly presentable. The Government, at that time, was concerned chiefly with the efficacy of killing all the disease germs the warriors brought back in their raiment from the bloody fields of Flanders. Hence the preservation of the garments was a secondary issue. The process evolved at the Mellon Institute does not have the slightest deleterious effect, but in reality aids in the renovation, which enhances the value of the apparel.

"The International Technical Society, composed of eleven of the largest and most progressive cleaning and dyeing firms in the United States, was organized to make possible the technical investigation of processes, appliances and products utilized in the cleaning and dyeing industry. The results of this research will be a great help in combating disease.

"An investigation of the bactericidal action of the process of 'dry-cleaning' garments with solvents, such as gasoline and benzol, was made at the Mellon Institute as a part of the regular program outlined for the year's work. John C. Fetterman, dean of the college and professor of biology, and W. H. Emig, assistant professor of biology, directed and did the bacteriological work pertaining to the tests.

"Prof. Fetterman's report is as follows:

"Pieces of cloth, one inch square, were inoculated from a culture of the common hay bacillus and then allowed to dry at room temperature. A number of these unit cloths were attached to a garment at the beginning of the cleaning process and one removed after the clothing had been centrifuged, another after treatment in the tumbler, and a third after the garment had been in the pressing machine. The determination of the bacteria present was then made and a comparison made with the bacteria found in the untreated samples. In the second series of the experiments, live steam was introduced into the tumbler for a period of five minutes. In connection with the second experiment conducted at each of the plants, the pieces of cloth were inoculated from a culture made up largely from lactic bacteria.

"The results follow:

"First series: control, 580,000 bacterial counts; centrifuge, 180,000; tumbler, 80,000; pressing machine, 40,000; efficiency, 93.10 per cent.

"Second series: control, 1,200,000 bacterial counts; centrifuge, 370,000; tumbler, 180,000; tumbler and live steam (five minutes), 50,000; pressing machine, 500; efficiency, 99.96 per cent.

"A similar investigation was conducted, where gasoline was employed in the process.

"These experiments reveal," stated Professor Fetterman, "that the efficiency of the method of cleaning employed at both plants is unusually high. The destruction of the organisms which were utilized in these experiments, notably in the case of the hay bacillus, would indicate that pathogenic organisms, such as the tubercle bacillus, the bacillus of diphtheria, as well as of typhoid fever, would undoubtedly be destroyed. Herein would lie one of the strongest points in favor of the cleaning process employed."

"The hay bacillus used to inoculate the test pieces of cloth for the first series of tests is one of the most hardy in the whole bacteria family. It is conservative, chemists avow, to say that conditions that will kill these bacteria, will also kill any of the disease-causing bacteria. The hay bacillus is widely distributed in earth, air and water, and was formerly regarded as one of the most typical of non-pathogenic organisms. Lately it has been proved capable of producing spontaneous infections in man.

"These tests are unique in that practically no work of this nature has been done before. A search of the bacteriological literature reveals no published results of tests made to determine the germicidal efficiency of the dry-cleaning industry. A number of tests of the germicidal efficiency of laundering have been carried out and published in public health periodicals. Authorities are responsible for the statement that the dry-cleaning process now used by the members of the International Technical Society of Cleaners and Dyers has a very high and hygienically satisfactory bactericidal efficiency, as measured by the standards used in public health work for laundering, treating drinking water, milk and food products."

ANOTHER STEP IN TRANSMUTATION

THAT A SOLID ELEMENT may change under powerful heat to a gaseous one supposed to be entirely distinct from it, is shown by experiments conducted at the University of Chicago by Dr. Gerald L. Wendt and C. E. Irion. The solid operated on is tungsten, lately well known for its use in the filaments of electric light bulbs. It turns completely into helium gas when subjected to a temperature of 50,000 to 60,000 degrees, said to be the highest ever reached on this world or beyond it. Since in the hottest stars the spectroscopist shows only the existence of simple gases, it had long been suspected by astronomers that the more complex elements were decomposed there; but until now it had been impossible to produce such great heat in the laboratory. Dr. Wendt accomplished it by using a super-powerful electric discharge similar to that called "artificial lightning" by Dr. Charles P. Steinmetz, expert of the General Electric Co. Dr. Paul N. Leech, of the Chicago section of the American Chemical Society, is quoted by *The Times* (New York) as commenting on Dr. Wendt's discovery in the following words:

"The alchemists who tried to turn the baser metals into gold were right on one point—that the nature of metals could be changed. But, of course, it has nothing to do with the assertions of scoundrels that the baser metals can be transmuted into synthetic gold.

"It does, however, actually blast the theory that the atoms of elements, supposed to be absolutely indestructible, can not be broken up by men. It opens a vast new field to science and may result in many far-reaching and important scientific developments. We can not yet foresee what these developments may be.

"Up until 1895 it was believed that no decomposition of elements was possible. At that time, however, it was discovered that radium, which is one of the about ninety known elements, naturally decomposes into lead. Nature, however, performs that change, and until Dr. Wendt and Mr. Irion completed their experiments, man had never been able to produce a similar result.

"The heat developed to break down the tungsten atoms and change them into helium is the greatest ever known—hotter than the sun or than the hottest star known to astronomers. The heat of molten steel is about 2,000 degrees, the temperature of the sun is about 9,000 degrees, and of some of the hottest stars is about 30,000 degrees.

"But these scientists have, by means of 'artificial lightning,' such as Dr. Charles P. Steinmetz recently produced, developed the hottest known spot in the universe.

"Astronomers have long known that, while in general the materials which compose the sun and stars are the same as those known on earth, the list of substances and chemical elements becomes shorter and shorter when the hotter stars are examined.

"On the brilliant white or bluish stars, which are masses of

When one of its mechanics works on a car the Jackson Auto Company has a check on his time and the parts he used and it knows whether the repair department is paying or not.

The monthly statement below shows the Jackson Auto Company not only how much business it has done, but also what it costs—which few garages know.

It was back in January, 1921, that we put in a Burroughs Automatic Bookkeeping Machine, opened a set of books and decided to really know just what every department of our business costs us.

The result today would surprise many car dealers and garage owners if they knew the facts. Our records are so complete and accurate that we can glance at them and know just what each department does and what it costs to operate it.

And yet one person keeps the books and has plenty of time for other office work—which we never imagined possible.

Our Monthly Statement, as you see, is not cumbersome or complicated; but look what it shows us!

Our sales and cost of sales are all down by departments. We know our gross and net profit—how many retailers know that?

We know what we owe and what others owe us, and have a statement of our assets, liabilities and net investment.

We certainly can recommend the Burroughs Bookkeeping Machine and their Simplified Accounting Plan for Garages to anyone in the garage business. We positively know they will never regret the investment.

Burroughs

Continued

gas at about 30,000 degrees, only the simplest elements are present. They seem to consist entirely of the gases, hydrogen and helium. The heavier metals, such as iron, are not present.

To determine whether this was due to decomposition by great heat, Wendt and Irion reproduced conditions such as are on the stars and succeeded in reaching a temperature twice as high as that of the hottest star, and found that ordinary metals are decomposed into the simple gases, particularly helium.

The method used was the same as that used in producing artificial lightning, recently announced by Dr. Steinmetz of Schenectady, and was originated by Dr. J. A. Anderson of the Mount Wilson solar observatory at Pasadena, Cal.

It consists in charging a large electrical condenser to 100,000 volts and discharging this large quantity of electricity at high speed through an extremely fine wire. The wire explodes with a deafening report, as if struck by lightning, which, in a minor way, it is. The flash is about two hundred times as bright as direct sunlight, but it lasts less than a hundred-thousandth of a second. The pressure developed is about 1,000 pounds per square inch, and the temperature is momentarily over 50,000 degrees Fahrenheit. Under such conditions, the atoms which compose the wire decompose into simpler ones, and the result is the change of metallic tungsten into gaseous helium.

One of the first laws of chemistry has been that the so-called elements are permanent and unchangeable. The failure of the alchemists, after centuries of efforts, to change such common metals as copper and iron into gold convinced chemists that the metals could not be decomposed.

Great advances, as the result of the work of Wendt and Irion, in discoveries on the nature of the matter that composes the universe are confidently predicted.

The following account of the Steinmetz "thunderbolt machine," working on the same principle that has made this result possible, is given in *The Tribune* (New York):

Dr. Charles P. Steinmetz announced to-day that he has succeeded in producing and controlling an indoor thunder-storm with all the characteristics of its natural brother except the thunder-clouds.

At a demonstration of his "lightning generator" a few days ago the familiar forked tongues flashed through the laboratory with a deafening crash, splintered a large block of wood, hurling the fragments 25 feet, and ripped a miniature tree from tip to base.

The bolt carried the energy of 1,000,000 horse-power—about one five-hundredth of the energy of a natural lightning bolt, Dr. Steinmetz estimates—and lasted for the one hundred-thousandth part of a second.

Dr. Steinmetz hopes his apparatus will contribute largely to the development of lightning arresters, as it provides an opportunity for the study at close range of the phenomenon that Benjamin Franklin began to investigate years ago with his kite, string and key.

His experiments have convinced him, however, that there is little likelihood of man's realizing his dream of harnessing thunderbolts and making them work.

The Old Way and the New

The old way of cleaning, dusting and polishing hardwood floors and woodwork means hard, back breaking work.

The New Way—the O-Cedar Way—means a pleasant task. A saving of time, work and money and much more satisfactory results.

With the O-Cedar Polish Mop you clean, dust, polish and beautify all at one-the same-time. You banish work, dust, care and trouble.

Your dealer guarantees the genuine O-Cedar Polish Mop.

If satisfactory remit \$3.00; if not return belt. Give normal waist measure when ordering.

The Weil Health Belt Co., 316 Hill Street New Haven, Conn.

WITHOUT

Despite their tremendous energy, he says, their life is so short that, harnessed, they would be worth only a few cents apiece.

"In our lightning generator," he said, "we get a discharge of 10,000 amperes at over a hundred thousand volts—that is, a force of over a million horse-power lasting for a hundred thousandth part of a second. This gives us the explosive, tearing and shattering effect of real lightning, so that, for instance, a piece of small tree exposed to the discharge is mechanically torn to pieces. A piece of wire struck by the flash vanishes in dust.

"The difference between lightning energy and ordinary electric current is similar to that between a pound of dynamite and a pint of gasoline. The pint of gasoline contains more energy and can do more work than the pound of dynamite, but the pint of gasoline gives off its energy slowly, at a moderate rate of power, while the pound of dynamite gives off its energy explosively, all at once, at an enormous rate of power, and thereby locally tears and destroys."

THE PSYCHOLOGY OF PROPAGANDA

"PROPAGANDA" is a word often in our mouths and still oftener in print since the beginning of the war. It is used commonly with a bad implication, but of course a good cause may be advanced in this way as well as an evil one. Why propaganda succeeds and how it may be fought when it is objectionable are questions discussed by Prof. Edward K. Strong, Jr., in *The Scientific Monthly* (Utica, N. Y.). An interesting phenomenon of the last few years, Professor Strong thinks, has been the unanimity with which millions of men and women have conformed in their thinking and in their actions to what certain leaders wanted. Vast sums have been raised for all sorts of agencies. Citizens of the United States consented to universal conscription, cut down their daily use of sugar, closed their factories on certain days, and went without gasoline for their autos voluntarily and enthusiastically. To an extraordinary degree men and women in nearly all countries have cooperated in programs necessitating radical changes in their every-day life; and they have done so in response to suggestions presented in skilfully conducted propaganda. He continues:

Because of the surprising success of all this propaganda, the innumerable times it has been employed and the ease with which it has been carried out, people generally have become conscious of propaganda as a great tool or method for influencing others. If propaganda were a means of influencing others along lines only of benefit to society, it could be hailed with great acclaim. But unfortunately it can also be employed for dishonest and socially vicious programs, just as well as for honest and worth-while movements. Federal authorities estimated that in five years, 1910-15, the 2,861 swindlers that were arrested had defrauded the public of \$351,000,000, averaging a dishonest gain of \$123,000.

The drive, a new form of propaganda, has now become a regular business. According to James H. Collins, somewhere between a billion and a billion-and-a-half dollars have been raised in one year for various causes other than governmental. The District Attorney of New York County

The Air You Breathe Should Be as Pure as the Water You Drink

Ventilate With  Self-Cooled Motor Fans

Homes

Ventilate your kitchen—remove every trace of greasy fumes and cooking odors that permeate your home. Enjoy a clean, fresh, invigorating atmosphere.

Stores

Clerks are alert, ambitious and attentive, and customers linger longer in the store that's correctly ventilated with an Ilg Fan.

Churches

Efficient ventilation means capacity attendance for the church, theatre, lodge or assembly hall. Heed the warnings of public health authorities and install an Ilg Fan.

Offices

Fingers are nimble, brains active and muscles responsive in the office that's correctly ventilated with an Ilg Fan—there is an atmosphere that makes for health and vigor.

Cafes

Correct ventilation with an Ilg Fan pays big dividends to the restaurant owner—it's an appetizer—a factor that measures the size of every meal ticket.

Factories

Fresh air is the life force of man-power. Industrial plants everywhere use Ilg Fans for creating healthful air conditions—removing fumes, vapor, smoke, steam, acids, etc.—drying and cooling.

investigated 534 money-raising activities in 1918 and put 384 of them out of business.

But we are less concerned here with swindling propaganda than with those forms not so palpably dishonest. It is important that our citizens be protected from pecuniary loss, but it is far more important that the United States, for example, deals with Russia, Mexico and the Irish question in the right way. And it is just such problems that furnish us with propaganda very difficult to handle. Today the average citizen has been deluged with facts, near-facts and falsifications put forth by interested parties, so that he has a mass of undigested and conflicting ideas or else has become frankly partizan.

Naturally as a psychologist, I view this matter as an interesting psychological problem. The word "propaganda" means essentially the spread of a particular doctrine or a system of principles. Propaganda differs from "education" in that the aim is to spread one doctrine, whereas in the case of the latter, the aim is to extend a knowledge of the facts as far as known.

The aim of propaganda, Professor Strong goes on to explain, is to develop sentiment and then precipitate action through suggestion. Theoretically any emotional element can be associated with any specific line of action. Thus, the correspondence school arouses the boy's love for his mother and challenges him to make her proud of him, and "funnels" the emotional desire into taking a correspondence course. The same appeal could be utilized to get young men to go to church, to quit gambling, to work harder for their employer, to enlist when war is declared, to do anything the boy could be made to believe his mother would approve of. We read further:

No logical connection needs to exist between the emotion which is aroused and the program which is outlined. Consider the propaganda for the Red Cross, an organization for which we are all enthusiastic. Because its work has touched our hearts a real sentiment has been built up about its name. So strong is this sentiment that one now finds himself unable to resist the request for annual dues. But my friends—I have asked several—and I do not know whether all the money that is now raised is really needed, nor how it is spent, nor whether the organization is efficiently administered or not. I am not saying this in the way of criticism: I am only pointing out that when one's emotions have been properly aroused one acts as directed and without intellectually considering the matter.

Now let us consider how propaganda may be controlled by society so that dishonest and pernicious campaigns may be prevented without interference to worthwhile propaganda.

The matter of control can be discussed in terms of these three questions: How far can propaganda be controlled in terms of the validity of the statements which are made? in terms of the action which is proposed? in terms of the emotional elements that are involved?

Society has long dealt with false statements and already has postal regulations, laws against slander, libel and the like. The Association of Advertising Clubs of the World carries on a steady campaign

against dishonest advertising, and has accomplished a great deal of good against this type of propaganda.

But, unfortunately, many undesirable propaganda will not fall under the class of propaganda publicly making dishonest statements. One very undesirable sort is spread by word of mouth. No one knows from whence it comes, and exactly what is back of it. Such word of mouth propaganda is fostered in times of emotional stress and particularly wherever people believe they are not being told all the facts. The best possible cure for it is publicity of the sort that makes people *believe* they are getting all sides to the question.

But in addition to this sneaking underhand propaganda there are all sorts of campaigns which are very undesirable, but which adhere technically to the truth. They can not accordingly be prosecuted for dishonesty. Some of them, however, give false impressions just the same. For a distributor of a food product to advertise that his goods contain no arsenic is to give the impression that the goods of at least one of his competitors do contain that poison.

Then there are other kinds of propaganda which deal with this subject in such a general way that no one can challenge their statement.

To require that propaganda contain truths and not falsehoods is a desirable regulation, but it will not stop undesirable campaigns.

Let us consider, second, to what extent propaganda can be controlled in terms of the action which is proposed.

If the proposed action is that of buying, it is not difficult to evaluate the propaganda. But if the proposed action is that of giving money for some cause or charity, justification upon such grounds is far more difficult. Business men through their Chambers of Commerce in sheer defense are increasingly investigating such propositions, and in many places list the charities that they will countenance.

The establishment of bureaus whose business it is to investigate all organizations asking for funds renders it easier to determine whether any organization is desirable or not. Can society go farther here? Can society not only positively help worthy cause, but put the unworthy, inefficient or unnecessarily duplicating agency out of business? There is no question but that many individuals are being fooled every year and much money squandered through such non-worth-while causes. But at the same time, we must remember that most new uplift movements have encountered great opposition at the start, and to increase this opposition still more through the establishment of legal regulations may do society in the long run more harm than good.

But there is an entirely different type of response which some propaganda aims to accomplish. It is that where no definite act is suggested, but where public opinion is to be changed. To evaluate the propaganda in such cases, the entire program must be considered. And as individual members of a big movement emphasize different aspects it is very difficult to determine just what the movement stands for.

There is another very vexatious phase of this point. Can a propagandist be held responsible for the actions of his followers because he stirred them up originally? Shall propaganda be evaluated only on the basis of the actions that result or on the basis of the motives back of the propaganda?

Our law basically concerns itself with

The Welcome Wedding Gift

Brings Joy to Brides—and Others, Too

ANY WOMAN will prize the Duplex-Alcazar—the wonderful three-fuel range. Because—it gives such marvelous results in cookery, saves work and cuts down expense.

The Duplex-Alcazar burns gas and coal or wood, singly or together. The change from fuel to fuel or to combination is done in an instant and the heat can be instantly adjusted exactly to the degree desired.

It's just like having two ranges—but you purchase only one.

Then think of the comfort of having gas to cook with in hot weather and coal or wood in cold weather. A cool or a warm kitchen just as you wish.

The Duplex-Alcazar is made in various types and styles. Take your choice. Sold by best dealers everywhere. Ask your dealer or write to us for Booklet.

For districts where there is no gas, we furnish an Oil Duplex-Alcazar which burns kerosene oil and coal or wood.

SCIENCE AND INVENTION

Continued

man's behavior and takes little account of motives. But a distinction is made between wilful murder and unintentional manslaughter. And a man can be convicted of murder if a person's death results within a year from his shooting at a chicken with intent to steal it. The intention to steal makes the accidental death murder. Here man is held responsible for the final results of his criminal intention in just about as far-reaching a manner as if he had inflamed another who then went out and murdered a complete stranger.

Now let us consider the third aspect of the subject—the element of aroused desire, the emotional background. Here is the real psychological problem. Take away the emotional element and society need have no fear of propaganda. For man is always very slow to act in terms of ideas alone. He does nothing until his emotions are aroused by a whirlwind speaker, or by personal injury.

At the present time the prospects do not appear over bright of controlling propaganda through regulation. There is, however, a method of weakening its influence, and that is by fighting one propaganda by another, or by general publicity. The trouble, however, with fighting bad propaganda by good propaganda, aside from the very practical consideration that the former is usually better equipped financially, is that seldom is the public supplied with facts upon which a real conclusion can be thought out.

MAKING GOLD AND OTHER THINGS

THE possibility of changing one chemical element into another has two aspects: first, the alteration as a mere laboratory experiment; second, its employment to produce something of value, as in "making gold" out of lead or mercury. The first seems to have been definitely established, not the second. *The Mining and Scientific Press* (San Francisco) notes editorially that to speak of "synthetic" gold presupposes that it consists not of one "element" but of several, the combination of which makes the metal. It is the value, of course, that excites popular imagination. A newspaper story that somebody has found a way to make "synthetic" gold was given currency, the writer goes on to say, by two persons generally reputed to have good sense—Irving Fisher, a professor at Yale, and Roger W. Babson, a press writer on financial affairs. Mr. Babson went so far as to suggest that there was one way which Germany might be in a position to pay her debts, and that was "to manufacture synthetic gold." To quote the editorial:

He added, as if to give substance to his fancy: "Private advices have been coming to me for some time that German chemists are diligently working to discover some method for making synthetic gold. . . . Reports indicate that a process has already been discovered for the making of gold from quicksilver, the only difficulty being that the present process costs more

How To Get Rich

—by following a plan clearly explained in "The Book of Thrift," the new guide to financial success by T. D. MACGREGOR. You can do it if you get a copy of this remarkable book and yourself adopt its plan of saving and investing.

All the wisdom of genuine thrift is packed within the covers of this 350-page volume, and it is all yours at little cost.

The Book of Thrift

Why and How to Save and What to Do With Your Savings

By T. D. MacGREGOR

This remarkable book is not a mere collection of platitudes on the subject of thrift, but it is an extremely timely and practical work—at once an inspiration to the reader and a dependable Guide-Book on the road to fortune. It is of equal value to teachers and students, parents and children, employers and employees. Large 12mo, cloth, 350 pages; 70 illustrations; \$1.50 net; by mail \$1.62.

FUNK & WAGNALLS COMPANY
354-360 Fourth Avenue, New York City

than the product is worth." That's the rub. One can make diamonds out of graphite, but the game is not worth the candle. Professor Fisher is reported to have visited the alleged inventor, who said that he submitted samples of his artificial gold to the Reichsbank in 1917 and "they had found it to be real gold." We quote from a statement made by Professor Fisher at Berlin on January 30, "But," adds the Professor, "a distinguished German scientist tells me that the man is a fraud and has a prison record."

So this nine-day bubble has been pricked; but not before the U. S. Geological Survey issued a formal report stating that there was no occasion to fear the production of artificial gold. The truth, as any chemist knows, is that some elements are being transformed continuously, and without human interference, into other elements. These substances are all radio-active, the energy made available during transmutation being about one million times more than could result from a similar weight of any other material. For example, it has been noted that uranium and thorium undergo a slow change of this character, with lead as the final product. So far no scientist has been able to delay or to accelerate this natural transformation. In time this may be accomplished, but at present it would appear that were it possible artificially to transmute lead into gold the energy required would involve a cost out of all proportion to the value of the precious metal produced. Should such a change be controllable eventually by human intervention, it is probable that the transmutation of gold into base metal would be more profitable as a commercial venture than would a change involving the opposite reaction, because of the immense amount of energy made available during the transmutation.

What has really been done in the laboratory, in the way of turning one chemical element into another, and of proving that the elements may be built up of a single basic substance, probably hydrogen, is described in Science Service's *Science News Bulletin* (Washington), quoting a talk made to the Chemical Society of London by Prof. Sir Ernest Rutherford of Cavendish Laboratory, Cambridge, who has gone farther than any other man toward realizing the old dream of the alchemists. We are as far off as ever from the making of gold out of lead, says the *Bulletin*, but experiments by Professor Rutherford have shown that it is possible to get hydrogen out of nitrogen and from at least five other elements, boron, fluorine, sodium, aluminum and phosphorus. These experiments have given us an entirely new idea of the structure of the atom. As Professor Rutherford says:

Since the development of the atomic theory on an experimental basis by Dalton, the progress of chemistry has been based on the central idea of the permanency and indivisibility of the atoms of the elements. The whole experience of chemistry for nearly a century has shown clearly that it was impossible to break up the atoms of the elements by the application of ordinary chemical and physical processes. This idea has had to be modified to some extent by the rapid growth of our knowledge during the last twenty years of the inner constitution of the atoms. It is now gener-

The ONLIWON Nickel Cabinet

Why your building has this Protected Service

ONLIWON HYGIENE is the toilet paper service that is based on the principles of Health-Protection and Economy. It was the first service of its kind to be invented and is rapidly replacing the roll and other unsatisfactory fixtures—especially in public toilet rooms.

ONLIWON Protects

ONLIWON Toilet Paper is made of clean, new materials in the bright, airy mills at Albany, N. Y. Even the crystal clear spring water that dilutes the wood pulp has been repeatedly tested and found absolutely pure.

The ONLIWON Nickel Cabinet is dust-proof and safely locked to prevent handling of the paper.

The ONLIWON Cabinet has no insanitary knobs for you and everybody else to handle. It serves the paper automatically by a system of interfolded sheets.

Pays Its Way

This protected service could hardly be furnished to you unless it paid its way. But ONLIWON cuts down expense, for it discourages waste of toilet paper by the consecutive service of—*just two sheets at a time.*

Moreover, the service prevents plumbing troubles by delivering only the sheets of soluble tissue which could not possibly clog the pipe.

SCIENCE AND INVENTION

Continued

ally accepted that the atoms of the different elements have all the same general type of structure. At the center of the atom is a positively charged nucleus of minute dimensions which is responsible for most of the mass of the atom. This is surrounded by a distribution of electrons held in equilibrium by the forces from the nucleus.

By the action of light and electrical discharges, we can readily remove one or more of the external planetary electrons from the atom, while by the action of X-rays we may even eject one of the more strongly bound electrons of the system. In this way we can effect in a sense a transformation of the atom, but it is merely a temporary one, and a new electron is soon captured from the outside and the atom is as before. The general evidence indicates that even if a number of the planetary electrons were removed by suitable agencies, the stability of the nucleus would not be disturbed and the atom would in a short time regain its original structure. In order to effect a permanent change in the atom it appears to be necessary to disrupt the nucleus itself. When once a charged unit of the nuclear structure is removed, the nuclear charge is altered permanently, and there is no evidence that this process is reversible under ordinary experimental conditions.

The discovery of the instability of the radioactive elements was the first severe shock to the idea of the permanency of all atoms. This radiating property is, however, confined mainly to the two heaviest elements, uranium and thorium, and their long series of descendants, and is shown only by two other elements, potassium and rubidium, and then only to a minor extent. Apart from these exceptions, the great majority of the atoms appear to be highly stable structures and to remain unaltered under ordinary conditions in this earth for periods of probably thousands of millions of years.

The property of radioactivity belongs to the nucleus and is shown generally by the emission of a swift particle or helium nucleus and occasionally a swift electron from the nucleus. The number and velocity of emission of these particles appear to be quite uninfluenced by the most powerful physical or chemical agencies and to be an inherent property resulting from the instability of these very complex nuclei.

These results show clearly that the nuclei of heavy atoms contain both positively charged helium nuclei and negative electrons, and lead to the general view that the complex nuclei of all atoms are built up of hydrogen and helium nuclei and electrons. It is also generally supposed that a helium nucleus itself is a secondary unit composed of four hydrogen nuclei and two electrons. If this be the case, we may suppose the nuclei of all atoms to be composed ultimately of hydrogen nuclei, or protons as they have been termed, with the addition of negative electron.

It is probable that the forces which bind together the components of the nucleus are exceedingly powerful and that consequently a large amount of energy will be required to disrupt its structure. The swift alpha particle from radium and thorium, which is by far the most concentrated source of energy known to us, seems the most likely agent to succeed in an attack on the strongly bound nucleus. The alpha

A good old Friend

Remember the good old-fashioned mustard plaster grandma used to pin around your neck when you had a cold or a sore throat?

It did the work, but my how it burned and blistered!

Musterole breaks up colds in a hurry, but it does its work more gently,—without the blister. Rubbed over the throat or chest it penetrates the skin with a tingling warmth that brings relief at once.

Made from pure oil of mustard, it is a clean, white ointment good for all the little household ills.

Keep the little white jar of Musterole on your bathroom shelf and bring it out at the first sign of a cold, congestion, or twinging joints.

Sold by druggists everywhere, in jars and tubes, 35c and 65c; hospital size, \$3.

particle is expelled from radium with a velocity of about 10,000 miles per second and thus has a speed 20,000 times greater than that of a swift rifle bullet. Mass for mass, its energy of motion is 400 million times greater than that of the bullet.

A VEGETABLE OIL TERMINAL

PLANTS to handle petroleum are familiar, but a terminal especially adapted to receiving and distributing vegetable oils, such as is now in operation in San Francisco, is something new. This terminal, we are told by the author of an article in *The Marine Review* (New York), was constructed and is operated by the State of California and is among the best equipped in the world. As a result of the closing of many European ports by the war, a tremendous traffic in vegetable oils and copra, or dried cocoanut meat, now comes to the United States, we are told; and an exceptionally well-equipped plant is necessary to take care of it. Imports of approximately \$40,000,000 worth of vegetable oils and copra from the south Pacific are now handled at this terminal, which is located on Islais creek, in San Francisco harbor by the State. He goes on:

The terminal is controlled by the board of State harbor commissioners, which has charge of all the waterfront of San Francisco. The facilities include wharfs, with water deep enough to accommodate any vessel which has at yet appeared on the Pacific, warehouses, pipe-lines, spur tracks connecting with all the transeontinental railroads entering San Francisco, and a tank barge for use for transfer of oils from steamers to wharfs. The facilities for receiving, storing and distributing the oil and copra at this terminal will compare favorably, and in some features are in advance of those of the larger ports of Europe, over whose wharfs, prior to the war, millions of pounds of copra and millions of cases of vegetable oils passed annually.

The warehouses, which have a capacity of 1,000,000 cases of oil, have concrete floors and sumps for the storage of oil in any form of container. In addition to these warehouses, space is provided for the storage of an unlimited quantity of oil in the yards and on the open wharfs, to which the cases and barrels can be unloaded direct from the ship.

San Francisco vegetable oil and copra importers have been granted first privileges on the long-term leasing of a large area adjoining the terminal, and they have erected tanks for their own use of a total capacity of about 5,000 tons, with more being erected. Oil from these tanks may be unloaded direct into tank cars for immediate transfer to any railroad, while from the terminal wharfs it can be handled direct to inland, coastal, intercoastal, or ocean-going vessels. The system of distribution has been worked out with a comprehensive view to coordination of rail and water transportation facilities in a manner not before attempted in any publicly owned storage and distribution plant on the Pacific coast.

In the report of its survey on this handling of these valuable imports, the San Francisco Chamber of Commerce says:

San Francisco now has what is generally conceded to be the most completely

"Biggest dollar's worth of underwear I ever saw"

"I'VE tried pretty near every athletic union suit ever made and almost gave up hope of finding the right one. Then I found Topkis. No more experimenting—it's Topkis for me from now on.

"Every way you look at it, Topkis is exactly right.

"First underwear that ever really fit me. Hardly seems to touch my body at all. Walking, sitting, running, I never feel my underwear. Not a hint of pinch or pull at any point. The fellow who designed the Topkis Athletic Union Suit knew something.

"My health is better, too. Topkis lets your skin breathe."

Best nainsook and other high-grade fabrics. Pre-shrunk—full size guaranteed. Be sure you get your correct size—38 if you wear a 38 coat, and so on.

No good dealer will ask more than a dollar for the Topkis Men's Union Suit—although many will tell you it's worth more.

Does Better Work— Longer

Note This Exclusive Advantage

There is a difference in sweepers. And one difference puts the Bissell in a class by itself. It is more than four wheels, a box and a rotating brush. It alone has the famous "Cyco" Ball Bearings. This principle always brings the brush in correct contact with any kind of carpet or rug. It gives maximum sweeping power even after years of wear, and makes sweeping easy, of course. No other sweeper has it or can have it.

The average life of a Bissell is 10 to 15 years. Consider the cost per year of service—30 to 50 cents.

Even where there is an electric cleaner, the Bissell sweeper is indispensable if you want quick, thorough, easy sweeping, with your sweeper always handy and ready for use.

Make Your Garden A Wonder Garden

It's easy. Market growers know the secret. Follow it and have the largest crops of fruits and vegetables, an abundance of the biggest and sweetest scented flowers of the most intense and vivid colors. Here is the secret!

The better grades of commercial fertilizers contain only 3 to 5 per cent nitrogen; 6 to 10 per cent phosphoric acid and 3 to 5 per cent potash, combined in material that has no fertilizing value. Most fertilizers are far below this average.

Science has produced a tablet, rich in plant food, containing 11 per cent nitrogen; 12 per cent phosphoric acid and 15 per cent potash—clean and odorless.

For crops in rows, set the tablets a foot apart along the row.

Three tablets, one every ten days, in the hills make Cucumbers, Squash, Melons and vines fairly jump.

In Flower Beds and Borders, place tablets a foot apart. For Bush Fruits and Shrubbery, use three to five tablets, placed in the soil about each plant.

Fruit or Ornamental Trees, place tablets two feet apart, extending from the trunk as far as the longest branches.

Fine also for greenhouse benches and pot plants.

Four tablets dissolved in a gallon of water, used in place of liquid manure, is less trouble and gives better results than objectionable manure water. Makes velvety lawns.

Each tablet contains highly concentrated, immediately available plant food. They increase production, heighten color and improve quality. Their use is highly profitable.

The name of the tablet is Stim-U-plant. No matter how fertile the soil, Stim-U-plant is effective in feeding and forwarding crops. Market Gardeners use them in large quantities. Order by name—there is no substitute.

Price delivered: 100 tablets, 75 cts.; 1,000 tablets, \$3.50. If your dealer hasn't it, order from the makers—

equipped vegetable oil terminal, storage and warehouse plant on this continent, and importers of both vegetable oils and copra look forward to a steadily increasing demand for this class of raw products, a demand which will be the more easily filled because of the excellent storage and distribution facilities offered by the new terminal. For years Europe had controlled the sources of supply of foreign vegetable and animal oils, ports like Marseilles, Hamburg, Liverpool and Rotterdam having a movement of millions of pounds yearly.

These oils not only enter in a basic way into the making of glycerin for explosives, but many advances made in the hydrogenation and other process applied to vegetable oils make them valuable for their use as food substitutes. In addition to this, they are used in the manufacture of laundry soap, paints, varnishes, printers' ink, imitation rubber fabrics, linoleum, leather tanning, tin plate cooling, core oil in castings, and other industrial and manufacturing purposes.

Customs figures show that the principal vegetable oils of the \$40,000,000 worth imported through San Francisco last year were coconut, China wood, peanut, linseed, soya bean and rape seed. There were smaller imports and distributions of perilla oil, from Manchuria, and kindred types of oils.

INFECTED GERMS?

DISEASE germs not only infect, but may themselves be infected, according to a French bacteriologist, Dr. F. d'Herelle. In other words, certain bacteria have their own microscopic parasites, causing diseases of their own, of which they may perish, to the great benefits of the animals that they themselves have infected. We might, of course, have suspected these facts from the classic verse about fleas having smaller fleas to bite 'em. Whether discovery will verify the sequel and proclaim that the infective processes go on *ad infinitum*, time alone will show. A full exposition of the doctor's views may be found in a monograph of the Pasteur Institute in Paris, whose French title may be translated, "The bacteriophage, its rôle in immunity." The name given by Dr. d'Herelle to his parasite of a parasite is from the Greek *phagein*, to eat, so that he has called it "the bacteria-eater." We quote as follows from a review in *The British Medical Journal* (London), which says:

The book begins with a statement of the fundamental experiment on which the theory of the bacteriophage is based. D'Herelle believes that he is dealing with an ultra-microscopic parasite of bacteria, so small that it will pass through the finest filter. This "bacteriophage," as he calls it, can only thrive on living bacteria, in the substance of which it grows and multiplies, becoming more and more virulent.

The first half of his book purports to describe the manner of life of this ultra-microscopic parasite, and relates the method adopted for estimating its activity, the distinguishing features of its cultures,

HOW TO MAKE YOURSELF WORTH MORE Through APPLIED PSYCHOLOGY

ANOTHER MAN started even with you in life, no richer, no more talented, no more ambitious. But in the years that have passed he has somehow managed to move far ahead. What is the secret of it? Why should he, apparently, have the power to get so easily the things he wants while you must work so hard for all that comes to you?

Another woman, madam, no more able than yourself, has the good gifts of life fairly thrust into her hands. You have compared yourself to her and questioned what there is in her character and talents that you somehow lack.

Learn the Reason from Science

Scientists have found the secret. They can show you how you too can obtain the better things of life. How you can arouse the hidden powers of your mind and make them bring you more influence, a larger income, greater happiness.

Human intelligence acts and reacts according to certain laws known as the Laws of Psychology—"organized common sense." Either by instinct or by study some individuals master these laws. To them the minds of their associates become like fine instruments on which they can play at will. They have but to set the train of circumstances moving and await results. In other words—they apply *Psycho'logy*.

No Longer the Dream of Theorists

To-day we see Psychology studied by the business man and its principles applied to the management of factory and office. We see men in every profession, as well as those in many lines of industry and business, applying Psychology to their personal occupations, and from the benefits derived from it greatly increasing their incomes, enlarging the scope of their activities, rising to higher positions of responsibility, influence and power.

APPLIED PSYCHOLOGY

Direct Method to Attain Success

Recognizing the need for a popular understanding of its priceless truths, an organization was founded by Mr. Warren Hilton some years ago to coordinate the principles of Psychology and apply them to every-day life—thus the Society of Applied Psychology came into being. Among the members of the Advisory Board, who also contribute to the Society's literature, are such well-known men as Henry A. Buchtel, D.D., LL.D., Chancellor, University of Denver, former Governor of Colorado; Hudson Maxim, D.Sc., Inventor and Mechanical Engineer; George Van Ness Dearborn, M.D., Ph.D., Psychologist and Author; Harry S. Tipper, Chairman, National Educational Committee, Associated Advertising Clubs of the World, and others.

Because of the very great value of the Society's Basic Course of Reading to the average man and woman *The Literary Digest* is cooperating to bring it within the means of every earnest seeker for self-betterment.

FREE "HOW TO DEVELOP YOUR POWER OF ACHIEVEMENT"

A compelling booklet packed with information on such topics as: Psychology Reduced to Easy Simple Language; How to Apply Psychology in Salesmanship; in Public Speaking; in Retail Selling—Psychology Applied by the Professional Man—Your Undiscovered Resources—Source of Will Power—How to Avoid Worry—How Ideas are Created—The Ability to Read Men, etc. Sign and mail coupon and you will also receive full particulars of the Society of Applied Psychology, and what membership in it will mean to you.

and the influence of the reaction of the medium on its growth. An account is given of the effect of antiseptics on the life of the parasite and the manner in which it behaves in suspensions rich and poor in bacteria. The bacteriophage, we are told, exerts its action through the agency of a powerful ferment which it secretes. The author has watched infected bacteria under the microscope, and describes how they assume a spherical form and finally rupture, liberating the enclosed bacteriophages. Bacteria develops protective processes against these intruders in the same way that human beings develop anti-bodies against bacteria. Resistant bacterial races are described, the acquired resistance being associated with altered morphology and culture characteristics. To make the analogy complete, there are even bacterial carriers of the bacteriophage!

The second half of the book deals with the part the bacteriophage is believed to play in immunity. Here we are presented with even more revolutionary ideas. In the early stages of an infection, d'Herelle assures us, our chances of recovery depend on the presence of this enemy of bacteria. If the bacteriophage is present the bacteria are attacked and destroyed; if absent, the bacteria multiply and cause disease. The human body is no more than the battlefield where the struggle rages between bacterium and bacteriophage. It is only in the later stages of disease that the anti-bodies developed by the human subject play any part, for they take many weeks to appear. The ups and downs of an illness are an indication of the fortunes of the rival forces. In an epidemic, also, the disease dies down and disappears because of the triumph of the attendant bacteriophage. Unfortunately, we are not able to fortify ourselves by keeping a stock of well-disposed bacteriophages ready at hand in case of an illness. Injected into the body they are eliminated at once, for they are only able to live on living bacteria. Still it is comforting to reflect that the bacteriophage is very abundant throughout the natural world and is as likely to gain to an entrance as is a pathogenic bacillus.

From an editorial in the same issue of the *Journal* we gather that tho there has been ample confirmation of d'Herelle's experiment, few investigators are prepared to accept the explanation that the changes are due to a bacterial parasite. Kabeshima, a Japanese experimenter, has shown that d'Herelle's "bacteriophage" can withstand a temperature of 70° C., and he concluded that he was dealing with an agent produced by the patient as a protective mechanism. Says the writer:

The hesitation displayed by other scientific workers in accepting the bacteriophage theory d'Herelle likens to the incredulity with which the scientific world received Pasteur's explanation that fermentation is due to the action of living cells. D'Herelle would have no difficulty in making us all his disciples if he produced evidence as convincing as that advanced by his great fellow countryman. The subject deserves attention because of the practical questions involved. If we are dealing with ferments secreted by cells, then such agents may be valuable allies in ridding the system of bacteria. If, on the other hand, the effects are produced by living parasites, then we are in the presence of an unexplored world of life, and perhaps a form of life different from any we have yet known.

This book shows a way to prevent so much money from going up the chimney

IT costs nothing; it is well worth reading. The coupon will get it for you.

It explains why Sunbeam Pipeless Furnaces are so astonishingly economical to buy and to operate.

It shows how, with just one register, the Sunbeam can heat a given number of rooms more evenly, more healthfully and with one-third less fuel than stoves or fireplaces.

The Sunbeam is made on a quantity-

SUNBEAM PIPE and PIPELESS FURNACES

"Warms like the Sun"—heating the entire house with one central register

AS EVERYONE KNOWS, warm air rises and cold air falls; that is the simple principle upon which Sunbeam Pipeless Furnaces work. Heated air, mixed with vapor, rises through the central compartment of the large register placed in your hall or living room. A constant, gentle circulation of warm, moist air at an even temperature is maintained in every room; the cool air of the house being drawn down through the outer compartment of your register, heated, and sent upward again.

Owners tell us that their Sunbeams save $\frac{1}{3}$ on the cost of fuel. See your local Sunbeam dealer.

Gentlemen:

Without obligating me in any way, I would like to learn more about heating my home, and the Sunbeam Furnace. Also, please mail me a copy of your "SUNBEAM BOOK."

The FOX FURNACE CO.
Elyria, Ohio.

No obligation—so send the coupon
Find out how little it will cost to install a Sunbeam, how much you will save in fuel and how much you will gain in comfort. Just tear off this coupon and mail it today.

INVESTMENTS AND FINANCE

THE SLOW RECOVERY OF AGRICULTURE IN EUROPE

WHEN the farms of Europe can be restored to a normal productivity, an important step toward the restoration of the world's economic and political balance will be reached. This will have its effect here, altho from the standpoint of our farmers the decrease in foreign demand for our agricultural products will not be entirely welcome. Not long ago the National City Bank of New York made the prediction that "in Europe, outside of Russia, agriculture will be back in 1922 almost to normal productivity." But Prof. A. E. Taylor of Leland Stanford University believes that this is altogether too optimistic and he writes the bank to that effect. Professor Taylor surveyed agricultural and nutritional conditions in Europe in 1920-21 for the American Relief Administration. As his letter is quoted in the National City Bank's April bulletin:

Agriculture can not be back to the normal in 1922, for a number of reasons. The count of animals is gradually being restored, but lack of purchasing power prevents Europe from importing a volume of feeding stuffs necessary to bring the productivity of each animal, in edible products, up to the pre-war level. The average milch cow and the average slaughtered steer and pig in Europe yields much less in weighed products than before the war and this will not be restored in 1922. Sugar production will not be restored in 1922. The production of bread grains will be restored in 1922, barring crop failure. The production of fruits and vegetables will probably be normal, barring crop failure. Potatoes, rice and maize will be normal, barring crop failure. But if you will take the calories produced in 1921, contrast them with 1920 and 1919 and analyze the position, you will find your prediction for 1922 unduly optimistic.

Nearly every one overlooks one reason for Europe's ability to limit her imports. She mills her bread grains differently than before the war. The average extraction of flour before the war was about 72% for wheat and 76% for rye. A great deal of wheat and rye are now milled to 85% and 90%. This means that much less bread grains are required to produce a certain bread ration. It also means that domesticated animals are deprived of the corresponding amount of mill feed. The purchasing power of wheat is falling even more rapidly than the purchasing power of wheat in this country is rising. Europe will reach a relative agricultural equilibrium during 1922; but it will not reach the normal level at that time. It will be of great advantage for her to reach a new equilibrium between agricultural products, even tho the level be below that of the pre-war period. This new equilibrium between agricultural products will be accompanied by a new equilibrium in a somewhat subnormal standard of living, especially for Central and Eastern Europe. Certainly prices are not going back to war figures; but certainly they are not going back to pre-war figures.

WHAT TO DO WITH OUR VICTORY BONDS

THE thousands of holders of Victory notes now are faced with the necessity of making the choice whether to hold them until they mature next spring—unless the Government decides to exercise its privilege in calling them in whole or in part on December 15, next—or to sell them now at a premium and reinvest to an advantage. And in case of deciding not to hold them there are also two alternatives, as the New York *Evening Post* notes in its investors' columns:

Either the sale of the Victory notes and reinvestment of the proceeds in another Government security or some other class of bond, or acceptance of the Treasury Department's offer to exchange for the Victory 4¾'s an equal par value of Treasury notes paying 4¾ per cent. interest and maturing in four years. Considering the premium at which the Victory 4¾'s are now selling, the yield on the new Treasury notes would be about 4.60 per cent. This compares with a yield of 4.55 on third Liberty 4¼'s, due in 1928, and a yield of 4.46 on fourth Liberty 4¼'s, due in 1938. The Treasury offer is purely a refunding proposition that is likely to spur the Victory note holder to a definite decision.

If long-term investment is wanted, the only thing to do, according to the New York *Tribune's* investment editor, is to sell the Victory notes now and reinvest in sound long-term municipal, railroad, utility or industrial bonds or other securities yielding a fair rate of interest. Those who would prefer to keep their funds in Government securities are reminded by a bond house specializing in Government securities that there will doubtless be opportunity to subscribe for additional issues of Government bonds or notes during the current year. As we read in a recent bulletin of C. F. Childs and Company:

Six and one-half billion dollars of debt must be met within one and a half years. That involves an operation exceeding in volume the total issue of the First and Second Liberty Loans. New issues in some form must provide for fully \$700,000,000 before December 31st to redeem maturing War Savings Certificates, and other new issues must provide for fully \$2,200,000,000 before the end of the year to redeem outstanding Treasury Certificates. Following that certain action we will have only five additional months to complete the refunding into new issues of fully \$3,500,000,000 Victories which mature fifteen months hence. Each and all of these flotations and the rates and maturity dates affix to them will directly concern the market for outstanding Liberty Loans. When the task is finished we are confident it will stand as a heroic masterpiece of peace-time financing.

Stopping check fraud

Ever since George La Monte invented National Safety Paper in 1871, the dangerous plain-paper check has been gradually disappearing from circulation, and losses through fraudulent alteration have been correspondingly reduced.

Over 70% of the banks in our largest cities, and thousands throughout the country, use checks on

National Safety Paper

National Safety Paper not only prevents "raising" the amount, but also protects the payee's name, number, date and endorsements.

Any attempt to alter the writing with chemicals, eraser, or knife, produces a glaring white spot in the paper.

Ask your bank for checks on National Safety Paper, or specify them to your printer. Look for the wavy lines.

WHAT FINANCIAL LONDON THINKS OUR FINANCIAL ALOOFNESS

IN one of his London dispatches to the financial section of the New York *Evening Post*, Mr. Arthur W. Kiddy, the well-known London financial writer, tries to give "the exact and impartial views of the financial district" concerning the aloofness of the United States with regard to Europe's economic situation. In so doing he calls for cooperation between the United States and Great Britain for the benefit of the less fortunate Continent. As Mr. Kiddy speaks for the financiers of London:

Having regard to our readiness and ability to settle our debt to you, we feel that we have a right to rank with you toward the whole problem as a fellow-creditor nation. Starting on that basis, we regard the situation of all debtors, excluding ourselves, but including German reparations as calling for strong and skilful treatment by lending countries like you and us, the object being to recover as much as may be possible of the original debts and also to restore at the earliest moment international trade. Failing this, further losses must be added to old debts.

It is considered, however, that such skilful treatment is impossible unless the two chief creditors cooperate in dealing with the situation. It is difficult to express the matter in a brief cable, but I trust that I have made it clear that I am entirely free of sentimental forgiveness and the breaking of contracts. Moreover, I must again insist, in order to prevent the danger of misunderstanding, that the whole argument is based on Britain's fully performing her obligations to you; otherwise, of course, the whole argument collapses.

The action of your Senate with regard to Austrian assets is highly appreciated, and it is considered that this marks the first hopeful development in the European situation in some years. If Austria is not handled skilfully, the incident should react beneficially on other parts of Europe.

NEW CONSTRUCTION WORK AS A SIGN OF RAILROAD IMPROVEMENT

GENERAL talk of improvement is all very well, but there is real significance, we read in the New York *Journal of Commerce*, in figures presented by *The Railway Age* showing that there is more construction work actually under way or projected for 1922 by the railways than there has been for several years. Public announcement has already been made, says *The Railway Age*, of the construction of more than 500 miles of new lines this year, and contracts have already been let for at least half of this. A partial list of important projects definitely authorized is given by the railroad organ and is, in its opinion, "sufficient to demonstrate conclusively that the railways are viewing the future with more optimism."

"Attention is called, for instance, to an extension of 55 miles on the Atchison Topeka & Santa Fe from Satanta, Kansas west, and a line 40 miles long from Pawhuska, Okla., to Owen, which are understood to be the first of several projects

Now Jackson Knows Why Miller Bonds, Yielding 8%, Are Safe

HE thought a first mortgage on a piece of income-earning property worth a great deal more than the amount of bonds issued ought to be security enough for anybody, but we told him that we demanded more. Though Jackson had had much experience in financial matters, he opened his eyes when we told him about this safety feature, insuring the prompt payment of 8% interest and principal on the day due.

The provision of Miller First Mortgage Bonds which makes them safe is *monthly payments* by the borrower to meet principal and interest. The plan is described in an Investment Story from Real Life, "Mr. Jackson Discovers an Investment Principle." Write for your copy today and decide for yourself whether you can do without this remarkable feature which protects our First Mortgage Bonds yielding 8%.

MILLER MORTGAGE BONDS

Why You Should Have a Rock Garden

You'll fall in love with the idea of raising rock garden flowers as soon as you read H. H. Thomas' charming and suggestive book—

ROCK GARDENING FOR AMATEURS

A revelation of the possibilities of easily converting a rocky waste into a flower garden and a spot of beauty. Rock gardening grows more popular every day. And garden lovers have found that a small, simple rockery is just as delightful as an elaborate one—in winter as well as in summer.

"Rock Gardening for Amateurs" tells why you should have a rock garden, and how to make and plant one. It gives full descriptions of the flowers, bulbs, and shrubs that can be grown and from which you can select the plants you prefer and it tells you how to tend them. The book is exquisitely illuminated with fifty-six full-page photographic illustrations (eight in colors) of beautiful rock gardens from which you can take suggestions—or you can copy the entire scenic effect. If you have a few feet of rocky ground (or a stream) near your home, this book will interest you.

Crown 8vo. Cloth. 286 pages, \$2.50, net; \$2.62, postpaid.

New Varieties of Roses

Varieties have increased so rapidly of late years that amateur rosarians will find particular interest in a new and revised (fourth) edition of H. H. Thomas' complete guide book entitled—

"THE ROSE BOOK"

Which goes into minute details as to what is to be done in the rose garden, contains descriptions of varieties, cultivated and wild, gives a monthly calendar of garden operations for the year, and warms the heart of the amateur rosarian with words of encouragement by visions of rose beauty still unattained.

The work is beautifully illustrated with eight direct-color photographs and forty engravings made from photographs of rose gardens and varieties of roses. If you are interested in rose culture, you will find this book both interesting and satisfying.

FUNK & WAGNALLS COMPANY, Publishers
354-360 Fourth Avenue, New York, N. Y.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

To Several Correspondents.—With reference to the definition of *botulism* given by the Lexicographer, the following definitions sustain that given by the Standard Dictionary:—"Poisoning caused by eating decomposed sausages. (L., *botulus*, sausage).":—

Dr. Thomas Lathrop Stedman, editor of "A Practical Medical Dictionary," published in 1920, under *botulism* says: "(Latin, *botulus*, sausage.) Allantiasis; poisoning by tainted sausage." Dr. Smith Ely Jelliffe and Dr. C. W. Latimer in Appleton's "Medical Dictionary" give: "*Botulism*: Poisoning from sausage or other meat, thought to be produced by the *Bacillus botulinus* (Lat., *botulus*, sausage.)."

"R. F. M.," Visalia, Calif.—"Kindly give me some facts about that immortal song 'Annie Laurie,' for I believe that she was not simply a myth but that a lady by that name did once live."

Annie Laurie, a Scottish song of the eighteenth century, was written by William Douglas of Fingland, Scotland, to Anne, daughter of Sir Robert Laurie, of the Maxwellton family, but Anne Laurie married a Mr. James Fergusson of Craigdarroch. The words of the song were set to music by Alicia Anne Spottiswoode who, in 1836, married Lord John Douglass Scott.

"A. J. R.," Omaha, Neb.—"How are the plurals of proper names formed? Is the plural of *Jones* written *Joneses*?"

The formation of the plurals of family names depends entirely on the name. Some plurals are formed by the addition of *s* or *es*, as *Jones*, *Joneses*; *Smith*, *Smiths*; *Eustis*, *Eustises*, etc.; others by changing *y* to *ies*, as *Ptolemy*, *Ptolemies*; *Henry*, *Henries*; *Montgomery*, *Montgomeries*, etc.

"I. H. B.," Oxford, N. C.—"Please define the word *moniker* for me."

The word *monniker* is slang for a person's name or signature. *Moniker* is another spelling of the same word.

"A. McC.," San Francisco, Calif.—"Kindly give me the correct pronunciation of the word *hacienda*."

The word *hacienda* is pronounced ha'si-en'da—*a's* as in *artistic*, *i* as in *habit*, *e* as in *get*; or Spanish, a'thi-en'da—*a* as in *art*, *th* as in *thin*, *i* as in *police*, *e* as in *prey*, *a* as in *artistic*.

"A. T. B.," Shelton, Conn.—"Please give the meaning and pronunciation of the word *eleemosynary*."

Eleemosynary, as an adjective, means "pertaining to charity or alms; existing for the relief of the poor; charitable; as, *eleemosynary* institutions; *eleemosynary* gifts." It means also, "aided by or dependent upon charity."

Eleemosynary, noun, is defined as:—"A beneficiary or recipient of charitable gifts."

The word is pronounced el'i-i-mos'i-ne-ri—*i's* as in *habit*, first *e* as in *get*, *o* as in *not*, second *e* as in *prey*.

"J. J. L.," Weehawken, N. J.—"Kindly give me the difference between the words *endeavor* and *exertion*."

Endeavor, from the French *en*, in, and *devoir*, duty, is a calling forth or exercising of inherent powers, while an *effort* is the exertion of one power only. Dr. Fernald says: "*Effort* denotes the voluntary putting forth of power to attain or accomplish some specific thing; it reaches toward a definite end; *exertion* is a putting forth of power without special reference to an object. Every *effort* is an *exertion*, but not every *exertion* is an *effort*. . . . An *effort* is a single act, an *endeavor* a continued series of acts; an *endeavor* is sustained and enduring, and may be lifelong."—*English Synonyms, Antonyms and Prepositions*.

"J. D. F.," Abbeville, S. C.—The word *moron* is derived from the Greek *moros*, stupid.

"A. E. O.," Norris, Mont.—"Please tell me how to pronounce the words *humidor* and *loge* (a seat in a theater)."

The word *humidor* is pronounced hui'mi-dor—*iu* as *eu* in *feud*, *i* as in *habit*, *o* as in *nor*; the word *loge*, loj—*o* as in *go*.

There's only one 3-in-One. Ask for it by name and refuse substitutes.

Squeakless Comfort

When the davenport, folding bed or cot is opened out—or the "closet bed" drawn from its hiding place—

Then is the time to cure the squeaks.

A drop or two of 3-in-One Oil in each folding joint—a little on the connections between spring and frame, will put the whole crop of squeaks right out of business.

3-in-One

The Universal High Quality Oil

has a multitude of daily uses in every home, office and factory—lubricating, cleaning, polishing, preventing rust. It's all purest oil that won't gum or evaporate.

Sold at all good stores in 1-oz., 3-oz. and 8-oz. bottles and in 3-oz. Handy Oil Cans.

FREE—Generous sample of 3-in-One and Dictionary of Uses. Request both on a postal.

THE • SPICE • OF • LIFE

WHEN THE BABY OF *THE DIGEST* COVER GREW UP.

In the upper left-hand corner is a copy of the baby picture which appeared on the cover of the March 18 issue of *THE DIGEST*. It had the strange effect of starting the pencils going in all parts of the country and the other pictures represent the ideas of various subscribers of what the baby may look like a few years from now. In all of the designs the original baby head, it will be noticed, has been cleverly utilized to produce different effects. Nothing said or pictured here, of course, is intended to encourage aspiring young artists to start a contest in caricaturing *Digest* covers!

Preparedness.—"Can you fight?"
"No!"
"Come on then, you scoundrel!"—*Kasper (Stockholm)*.

One Editor Owns Up.—Don't forget that the advertisements often contain the most important news in the paper. *The Paonian (Paonia, Colo.)*.

Seeing Things.—Some one in America claims to have seen a blue caterpillar. There are bound to be these troubles so long as prohibition drives people to home-made whisky.—*London Opinion*.

Both in the Swim.—"My daughter sprang from a line of peers," said the ardent father.

"Well," said her feller, "I jumped off a dock once myself."—*The Naval Monthly*.

Years of Discretion.—"I asked you to send me young lettuce."

"Yes, ma'am. Wasn't it young you got?"

"Young? It's almost old enough to wash and dress itself."—*Boston Transcript*.

Mixed Feet.

A tree toad loved a she toad
That lived in a tree;
She was a 3-toed tree toad,
But a 2-toed tree toad was he,
The 2-toed tree toad tried to win
The she toad's friendly nod;
For the 2-toed tree toad loved the ground
That the 3-toed tree toad trod;
But vainly the 2-toed tree toad tried—
He couldn't please her whim;
In her tree toad bower, with her V-toe
power,
The she toad vetoed him.
—*The Van Raalte Vanguard*.

Why Not?—The name of the Los Angeles suburb where the film stars star is Hollywood. It is not yet intended to alter it to Alcohollywood.—*London Opinion*.

Two Definitions.—Optimist: Sick man learning to play a harp.

Pessimist: Sick man learning to shovel coal.—*N. E. A. Service (Cleveland)*.

No Comeback.—Carpentier is said to have taken to writing poetry. That's the best of being a heavy-weight boxer—you can do practically what you like, with impunity.—*London Opinion*.

We Take Ours Plain.—Americans are angry because their Ambassador attended the Royal wedding in court dress. They are so truly refined that they can not understand our preference for breeches of decorum.—*London Opinion*.

No Return Trip.—Sending out a show by wireless has this advantage: If it gets stranded the actors don't have to walk a thousand miles to get back to New York.—*Charleston News and Courier*.

When One Claim Adjuster Fainted.—Out in Wyoming a train ran over the cow of a Swede farmer named Ole Oleson. The claim adjuster went out to the home of Ole to adjust the claim likely to be made by Ole for the loss of his cow.

"Well, Mr. Oleson," said the claim adjuster, "I came out to see you about your cow being killed on our track. What are you expecting to do about it?"

"Vell," said Ole stolidly, "I ban a poor man, an' I can not do much because I ban so poor, but I will try to pay you five dollars."—*Judge*.

No Chance.—"What were your father's last words?"

"Father had no last words. Mother was with him to the end."—*Wag Jag*.

Keeping Them In.—DOORKEEPER (to late-comer at village concert)—"No, madam, I dare not open the door during the singing. Half the audience would rush out!"—*London Opinion*.

Agreeable.—"If I lend you ten dollars, what security will you be able to give me?"

"The word of an honest man."

"All right, bring him along, and I'll see what I can do for you."—*Banther*.

The Helpful Recruit.—"You told me to file these letters, sir," said the new yeoman.

"Yes," returned the officer.
"Well, I was just thinkin' that it'd be easier to trim 'em with a pair of scissors."—*Mississippi Bulletin*.

Wife to the Rescue.—YOUNG DOCTOR—"My Jove! Mary, this sitting around waiting for a practise is getting on my nerves."

DOCTOR'S WIFE—"Couldn't we invite the neighbors to dinner and give them something that would disagree with them?"—*London Opinion*.

Competitors.—Two little English girls were quarreling over the success of their fathers.

"My father can preach better than yours because he is a bishop," said the first.

The second little girl could not answer her back, but she suddenly recovered and said: "Well, anyhow, we've got a hen in our yard which lays an egg every day."

"That's nothing," said the bishop's daughter; "my father lays a corner-stone every week."—*The Van Raalte Vanguard*.

Outfit! There's downright magic in the artful skill of the Mimeograph when it is reinforced by the crafty Mimeoscope. Twins! A thousand duplicates of a drawing this outfit will produce in less than that many seconds. No cuts! No delays! Merely trace the design upon the illuminated Mimeoscope on a sheet of stencil paper, and print! And typewriting may go on the same page. All the unnumbered thousands of industrial and educational institutions throughout the world which know the fine economy of Mimeographic printing may now benefit by the artful easiness of Mimeoscopic drawing. Charts, maps, cartoons, factory diagrams, together with letters, bulletins, sales messages, etc., leap in quick thousands from the Mimeograph—at negligible cost. Twin savings for others—why not for you? Send for Booklet "L-4," A. B. Dick Company, Chicago—and New York.

Important Books on Gardening

Why You Should Have a Rock Garden

You'll fall in love with the idea of raising rock garden flowers as soon as you read H. H. Thomas' charming and suggestive book—

ROCK GARDENING FOR AMATEURS

A revelation of the possibilities of easily converting a rocky waste into a flower garden and a spot of beauty. Rock gardening grows more popular every day. And garden lovers have found that a small, simple rockery is just as delightful as an elaborate one—in winter as well as in summer.

"Rock Gardening for Amateurs" tells why you should have a rock garden, and how to make and plant one. It gives full descriptions of the flowers, bulbs, and shrubs that can be grown and from which you can select the plants you prefer and it tells you how to tend them. The book is exquisitely illuminated with fifty-six full-page photographic illustrations (eight in color) of beautiful rock gardens from which you can take suggestions—or you can copy the entire scenic effect. If you have a few feet of rocky ground (or a stream) near your home, this book will interest you.

Crown 8vo. Cloth. 286 pages, \$2.50, net; \$2.62, postpaid.

Wish a Model for a Beautiful Garden?

Right before your eyes? In all its charm of combined coloring? Not only one, but *eight*, fine photographic engravings in colors of selected model gardens, showing the pleasing arrangements of the flowers and shrubs and the blend or the contrast of colors. Select the one you prefer. Copy it.

These pictures with thirty-two other photographic half-tone reproductions are contained in the reliable garden guide-book by H. H. Thomas, titled—

ROUND THE YEAR IN THE GARDEN

Study the pictorial effects of the rose beds, climbing roses, and dwarf roses for borders; shrubbery grouping; rock and pool gardens; phlox in a rock garden; edgings; terraces; flower-fringed paths; greenhouse achievements; etc.

Besides pictures Mr. Thomas offers you the benefit of his wide experience as a successful gardener by laying out a calendar of operations for each month in fruits, flowers, and vegetables.

Crown 8vo. Cloth. 286 pages. \$2.50, net; \$2.62, postpaid.

New Varieties of Roses

Varieties have increased so rapidly of late years that amateur rosarians will find particular interest in a new and revised (fourth) edition of H. H. Thomas' complete guide book entitled—

"THE ROSE BOOK"

Which goes into minute details as to what is to be done in the rose garden, contains descriptions of varieties, cultivated and wild, gives a monthly calendar of garden operations for the year, and warms the heart of the amateur rosarian with words of encouragement by visions of rose beauty still unattained.

The work is beautifully illustrated with eight direct-color photographs and forty engravings made from photographs of rose gardens and varieties of roses. If you are interested in rose culture, you will find this book both interesting and satisfying.

Crown 8vo. Cloth. 206 pages. \$3, net; \$3.12, postpaid.

A Beautiful Garden of Rocks

Why not? Read in H. H. Thomas' delightful book—

ROCKERIES: HOW TO MAKE AND PLANT THEM

of the possibilities for beautifying rocky places. It describes the fascination of rock gardening, tells how to build and plant a rock garden, how to make water and bog gardens, cold greenhouses, etc. Liberally illustrated, some pictures being in the rich coloring of the gardens photographed.

12mo. Cloth. 148 pages, 75c. net; 83c. postpaid.

Success For You With Hardy Border Flowers

You can be positively sure of excellent results, if you follow the advice in that interesting and freely illustrated little book, "Hardy Border Flowers," edited by H. H. Thomas, editor of *The Gardener*.

It supplies full directions upon such important points as preparing the ground, planting, arranging, grouping, and the association of colors. It also describes the most reliable flowers, gives diagrams for flower borders, and shows photographic pictures of attractive floral effects you may want to duplicate. Frontispiece, in colors, of double peony garden scene.

Cloth 150 pp. \$1, net; postpaid, \$1.08

Complete and Reliable Guide

H. H. Thomas, floral specialist and editor of *The Gardener*, is the author of an attractive volume entitled—

THE BOOK OF HARDY FLOWERS

That contains a mass of new and valuable information. It gives complete descriptions of all the flowers, trees, and shrubs that are suitable for growing anywhere in the temperate zone. The descriptions include not only color of the flowers, but the height of the plant, and the season at which it is seen in full beauty. Special attention is paid to herbaceous perennials and annuals. Botanical as well as popular names are given. The volume is arranged alphabetically and contains many

New Kinds of Plants

that have been introduced in late years. Illustrations are profuse and include 32 color plates and 64 photographic engravings of beautiful flowers or shrubs or selected gardens. You would find this book a most reliable and helpful guide.

8vo. Cloth. 504 pages, \$5, net; \$5.20, postpaid.

"The Carnation Book"

By H. H. Thomas,

Assisted by S. M. Kingsford

Thoroughly descriptive, beautifully illustrated, and up-to-date. Shows how you may have Carnations in bloom all the year, and gives explicit instructions on cultivation. Sixty-three fine photographic illustrations.

12 mo. Cloth. 156 pages. 75c. net; 83c. postpaid.

Practical Amateur Gardening

By H. H. THOMAS

is a thoroughly up-to-date and practical book covering the whole range of gardening. It gives you instruction on growing and grafting hardy flowers, flowering and evergreen trees and shrubs, greenhouse flowers, fruits and vegetables. It also advises you on plant diseases, pests, and fertilizers. It provides a gardening calendar of what should be done each month, and is liberally illustrated with photographic reproductions of beautiful garden scenes.

8vo. Cloth, 288 pages. \$2.25, net; \$2.37, postpaid.

At Booksellers or Direct from the Publishers

Funk & Wagnalls Company, 354-360 Fourth Ave., New York

The "Daily Dozen" builds shoulders and back muscles in which you can take pride.

Overweight? 10 minutes a day of the "Daily Dozen" to music will rid you of dangerous excess flesh.

Why be run-down, emaciated, half-alive? The "Daily Dozen" quickly builds you up.

Try the "Daily Dozen" To Music!

Ten Minutes' Fun a Day Gives You Health, Strength and Vitality—Free Record Proves It.

A GREAT and new idea—and more fun than a game! You cannot appreciate the fascination, the glow of health, the amount of "pep" you acquire from exercising to music until you have tried it!

Ten minutes a day of genuine fun will keep you fit. Walter Camp has made it possible. The famous "Daily Dozen" Exercises of this great Yale coach—exercises that reach and strengthen every muscle in your body—have been set to music on phonograph records, with Mr. Camp's special permission.

You put a record on the machine and the lively, spirited music carries you through ten minutes of the most exhilarating fun. You are swept along with a buoyancy that will amaze you. And the result of this ten minutes' fun a day is a glowing health, a glorious vitality, a springy step, a bright eye—and, in short, a whole, healthy, breathing and zestful man or woman tingling with the very glow of life.

But the famous "Daily Dozen" do not stop their wonderful work there. Far from it. If you are overweight they will reduce your waistline. If you are underweight they will put firm, sound flesh on you.

They revitalize your body. They revive weak, flabby muscles and rebuild them into live, vital tissue.

Thousands of men and women and boys and girls are regaining health, strength and vitality through use of the "Daily Dozen" Exercises.

The "Daily Dozen" Build Muscle

Increase your wind, develop your chest, strengthen your powers of endurance and your energy to work. Put on muscular shoulders, acquire strong stomach muscles, get a wonderful

and superb physique—and enjoy yourself every minute you are doing it.

The "Daily Dozen" are set to music on large double-disc records, playable on any disc machine. In addition there are charts with 60 actual photographs illustrating every movement with clear and simple directions. On the record itself a clear voice gives you the commands, telling you exactly what to do. All you do is put a record on the machine. Inside of ten minutes you will feel a glow that is priceless in its benefits to your health. You can say good-bye to constipation, headaches, backaches, insomnia, run-down condition, nervousness, emaciation, want of appetite and that tired, exhausted feeling.

Record Free

So that you may see for yourself the wonderful benefits to your health that the famous "Daily Dozen" will give you, we will send you, absolutely free, a sample record containing two of the "Daily Dozen" Exercises and a chart illustrating the movements. Put it on your phonograph and follow the simple directions of the clear voice on the record. That great sensation of glowing health you feel when you have gone through these new, exhilarating and interesting exercises will amaze you.

There is no obligation. The record is yours to keep. Just enclose a quarter (or 25 cents in stamps) with the coupon, to cover charge of postage, wrapping, etc., to Health Builders, Dept. 94, Oyster Bay, N. Y.

Free Sample Record and Chart

HEALTH BUILDERS, Dept. 94
Oyster Bay, N. Y.

Please send me your free sample Health Builder Record, giving two of Walter Camp's famous "Daily Dozen" Exercises, also a free chart containing actual photographs and simple directions for doing the exercises. I enclose a quarter (or 25 cents in stamps) to cover cost of packing, postage, etc. This does not obligate me in any way whatever and the sample record and the chart are mine to keep.

How to Become a Master of English

THERE is not a walk in life in which a mastery of the English language will not bring advancement, a larger income, wider influence. It will make the road to success smoother and surer.

To think straight and purposefully you must know words, for they are the finger-posts of thought. *Get a command of words* and it will give you a command of men—of circumstances. It will aid you to meet customers, to make sales, to close contracts, and to impress men of affairs. It will enable you to express yourself clearly and forcefully. It will help you to write in a clear, bold, vigorous style that carries conviction. It will give you power and personality. Good English is good sense, good business. Read what

JOHN BURROUGHS
Venerable Naturalist and Nature Writer.

"I see valuable and helpful hints in these lessons. Any young man or woman who has an undeveloped literary talent ought to profit greatly by this course."

BOOTH TARKINGTON
Distinguished Novelist and Short-Story Writer, Author of "Monsieur Beaucaire," "Seventeen," etc.

"Your course is almost painfully needed by many professional writers and speakers. A student who intelligently follows your course will know what he is talking about when he talks or when he writes. His audience will certainly know, because he will talk well, no matter what his subject."

These Master Word-Artists

have to say of the advantages to be derived from the study and application of Grenville Kleiser's *Mail Course in English*. Here you have expert opinions from people who know all the ins and outs of the literary craft, who are paid large sums for their work, and who can appreciate, as no amateur can, the

vital importance of a mastery of English. For the young writer or for the old one, either, for that matter, to take up and work through this course faithfully is to secure an increase in efficiency that will be worth much every year in real cash. No other asset will be of such value to you in your career.

It Will Work Wonders for You

But it is not only in the teaching of a correct use of words or in the gradual upbuilding of a pure and effective English style that this course is of such splendid service to you. It has above and beyond this an inspirational value, an educative power, a character-forming influence that will accomplish wonders for you, that will make you twice the man or woman you were. Grenville Kleiser can teach you by mail in spare moments, at home, how to

munity.**

"I am so favorably impressed with Mr. Kleiser's Course—his method of instruction—that I would advise every person to take it as part of his education."—*Dr. H. J. Boldt, New York City.*

"If one desires to enlarge his vocabulary, improve his diction, polish his style, and express his thoughts in clear, terse English, he can not do better than take your course."—*Rev. S. A. Walton, Nebraska City, Neb.*

Whatever Your Business or Occupation Grenville Kleiser Can Make You More Successful

What is true of the writer is true of every other profession. Whether you are a doctor, a lawyer, a merchant, a clergyman, a teacher, a salesman, a clerk, or in business of any kind, a command of English will bring you

to the front and lack of it will be a drag on your upward climb. You need good English in every relation of your life and it will help you, as no other single thing can, to reach the goal of your desires and achieve success.

FREE—"How To Become a Master of English"

We want you to read this booklet that you may understand what this course will do for you, the real practical help it will give you in a hundred different ways. You have a message, a something within you, that demands expression. You need no longer be

voiceless. Learn the mastery of English and realize your own possibilities. Be yourself at your best. It means more money, more power, more life in every way. Sign and mail this coupon NOW. To-morrow you may forget and the opportunity will be lost.

ELLIS PARKER BUTLER
Popular Humorist and Short-Story Writer, Author of "Pigs is Pigs," "The Incubator Baby," etc.

"A good idea excellently worked out. Supplies what nine out of ten men and women need before they put pen to paper or open mouth before an audience. I should especially recommend it to college graduates and others who have been stuffed with petrified English and turned loose with no knowledge of working English."

RUPERT HUGHES
Noted Novelist, Poet and Dramatist, Author of "Empty Pockets," "Excuse Me," etc.

"You have provided an effective and sufficient course of lessons in the mechanism and the art of writing English. I congratulate you on your achievement and I congratulate those who are fortunate enough to approach the chaotic vastitude of our dictionary under your guidance."

Funk & Wagnalls Company, 354-360 Fourth Avenue, New York

Nature's Wonderful Secrets Revealed

IF the great "out-of-doors"—the meadows basking in golden sunshine, the cool, quiet woodlands, the rushing streams—call to you irresistibly with the first warm days of Spring—

—If you delight in the song of birds, in the gorgeous hues of the myriads of butterflies, in the beauty and scents of the hundreds of wild flowers, vines and shrubs which spring up on every hand—

—Then you will find the four wonderful books known as the *Little Nature Library* a source of unending delight.

Little Nature Library

Gives you the exact information in both illustration and text that you need to enable you to identify every bird, tree, flower, and butterfly that you see. These books have beautiful color plates which give you, for identification, the exact colors of birds, flowers, butterflies, etc., as the text describes the habits, family history, travels, methods of propagating and of protection against enemies. They increase your pleasures in the great outdoors by telling you many of the little-known things about Nature's creatures that will make your walks a hundred-fold more delightful. Each book is handsomely bound in cloth, size 5½ x 8¼ inches. The titles are "Birds," by Neltje Blanchan; "Butterflies," by Clarence Weed; "Wild Flowers," by Neltje Blanchan, and "Trees," by Julia Ellen Rogers. Every page is illustrated in a manner that sustains interest and gives you a new delight in Nature.

Examine Them Free

No description can do justice to these extraordinary books. See the books themselves. Send for the complete set on approval. Don't send money now—just mail the coupon and we will send the four volumes for your personal 10 days' free examination. If at the end of that time you decide to keep them, and we feel sure you will, just send \$1.50 and then \$1 a month for six months. And remember that any time during your ten-day free examination you can return the books and you will not owe anything—you will not be out one cent.

Send No Money

When you get the books, take a little stroll and read the absorbing text on what you see. Discover this new and remarkable world. Take advantage of this free trial offer.

Send coupon below.

Nelson Doubleday, Inc.,

Dept. L-394, Oyster Bay, N. Y.

Nelson Doubleday, Inc.

Schools in Education (including primary), Smith-Hughes Agriculture, Home Economics, Rural Ministry, Athletic Coaching, Radio Telephony, Library Science, College Courses, Conservatory of Music. Write for Catalog. BOX K, FORT COLLINS, COLORADO.

Learn Languages at Home

French, Spanish, German, etc.
Quickly, Easily Learned

In your home, in your spare time, at a minimum of cost, you can now learn modern languages by the famous Berlitz Method of Language Instruction. For those living too far from Berlitz Schools this unexcelled Method is now prepared for home study. The course, including text books with translations, grammatical explanations, guides to pronunciation, together with direct supervision by us, correcting of exercises, explaining of difficulties, etc., is now offered for only \$15 covering a full year's service. Everyone ambitious to advance socially and in business should take advantage of this great opportunity. Write at once for full particulars.

THE BERLITZ SCHOOL OF LANGUAGES
Dept. B, 30 W. 34th St., New York City
Berlitz Schools in New York, Boston, Philadelphia, Washington, Baltimore, Detroit, Chicago, Paris, London, Madrid, Rome, Berlin, and over 200 other cities.

BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 3000 Certified Public Accountants in U. S. Many are earning \$3,000 to \$10,000 a year. We train you thoroughly by mail in spare time for C. P. A. examinations or executive accounting positions. Knowledge of bookkeeping unnecessary to begin. The course is under the personal supervision of William B. Castenholz, A. M., C. P. A., former Comptroller and Instructor, University of Illinois; also former Director of the Illinois Society of C. P. A.'s, and of the National Association of Cost Accountants. He is assisted by a large staff of C. P. A.'s, including members of the American Institute of Accountants. Low tuition fee—easy terms. Write now for information. **LaSalle Extension University, Dept. 452-H Chicago**
The Largest Business Training Institution in the World

WOMEN TEACHERS WANTED

To Travel During Summer Vacation

Educational sales work along school lines selling a New Educational Work. Over one hundred teachers last summer averaged \$500.00 each for their summer vacation. Applicants must be between 25 and 40 years of age, have had two years Normal School or College training and three years teaching experience. Give details concerning age, education and time you can start work in first letter. Address Dept. L.11.

F. E. COMPTON & COMPANY, 58 East Washington Street, Chicago, Illinois

LEARN HOW TO SWIM

Swimming Scientifically Taught by Prof. F. E. DALTON and L. C. DALTON, the noted experts, teaches you all the principal strokes, how to float, dive, etc. Get it to-day and double your summer enjoyment. *Newly revised and illustrated; by mail, \$1.62.* FUNK & WAGNALLS COMPANY, 354 4th Ave., N. Y.

SCHOOL and COLLEGE SERVICE

BEGINNING with the May 13th issue and continuing to the September 9th, 1922, number, we shall publish a *Classified Directory* containing the names and addresses of many noted Educational Institutions. In the FIRST ISSUE of EACH MONTH—MAY to SEPTEMBER, inclusive—there will appear illustrated or descriptive copy of the schools. Our readers are invited to correspond with the heads of these schools who are training the youth of our country. Forms go to press April 22nd for the MAY 6th issue.

The School and Camp Advisory Department continues to serve as it has for many years, readers, schools and camp directors without fee or obligation. All requests for educational information should be very explicit and must be written. We can give no advice by telephone.

The Literary Digest

Should She Thank Him?

HE is as much in doubt as she—and both are embarrassed. They have attended the theatre together. He has escorted her home. Should she thank him for the pleasant evening? May she invite him into the house if she wishes? Or should he thank her for the pleasure of her company? Is it correct for him to ask permission to call?

The woman who knows the correct thing to do and say on all occasions has charm and grace. The man whose fine repose and ease of manner characterize him as cultured and well bred is always welcomed wherever he goes, is always admired and respected.

Etiquette makes it easy for everyone to be cultured and charming, to avoid embarrassing blunders and humiliating errors. By knowing the correct form of speech and manner at all times one can mingle with the most highly cultivated, the most brilliant people, and yet feel entirely well poised and at ease. Etiquette is a comfortable shield that protects one from embarrassment in one's contact with men and women.

Why is Rice Thrown After the Bride?

—Very much for the same reason that an old slipper is thrown after a newly married couple. And do you know why a teacup is usually given to the engaged girl, why the woman who marries for the second time may not wear white, why black is the color of mourning?

In the book of Etiquette, the famous two-volume set, you not only find all the important rules of etiquette, but you actually discover the origin of each rule, each custom. As interesting as a story—yet the Book of Etiquette is one of the most authentic, authoritative and exhaustive works on the subject ever published.

FREE to You! The Famous Book of Etiquette

Not a cent in advance. Just the coupon—and the complete two-volume Book of Etiquette will be sent to you at once. Glance through the table of contents. See how much you know about correspondence, about formal dinners, about introductions, weddings, dances, speech, dress. Don't miss the illustrations. Read a chapter or two. Examine the books thoroughly at our expense for 5 days.

Within the 5-day free-examination period decide whether you want to return the books without obligation or keep them and send us only \$3.50 in complete payment. You to be the sole judge. You decide whether or not you want to be one more day without this splendid Book of Etiquette. We advise you to mail the coupon at once, before the free-examination offer expires. NELSON DOUBLEDAY, Inc., Dept. 394A, Oyster Bay, N. Y.

NELSON DOUBLEDAY, Inc.,

BECAUSE it is *sensible* men have made the VAN HEUSEN the *style* in collars.

They insist that it is not merely soft and supple but also smart and stylish.

It achieves smartness without starch and suppleness without slovenliness.

Just as men wear soft shirts instead of stiff, hard-boiled shirts—and low, soft, felt hats instead of high, hard, stiff hats—

so carefully dressed men wear the VAN HEUSEN in preference to the stiff collar, because it is smarter and more comfortable—and in preference to the ordinary soft collar, because it is better-looking. In appearance, no other collar can compare with the VAN HEUSEN, for no other

collar is made from the same seamless fabric.

Men who scorned soft collars wear it and praise it. And fastidious men who like a slight suggestion of the formal, or the severe in their attire, are fast friends of the VAN HEUSEN Collar.

Nine styles in heights, quarter sizes, 13½ to 18. Boys' sizes 11 to 13. Price fifty cents. Will outwear half a dozen ordinary collars.

THE TARIFF BILL AND THE NATION'S PURSE

AS EVERYONE'S POCKETBOOK is touched by the tariff, either in its effect on prices or on prosperity, the stormy course predicted for the tariff bill reported to the Senate last week is a matter of profound concern to the average citizen, no matter how slight may be his affiliation with or interest in political parties. Both its friends and foes agree on that. But there the agreement stops.

Thus Senator Porter J. McCumber, of North Dakota, chairman of the Senate Finance Committee which has been intermittently at work on the tariff bill since it passed the House last July, assures us that it is "a consumer's tariff" which "will bring prosperity to the whole country by providing markets for producers and work for the consumers"; Representative Joseph W. Fordney of Michigan, father of the House bill with which the Senate measure must ultimately be reconciled in conference, fondly characterizes his child as "the Constitution of a uniform and universal prosperity"; and many Republican and independent papers agree with the *Seattle Post-Intelligencer* (Ind. Rep.) that the Senate bill represents a long step "toward the stabilization of American business," and that the sooner the new tariff schedules are permanently fixed "the better off will be the country, its business and its industry."

But no less definite and emphatic are the assertions, from Republican and independent as well as Democratic quarters, that the proposed tariff measure will deal a crippling blow to American business and will hit the American consumer by increasing the cost of living. It is "a bill to raise living costs and hamper trade," declares the *New York Journal of Commerce*, one of the country's leading organs of business. "It is something of a shock to learn, if the analysis of the Associated Press is accurate, that the rates of the bill are, on the whole, higher than those of the Payne-Aldrich Law," remarks the staunchly Republican *New York Tribune*, which adds: "If President Harding stands for reelection it is scarcely fair to handicap him as was President Taft in 1912 by the Payne-

Aldrich Act." In another editorial it warns the Republican party that "the present is no time to go tariff mad," and suggests that "the enactment of a permanent tariff may well be postponed until normalcy abroad is attained." This bill, says the *St. Louis Globe-Democrat*, a strong Republican organ, "seems to

have applied the principle of protection to everything, without regard to present world conditions and without regard to our altered position in relation to the world's trade." If our tariff does not permit fair competition with other countries, asks this *St. Louis* journal, "how are we to maintain the world trade that is now so essential to our prosperity?" "The Senate must give ear to the changed conditions of world trade due to our change from a debtor to a creditor nation," warns the *Syracuse Post Standard* (Rep.), which adds: "It must give ear also to a demand that the rates on foodstuffs shall not be the highest ever levied." As the *Boston Transcript* (Ind. Rep.) sees it, the Senate bill is animated chiefly by this idea: "Give the Western producers all they want on wheat, hides and wool, and never mind whether the manufacturer gets compensatory protection on his products or not." To quote this *New England* paper further:

"Party guidance is thrown to the winds. This is undoubtedly due to the prevalent chaotic condition not only of conditions and of interests, but of views. There may be some consolation in the

fact that it will take a long time to straighten out this chaos of views and that the delay will give an opportunity to get rid of some of the injustices involved in the Senate bill. But in the meantime the manufacturers of the country are carrying all or most of the expenses involved by the war without the market which the war created, and are consequently pretty nearly paralyzed. In this situation they are to some extent prepared to regard strikes as a blessing and are content to let the tariff repose on the switch."

Already the Republican Administration has been in power more than thirteen months "and the tariff law still seems far in the future," remarks another Republican paper, the *Columbus*

Copyrighted by Underwood & Underwood.

"WE'LL HAVE AMERICAN VALUATION, OR WE'LL BE HERE TILL THE SNOW FLIES,"

Announces Representative Joseph W. Fordney, father of the House tariff bill, declaring war on Senator McCumber's foreign-valuation amendment. This issue is regarded as the storm center of the tariff controversy.

Ohio State Journal, which goes on to explain why it does not altogether deplore this delay:

"Economic conditions in the world have changed so much since the war that the tariff problem is vastly altered. We are the creditor nation now, and the only way in which our debtors can pay is in their products. Our agricultural and manufacturing interests need as never before a wide, free foreign market. No one, apparently, except the hard-shelled old high protectionist, who is wrong about it, has a clear idea of just what ought to be done. It is important to be fairly sure we are right before we go ahead. This is one of the cases where it is better to do nothing than to do the wrong thing."

Even the farm journals do not seem enthusiastic over the Senate bill, despite the fact that many of its schedules are said to have been dictated by the "farm bloc." *The Business Farmer*, of Mount Clemens, characterizes it as "a very acceptable gift horse for the farmers, provided they do not look into its mouth"; and this Michigan paper goes on to say—

"A casual examination and comparison with former tariff measures would lead agriculture to believe that its long-cherished dreams had come true and that it is at last to sit in the front pew of the world's protected markets. But a closer inspection dispels some of these fond illusions. Nearly all the agricultural items are in terms of specific duties. Reduced to an ad valorem basis at current valuations and compared with the ad valorem rates on commodities of which the farmer is a large purchaser, we find that the agricultural schedules are actually among the lowest on the list, amounting in few if any cases to more than thirty per cent. Of what benefit to the farmer is a twenty-five per cent. duty on a world grain like wheat, of which we produce a large surplus, when he must turn right around and pay a forty to eighty per cent. duty on the majority of things he buys? The value to the farmer of a tariff on corn and oats is negligible. The duties on dairy products are badly needed and none too high. The duty on sugar is an affront to every American consumer. Michigan is an important sugar-beet-growing State, but only ten thousand of her two hundred thousand farmers grow beets. But three and a half million Michigan people are asked to add several million dollars to their sugar bill for the direct benefit of a few hundred sugar-mill stockholders and the very small indirect benefit of the handful of beet-growers."

In similar vein *The Southland Farmer*, of Houston, Texas, declares the tariff bill "a betrayal of agriculture," and explains that this betrayal lies in "the promise of protection for farm products, which is impossible to bring about because we are an export nation for the main farm crops." This promise, it avers, merely gave the tariff framers an excuse for putting high duties on manufactured products. We read further:

"Written into law this tariff will bring the farming regions of the West and South under still greater bondage to the indus-

trial sections of the East and North. The emergency tariff showed the fallacy of any tariff helping prices for farm products to any extent worth considering. This tariff will add nothing worth while to returns for the farmer, but will add hundreds of millions to the cost of what he must buy.

"The bill is one written by special interests for such interests, with little regard to the plain people of the country, and it takes no prophet to foretell what its enactment will cost the Republican party responsible for it."

The big battle for the protection of the farmer's interests "is still to be fought," declares the *New York American Agriculturist*, in which we read further:

"In the long siege ahead on the McCumber Tariff Bill our legislators need bear one thought in mind if they intend to make good with their farmer constituents. The schedules on such products as raw wool, vegetable oils, poultry products, potash, hides and cotton which have been urged by organized agriculture are vital in the minds of farmers. No equivocation, no compromise and no sidetracking will satisfy the demand for real protection against the importation of substitute or inferior products such as those now undermining the dairy business. They must bear in mind too that products basic to crop production, such as the raw fertilizer salts, must be duty-free so that production is encouraged as cheaply as possible."

Turning to the independent dailies that don't like the new tariff bill we find the *St. Paul Dispatch* ridiculing the idea that it can "work the miracle of protecting industry and agriculture alike—a patent impossibility unless the

fundamental laws of economics are repealed at the same time." But assuming that both the farmer and the manufacturer are to be protected, adds this Minnesota journal, "what of the great unregarded masses of consumers?" This bill, says the *New York Herald*, an independent paper with marked Republican leanings, "completely shuts America out of foreign markets, except in our raw materials, notably cotton and copper." It "will make trouble for the consumer," declares the *New York Evening Post*. If we pass the McCumber tariff, or even the Fordney version of it, says the *New York Globe*, "we practically make Europe a present of the eleven billion dollars she owes us." For—

"She can't pay in gold, and we wouldn't let her if she could, for it would be ruinous to us to receive it. She can only pay in goods, and against those goods we now propose to erect impossible tariff barriers."

This bill, agrees the *Kansas City Star*, "is a serious economic mistake," the immediate effect of which will be to increase the cost of living. The farmer, it adds, will find that the protection offered his products "is an illusion" while "the protection on what he has to buy will be real." The measure, says the *Springfield Republican*, "is open to severe attack by those who believe

TROUBLES OF A DOOR HANGER.

—Bronstrup in the San Francisco Chronicle.

that the price of commodities should not be raised." The Senate "should modify it with a liberal hand in obedience to the logic of the world situation and of the just claims of the American consuming public," says the *Chicago Daily News*. The bill, avers the *Indianapolis News*, "represents an outrageous abuse of the taxing power."

Turning to the Democratic press, we find condemnation virtually unanimous. The measure "spells calamity," declares the *New York World*. "The wild horses of the agricultural bloc have run away with the Republican party, and the Senate tariff bill is the result," says the *New York Times*. This bill "would deny the only hope to returning prosperity," according to the *Raleigh News and Observer*. "The elections for forty years indicate that this new scheme for increasing the cost of living is a favorable augury for the Democrats in this year's Congressional elections and the Presidential election two years later," says the *Philadelphia Record*. The *Atlanta Constitution* reminds the Republicans that "in the end there is, of course, only one source from which every dollar of 'protection' revenue must come, and that is from the masses of the people—not from the interests enjoying the 'protection.'" "The consumer will pay the bill," predicts the *Louisville Courier-Journal*. It is "protectionism run mad," declares the *Richmond Times-Dispatch*, which warns us that its effect will be to "impose an unbearable burden upon consumers throughout the whole country." "All who envisage the United States as a world commercial power frankly regard the measure as grotesque and impossible," according to the *Baltimore Sun*. It is "a highly reactionary bill," says the *Cleveland Plain Dealer*.

When we turn to the friends of the Senate Tariff Bill we find its official sponsor, Senator McCumber, characterizing it as "the first national tariff bill in our history." It is more, says the North Dakota Senator, as quoted in the Washington dispatches—

"It is a consumer's tariff. Its object is to restore the buying power of the country. This bill, when accompanied by a reasonable reduction in transportation and production costs, will bring prosperity to the whole country by providing markets for producers and work for the consumers."

"We have written this tariff on the basis both of protection and revenue. No rate is so high that it will shut off reasonable foreign competition nor so low that the American manufacturer with economy of production can not hold his full share of the American market."

In this statement the Senator expresses views which are widely repeated and enlarged on by the Republican press. The *Minneapolis Journal*, for one, likes the bill and considers it "a considerable improvement over the House Bill." It seems to the *Des Moines Capital* that the Senate Committee has paid

careful attention to both consumer and producer. The *Portland Oregonian* thinks the new bill is "justified as an effort to place American industry on equality in the American market with other countries producing at lower costs." The McCumber bill, says the *Omaha Bee* (Rep.), "will afford to American farms and mills, the producers and workers of the country, security against the competition of foreigners, already invading and underselling home markets." The Senate Committee in preparing this bill, remarks The *Milwaukee Sentinel*, "appears to have kept in mind the essential fact that, while American

industry must be protected, especially those industries which have grown up since the war and are threatened by foreign competition, conditions have changed, and some things which were wise and beneficent policy a decade ago may prove the reverse to-day." The new tariff delights the *Kansas City Journal* (Rep.) because it "corrects the vicious features of the Underwood Act which was steadily heading the country toward an era of industrial depression when the war halted the downward trend." Similarly, in the East, the *Manchester (N. H.) Union* (Rep.) welcomes this bill because "industry in this country has long been suffering from ruinous foreign competition due to the lack of a well-digested tariff measure." This tariff, says the *Pittsburgh Gazette-Times* (Rep.), "will be as a dam against the menacing flood" of imports, and will keep prices at "levels that will assure employment of Americans at satisfactory wages."

While farm papers already quoted are critical of the bill introduced by Senator McCumber, it seems to the *Philadelphia Public Ledger*, an independent paper which supported the last Republican ticket, that "the farmer has been given about everything he could think of in the way of tariff help"—

"No more will frozen muttons from New Zealand, beef from Melbourne or the Argentine, eggs from Hongkong, butter from Copenhagen or soy-bean oil from Japan play hob with his markets and vex his soul. Argentine corn and hides will trouble him no more. The farmer is walled in back of a tariff that should satisfy most of the ardent protectionists and place the farm on the long list of favored industries. Mid-West corn-grower and Eastern manufacturer have joined hands across the Alleghenies."

"One of the strongest points in the bill as reported is the maximum-minimum provision, which will make of the Tariff Commission the real rate fixer within the definite limitations provided by the measure. This is the greatest single step toward making the tariff a workable and adjustable machine, rather than a plaything for politicians, that has been taken in years."

In the *San Francisco Chronicle's* opinion:

"Such differences in rates as may exist between the two Houses will easily be settled by the usual give-and-take method."

"But the prospect is for a rather strenuous contest between the advocates of American and of foreign valuation."

CITIES HELPLESS IN THE GRIP OF CRIME

AN EVEN HUNDRED MURDERS in the first three and a half months of 1922, and 126 hold-ups are part of New York City's unenviable crime record, according to the *New York World*, a record that "in London or Paris would compel a Parliamentary inquiry." "If the robberies committed during the winter were catalogued they would cover a page of this newspaper," declares the *New York Tribune*. But the *Chicago Journal* believes that "if any medals are to be awarded for the greatest number of homicides per capita in the large cities, that doubtful distinction would probably go to

Boston *Herald*, has found an effective way to deal with the crime wave. As the Boston daily explains:

"All the law enforcement agencies of the city dropt their bickerings and got busy at the same time. The board of judges doubled the number of criminal courts. For five weeks the judges, assistant district attorneys and city and county detectives kept incessantly at work. Precedents were broken. Delays were not tolerated. Thus Philadelphia handled the longest list of criminal cases in any single term of the history of its criminal courts. Of these fifty-nine were homicide cases involving sixty-four defendants.

"The district attorney notified the public at the end of the clean-up that the office had caught up with its job, that the dockets were cleared, and that within a week of arrest criminals now could be placed on trial. The criminal classes understood. Justice swift and sure awaited their apprehension in the future. They heeded the warning. The results of the campaign are said to have surprised its most ardent promoters.

"Criminals fear most of all quick trials and heavy sentences. Delays take the edge off the public reprobation of a specific crime, dull the memories of witnesses, afford opportunity to devise ways to elude penalties. Criminals are far scarcer in Philadelphia to-day than three months ago."

Before we return to New York City, which appears to be entitled to the greater part of our attention, let us note the complaint of the *Milwaukee Sentinel* regarding Chicago. "It is easy for Chicago criminals to make raids into neighboring cities and get back to the comparative safety of Chicago by the time pursuit is under way," asserts this paper. In this the modern bandit is helped by the modern automobile—probably stolen for the occasion, we are told. Other handicaps imposed upon the officers of the law, according to the *Chicago Daily News*, are the "lax attitude of the judges, unscrupulous lawyers, crooked witnesses, and stupid or bribed jurors." Still another handicap, avers a Chicago judge, is "incompetence in the prosecution of criminal cases." Municipal politics is yet another, it is said. "With courts and peace officers allied in the protection of criminals, government in Chicago becomes a rule of crime, and no man's life or property is safe," asserts the *Rochester Post-Express*. Nevertheless, as we look over the statistics of the Chicago Crime Commission as presented in the *Indianapolis News*, we find that—

"Major crimes have decreased in Chicago during the last three years. Murders decreased from 330 in 1919 to 190 in 1921; burglaries from 6,108 to 4,774, and robberies from 2,912 to 2,558. The criminal court record shows that out of 6,723 defendants, 75.10 per cent. paid no penalty. In 225 murder cases, only 24.44 per cent. were punished. In 510 automobile cases, 31.56 per cent. convictions was the record. Over 69 per cent. of the persons charged with burglary were acquitted or dismissed, and over 73 per cent. of the alleged gunmen went unpunished."

"Pardons, paroles, and freedom on probation further helped to demoralize the police force of Chicago," notes the *New York Herald*. For—

"In Chicago, as elsewhere, police efficiency is of little avail in suppressing crime if criminal prosecution procedure and criminal punishment are weakened by political influence, the toleration of straw bondsmen, weakness of the jury system, paroles, freedom on probation and pardons opening the doors of prisons for the exit of convicted criminals."

So numerous are bank and pay-roll robberies in New York City that several banks are reported as installing shooting gal-

A NEW YORKER STARTS TO BUSINESS.

—Kirby in the *New York World*.

Chicago." Robberies and hold-ups have become so prevalent in Chicago, notes the *Pittsburgh Dispatch*, "that any man who has to walk three blocks from a car line to his home hasn't an even chance of reaching his fireside in safety." Certainly conditions are such that Chicago theaters complain because of the serious consequences to their business. Apparently the "crime wave" is still surging.

But New York and Chicago are not the only cities afflicted with what the *New York Evening Post* calls "a scrofula of crime," and the *New York Herald* an "explosion of crime." The *Indianapolis Star* flatly declares that "there is not a city of importance in the country that is not having serious trouble with criminals." "There are bank robberies, hold-ups and burglaries from one side of the country to the other," adds *The Star*, "and the police in all cities seem to be ineffective to a surprising degree." In Indianapolis, observes *The News* of that city, "the number of hold-ups and robberies for the first three months of 1922 is almost twice that for the corresponding period in 1921." In Detroit, however, the crime list was reduced 58 per cent. in 1921, mainly through cooperation of the police department, the prosecuting attorney, and the courts. Philadelphia, too, notes the

leries in the basements of their buildings. So numerous, too, are burglaries and hold-ups that in the first three months of this year more than 25,000 persons were given permits to carry revolvers. "This," observes the *New York World*, "is more than double the number of pistols or revolvers carried by the active members of the entire police department." And the number is still growing. Recently the Police Commissioner assured the people of the city that they would "be as safe on any street at midnight as at noon," yet many New York newspapers think the Commissioner was indulging in irony at the time, for, as *The World* puts it, "no one is safe at any time." Continues this paper:

"Never before has there existed in this city such a situation as exists to-day. Never before has the average person, in his place of business, in his home or on the streets, had cause to feel less secure. Never before has a continuous wave of crime given rise to so general a wave of fear.

"New York is becoming a community of gun-toters because everybody knows that the police administration has completely broken down, and because the record of crimes of violence is fast growing longer, and murder and robberies are rapidly increasing.

"Instead of being a safe city New York is now the most unsafe of all the great capitals, so far as the protection of life and property is concerned. Conditions that the City Administration regards as little less than ideal would not have been tolerated even in Tweed's time.

"There is less crime in New York, according to Police Commissioner Enright's letter to Mayor Hylan, than there was in 1917.

"So Mr. Enright appears before the Board of Estimate and obtains 1,192 additional patrolmen.

"So Mr. Enright reestablishes the nine-platoon system, which is equivalent to adding another 700 men to the force.

"So Mr. Enright issues a pamphlet giving 126 specific directions for the prevention of crime.

"*The World* is making no blanket accusations against the police or the Commissioner or the Mayor. Nevertheless, crime in New York has become a public scandal and a public reproach to the richest city in the world. It is a confession of governmental impotence which has no parallel among the great municipalities of the world. All the guaranties that civilized government is supposed to provide are suspended. The security of life and the security of property are equally a gamble. If the citizen is lucky he may not be robbed, if he remains lucky he may not be murdered, but it is all a matter of chance."

"The rank and file of the New York police force are a splendid body," asserts the *New York Evening Post*; "as good as the 'bobbies' who make London a city in which one day of New York crime would furnish excitement for a year. But the basic evil is that the Police Commissioner has let the police morale deteriorate steadily." Recently more than a thousand policemen were added to the police force, but, observes the *New York Evening World*, "even if New York had a hundred thousand police, Commissioner Enright is not the man who should command them." As we read in *The Tribune*:

"What New York needs is not a new police force, nor an increased police force, but a police force given proper leadership. The policemen on duty outnumber the criminals by more than a hundred to one. They have the law on their side. They have access to the records of every professional criminal in the country. They can at any time they choose enlist the aid of citizens in the pursuit of criminals. They can not, however, do what they must do if the crime wave is to be checked until they are specifically assigned to that duty and handled in the same way that a general would handle a force of soldiers in a battle."

When we seek the main causes of crime, not only in New York, but throughout the country, we are told by police officials of New York that they are, in the order named: Lack of employ-

ment, the aftermath of the World War, and the ease with which bandits can steal automobiles for use in hold-ups. The editor of *The Detective* (Chicago) assures us that there is a new crop of criminals, 3,000,000 strong, made up of youths ranging in age from 18 to 25. It is his opinion that not only men who became accustomed to firearms and to killing in the World War, and who entered the Army already familiar with firearms and crime, are among these three millions, but also the "silk-shirt gang" which worked in the shipyards and munitions plants, receiving fabulous salaries, and who now "are not content to do an honest day's

work for an honest day's pay." The National Surety Company, which reports a 51 per cent. increase in the number of claims filed for burglary insurance over last year's figures, also adds as causes the increased number of drug addicts, and the paroling and pardoning of desperate criminals, together with the practise of suspending sentences.

The superintendent of New York State's reformatories says that of 22,000 criminals whom he has examined, but four were college graduates, while in a group of 1,000 prisoners only 7 per cent. had high-school education, 25 per cent. had finished grammar school, and 64 per cent. had attended only primary grades. "Here is evidence," declares the *Brooklyn Eagle*, "that even a moderate amount of schooling is a positive and active deterrent to crime."

"The only way to lessen crime permanently is to strengthen the weak spot in our social fabric," believes the *Washington Herald*; "we must begin with the coming generation. In the schoolrooms or lack of schoolrooms of to-day lies the answer to the crime or lack of crime of the next decade or two." *The Herald* goes on:

"Most criminals come from the ranks of the poor and ignorant. Their childhood was circumscribed by ugliness, with perhaps the shadow of vice hanging over it. Who can say that such a child is altogether to blame when he becomes identified with the 'gang'? Great numbers of children live in circumstances that encourage irregularity of life. We can only save them through education, through super-schools that leave nothing undone to help the child, who is the victim of unfortunate environment."

JOBS IN JEOPARDY

THE BIGGEST SENSATION in the Government service since the days of President Garfield, say the Washington correspondents, has developed out of the dismissal of a group of Treasury Department employees by Executive order. Not that any one accuses President Harding of trying to be sensational. He acted quietly one evening without any preliminary trumpet-blowing, solely, as he has repeatedly explained, "for the good of the service." But we see here again "how great a matter a little fire kindleth." Three days later the dismissed employees are at the White House demanding to be told why they were thrown into the ranks of the unemployed without benefit of civil service rules. Other employees in the classified service are spoken of as quaking with fear of sudden loss of their jobs. Friends of civil service reform are loud in their wail. The halls of Congress ring with Democratic protests against Republican infamy, inhumanity and hypocrisy, and with equally vehement defense of the Administration's motives and purposes. Editors and press correspondents join in the chorus. Through it all runs a note of uncertainty, friends and critics alike apparently feeling none too well-informed about the precise causes impelling the Administration to separate these workers in the Bureau of Engraving and Printing from jobs and salaries. In Washington itself, observes a Boston *Herald* (Rep.) correspondent, the most varying interpretations have been placed upon the dismissals. For instance,

"One view is that it was done because of grave irregularities in the Bureau, which soon will come to light. Another is that it was necessary to break up political activity there. Another is that it was forced by considerations of efficiency. Another is that it was just plain economy. Another is that it was the first gun in a general bombardment of the service all through the departments, the purpose being to put into effect those precepts of governmental economy which have been preached; and to carry forward the whole program of placing the departments on a sane basis, for the public good. Another assertion is that it was plain politics to give the jobs to deserving Republicans."

"Plain politics," is naturally a favorite Democratic interpretation. Democratic Senators urged the Senate to ask the President to explain, and a resolution was introduced to that effect. Mr. Caraway of Arkansas cried out bitterly against the injustice done the employees who were "dismissed from service and no explanation given except that it is 'for the public good'; which is equivalent to saying that there is something against the character of the men that makes the severance from the service necessary. If there is, the President ought to specify it; if there is not, he ought not to disgrace these men and deny them the right to engage in honest occupation by such an infamous order." If other employees are to feel that their jobs are thus in jeopardy, it means, in the opinion of the Arkansas Senator, a grave hurt to the public morale. The Democrats are not complaining because these men lost their places, explains Senator Stanley (Dem., Ky.), but because—

"Every man and every woman who goes out under this shadow is stamped as corrupt, incompetent or indecent. Wipe out the

stain. Charge us with being Democrats and we will wear your charge like a halo, a badge of distinction to be coveted and treasured, and you will hear no complaint. But fire us like men! Let us out like men!"

Even some papers friendly to the Administration, like the *Baltimore News* (Ind.), view the dismissals as "a rather unpleasant mess." "Ugly partizanship," is the phrase used by the *New York Globe* (Ind.), which finds reason to believe "that many Republicans in Washington intend to restore the spoils system." Such a veteran fighter for the cause of civil service reform as the *Springfield Republican* (Ind.) sees grave cause for alarm:

"No barrier remains against Democratic spoilsmen when their turn in power comes if the merit system is beaten down by the Republicans for the sake of nothing more definite than 'efficiency' or 'the good of the service.' The vicious circle of partizan retaliation has been the life of the spoils system in America. To break it permanently has been the effort of the civil service reform movement for half a century, and the only practical method of nailing down the gains made under successive administrations has been to 'cover' as many office-holders as was practicable into the classified service."

"This system has its defects, but the United States Government can not be run like the United States Steel Corporation in relation to politics, and the system's overthrow would leave the vast administrative business of the Government with no adequate protection whatever against the raids of party spoilsmen. It is mere mockery to talk of efficiency if the spoils principle is to regain a stranglehold on the civil service."

The Democratic *New York World*, after noting that Congress has always been unfriendly to the Civil Service

Law, pays its respects to the Republican President as follows:

"The Republican Congressmen have been complaining for months that there was not enough swill in the trough and something would have to be done, so the President has done it. A way has been found to throw down the bars that the law erected, and Mr. Harding calls it the reestablishment of efficiency, thus adding hypocrisy and deceit to the barefaced shame of a degrading spoilsmanship."

But until we have more evidence to the contrary, it seems to the *Minneapolis Tribune*, as well as other Republican papers, that it is only "fair to the President to credit him with turning out not 'the rascals' but the incompetents." There is "no spoilsmongering," insists the *New York Tribune* (Rep.). There have been, we are told, "charges from time to time of laxity and irregularity in the work of the Bureau of Engraving and Printing," a bureau which, by the way, "has often fallen into a rut." It is the President's duty, maintains *The Tribune*, to make removals whenever he thinks "that the service in any bureau or department is below the mark and shows no sign of improvement." Furthermore—

"No President has given more energy to the betterment of administration than Mr. Harding has. Under his and General Dawes's proddings the bureaucracy in Washington is steadily climbing the grade toward modern organization and efficiency. On this matter Mr. Harding has non-partizan support."

"What ground is there for sudden distrust of the President's motives? None, apparently, except that a Congressional election is approaching."

"IT'S REAL!"

(A Democratic interpretation.)

THE CHICAGO LAWYER.

Alexander Michaelovich Krasnoschokov, who helped to found the Far Eastern Republic, and who was its first President.

From the New York "Evening Post."

WHERE JAPANESE AND SIBERIAN TROOPS CLASH.

The heavy black line denotes the boundary of the Far Eastern Republic of Siberia, now two years old. A clash between Japanese and Republican troops occurred at Spasskoe early in April, in which 80 Siberians, according to Tokyo dispatches, were killed. Japanese losses were not given.

Copyrighted by Keystone View Co.

HE IS PRESIDENT NOW.

Nikolai Matveef, who was Minister of War of the Republic under Krasnoschokov, and succeeded him as President.

Without presuming to guess all that is in the President's mind, the *Detroit Free Press* (Ind.) concludes that "he certainly has begun in a manner that is likely to drive shivers up and down the spines of a lot of men and women who have been presuming on civil service regulations as a protection against any effort to make them conform to ordinary office discipline or to force them into efficiency." What there is about the civil service idea that is so sacred is more than the weekly *National Republican* (Washington, D. C.) can understand. In fact, it argues that the so-called "merit system" has done more harm than good:

"The system of life tenure in office, of a permanent job-holding class, is out of harmony with the spirit of American institutions. The American Government does not exist solely for the benefit of those who have gained places on the public pay-rolls. The people generally are weary of the exactions of bureaucracy, which busies itself chiefly with the multiplication of red tape and the lengthening of the public pay-roll.

"The scheme of selecting government employees by scholastic examinations is so asinine that no private business has ever thought of imitating it. In the stupidity of that method of picking employees the Government stands alone—forced into that position not by public sentiment but by the machinations of theorists and of people who wish to make easy picking out of the national treasury for a professional job-holding element.

"It is far more important that a postmaster should have an honest desire to reflect credit upon the Government by helping make a good record for the party in power, than that he should be able to bound Patagonia or explain Einstein's theory of relativity.

"The popular demand for government by examination is entirely imaginary."

In the Senate the Democratic attacks on the President brought Republican condemnations of the merit system which would have delighted the heart of Andrew Jackson himself. Senator New (Rep., Ind.) hopes there will be many more removals, and frankly says, as reported in *The Congressional Record*, that he considers the removal of a Democrat and the placing of a good loyal Republican in his stead a sufficient reason for changing. Senator Moses had his attention called to the declaration of the Republican platform, "that the civil service law shall be thoroughly and honestly enforced, and extended wherever practicable." His interpretation of the words, "wherever practicable," is "that the application of the civil service law is practicable when we put Democrats out and put Republicans in."

A JAPANESE-SIBERIAN WAR-CLOUD

FOR THE HUNDREDTH TIME OR SO, notes one observant onlooker, "it is announced that Japanese troops are going to be withdrawn from Siberia." Twelve hours after this came news of a clash between troops of the Far Eastern Republic and Japanese troops north of Vladivostok. This skirmish indicates to the *New York Globe* that the Republican troops "intend to resist Japanese designs upon Siberia." The *Seattle Post-Intelligencer*, however, believes that, "as the cables from Siberia must go through Japanese censorship, there is little reason to doubt that the Japanese Government knew all about the bloodshed in Siberia before it announced that it intended to recall its soldiery. Japanese soldiers have been killed by Chita Government troops; Japanese troops must be avenged; the Japanese troops must stay in Siberia." The fact that eighty Siberians were killed on their home soil in this battle leads the *Houston Chronicle* to ask: "Why are Japanese soldiers dominating large areas of Siberia?" "What is Japan's intention in regard to Siberia?" echoes Thomas Steep in a *New York Tribune* article. "What is the status of the Far Eastern Republic, of which Chita is the capital?"

After the Russian revolution had simmered down, and most of the Allied troops had been withdrawn, this young State sprang up, we are told by Orrin Keith, in *Asia* (New York). The constitution was approved. The bill of rights of this document, it is said, provides for free speech, freedom of the press, separation of Church and State, the right of assembly, equality before the law, and the abolition of all class distinctions and titles. Foreigners, moreover, are granted practically the same rights as citizens. But the Japanese authorities appear to be unconvinced of the ability of the Chita Government to maintain peace and order in the Far Eastern Republic. To this the Chita Government replies that the preservation of peace has been made exceptionally difficult by insurrections which the Japanese have promoted. "It is difficult to maintain your rights when Japanese troops control your ports and railroads," agrees the *New York American*.

Many editors, however, take the stand that Japan should not evacuate Siberia until there is a stable government there. "Siberia is really in a state of anarchy," asserts the *Louisville Post*; "moreover, it must be recalled, Russia owes Japan billions of

dollars, honestly loaned and dishonestly repudiated by the Moscow Soviet. So there is something to be said for permitting Japan to hold Siberian territory as a hostage until Russia assumes her just obligations." "The Far Eastern Republic is independent in name only," declares the *Seattle Times*, which considers the Chita Government "merely a pale reflection of Moscow Bolshevism." "In fact," continues *The Times*, "there has been a shrewd suspicion that the Republic was set up in the hope that it might obtain early recognition from foreign powers which bitterly resent Bolshevism."

"The Chita Government in Siberia has no standing in Washington," points out the *Indianapolis Star*, which believes the "immediate withdrawal of the Japanese would constitute another Bolshevik victory." "Japan knows better than any one else how empty are the pretenses of the Chita Government to authority in Eastern Siberia," avers the *Utica Press*; "this Government is nothing more than a creature of the Soviet régime." We are further informed by the *Cleveland Plain Dealer* that—

"The Chita Government, which is the most important of the Far Eastern Russian governments and quasi-governments, is bolshevistic. Theoretically it is independent. Actually it is an adjunct of Moscow. It is one of the Soviet states that Lenine has seen fit to create in outlying parts of the Russian realm. It is really no more independent than the Bolshevized Ukraine, which is gravely masquerading as a separate 'Soviet republic.'"

"It is plain, therefore, that were Japan to withdraw from Siberia at this time the Bolshevik power would extend to the Pacific Ocean. Certainly Japan desires no such neighbors. Nor is the United States keenly desirous of thus bringing established Bolshevism into a part of the world in which the United States is directly interested. With the Soviet power confined to Europe and hemmed about with democracies, the Russian menace seems remote. But the Pacific Ocean is a great lake which means much to America, and with Lenine and Trotzky standing on the eastern shore Bolshevism would at once become visible, tangible and minatory. . . . When there is a real Russia, a reunited Russia, a Russia that can be recognized by the world's democracies, it will be high time to insist on Japan removing her troops and giving the Russians their rightful window on the Pacific. For the present it is more comfortable to have Japan in control of eastern Siberia."

The *Springfield Republican*, on the contrary, tells us that "the Far Eastern Republic is admitted to be democratic and representative," and that it "is about the only source of law and order left in eastern Siberia." "For two years the Far Eastern Republic has been a *de facto* government," says the *New York Globe*. Bandits may have infested the provinces which make up the republic, but *The Globe* maintains that they "have been used by the Japanese in two ways—first as allies, and second as an excuse for sending troops into territory upon which the Japanese have no honest claim." "Here, as elsewhere," remarks the *Boston Christian Science Monitor*, "Japan has succeeded in throwing dust in the eyes of the world."

It was early in 1918 that the Japanese, with American, English, French and Italian troops entered Siberia. After the Armistice, in 1918, all Allied contingents except the Japanese were withdrawn, but the Japanese, we are told, thought it their duty to remain and erect a barrier against the eastward spread of Bolshevism. The *New York Times* likens Japan's promises to withdraw her troops to those which Great Britain gave forty years ago in regard to withdrawing troops from Egypt.

Foreign occupation, however, points out the *New York Evening Post*, "has a way of postponing the establishment of public order and the rise of stable governments." Popular sentiment in Japan is said to be against adventures in Siberia. Moreover, "Japan's troops are kept in Siberia against the wishes of the very people they are supposed to help," asserts the *Honolulu Star-Bulletin*, which goes on to say that "it is the opinion of many Americans who have been in Siberia that the country will never be quiet so long as Japanese soldiers are maintained there." "Japan's profest alarm is insincere," charges the *Columbus*

(Ohio) *Citizen*; "the Chita Government could as well menace the moon as menace Japan."

The population of the Far Eastern Republic is about two millions, and the Chita Government claims to be entirely independent of the Moscow Soviet. Running through the center of the Republic are some two thousand miles of the Trans-Siberian railway. As Thomas Steep tells us in the *New York Tribune*:

"After the defeat of the Kolchak army in the winter of 1919-1920 the rule of the Omsk Government was overthrown. The Russians of the Far East, being isolated from European Russia, determined to set up a republic, which was subsequently recognized by the Soviet Government. In April, 1920, a Declaration of Independence and the adoption of a Constitution were effected. A National Assembly, supposed to be a coalition of communists, monarchists and conservatives, was selected. Chita, 1,500 miles inland, near Lake Baikal, was selected as the capital."

Bolshevism, declares the Republic, is no part of its creed, nor is communism. For months it has declined to discuss a settlement with the Japanese. According to the Foreign Minister of the Chita Government, who is quoted in the *New York Call*:

"Japan wants special privileges for her subjects who are residents of the Far Eastern Republic and who are engaged in commerce and industry. Japan wants us to recognize all the deals that have been concluded between the Japanese and Semenov. Japan also wants special rights for navigating the Amur and the Sungary rivers. Japan even demands that the Far Eastern Republic officially recognize the right of the Japanese Government to maintain troops on the territory of the Far Eastern Republic. Japan insists that we grant rights to Japanese fishermen in all Russian territorial waters equal to those of Russian fishermen. Furthermore, Japan wants to control our internal affairs. By dictating to us the form of government we should adopt she is impairing our sovereignty and is violating the will of the people of the Far Eastern Republic as expressed in the Constitution adopted by the Constituent Assembly."

"We would readily sign a treaty without the objectionable clauses if Japan would withdraw her troops. Until now the Japanese Government did not agree to make concrete terms regarding evacuation, and it refused to appoint a military commission to regulate this evacuation. We have made this the main issue, without the settlement of which no further discussion is possible."

As the case for the Chita Government is put by the *New York Globe*:

"The Far Eastern Republic is not Communistic, altho its Government is on excellent terms with the Moscow Government; the Republic is democratic. Instead of restricting the suffrage to a selected group of manual workers, it lets every one vote, and 80 per cent. of the citizenry actually did take part in the election of delegates to the Constituent Assembly at Chita, which set up the new Government."

"The land has been nationalized in order to prevent sales to the Japanese, but it is rented on long leases to peasants, both rich and poor. Private property other than land is guaranteed. Personal rights and the rights of national minorities are protected. A system of local Government is provided for. In short, the Far Eastern Republic is in many respects the sort of State American settlers might have erected had they been obliged to combat invaders, bandits, and the harshness of nature in an underpopulated, undeveloped country."

At the Washington Conference, the *Providence Journal* reminds us, Japan promised to withdraw her troops from Siberia, "and Japan can not evade this promise," thinks *The Journal*. Continues this paper:

"In accepting Japan's word, Secretary Hughes and his associates gave her the benefit of every doubt. Their faith in Japan is beyond suspicion. Will Japan reciprocate in kind within a reasonable time? Or will she persist in her present policy of Siberian aggrandizement, which even her Government is not able to disguise cunningly enough to deceive anybody? The next move is hers; and on it depends to a large degree whether the question of Siberia has been really settled or whether it remains in a state of flux to disturb the advancement of peace and friendly relations between Tokyo and the Russia that is to be."

IS THE MELTING-POT SPILLING THE BEANS?

AMERICAN EDITORS ARE NOT UNANIMOUS in approving the proposed "five-year immigration holiday," but every editorial reaching this office is strongly in favor of a thorough examination of emigrants at the European port from which they sail. This, it is argued, will obviate the acute disappointment which the would-be immigrant suffers when he arrives in America, only to find that under the quota law no more of his nationality can be admitted. "If the United States is to refuse admission to an immigrant for no fault of his own, common decency requires that he should not be permitted to start on his journey," declares the *New York World*. In the majority of cases, it is said, the immigrant may have sold all his possessions in the old country, and cut loose from all ties. He overcomes great difficulties in reaching the coast of his native country and obtaining passage. "Off Sandy Hook," notes *The World*, "he learns that he must lie in wait to take part in a race on the first day of a new month. Arriving finally at Ellis Island, he learns that he must be sent back."

Mrs. Alexander P. Moore, of Pittsburgh, better known as Lillian Russell, recently returned from a special mission to Europe to investigate the immigration problem. In her report to the Secretary of Labor, Mrs. Moore recommends that American consuls be given authority to put applicants through rigid mental tests, and that American physicians be employed abroad to make physical tests. Another recommendation is that immigration to this country be suspended for a period of five years. "Our melting-pot has been overcrowded," maintains Mrs. Moore; "it has boiled too quickly, and is running over. It were better to put out the fires under it and allow its contents to solidify before adding any more raw material. If we don't put up the bars and make them higher and stronger, there no longer will be an America for Americans." She also urges an amendment of the three-per-cent. immigration law so that the Secretary of Labor and officials of the countries from which immigrants come can fix the number of passports to be issued, and thus end the spectacle of immigrants being held up outside the three-mile limit.

"That immigrants must be selected on the other side has long been our contention," says the *San Francisco Chronicle*; "but immigrants now lawfully here should be allowed to bring in members of their immediate dependent families." The abuse of the present law is charged to the steamship companies by this paper.

Mrs. Moore's recommendation that emigrants be examined abroad "is a matter of plain common-sense and of common justice to would-be immigrants," in the opinion of the *Brooklyn Eagle*. "But if the melting-pot has boiled too quickly, and is running over, the answer is not to cease feeding the pot, as Mrs.

Moore suggests, but to watch it with greater care," according to the *Omaha Bee*. "We need quality rather than quantity now," observes the *Pittsburgh Gazette-Times*. "We are not getting much promising material at the moment, and we have about as much dross in the melting-pot as that much enduring crucible can stand," declares the *Lowell Courier-Citizen*. As the *Grand Rapids Press* points out:

"We have recently experienced a change of attitude from the purely 'human' or 'promised land' policy on immigration in favor of a scientific 'safety-first' plan for America. We found ourselves unable to digest the tremendous rush of aliens following the war. As a first-aid measure we passed a very foolish and costly restriction act which offends nobody because it allows all racial groups to enter on the same three-per-cent. ratio to their present representation in our population, but which shuts out thousands of the best immigrants seeking entrance and opens the doors to the undesirable. In other words, we have not even yet begun to choose our immigrants, yet if we intend to carry out a permanent policy of preserving American traditions by admitting only the most useful, we must begin to discriminate."

The present unemployment situation in this country is also to be considered in dealing with the immigration problem, notes the *Richmond (Va.) Times-Dispatch*. As the *Chicago Tribune* says:

"There is little advantage to immigrants in allowing them to enter this country when they can not find jobs. There is great disadvantage to America in such action. It delays the Americanization of such immigrants, makes them enemies of our society rather than members and supporters of it, and tends to lower the standards of those already in this country with whom they compete."

An amendment to the present immigration law, suggested by the New York Merchants' Association, would divide each nation's quota of immigrants into ten instead of five months, as the present law provides, and in that way facilitate the work of immigration officials and minimize the probability of any nation exceeding its quota for the year in question.

The Cincinnati *Times-Star*, however, argues that "the three-per-cent. law has done and is doing well. It is the first law we have ever had for the restriction of immigration which really works, and the drift of public opinion is toward still more restrictive measures. Continues this paper:

"Some individuals and some newspapers, representing special racial interests, have been trying very hard, through carefully conducted propaganda, to discredit the three-per-cent. law and eventually to get rid of the restrictive principle altogether. The country has been flooded with 'sob stuff.' The immigration law has been pictured as a heartless and cruel measure. Millions of words have been devoted to explanation of the hardships put upon would-be immigrants—but not a word has been wasted on the interest of Americans in their country as a decent place for themselves and their children to live in."

Copyrighted by Harris and Ewing.

LILLIAN RUSSELL MOORE WOULD HELP UNCLE SAM'S COOKERY.

She says our melting-pot "has boiled too quickly, and is running over." She is here seen handing to Secretary of Labor Davis her report, in which she recommends that several things be done about it.

FOREIGN - COMMENT

THE INVISIBLE FACTOR AT GENOA

APPARENTLY ABSENT from Genoa, actually America is there in invisible presence, observe various foreign writers, who point out that the big sum of European reconstruction can not be worked without including the American column of figures. In fact, America's share in the problem is likely to prove one of extreme difficulty, according to Sir George Paish, an eminent English financial authority. The war has rendered European nations more than ever dependent upon supplies of food and raw materials from the United States, he tells us in the London *Westminster Gazette*, but if these nations can not pay for such necessities in goods, produce, or services of any kind, European or other, before long they will be unable to buy them, and the poverty created by the war will be intensified by the poverty of the after-war period. Both Europe and America in consequence will suffer grievous misfortune, says this expert, who proceeds:

"Since the early months of 1915 Europe has been able to pay in goods for but a small portion of the produce and goods supplied to her by the United States, and in consequence has incurred a great debt to the American people, a part of which Congress has now agreed to refund into loans bearing a rate of not less than $4\frac{1}{4}$ per cent. and repayable within 25 years. This means a rate of interest of possibly $4\frac{1}{4}$ or $4\frac{1}{2}$ per cent. and a sinking fund of at least $2\frac{1}{2}$ per cent., making a total annual payment in respect of debt incurred to the American Government of $6\frac{3}{4}$ to 7 per cent. per annum. On the sum of about two thousand millions sterling of Government debt, this means an annual payment to the United States for sinking fund and interest of about one hundred and forty millions sterling, assuming par of exchange. With the exchange depreciated it would mean a much greater sum in pounds currency. Beyond Europe's debt to the American Government, however, American bankers, capitalists, and investors have purchased a great many other foreign securities upon which interest and principal must be paid, and it would be a moderate estimate to place the annual sum accruing to America from the rest of the world, and mainly from Europe, for interest and principal at two hundred millions sterling per annum."

This income of America from other countries as a creditor nation shifts a pre-war burden of interest from the shoulders of America to the shoulders of Europe, and we are reminded that prior to the war America was indebted to Europe for upwards of 1,000 millions sterling on balance, whereas now she is a creditor of the rest of the world to the extent of nearly 3,000 millions sterling. Therefore it is shown, that instead of having to export produce to the value of 50 or 60 millions sterling a year, to meet interest payments to other nations, America now has to import goods of other nations to the extent of about 200 millions sterling in order to receive interest and principal upon the foreign loans she has granted since the war began. But this is only part of the problem, it is said, for—

"In the past seven years America has exported produce and goods to the value of 8,400 million pounds sterling, while her

STATUE OF LIBERTY—
NEW STYLE.

—Il Travaso (Rome).

imports have been of the value of only 4,400 millions sterling, and she has had a favorable trade balance on trade account of 4,000 millions sterling. When allowance is made for the interest due to her upon her foreign loans, and the earnings of her mercantile marine in the latter part of the period on the one hand, and the sums she had to pay for interest, for services rendered and for tourists on the other, it is evident that the real balance of trade has been not much less than this excess of exports over imports. The task of now paying for this vast quantity of goods purchased by Europe on credit would be onerous enough if there were no longer need to buy more goods on credit; but Europe in general and Great Britain in particular still need to buy produce on credit. In 1921 the total exports of the United States were valued at 900 millions sterling, while the goods imported were worth only 500 millions sterling, and there was again a balance in America's favor of 400 millions sterling, plus a large sum for interest and services. Until 1920 America was willing to take payment for her excess exports mainly in securities, but since the collapse of credit and of trade she has demanded payment largely in gold, and in the last two years has imported mainly from Europe no less than 220 millions sterling of this metal. The amount of gold sent to America in the past year has been over 140 millions sterling at par of exchange."

Sir George Paish goes on to say that it is plain Europe can not continue to buy produce from America and to pay for it in gold to this extent, for the whole of its reserves would soon be exhausted. Yet

Europe needs American produce—especially

as Russian supplies are lacking—and also American goods for reconstruction. Thus it is now faced with the question of how to pay for produce and goods needed to the value of something like 400 millions sterling a year, in excess of the quantity of goods which America is willing to accept in payment, plus payment of interest and principal on loans amounting to about 200 millions pounds a year. This immediate problem may be solved, we are told, by the continued sale of securities by Europe to America, but the permanent problem remains of how it will be possible "for the world in general and for Europe in particular to buy American produce unless America is willing to buy European goods and other foreign produce in exchange?" From a national standpoint the problem would seem to concern the American people alone, who are to decide what they will and what they will not buy from other nations, but, says this writer:

"When one considers it from the international standpoint, at once it becomes a matter of great concern to the whole world. If the American people refuse to buy foreign goods and produce, then foreign nations will be unable to buy American produce, much as they may need it. The inability of cotton planters and farmers of America to sell their produce abroad last year induced the American Government to reconstitute the War Finance Corporation and to create export credit in order to facilitate export sales, and the ability of Continental Europe to buy cotton and other produce in recent months in part arises from the assistance afforded to them by this Corporation. But the assistance granted is only of a temporary character, and this method of meeting the difficulty offers no permanent solution of the problem.

Until steps are taken to induce the American people to buy foreign goods more freely in order that American exports and interest may be paid for by imports, the problem will remain unsolved.

"The question of the American exchange is one that demands the fullest possible discussion both in the United States and at Genoa. It is not only an American question, it is an international matter of exceptional importance. Its solution depends not only upon the ability of Europe to produce, but upon the willingness of America to buy."

But the British people are perhaps more keenly concerned than any other nation in the problem of imports and exchanges, we are told, and it is recalled that the 900 millions sterling which the British Government borrowed from the United States during the war was mainly for the purchase of American food and raw materials, without which Britain "would have suffered economic defeat." Furthermore, it is pointed out that—

"In the seven years to the end of 1921, the excess of American exports to Great Britain over the import of British goods into America of upwards of 2,000 millions sterling was mainly for food and raw material essential to the British people. The situa-

tion has improved in the past year owing to the great fall in prices and to the depression in the British cotton trade. The latter factor reduced British imports of American cotton by nearly 50 per cent. compared with 1913. The decline in our imports from America is also attributable to the fact that when the American exchange is adverse British buyers necessarily try to buy as little as possible from America. Nevertheless, in the past twelve months the value of the produce and goods bought by Great Britain from the United States was no less than 275 millions sterling, according to our British trade returns, while the value of British goods exported to that country was only 44 millions sterling, and of foreign and colonial produce reexported only 20 millions. Beyond this adverse balance of 211 millions there was the large net sum which Great Britain owed to the United States for interest and principal.

"On the basis of repayment of our Government loans to America in 25 years, with interest at 4½ per cent., the British adverse trade balance with the United States in 1921 would have been between 250 and 300 millions sterling. Fortunately, Great Britain still enjoys the confidence of American bankers and investors and, moreover, possesses foreign assets of about 2,500 millions sterling net, after the doubtful new foreign investments made during the war are excluded."

FOREIGN VIEWS OF UNCLE SAM'S ABSENCE.

RUSSIA'S BALTIC BULWARK

TO MAINTAIN PEACE in the Baltic states and thus afford a bulwark to Russia on the west, Soviet Russia, Poland, Latvia and Esthonia have signed an agreement at Riga. we learn from press dispatches, and this step is considered of particular importance to Russia just as her delegates present themselves at Genoa. We read also that the signatory Powers "agree to support Russia in any proposals toward *de jure* recognition of the Soviet Government and, as an aid to thereconstruction of Eastern Europe, they agree also upon a joint attitude at Genoa regarding foreign credits designed to assist the economic life of the four countries." Among other matters covenanted, we are told, is the principle of armament limitation and the provision for semi-neutral zones on the frontiers of the countries concerned, in which only a few guard-duty troops will be permitted. The agreement expresses a "sincere desire for universal peace" and is said to stipulate that in the event disputed questions arise, an endeavor must be made to reach solutions by pacific means.

The Polish view-point of the line of states reaching from the Arctic Ocean and the Baltic Sea to the Black Sea and the Adriatic, which are taking steps to work out their problems by joint harmonious effort, is presented in the *Bulletin* of the Polish Bureau of Information (New York), which declares that "cooperation is the new watchword in Central Europe."

The countries in question are: Finland, Esthonia, Latvia, Poland, Czecho-Slovakia, Roumania and Jugo-Slavia, and they have a combined population of between seventy-five and eighty millions, in an area of approximately 600,000 square miles. In other words, according to this *Bulletin*, their population is "greater than that of any single European Power, and their combined area more than twice that of any one European nation, excepting only Russia." But it is pointed out that from a political and commercial standpoint their geographical position is even more important than their size and population might indicate, because—

"They constitute an almost complete bloc of the countries in the heart of Europe. The sole gaps are Lithuania, Austria (there are hints that Austria may ultimately become affiliated with this group) and Hungary. United, they form a solid wall against the spread of Communism to the west. At the same time they effectively bar Germany from executing her grandiloquent

'Drang nach Osten' plans. Their resources are such as to assure commercial importance. Both rail and water transportation systems are at their disposal. In fact, the Danzig to Odessa inland water route will, when completed, assure cheap transportation to an extensive area.

"It is not implied that these seven nations have already established a definite functioning entente. The situation, however, is exceedingly promising. Czecho-Slovakia, Roumania and Jugo-Slavia have, of course, joined together in a Little Entente. Poland, by virtue of separate agreements with Czecho-Slovakia and Roumania, has entered into close political and commercial cooperation with this triumvirate. These ties would be drawn even closer through the completion of an agreement between Poland and Jugo-Slavia, now reported in process of negotiation. In the north, the plan of a Baltic Union to include Finland, Esthonia, Latvia and Poland is working toward similar common ends."

The vast potentiality of team work between the Baltic states and the Little Entente is foreshadowed in a suggestion made by the recent Roumanian Minister at Paris, Prince Ghika, who is quoted in the *Paris Matin* as suggesting a possible accord between France, Italy and the Little Entente, out of which would naturally grow a united system of transport and commercial intercourse reaching from the English Channel to the Black Sea and the Baltic Sea. Another benefit of such a trade relationship, he says, would be the protection of the states involved against attacks by hostile nations. Prince Ghika also set it down as his belief that

THE KERNEL OF NEW EUROPE.

From the Arctic Ocean and the Baltic Sea to the Black Sea and the Adriatic stretches a line of states whose watchword is said to be cooperation. At the north we find Finland, and at the south of the line we discover Jugo-Slavia, which is linked to Roumania and Czecho-Slovakia in the Little Entente, while Poland and Czecho-Slovakia are joined in a separate agreement. Moreover, Latvia and Esthonia, as members of the Baltic Union, together with Poland, have signed up with Soviet Russia, thereby providing the Vast Enigma with the support of states that were formerly her subject provinces.

the Genoa Conference will be the touchstone that proves the solidity of the Little Entente, which is still further strengthened by the protection to it implied in the renewed good feeling between London and Paris. This Roumanian authority is quoted further as saying:

"The Russian problem, of course, remains the unknown factor which disturbs everybody. Whatever the solution of the Russian problem is to be, the Allies must form a united front and produce a sound and stable work. In order that their efforts may be crowned with success, the bonds uniting Poland, Czecho-Slovakia, Roumania and Serbia with the Allied states of the West must be further strengthened.

"It is absolutely necessary that Italy, the great Power which since the war has been free of foreign entanglements, openly declare her attitude toward France and the states of the Little Entente. The geographic situation of Italy and her recent territorial acquisitions make the relationship between this country and those of the Little Entente of paramount importance. Italy's policy will certainly be warmly welcomed by the Little Entente if Italy proves frank and earnest in the desire to work together with a will. But if her policy is only to be one of dissimulation

leading to misunderstandings, it can not be looked upon favorably by the states of the Little Entente."

In order to complete the chain which should bind the two ententes together, he proceeds, Italy and France should talk matters over candidly, and ascertain the economic agreements

they may find it well to conclude with Prague, Warsaw, Belgrade, and Budapest, in order that they may establish a commercial understanding that can do no harm to the interests of either country. Prince Ghika expresses it as his further belief that France and Italy could easily get together in this matter if they would have their experts in commercial and industrial fields elaborate a project for trade, transportation and tariff cooperation.

As between France and Italy, we have the view of the Italian Foreign Minister Schanzer, who represented his country at the Washington Conference, and who is quoted as saying in the *Rome Giornale d' Italia* that everywhere he was agreeably received in France, and that much of the so-called antipathy between the two countries must not be taken seriously, for "with calm and with confidence on both sides we shall travel far together."

Foremost among the statesmen in Central Europe of the new day is Prime Minister Benes of Czecho-Slovakia, who, when questioned by a Prague correspondent of the *Manchester Guardian* as to whether the Succession States of Austria-Hungary might be merged into a Central European federation, replied:

"I am opposed to either a political or economic federation of these states. I believe in the consummation of political and economic treaties between state and state, such as the one just concluded between Czecho-Slovakia and Austria at Lana, but I do not believe in political federation, a Customs Union, or in Free Trade. Both politically and economically such a policy would be dangerous for Czecho-Slovakia.

"A federation would inevitably restore the German balance of power. In these states there are ten million Czechs, ten million Germans, and nine million Magyars. Magyars and Germans will always stick together, in the future as in the past. Economically and politically they would dominate a federation—the thing we fought against before and during the war. It must be remembered that the Czech Nationalist movement was always more economic than it was political."

The detailed population and area statistics of the kernel of New Europe as afforded by the Polish Bureau of Information *Bulletin* are as follows:

Country	Area (Sq. Miles)	Population	Capital
Finland ..	125,689	3,331,814	Helsingfors
Esthonia ..	23,160	1,750,000	Reval
Latvia ..	24,440	1,503,193	Riga
Poland ..	150,000	27,000,000	Warsaw
Czecho-Slovakia	54,438	13,636,390	Prague
Roumania	122,282	17,393,149	Bucharest
Jugo-Slavia	95,628	11,337,686	Belgrade

Total population for the seven nations: 75,952,232.

The Little Entente, Czecho-Slovakia, Roumania and Jugo-Slavia: 42,367,225.

Poland: 27,000,000.

The Baltic States, Finland, Esthonia and Latvia: 6,585,007.

Lithuanian writers note with irritation that their Polish colleagues take particular pains to write of the Baltic states as tho Lithuania were not charted and duly recorded on the map, and they attribute it to the animosity between the two countries over the Vilna dispute, which is one of the hard nuts the League of Nations has to crack. As to Lithuania's status it is claimed by a Lithuanian newspaper, *Teryne* (New York), that during her four years of independence Lithuania has "proved that she has a stronger foundation from the economic standpoint than any of the new neighboring countries." We read then:

"The budget of Lithuania during the Russian régime, before the Great War, was larger than the budget of such European nations as Switzerland, Serbia and Denmark. 41.2 per cent. of Lithuania's area is very fertile and 23 per cent. of her area is under forests. Her outlet to the sea, through Klaipeda or Memel and Palanaga, gives her an advantageous geographical situation.

"Through the development of her agricultural resources, Lithuania collects sufficient taxes to cover all of her national expenditures, which is proved by the budgets of 1920 and 1921. Ac-

According to the treaty with Russia, dated July 12, 1920, Lithuania has an area of 90,000 square kilometers, including Vilnius and Klaipeda; according to the Russian census of 1914, her population is 4,489,000; including the Klaipeda region it will reach as high as 5,000,000. Lithuania is larger than Belgium, Holland, Denmark, Switzerland, Serbia or Greece."

FINAL DEFEAT OF HAPSBURG CHARLES

DEATH LAYS HIS ICY HAND on kings, and also on "harlequin monarchs" like the Hapsburg Charles, who, according to Austrian editors, was "politically dead for Austria long before his physical death," and whose political activities, says the German *Allgemeine Zeitung*, "put the patience of the defenders of the monarchical system to a severe test." But the Swiss *Journal de Genève* calls attention to the fact that "while the great war-lord Wilhelm II is taking his leisure, a sovereign much less guilty paid the penalty for his crime." Meanwhile this daily wonders whether the Allies were not imprudent in banishing Charles, who "died a victim of circumstances," for "his legend begins to-day, and as history so often has proved, legend has served for the restoration of monarchies." Budapest dispatches advise us of a proclamation of the Hungarian Legitimist party, issued by nineteen Hungarian aristocratic leaders headed by Count Albert Apponyi, in which it is stated that "with the death of Charles, Otto II is King of Hungary, altho temporarily prevented from coronation." With the death of Charles, we read further, the provisional constitution, which was based on the fact that the king was prevented from exercising his prerogatives, must be redrafted by the Assembly about to be elected. Dispatches inform us also that—

"Further postponement of Hungary's choice of a form of government has become impossible, and through the coming elections the people must decide the question and elect a king if the monarchical form is preferred.

"Candidates for the throne are beginning to spring up again, strong parties forming for the support of the Archdukes Albrecht and Joseph Ferdinand, but many deputies are reviving the proposal for the election of an English prince. The party favoring Francis Joseph Otto, eldest son of the dead monarch, however, is unquestionably the strongest.

"Altho the Legitimists are united on a platform upholding the claims of Otto and their program is growing more radical, the indications are that Charles's death has strengthened the position of the government of Admiral Horthy, the Regent.

"The Government is conceding the Legitimist desires for national mourning as for a sovereign, and also has stated there is no objection to the burial of Charles in Hungary, if he express such a wish in his testament.

"As regards the claims put forward for Otto, the Government insists that the rights of all the Hapsburgs were abrogated by the dethronement act passed in the National Assembly, and that even the election of Otto, which is now barred by that law, depends upon the consent of the Allied Powers."

It is noted with significance that all the Budapest newspapers appeared with black borders on the day they announced the demise of Charles, whom they regarded, in spite of the dethronement of last November, as their constitutional monarch. They claim that according to the Pragmatic Sanction no National Assembly could dethrone him or void his monarchical rights. In the Budapest *Magyar Ujsag* a Hungarian writer, Mr. Imre Deri, tells us that Charles "had to die to be taken seriously," and proceeds:

"The first time I saw him, before the war, was at Budapest,

where he was the guest of a regiment of Hussars. He was very charming and very young, always smiling and jolly. He spoke Hungarian with a strong German accent, but his smiles were genuine. At that time it was rumored that he loved Hungarians very much and the officers of the regiment carried him on their shoulders. He said things that sounded very important, yet were always commonplace. His mentality was that of a child of six, when he was twenty-four. He would ask how people make statues, or he would express great pleasure over the fact that even in Hungary people could make statues of difficult conception."

This informant relates further that he accompanied King Charles in his tour along the war fronts, and tells of his calling up officers in the front line by telephone from headquarters at the rear. Naturally Charles would announce King Charles as speaking, which announcement, on more than one occasion, was taken as a joke. One lieutenant retorted: "And on this end of the wire is the Pope of Rome. Now, stop making jokes while we are under Russian fire." It was impossible for Charles to convince the officer at the other end of the wire that it was the King who addressed him, and this newspaper correspondent continues:

"He never heard of the newspaper I represented and instead of answering my questions he wanted to know all about how newspapers are made and how I sent my telegrams. It was evident that I was the first newspaper man he ever spoke to. He wanted to show off his knowledge of the Hungarian language, but he did it stammeringly and had to revert to German. In the second month of his reign, he began to cut a comic figure in Vienna, where the people

talked about him only as 'our charming Charley.' They regarded him as a child, and not without justification. On the second day of his incumbency he rang up several of his old friends telling them that he appointed them Royal Counselors. People began to talk of his adventures and his petty quarrels with his wife, the Empress Zita, who always proved to be the stronger person of the two. He was not respected, but he was loved. The first time they take him seriously is now that he is dead. He was not destined to be a monarch. It was his tragedy that he had to become one."

The death of Charles is "a much greater event than it would seem at first sight," observes the Budapest *Magyar Nepszara*, and "will make itself felt throughout Europe." To be sure he died as an ordinary man, but with him died "one kind of propaganda, only to give rise to another, and it is to be hoped that with it will arise a new public opinion to counteract the pretexts of the Allies and the Little Entente in opposing obstacles to the Hapsburg aspirations." In the Paris *Matin* Count Apponyi, one of the leaders of the aristocratic element, expresses the hope that the impending elections will give Hungary an Assembly able to accomplish things, to which he adds:

"What Hungary needs is not the triumph of this or that party, but a régime of efficiency and effort on a democratic basis, which it would be dangerous to attempt to change. . . . Hungary is sick with a complication of diseases: first, the Trianon Treaty, and secondly, the meddling of foreign Powers in our constitutional questions. These Powers may say all they like about aiming at the economic reconstruction of Hungary, yet the truth is they have done all they could to keep the country in its present impotent and agitated condition."

SCIENCE - AND - INVENTION

TRAVELING BY AIR IN ENGLAND

ENGLAND HAS FOUND by bitter experience that commercial aviation can not be set on foot without a government subsidy. This is the conclusion of Michael Egan, the author of a leading illustrated article on the subject in *Conquest* (London). Mr. Egan is of the opinion that England's treatment of this branch of industry was "a failure" up to the adoption of the subsidy law. After reading of its present activities, one is tempted to wonder what he would call the state of somnolence into which this method of transport

Meantime a fresh scheme was drawn up under which an allowance was to be made to approved firms of 25 per cent. of their gross takings, while the Air Ministry guaranteed to provide a certain number of machines on a hire-purchase basis at less than cost price.

"This scheme, prior to its final ratification was condemned on the grounds of providing inadequate assistance. The scheme was accordingly amplified to include an extra grant to the extent of paying 50 per cent. of the premiums up to a maximum. This scheme, which it is hoped will soon come into operation, will be financed by the Treasury to the extent of \$1,000,000.

"The latest type of Bristol airplane, a single-engined tractor biplane, which will probably be used very extensively for commercial purposes during the coming summer, has an enclosed cabin for eight passengers (six seats facing forward and two facing aft) and an open cockpit for the pilot and mechanic. Windows, which can be opened readily, are fitted the whole length of the saloon, and heating is provided by means of hot-air muffs round the exhaust pipe.

"In the design of this machine special precaution is taken against fire by the equipment of a steel fireproof bulkhead immediately behind the engine, aft of which no petrol is carried in the body of the machine. A complete wireless telephone and telegraph apparatus is also installed. At full load, *i. e.*, with sufficient petrol and oil for a 400 miles' flight, eight passengers and 50 lbs. of baggage per passenger, the machine weighs over three tons. This three-ton mass of men and matter can skim over trees and hedges at a speed of 122 miles per hour, and can climb to 10,000 feet in twenty-two minutes!

"Probably the most imposing-looking airplane ever built in

this country (altho, perhaps, somewhat in advance of the times in respect of its actual commercial utility) is the Bristol Pullman Triplane. This aerial monster is equipped with four engines which drive two tractor and two propeller air-screws. In the event of one, or even two, of the engines failing, normal flight can be maintained by means of the remaining engines. The passenger saloon contains accommodation for fourteen persons, but if the airplane is required for cargo transport, a space of 570 cubic feet can be made available by removing the seats. The average cruising speed is about 105 miles per hour."

It is quite certain, Mr. Egan thinks, that continental air services can never become established on a basis that will enable them to enter into serious competition with existing modes of transport until they are capable of maintaining regular day and night services along the main traffic routes. The problem of flying by night is one which many people assume to have been solved completely during the war. Yet the difficulties of night flying that affect passenger air services are totally different from those encountered during the war. If an airplane crashed in the darkness then, or lost its way and landed in a plowed field fifty miles from its destination—that was part

"PROBABLY THE MOST IMPOSING LOOKING AIRPLANE EVER BUILT."

The Bristol Pullman Triplane. "This aerial monster is equipped with four engines which drive two tractor and two propeller air-screws. In the event of one, or even two, of the engines failing, normal flight can be maintained by means of the remaining engines. The passenger saloon contains accommodation for fourteen persons, but if the airplane is required for cargo transport, a space of 570 cubic feet can be made available by removing the seats. The average cruising speed of this machine is about 105 miles per hour."

has fallen in these United States. Still, in England, failure has been turned into hopefulness, and now things are going to happen. After two years of doing the wrong thing, as Mr. Egan puts it, the British Government has learned at last to do the right thing. He continues:

"The summer of 1919 marked the birth of the civil aviation industry in this country. During the first eighteen months or so of its existence the infantile industry was left to its own resources, and lost no time in getting into mischief. It did all sorts of comic things, too numerous to recall in this article.

"In addition to this, in the winter of 1920-1921, the infant contracted a very nasty chill from the awful channel fogs encountered on the London-Continental air routes. Its health became seriously endangered. Then the big thing happened—the Government introduced the human touch! A cash subsidy of £81,000 was granted and the infantile industry sat up and took nourishment once more. We failed to realize that the industry should have been subsidized from the start. But we have learned our lesson.

"The terms of the first subsidy were provisional. They comprised an agreement made with two companies, whereby each was allowed a definite sum per passenger carried on their London-Paris services during the period, March-October, 1921.

of the job. The business man, however, who steps into an airplane on a London aerodrome at midnight, expecting to be called for breakfast in a Paris hotel next morning, may reasonably be expected to worry if he finds himself compelled to spend his night shivering with cold in the center of a turnip field on the outskirts of a French village! It seems that—

"The establishment of a regular aerial night service necessitates three important provisions: (1) Efficiently lighted aerodromes at the points of arrival and departure; (2) an accurate method of guiding a pilot to his destination, either by means of a series of lighthouses along the route, or by directional wireless apparatus; and (3) a regular system of transmitting periodical meteorological reports to the pilot by wireless in the course of the flight. The aerodrome lighthouse that has been installed at Croydon—the London terminal aerodrome for continental routes, is equipped with an ordinary lighthouse lamp on top. This lamp, which gives out a bright, dazzling light, is kept burning while the airplane is approaching the aerodrome. When the airplane reaches the immediate precincts of the aerodrome the top lamp is extinguished and the four lower lights are brought into play. These are fitted with curved shades by means of which the light is reflected downwards and inwards on to the white cone-shaped base. Thus the pilot sees a clear white circle of light which does not dazzle him."

The problem of navigating aircraft by night over short distances has been carefully investigated, Mr. Egan tells us; and experience has shown that the best system is one in which wireless direction-finding apparatus is supplemented by visual land signals. When a pilot wishes to ascertain position he sends out a series of pre-arranged wireless signals, on which the operators at two stations take bearings, compare results and inform the aircraft. Then, too,

"In addition to this, arrangements are now in course of completion for the installation of a number of aerial beacon lights along the continental air route. These lighthouses will be of the 'automatic gas acetylene' type, and will be of 70,000 and 90,000 candle-power respectively. In clear weather the light at Lympne can be seen from the French coast, so that machines flying by night should be in constant touch with one or other of the lights after reaching the Channel on the homeward journey. It remains for the French authorities to complete the chain on the other side of the Channel."

"The rapid and reliable transmission of weather reports to pilots during flight is of supreme importance to all air transport services. The fickle nature of our climate renders this essential. It frequently happens that a flight which is begun under 'fair weather' conditions is finished in a blizzard, or a gale of wind."

"The problem of forecasting weather conditions to such a degree of accuracy as is required in order that such forecasts should be of real utility to aircraft is by no means a simple one. To-day a provisional organization is in operation whereby frequent weather reports are transmitted by wireless each day to a home meteorological office by a number of merchant ships plying on the North Atlantic. This scheme has proved so satisfactory that arrangements are already in progress for extending its application to ships traversing other seas."

"There is every reason to expect that regular day and night services will be in daily operation along the London-Paris air route during the coming summer. Once this has been accomplished it should not take long for the companies concerned to demonstrate the great value of aerial transport to the general public, and so secure for themselves a regular supply of passenger and cargo traffic. Given equality in speed, cost and reliability, companies that compete for patronage on the same route will have to give particular attention to the all-important question of passengers' comfort. This resolves itself into a number of separate problems, such as elimination of engine noise and vibration, the dispersal of unpleasant smells from the exhaust, and the provision of adequate heating and ventilating devices. Bad ventilation has frequently been the main cause of air sickness."

"It may be wondered how air is to be admitted into the saloon of a machine traveling at, say, 100 miles per hour. This is accomplished, however, by the insertion of right-angled bends in the air trunk which feeds the compartment. Each bend reduces the rate of flow by 50 per cent. Owing to the tendency of vitiated air to descend, the aspirators for its removal are situated below the level of the seats."

POWER SHORTAGE FROM LACK OF SNOW

THE DEPENDENCE OF POWER-STATIONS on snowfall in certain locations is well illustrated by an unprecedented power-shortage with which the industrial zone in northern Italy is now threatened, as we learn from *The Electrical World* (New York). The shortage will reach its peak this month but, reports to the Department of Commerce say, it has been serious since early in December. An abnormally small snowfall in the northern mountains last winter and the intense cold which prevailed throughout the summer in the upper

Copyrighted by Underwood & Underwood

LUXURIOUS INTERIOR OF A LONDON-PARIS FLYER.

mountain levels, hindering the snow from melting, have caused the streams which are relied on for power to fall to very low levels. We read further:

"In an effort to develop new sources of water-power it has been proposed to tap the southern end of Lake Lecce. At that point, it is estimated, 2,000,000 kilowatts could be developed without lowering the level of the lake to the point where hardship would ensue. Work already is under way looking to the emptying of Lake Castel into the Val di Toce. This development is expected to produce 5,000,000 kilowatts. An estimate also has been made showing that 500,000 kilowatts could be developed by drawing off water from Lake Varese without lowering the level of the water more than two feet. It is believed that an additional 2,000,000 kilowatts could be obtained if Lakes Monate and Comabbio were connected with Lakes Maggiore and Amone by means of siphons across intervening hills."

"The power shortage has become so serious that curtailments already have been made of the supply for less essential uses and it may become necessary to suspend all electro-siderurgical operations—highly developed in Italy—and supplant electric traction with steam locomotives on the Milan-Varese railway. Restriction of the use of electric lighting in homes to two hours daily is under consideration. One industrial plant has rigged up a battery of farm tractors to furnish power for some of its generators."

"It is reported that beginning February 1,200,000 kilowatt-hours of electrical energy was daily being diverted to northern Italy from Switzerland, in order to overcome to some extent the crisis arising from the electric power shortage. In view of the fact that Switzerland also is suffering from low water this action merely indicates to what extent the shortage in Italy has affected her economic status."

A NEW FUEL

THE COMBUSTIBLE PART of coal is conserved and the ash is eliminated in the preparation of a new fuel known as "Trent Amalgam," we are assured by Herbert Hanlon, writing in *Pacific Shipping Illustrated* (Seattle). This new mixture, we are told, may supersede oil and find market for the poorer grades of coal, opening new opportunities to steamships and railroads heretofore dependent upon high-priced fuels. The inventor, Walter E. Trent, was formerly of the U. S. Bureau of Mines. Lord Pirrie was so impressed with the process, Mr. Hanlon tells us, that he has arranged to establish proper burners in the ships of the White Star Line from Baltimore, and will arrange to use them as early as he is assured of production in sufficient quantity to justify the undertaking. We read:

"Mr. Trent's development of this fuel was the indirect result of his having presented to the War College in the earlier stages of the war a design for a constant cycle motor, using pulverized coal in the combustion chamber. Mr. Trent developed the engine to where he was getting the desired results for about ten minutes when the motor would clog with ashes. He had therefore to find a way to eliminate the ash from the carbon in the pulverized coal, without reducing efficiency. The final result was the Trent Process Amalgam. The first commercial plant is at Alexandria, Va. This plant, which is owned in its entirety by Mr. Trent personally, is capable of producing five hundred tons of amalgam daily from the first unit of construction, and may be quickly expanded. The process of producing the fuel, as related to me and demonstrated to me by Mr. Trent, is as follows:

"In processing, the coal is first passed through a crusher and reduced to quarter-inch sizes, and is carried on a conveyor to a pit from which it is pumped, wet, into a large wood tank, filled with water kept in constant agitation. The powdered coal from the first crushing floats to the top, overflows into a circular trough and is carried direct to the agitator. The heavier materials are mechanically carried into a pulverizing machine. The resultant product is then carried back to the original tank and floats over the top into the trough and is carried into the agitator. In the agitator, oil is added to the powdered coal and water which fills the tank, and during the process of agitation, which is accomplished by hydraulic jets, amalgamates with the pure carbon of the coal, which by the pulverizing has been released from the ash. The oil will not amalgamate with the wet ash, and the oil and carbon amalgam is salvaged from this tank, which is the final step in the process.

"Ash elimination is dependent upon the fineness of the wet grinding of the coal and the viscosity of the oil. In the amalgam, the ash content plus moisture will not usually exceed five per cent., and in some instances will run as low as two per cent.

"The process yields approximately like results from the various grades of bituminous, anthracite, semi-anthracite, cannel and lignite. The resultant amalgam from the average of coals treated as described will show 25 per cent. oil, 70 per cent. carbon and about 5 per cent. ash and moisture.

"The completed product will stow in ships' bunkers 60 per cent. more thermal units than is possible with the best of Pocahontas coal, deemed by the U. S. Navy to be the best steaming coal available. It may be stowed dry, plastic or semi-liquid form. In any form it shovels freely and spreads as readily as any slack coals. Trent Amalgam may be handled by conveyor or pump and can be fired by any automatic or mechanical device for firing coal, or by hand. It also burns well in what are known as 'tar' bunkers. It can be made of a consistency to handle exactly as oil, but it is far better to use it dry or in a plastic state.

To increase the percentage of oil increases the cost without adding to the efficiency.

"Boiler tests made at Alexandria, Va., show that the amalgam has 42 per cent. steaming advantage over the best steaming coal available.

"It is claimed that the quicker and better burning of the amalgam in comparison with other fuels, particularly coal, is a great factor in insuring the maximum efficiency of boilers, and burning amalgam in a firebox will show 150 horse-power efficiency as against 100 horse-power from coal under like conditions.

"The coke from the amalgam shows every indication of being available for any use to which the best of coke may be devoted, from ordinary fuel purposes to the reduction of minerals, and this is claimed for it by Mr. Trent.

"This process properly developed on the Pacific coast would undoubtedly open up fields of opportunity which have hitherto been closed or greatly restricted by reason of inability to produce high quality coke in quantities in the Northwest.

"Plants under the Trent Process are under construction in Great Britain, France and Italy."

INVENTOR OF THE NEW FUEL.

The mixture devised by Walter E. Trent "may supersede oil and find a market for the poorer grades of coal, opening new opportunities to steamships and railroads now dependent upon high-priced fuels."

THE BIGGEST BOILER
IN THE WORLD

IT IS IN DETROIT, where it was installed recently by the Edison Company. A writer in *The Michigan Manufacturer and Financial Record* (Detroit) tells us that this boiler can convert 24,000 gallons of water into 200,000 pounds of steam every hour, and this is steam enough to heat comfortably more than 1,000 large residences in the coldest weather. To say that this boiler is the largest in the world is quite a statement. There have been many large boilers installed in industrial plants throughout the country, but this is the only

one of 2,982 horse-power in existence. We read further:

"In the coal-box of this boiler, were the grates to be covered with flooring, a dancing party could make merry without bumping heads or treading upon each other's toes.

"For a more detailed description of the boiler, we will quote J. H. Walker, plant superintendent, as follows:

"The four upper drums are of 44 inches diameter and the two mud drums 48 inches. There are 2,184 tubes. The tubes banks are 52 tubes wide in the direction of the length of the drums.

"It has been possible to install 29,820 square feet of heating surface in this boiler without a corresponding increase in the size and cost of the building, boiler setting, auxiliaries, etc.

"The boiler is set with the mud drums 15 feet nine inches above the floor, which is a common height for boilers of this type, giving a height to the extreme peak of the combustion chamber of approximately 35 feet. The volume of the combustion chamber is 11,440 cubic feet.

"The stoker is of the Taylor three-plunger type, with 14 retorts on each side of the boiler. It has a rated capacity of 1,200 to 1,400 pounds of coal per retort, per hour, giving a total fuel burning capacity of 33,600 to 39,200 pounds of coal per hour.

"The service to which the boiler is put requires the use of raw water to about 90 per cent. of the total output. To remove the scale-forming materials from the water the boiler is equipped with four live steam purifiers, each consisting of a drum containing a number of shallow pans over which the water flows. Each purifier is connected directly to the steam space of the boiler by a pipe of generous size and the scale-forming materials in the water are deposited as the water becomes heated by the high-pressure steam. Sodium carbonate also is added to the water in graduated amounts before it enters the purifiers."

UNCLE HENRY'S SUBSTITUTE FOR LEATHER

HENRY FORD is now reported as turning out daily 27,000 yards of leather-substitute for use in the seats, tops and curtains of Ford cars. In 1920, we are told by Kenneth D. Cassidy in an article in *The Michigan Manufacturer and Financial Record* (Detroit), the Ford Motor Company built 940,000 motor cars, necessitating a purchase of approximately 81,875,000 square feet of rubber cloth material for tops alone. The process by which Ford is producing this great quantity of artificial leather substitute daily with a working force of 63 men may well be classed, the writer asserts, among the wonders of the Ford industry, and is one of the answers to, "How does Ford do it?" He continues:

"The story of this branch of the giant industry, its gradual evolution from a struggling infancy, and the radical departure from all previous methods involved, forms an interesting chapter in Ford's industrial progression. Prior to 1919, an engineer in Ford's employ conducted experiments in leather substitute making for more than two years. In the latter part of 1918, preparations were made for actual production. On January 6, 1919, 840 yards of sateen were given the first two coats of 'mixture,' as it is called. Since that time the growth of the industry has been rapid, until the estimated output for the current year is in excess of eight million yards.

"Three grades of leather substitute are being manufactured. The raw material is sateen. A twenty days' supply of cloth is kept on hand.

"The roll is first weighed and inspected. Then it is placed on the unwinder, a special machine equipped with a regular Ford brake which regulates the flow of cloth into the ovens.

"From this machine the cloth enters the ovens. Seven feet square at their base, they extend thirty feet upward through the roof. Within each oven are coils of steam pipes and a temperature of 190 degrees is maintained.

"Before the cloth enters the ovens from the unwinder it is given its first coat of 'mixture.' It is this mixture which changes the sateen into leather substitute. The ingredients and the amount required for a batch are as follows:

"Nitrated cotton, 1,420 pounds; blended oil, 1,120 pounds; drop black, 1,300 pounds; butyl acetate, 33 gallons; ethyl acetate, 320 gallons; benzol, 650 gallons.

"The nitrated cotton used is not quite as highly nitrated as that utilized in the manufacture of guncotton and is non-explosive. This is dissolved in the acetates, thinned with benzol, and the other ingredients added. Blended oil is used to assure flexibility.

"At the present time, this mixture is received in barrels already mixed. Ford, however, in the near future plans to do his own mixing.

"The mixture flows from the supply tank through a pipe directly above the cloth in a thick, black stream. It is spread out and the coat made uniform by means of a knife which scrapes over the cloth and the excess mixture flows into a trough and is pumped back into the supply tank.

"The prepared cloth passes into the oven, travels to the top of it and down again, and then emerges on the opposite side. By this time the first coat of composition has been baked on. The sateen then receives a second coat of the mixture and travels into another oven. This process is repeated in seven ovens. Coats one and two are not as heavy as the other five, thus providing a thorough penetration of the cloth, which travels on rollers moving at a uniform rate of eighteen yards per minute.

"After emerging from the ovens, the cloth is cooled by merely running it up and down in the open.

"From the ovens the roll of cloth is carried to an embossing press, which exercises a pressure of 200 tons and makes seven and a half presses a minute. After the leather has been grained, a finishing coat of mixture is applied. When the coating process is finished the material is inspected, rolled, packed into box cars, and shipped to the assembly building where it is made into seats and backs. The yardage of finished leather exceeds the original yardage of cloth, due to a slight stretching of the material."

The foregoing details are of the manufacture of heavy material for seats. In making top and curtain leather a different grade of sateen is used. Only four coats of mixture are applied and

only four ovens are necessary. More oil is also used to give increased flexibility. Mr. Cassidy proceeds:

"Approximately 2,000 pounds of nitrated cotton are used every day. The ingredients are mixed in a large revolving tank having a capacity of 1,500 gallons. The mixing of a single batch requires from six to eight hours.

"Prior to Ford's experiments all ovens used in making artificial leather were of the horizontal type. With the horizontal oven there is the necessity of transporting the cloth from one oven to another, and a forced draft is necessary to carry off the heavy fumes, while in the vertical oven natural draft is sufficient. Finally, danger from fires is greatly lessened. With the vertical oven the flames are confined to the oven and escape through the roof. Ford has taken every precaution to avoid fire. Everything is grounded for static electricity. All lights are outside of the building and so arranged that they shine through the windows.

"There are some interesting bits of salvage work in connection with this production. It was noticed that when the barrels of cellulose were emptied considerable of the material adhered to the sides of the barrels and was wasted. By rigging up a barrel tumbler—a revolving platform to which the barrel is fastened—and by the addition of a thin oil most of this loss is now recovered.

"Another saving has been made in the photographic department. All Ford Weekly films and negatives of pictures that are discarded are sent to the artificial leather building where they are soaked in hot water and the cellulose recovered. This is used in the 'mixture.'

"Ford also is preparing to make his own cloth and, from present indications will, in the near future, be able to manufacture enough for his own use. At this time three looms are turning out 120 yards daily.

"Should Ford obtain possession of the nitrate plant at Muscle Shoals, one operation there will be the nitration of cotton. If this can be accomplished, Ford will be weaving his own cloth, nitrating his own cotton, preparing his own mixture, and manufacturing his own leather substitute. It is possible that should matters turn out as expected, this entire plant will be transferred to Muscle Shoals. At this time, sixty-three men are turning out from 27,000 to 36,000 yards a day."

READING BURNED MANUSCRIPT—A method of deciphering completely black charred paper from which important ink records have been apparently completely defaced by fire, has been discovered by Raymond Davis, chief of the photographic laboratory of the United States Bureau of Standards, we are told by Science Service's *Science News Bulletin* (Washington). We read:

"Records that were contained in a practically air-tight safe were charred beyond recognition in a fire at Augusta, Ga. The Bureau of Standards was appealed to by the postmaster at Augusta to restore the carbonized records to readability. Chemical means of restoring the ink were resorted to without success. Then photographic methods were tried. The charred record sheet was laid between two photographic plates with the emulsion sides of the plates next to the carbonized paper. For two weeks they were allowed to remain in contact. Then the photographic plates were developed in the ordinary way. A perfectly decipherable image of the valuable records on the sheet was the result.

"Contact of the charred paper had affected the photographic plate, but where the ink had been the photographic chemicals of the plate were unchanged. The writing that had been on the paper could thus be read! The only difficulty in the deciphering was that the writing on both sides of the paper showed on both plates, but that on the closer side of the paper was the stronger on each plate.

"When photographic plates were first packed for sale, the manufacturers were in the habit of placing printed instructions inside the boxes next to the plates. They soon had to abandon this practise as they found that after the package had stood for a time the paper formed an image on the plates and spoiled them. It is believed that this phenomenon is similar to the one that Mr. Davis has utilized. One explanation of the effect of the charred paper on the photographic plate is that the gaseous emanations of the products of the destructive distillation of the wood in the paper cause it."

RADIO • DEPARTMENT

RADIO FROM AN ELECTRIC-LIGHT SOCKET

GREAT INTEREST HAS BEEN AROUSED by the newspaper reports of a successful experiment of Maj. Gen. George O. Squier in the utilization of an ordinary electric-light system for the dissemination of radio messages. General Squier made a demonstration before a number of experts in his office, in which he attached a radio receiving telephone set to a socket of an electric light on his desk. By merely pulling the lamp cord, the General started and stopped the messages. In *Popular Radio* (New York) we find this description of the interesting test:

"The demonstration included the receiving of news, music and talks from a distant room in the Munitions Building, where a radiotelephone transmitter (S C R 67) was connected through an ordinary socket to the lighting circuit of the building. Music from a phonograph was transmitted to the 110-volt electric line through a standard microphone such as was developed during the war for aviators.

"There is no interference, no fading, and weather does not affect the broadcasting by this new method. The process is based on General Squier's invention of 'line radio' or 'wired wireless' which he perfected some time ago and which permits the use of a line as a guide, altho the messages go on wireless waves which follow the line. The turning of the switch, however, cuts the circuit, and the sound ceases.

"Future uses for the new invention suggests that a hotel can supply all of its guests with music from a sending station in the basement; a single orchestra can furnish music for the local playhouses and movies, and invalids at home or in near-by hospitals can get such entertainment as is furnished locally. 'Every home and every room in a hotel where there is an electric lamp can now keep in touch with the world,' General Squier said."

The qualifying statement is made, however, that experts are doubtful whether the system can be used over the large lighting cables in city streets; and amateurs are advised not to play with this new idea until they have more definite information on the subject. Meantime the new experiment gives added interest to the remarkable "wired wireless" method. Another article in *Popular Radio*, by Dr. Henry Smith Williams, tells how General Squier came to develop this method as a war emergency. The U. S. Signal Corps had been called upon by the Allied Council to furnish 100,000 miles a month of insulated telegraph and telephone wire, and no such quantity could be produced, chiefly because there was lack of adequate machinery to make the braided covering for the wire.

"Confronted with this situation, the United States Signal Corps, with General Squier at its head, not unnaturally re-

alized the desirability of finding a substitute for braided cotton thread.

"The Signal Corps found it. Indeed, it found something not merely 'just as good,' but in many respects vastly better. Confronted with the shortage of braiding machines, General Squier said in effect: 'Let us try electron tubes instead.' Asked to supply 100,000 miles of braided cotton a month, he said: 'I will give you an unlimited quantity of electromagnetic waves instead.'

"Succinctly stated, what General Squier did was to run a bare wire of phosphor bronze across the Washington channel of the

Potomac River from the Army War College to the opposite shore in Potomac Park, letting it sink to the bottom and lie there absolutely unprotected. A standard Signal Corps radiotelephone and telegraph set was directly connected to each end of the wire; one set served as transmitter and the other as receiver. At the receiving end, the bare wire was directly connected to the grid terminal of an electron tube of the receiving set and the usual ground connection was left open. Tuning a wire to a frequency of about 600,000 cycles a second, excellent telegraphy and telephony were attained.

"Sundry other confirmatory experiments having been made with a submerged wire, attention was directed to the possibility of conveying a directed message along a wire lying on the ground. A bare No. 16 wire was laid on the surface of the earth connecting the main laboratory with the Signal Corps and a small

field station one and three-quarter miles distant. Radiotelephone instruments used were standard sets utilizing an oscillating transmitter of the electron tube type. It was found that good telephone communication could be made with this equipment.

"As the next important step, the bare transmitting wire was buried in the earth to a depth of about eight inches. The soil was moist, sandy loam, only a few feet above tide-water. The wire thus buried conveyed the electromagnetic current as before, and satisfactory communications were established for the distance of about a mile. To make the experiment more definitive, tests were made with the buried wire not laid in a straight line, but turning in various angles.

"The successful termination of the experiment may be said to have established the principle of 'wired wireless' beyond controversy. It is obvious to any one familiar with the general principles of radio transmission that it should be possible, by using different wave-lengths, to send several messages simultaneously in either direction along a single wire, each message indistinguishable except to the particular instrument tuned to receive it. Practical experiment was presently to demonstrate the validity of this assumption."

Such, then, is the method for which its originator suggests a new and highly important practical application. It will be understood that the waves that follow along the wire do not con-

Photo from International.

RADIO BROADCASTING OVER ELECTRIC LIGHT WIRES.

General Squier, the inventor of "wired wireless," and Chief of the Signal Corps of the U. S. Army, is here seen receiving music and messages from an ordinary electric light socket by another new process he has perfected.

stitute an ordinary electric current, but are the electromagnetic waves of radio, not traveling on the wire itself, but for some strange reason holding to a channel of ether which has the effect of a tube about the wire, and thus being directed to a particular goal instead of being dissipated into space in every direction.

It is suggested that there are great possibilities of conservation of power in the method; and that the problem of interference of waves conveying different messages in the air is virtually solved by "wired wireless." Should it be found that the ordinary electric light wires which run out from a power station and branch perpetually to reach multitudes of homes, can be used effectively to distribute radio messages, broadcasting will take on new aspects, and is assured a greater importance in community life than even the most sanguine of enthusiasts had hitherto predicted for it.

THE SIMPLEST RADIO RECEIVER

NOT LONG AGO A PRIZE CONTEST was instituted by *Science and Invention* (New York) the intention of which was to stimulate ingenious persons to devise the simplest possible of radiophone receiving sets. "What was wanted," the editor explains, "was an outfit that could be made by any one without knowing anything whatsoever of radio mechanics. We wanted an outfit that could be made from scraps lying about in almost any home, and from things that could be procured readily without making special fittings, etc."

The response demonstrated anew the wide interest in radio. Over eight hundred manuscripts were received, and more than one hundred models of outfits. Men in all walks of life competed, and four articles with models were received from women. The smallest outfit was wound upon an ordinary thread spool and did not weigh more than one and a half ounces. The first prize was awarded to "a young New York genius of twenty-one," for an apparatus which the editors declare to be, in their opinion, "the simplest outfit that can possibly be made." There is further editorial assurance that this is a complete and practical radio-receiving telephone apparatus, which works well, tho the cost, without

express the hope that those laymen who are still skeptical as to radio will find time to build the outfit. Here is the inventor's own account of the way to make this simplest of radiophone receivers:

"The material required is as follows:

- 1 paper container (4" in diameter)
- 13 paper-fasteners (small size)
- 2 paper-fasteners (large size)
- 3 paper clips

Illustrations by courtesy of "Science and Invention," New York.

JAMES LEO MCLAUGHLIN AND HIS PRIZE OUTFIT.

It can be made in thirty minutes, he says, with a knife or razor blade and a small nail, and is "as efficient as most of the crystal sets now being sold." Aside from the phones, it cost less than forty cents.

- 2 oz. No. 26 enameled copper wire
- 1 small piece of silicon or galena
- 1 common pin.

"Take the container and punch nine holes one inch down from the top, with a small nail, one-half inch apart. Into each hole push a paper-fastener. With pen and ink number each fastener from right to left, 1 to 9. Alongside of hole No. 1 push two fasteners with a paper clip underneath—mark GND (ground). One-half inch down from GND, punch a small hole; this is the starting point of the coil.

"Take the wire and push the end through the hole. Wrap the end around one of the fasteners GND (on the inside of the container). Be sure that where the wire touches the fastener, the enamel has been scraped off or else a poor connection will result.

"Next pull the wire tight and commence winding the coil. The total number of turns is seventy, and a tap is taken off at each of the following turns: The 15th, 20th, 25th, 30th, 35th,

40th, 45th, 55th and the 70th.

"Fig. 1 shows how to tap the coil. The important things to look out for are that the coil is wound as tight as possible, and that the enamel is scraped off the wire, where it makes connection with the fasteners. The 15th turn is contact No. 1, the 20th No. 2, etc. The next job is the switch that moves over the contacts. Fig. 2 shows how this is made. Take one of the large

ALL THE PARTS AND WINDING ARRANGEMENT OF THE PRIZE SET.

the telephone receivers, was less than forty cents. The inventor tells us that a knife or razor blade and a small nail are the only tools required to make it, and he declares that the complete set can easily be constructed in about half an hour; and that it is "as efficient as most of the crystal sets now being sold and in most cases superior to them." The editors

fasteners, push the ends through the side of the cover, close to the lid. Bend one end down flush with the side and push the other end through the top and bend over.

"Put the cover back on the container and bend the end of the fastener so that it rides over the contacts easily, when the cover is turned, but be sure that it touches each of them. Break off the surplus end.

"The other large fastener is pushed through the lid opposite the switch and is bent, as shown on Fig. 2, so that it can hold the small crystal. A short piece of bare wire (about No. 24 will do) acts as the cat-whisker, a pin is fastened to one end and the other end is wrapt around the end of the switch—the part that is bent over (see Fig. 2).

"Fig. 3 shows the diagram of connections and needs little comment.

"The telephone receiver is a single Murdock without head

band, and can be purchased for about \$2.00. Of course any other kind may be substituted.

"For the antenna one-half pound of No. 18 bare copper wire will do. This will give about 100 feet of wire. Two porcelain cleats will also be required and should not cost over 5 cents. The wire can be had for about 30 cents.

"String the wire the greatest length possible, and attach outer end to a tree or other elevation, at least thirty feet high. The other end of the wire enters the house and is attached to the switch button marked ANT and a short piece of rubber tubing should be slipped over the wire where it passes through the wall of the building.

"A good ground can be had by connecting a wire to the nearest gas or water pipe. Scrape the pipe for a length of about two inches, so that it shines, then wrap several turns of wire around it and twist tightly.

"To operate the set, bend the cat-whisker wire so that the pin rests on the crystal. Move the pin over the surface until a signal is heard; at the same time move the switch over the contacts, and leave it on the one that brings in the station the loudest. With this set in New York City using only a single No. 24 wire, 25 feet long strung up in a room, WDY'S and WJZ'S concerts came in fine, and on several occasions, the phone could be held about six inches from the ear and still the music and voice could be distinguished."

HOOKED UP WITH THE WORLD

NOT INFREQUENTLY WE HEAR the opinion expressed that the present extraordinary vogue of radio represents "a craze that can't possibly last." The holder of this opinion is usually a city man who has some friends with whom the receiving telephone is probably little more than a toy. Many such there are, doubtless. But the future of the receiving telephone in the home does not rest primarily with the city dweller who is within easy reach of numerous entertainments. It rests with the residents of the villages and with a farm population numbering thirty odd millions. Here are people who can not step round the corner to an entertainment, nor gain the news from an evening paper.

But now the radiophone brings news and entertainment into their homes. An inkling of what this means may be gained from an account of the personal experience of a Kansas farm boy, named Hugh Stout, as related in the *Kansas Farmer* (Topeka). It is a matter-of-fact recital; yet even five years ago it would have seemed like a fantastic dream. The youth who is speaking lives away out in Kansas; but in his daily experiences he is a cosmopolite. Let him tell the story:

"We have been using a radiotelephone receiving set for about a year and have been regularly receiving market reports, concerts, news items, conversations between operators, reports of stolen automobiles, descriptions of men hunted by the police, and a number of other things. On the evening of February 24 we heard an organ recital from a church in Pittsburgh, Penn., and a concert given by the *News*, of Detroit, Mich.

"The stations which we can hear best are Pittsburgh, Detroit, Kansas City, Denver, and Madison, Wis. We also hear occasionally from Oak and Wahoo, Neb., Slater, Jefferson City and St. Louis, Mo., Chicago, Ill., Dallas and Childress, Tex., and from our neighbors at Wichita, Great Bend and Kiowa, Kan. We get the correct time twice a day from Annapolis, Md.

"The set which we have is mounted on a wall board panel which is fastened to a wooden box containing a type 'B' battery for the audion tubes. The tuning portion of the apparatus consists of a three-coil mounting and two sets of coils and two variable condensers. One set of these coils is for the radiotelephone and all stations using a wave-length ranging between 180 and 450 meters. Two of the coils have 35 turns of wire, while the third one has 25 turns. The other set of coils is for receiving messages from air stations using a wave of from 10,000 to 20,000 meters in length.

"For a detector we have a Cunningham detector tube. The control for this detector consists of a rheostat, a type 'B' battery switch and a fixt grid condenser. We use a Radiotron amplifier tube with a transformer and socket and a rheostat to control the current to the filament in the tube. We use two sets of 3,000 ohm receivers.

"The aerial is made of three wires about 125 feet long and 25 feet high. We have found that by using the telephone line in place of the aerial and the aerial in place of the ground we get better results and have less interference from static electricity. This will not always work on all stations as it change the wave-length of the receiving set.

"A set like the one we describe will receive messages from radiophone broadcasting stations and from spark wireless telegraph stations. It would cost a little more than \$60 with a 6-volt storage and a 60-volt dry-cell battery. We use a number of flashlight batteries connected together in series.

"We did not make up any of the units of this set which we use because we think that factory-made instruments are more satisfactory since they have been made by experts and have been tested before being sent out. The units which we now have we mounted on the panel ourselves, but we had some help in hooking them up properly.

"The other evening we had some guests here at the farm and all of us listened to a splendid concert by a symphony orchestra in Chicago. At 8:55 I changed the coils on my set for those adapted to the greater length waves and tuned up for a message from Annapolis which sends out the time every evening. For five minutes before the hour, the Annapolis operator dispatched a continuous signal that sounded like a mechanical hum, each variation marking the elapse of a second. At exactly the hour the sound stopt for an instant and the listeners set their watches to Government time sent 1,000 miles through the air."

A POCKETBOOK RADIO SET

THE ATTENTION OF CHRONIC INVALIDS and bed-ridden convalescents is called to a way in which they might beguile some tedious hours by imitating Mr. Raymond M. Moore, who made a compact radio receiving set out of an old pocketbook, while confined to bed recovering from a long illness. In *Radio News* (New York), Mr. Moore gives a cheery account of the way he did it.

"Why not install a wireless in your billfold? Especially when you're broke! After reading in *Radio News* about a prize for the smallest portable radio outfit, I decided my billfold would be of more use carrying a wireless than money. This is the method I used:

"Take a billfold or card-case of the ordinary kind that folds over twice.

"The coil to the extreme right is the secondary and is constructed on the pancake style in the following manner: Take a

piece of cardboard or wood $\frac{1}{2}$ " x $1\frac{3}{4}$ " x $\frac{1}{4}$ " and paste a piece of cardboard 2" x 4" on either side so the first piece forms a core for the coil. Then wrap 450 turns of 31 S.S.C. wire on this, taking a tap every 90 turns. This makes a coil about 2" x $3\frac{1}{4}$ ". Break frame away from it and fasten on the billfold with an ordinary needle and thread, running the taps under the primary to switch.

"The primary is placed on the center of the fold and is constructed and fastened on much the same principle as the secondary. It consists of 820 turns of No. 28 S.S.C. wire, a tap on the first 80 turns and every 40 thereafter, making seven in all.

"The extreme left of the fold is given over to the panel or control. This is a piece of fiber or some stiff insulating material $1\frac{3}{4}$ " x $4\frac{1}{4}$ " x $\frac{1}{8}$ " and is slipped under the transparent cover where identification card belongs. On this are mounted the primary and secondary switches, the crystal detector and binding posts. The condenser is also mounted here.

"The primary switch is of the usual rotary type and has a 1" radius. The small fiber handle is grooved and slipped on a

lever, as there is hardly enough room for a screw in it. Since such small switch points are hard to get, it is of interest to know I took these out of old electric-light sockets. They are just right. The bearing for the primary switch is also the antenna binding post. Both switches increase counter clockwise.

"The secondary switch is much the same as the primary, but is a little longer to allow for the condenser which is mounted under it. It has a radius of $1\frac{1}{2}$ " and uses the upper fone binding post as a bearing.

"The condenser which is mounted between the two middle binding posts or the fone binding posts is $1\frac{1}{4}$ " x $1\frac{1}{4}$ " square and has flaps on each side to connect to posts. It is of the usual stoppage variety.

"The detector cup or clip is also directly connected to the lower fone binding post and is set down in the panel. It should be made of good spring brass to hold the crystal well. The cat whisker wire is fastened on the lower right post.

"The post directly below the detector cup is the ground. About 10 feet of wire are fastened to this for use as ground connection with a clip on the end which can be hooked to anything handy in the ground line or to a tinned spike driven into a tree trunk. This is wound over the antenna holders when not in use.

"The coil on the left of the panel is the antenna, or if not needed for that, the fixt loader. It is made of about 100 feet of No. 28 wire and is wound on two pieces of wire bent in U-shape and a long tail which is inserted between the end of the panel and the end of the fold. As much wire can be put on as is convenient and needed to give satisfaction. One end of this is fastened to the antenna binding post and the other to a clip similar to a ground clip.

"This makes an outfit which is complete, except for the fones, in $19\frac{1}{4}$ cubic inches or an overall measurement of $4\frac{3}{4}$ " x $3\frac{1}{4}$ " x $1\frac{1}{4}$ " when folded to carry. In fact it is no bulkier than the ordinary well-filled billfold. The coupling is varied by opening and closing the right-hand flap.

"Care should be taken in placing the coils to see that when closed the primary is directly below the secondary. This is done to secure the best coupling."

HE HAS MUSIC IN HIS PURSE.

Raymond M. Moore, who made the pocketbook radio outfit while sick in bed. What he can do when he is well is not stated.

LETTERS - AND - ART

LITERATURE DRAMA MUSIC FINE-ARTS EDUCATION CULTURE

REHEARSING IN THE COLD OF THE MARINSKY THEATER.

Last winter the silk costumes of the ballerinas froze to their bodies; but devotion to their art helps to sustain life in these one-time favorites of fortune.

THE BOLSHEVIKI STAMPING OUT ART

EVERY "PARLOR-BOLSHEVIK" in this country is recommended to read the manifesto of the suffering musicians, composers, artists and men of letters in Russia to-day and "hang his head in shame." Mr. Finck of the *New York Evening Post* makes the proposal, tho he does not say how that will help the sufferers. A more practical proposal issued from Sergei Rachmaninov, the pianist, who organized a benefit for those suffering fellow artists and paid for the hall himself, so that expenses should not eat a large bite out of the proceeds. Tales of the hardships of the artist class in Russia have filtered through to us from time to time. But nothing so circumstantial as the account which Rachmaninov sends to Mr. Finck has come under our notice. "The creative arts are most seriously menaced," he says, "by the subjugation that the present ruling classes have seemed to take delight in imposing upon Russian men and women of intelligence." To make the situation clearer:

"Imagine, if you can, a régime in the United States that prohibited by force the publication of any current literature, magazines, books, or any printed outlet for the theories and thoughts and fictions and dramas that surge in so many American minds. Imagine a condition that made of the creation of new music or wondrous paintings an effort not only to be derided and ridiculed, but a crime as well. In this same picture the position of university and college people would be reversed from normal conditions in that they would be viewed by the ruling classes much in the same light as one looks upon the criminal class here to-day.

"Under such conditions over a period of six or eight years, what would happen to the prospect of a future for American literature, music, art and general culture?

"One says that such a condition could never be in the United States: that the United States is too large and that there are too many people here to allow such a development.

"Russia is larger in territory and in population than the

United States. And yet all that I have pictured has happened to Russian art and cultural progress.

"I do not want to speak of the life our brother artists in Russia are forced to lead, they and their families. Rather than allow them to exercise their genius, the ruling classes drive everybody who is suspected of bourgeois tendencies to the most menial labor, even to cleaning the streets. Hard work never will hurt anybody. But when a violinist, a doctor of philosophy, a poet, or a great portrait painter whose hands have been made for honorable effort in honorable professions is forced for no reason under the sun, except the mad whim of temporary rulers, to the bench and the plow, the mop and the hoe, then there is danger indeed that the brave spirits within these artists may droop with discouragement, and their messages die unspoken for the delight of posterity the world over.

"They send appeals to us even for paper on which to write their verses or their songs. It is unbelievable almost that they should be denied the privilege of securing blank paper, but the hatred of the ruling classes for intelligence and culture has no limits.

"For some time those of us who have many friends among the desperate artists of Russia have been able to assure ourselves that the little assistance we could send them really reached them through the American Relief Administration.

"These friends are unable to write much of their plight to us. They do not dare to tell anywhere near the truth, for the censors would persecute them even more if they had been detected revealing actual conditions. However, the Relief Administration requires that a receipt signed by the recipient to whom relief has been sent shall be returned to the donor in this country. And occasionally our friends there scribble a few poor lines on this receipt in addition to their signature. It is too often the only communication possible for them, as a postage stamp costs 10,000 rubles or what once was the equivalent of \$5,000.

"It is not only in Russia that Russian men of letters, musicians, and artists are affected by this situation. One of my best friends, a poet, has been in Paris. He nearly starved. But his genius has no outlet because it expresses itself in Russian, not in French or English. And there are no Russian publications to-day.

His case is one where I have been glad to have been of some small but direct assistance.

"The cultured men and women of the world will not allow death of the arts to stalk in Russia. The little help that a few of us have been able to send has been only a drop in the bucket. Relief, we are sure, will be forthcoming. Otherwise the courage and genius of our brother artists will sink in stagnation until weeds overwhelm them. And the world will be the poorer."

The press announces that from the concert, at which Mr. Rachmaninov with the New York Symphony Orchestra performed his concertos in C minor and D minor, \$7,500 were realized for relief purposes. Other efforts made by Morris Gest to furnish relief to stage hands and theater employees whose status has not brought them within the sphere of help afforded by relief organizations realized a still more substantial sum. Members of the Russian ballet are also heard of as suffering almost extreme want. Not long since the press published an account of the extreme distress of Mme. Mordkin, who was saved from actual starvation by the Near East Relief organization. The New York Times published the following dispatch from Paris from one of the workers in the Near East Relief:

"Mordkin, who has been lionized by society throughout Europe and the United States, has been dancing recently in the Municipal Theater at Tiflis for the equivalent of about 50 cents per month. He and his wife were too proud to beg or to apply to soup kitchens for rations. When the relief workers learned of Mme. Mordkin's plight, it was barely time to save her."

A picture of cheerfulness, devotion and starvation is given in a letter by Mr. Sanford Griffith of the New York Herald, who recounts his observations during a personal visit:

"The plight of the Petrograd Opera (Marinsky) is a very critical one. The orchestra was reduced entirely to bread and tea, and their bread ration was so low that some ten men were sick all of the time from malnutrition. Twenty more unable to hold out longer have left for the land, some of them finding work in the German Russian colonies. But 150 musicians have remained faithfully at their work despite every conceivable hardship. Their salary of \$4 a month obliges them to find all kinds of work on the side to live.

"Singers received on paper in November as high as two million rubles—\$20. In reality they received but a small part of this, their pay being one to three months in arrears. They were still selling their remaining trinkets to live. Many of them work at the docks. All must hunt and carry their fuel and food.

"The dancers were receiving at an average of 100,000 rubles a month, the equivalent of \$1. These have a very uphill time. Some of them dance in cabarets, concerts, and wherever else they find a public. They dance in old patched shoes, which damage their feet. As the theater is practically unheated, the entire personnel suffers from cold. On one occasion the silk chemises of the ballet actually froze on them. Altho the dancers get better food than some other classes, it is entirely inadequate.

"There are several hundred youngsters at the ballet school. For want of food the number of pupils is no longer being increased. Sixty of these children classified as particularly undeveloped are already getting American Relief food. All of the children, however, need it almost equally.

"There is a large personnel of chorus, scene-shifters, seamstresses, and the like. These receive very irregular pay, shifting in any way they can. They have kept an unbelievable loyalty to the theater, working under most difficult conditions, some of them literally until they dropt.

"I visited several of the prominent artists in their homes. Alexandre Benoist lived in very reduced circumstances, working away at scenery and staging despite cold, absence of paints, and despite food shortage at home. 'We have nothing but our art to live for now,' he remarked to me.

"It occurred to me that if music lovers in America knew something of this specific need they would be happy to give help to these plucky Petrograd artists. Food packages could be sent through the American Relief Administration with the specification that they go to any particular person or group in the Opera. I am told that old clothing could be sent in the same way. This is equally necessary. While the artists have their old finery for the stage, they are themselves now reduced almost to rags on the street."

PENALTIES OF BEING A CLASSIC

THE STARVING POET who found his bitter bread sweetened by the thought that posterity would do him justice was mercifully kept in ignorance of the caliber of that audience. One may permissibly wonder, says Mr. James Branch Cabell, "if time does actually right all." When the creative writer consoled himself over "posthumous atonement for the current era's stupidity," he rarely can have tried to

Courtesy of the Near East Relief.

ONCE THE FURORE OF THE METROPOLITAN OPERA.

Mordkin, the dancer, with his wife and son. Mme. Mordkin was last winter rescued by the Near East Relief, at the point of starvation.

imagine his readers. Mr. Cabell tries in the *Literary Review* of the New York Evening Post to reduce the idea to absurdity by suggesting that "it seems at least remarkable that we who have made the *Saturday Evening Post* a literary success second only to the Telephone Book should be the clear-eyed cognoscenti to whom dead poets appealed; and that it was in our standards of criticism they invested their life's labor and confidence. For them 'Les Contes Drolatique' were really written for the beguilement of Dr. Brander Matthews, and it was with an eye upon Mr. H. L. Mencken that à Kempis compiled the 'Imitation of Christ.'" Mr. Cabell invokes history to prove that our classics did not live through their inherent merit, but by that chance which managed to spare some from oblivion. "There is no vaguest reason to suppose that of the Greek and Roman writers we have preserved, by any standards, what was best worth keeping; nor that of such authors as Æschylus and Aristophanes, of whom oblivion has spared more than the name, we have retained the master works." When he comes to treat of "the vitality of the mediocre" we find impaled some classics of our own tongue:

"The quality which makes for acknowledged greatness in a writer is—I know not how many textbooks have assured us—the universality of his appeal. His ideas are, in brief, the ideas which the majority of persons find acceptable; and Shakespeare has been praised, for once with absolute justice, as 'the myriad-minded,' because myriads have always had just such a mind as his. The writer of 'classics,' in short, has need of quite honest and limited thinking, and of an ability to utter platitudes with that wholesome belief in their importance which no hypocrisy or art can ever mimic. Of the letters of a foreign nation nobody can speak without some danger of magnifying his everyday folly. But it appears safe to point out that the main treasures of our national literature, including its British tributaries, really are, when considered in the light of the ideas

they express, rather startlingly silly. The 'ideas' of Chaucer and Shakespeare and Milton, when once looked at without prejudice, appear to wander sheepishly from the platitudinous to the imbecile, the while that their 'stories' rove, in somewhat more the manner of the mountain goat, about the heights of idioey. And when you compare the reality with the ideas which Scott and Thackeray and Dickens quite gravely express about human existence, the incongruity breathes more of pathos than of mirth, for these novelists express the usual ideas.

WHEN THEY CAN GET A RIDE

the lot of the Petrograd ballerina finds some alleviation. These are seen leaving the Marinsky Theater.

"Most persons really do believe, for example, that complete and abiding happiness is to be won by marriage until they have tried it; and, for that matter, widows have been known to carry this romanticism to the extreme of taking a second husband. And most persons do quite honestly believe that in the outcome wickedness is punished and virtue is rewarded (again) with a complete and abiding happiness, and in consequence of this belief most persons make it a point in social intercourse to check the most natural sort of impulses toward murder. Most persons do, in fact, for various reasons think it best to be 'good'; and do expect, for equally various reasons, to be happy by and by. Now, with hardly an exception the concededly 'classic' writers have, without any detectable skepticism, set forth such popular notions, with every fit adornment of rhetoric and cunning diction: and their ideas have endured for the simple reason that they were endurable."

Mr. Cabell sees it "a rather dreadful fate" to become a "classic"; and in many cases it carries a legend curiously at variance with the moral ideas "imposed," as he seems to think, on these writers:

"Once the writer is thus deified, his private character is the first burnt offering; for his cult has need of a legend, by preference a highly colored mythology which reveals the demigod to be no better than anybody else.

"Nor do many of the auctorially great escape calumny in the form of a Complete Edition, wherein their self-confessed failures at writing, and the chips and rubbish of the workshop, and the rough drafts and notes designed for the waste-basket, and the politic ephemera into which most writers are allured by kindness and advertising purposes, are piddlingly amassed to be bound up, in pompous scavengery, with all the unsigned refuse from the backfiles of magazines that can be 'attributed' to the victim. None other of the dead has even his appointed executors combined to convict him of idioey. And, of course, those luckier immortals who are recollected, however infrequently, by virtue of one book alone, are but too apt to get into some such collection as Everyman's Library, and have the upshot of their existence identified with the twaddle of Trollope and Jane Austen and Mary Cowden Clarke."

GENIUS AND DRINK

"NO NATION ever produced and maintained art without freedom of thought such as drink implies." "You can not have good art or good literature without wine."

These pronouncements of the famous artist, Mr. Joseph Pennell, spring not so much from a belief that alcohol is a necessary stimulant to inspiration as from concomitant circumstances.

When you take away "such a privilege as wine, then freedom takes to its wings and the graces are not long in following it." Mr. Pennell finds a kindred spirit in Sir Arthur Quiller-Couch, professor of English literature at Cambridge University, England, who takes up a similar position. His creed is stated thus: "Man is in the world to enjoy all the world can give, so that he use it temperately; that temptation to excess inheres in every pleasure, and man's business is to understand this and regulate his life accordingly." In an interview reported in the New York *Herald* Mr. Pennell elaborates his thesis and we see that the prohibition of alcohol is only one element of a system that he finds ruining our corporate life:

"You can not have good art or good literature without drink. It is absolutely impossible, and unless something is done toward amelior-

ating the prohibition laws, then art will go to the devil in America.

"I have been suspecting its destination for some twenty-five or thirty years, for in all that time and more there has not been a noteworthy development. What's the trouble? We are being standardized and sterilized and purified and uplifted to the point of stupidity. All the originality is being taken out of us by the people who insist that life must be lived by pattern—the pattern to be devised by themselves only. There is plenty of originality and courage in the United States if the standardizers would keep hands off.

"At the present time I should say that the art appreciation of the average American was about equal to the art appreciation of an Abyssinian. The average American is bored by art. We did not even appreciate Whistler, one of the shining geniuses of all times, and it was only the other day that here in New York a Cezanne sold for \$21,000 and a Whistler brought only \$7,000. Americans are money crazy and movie crazy. The press has degenerated and is dominated by advertisers. There is a saturnalia of vulgarity and ugliness. Beautiful old Colonial houses are being torn down to make way for atrocities labeled French chateaux and Italian villas.

"When one walks or rides about, one scarcely perceives a gleam of intelligence in the eyes of the passers-by. Everywhere about are plain signs that this country is taking the worst traits from the rather poor lot of Europeans we have been getting for a generation or so. Even women are coarsening obviously and losing their beauty. They insisted on becoming our fellow citizens and what has happened? They now have the privilege of standing in the subway while the men sit.

"It is absolutely a rare thing nowadays to see a pretty American woman. All honest men must admit that women are less beautiful than formerly; that they have lost a certain aristocratic something that made them charming, a certain delicacy and grace abandoned in the passion for athletics and rugged bodies and political privileges."

"One looks over the arts with a feeling of sadness for the little that is being accomplished," continues Mr. Pennell. To the architects he grants a little more. They have given us the skyscrapers, but "that is the one beautiful thing the American architects have created." He goes on:

"If they had been left to themselves no man knows what glorious towers they would have created, but the regulators and standardizers couldn't keep their stupid hands off, and the zoning and height regulations have throttled a great distinctive art. Gaze at that abortion called the Equitable Building, a blot on the skyline. A few years ago the skyline was a miracle of loveliness. Now it is beginning to resemble a string of packing boxes set on end.

"Nor can they even let a really beautiful thing alone." They have stuck a hideous red light up in the Woolworth Tower and I suppose they will put a gigantic ten-cent piece on the tip of the tower next thing we know. Still, the skyline is wonderful and none appreciates it so much, I think, as our foreign visitors of culture. When H. G. Wells was here he came over here at this hotel to call on me, and we sat and talked by this window, looking out over the river and the gleaming lights of New York.

" 'This is no city. It is an enchanted thing,' Wells said. . . .

"There are plenty of painters in America, but there are very few artists. Do you think I am pessimistic when I say that art has been degenerating, and that the art of illustration has fallen from a once proud height? Do you know that thirty or forty years ago such men as Whistler, La Farge, Winslow Homer and Timothy Cole were illustrating our magazines and that people knew and appreciated their work? In those days, with such illustrations, magazines were saved and bound into volumes that were treasured.

"Who saves magazines now? Why should they be saved? Like the newspapers, they are crammed full of unimportant junk, 99 per cent. worthless. . . .

"You asked about the Metropolitan Museum of Art and its value to artists. In my opinion the Metropolitan Museum of Art is getting the taxpayers' money under false pretenses. It is a veritable graveyard. They never encourage living artists up there. They sit around and twiddle their thumbs. It seems to be an American habit to look for art only in the past and to value art according to its antiquity."

Mr. Pennell's argument has not been so easy an invitation to the critic as Sir Arthur Quiller-Couch's. His position is thus combated by the *Chicago Journal of Commerce*:

"On the literary phase Sir Arthur holds that no total abstainer can be perfectly equipped for either the enjoyment or the production of high literature, because it demands what he calls 'total manhood,' and total abstinence from intoxicants is a restricted modification of that. Carried to its logical conclusion this conception of total manhood requires a temperate indulgence in every physical and mental pleasure, regardless of the prohibitions society has built up to protect manhood and womanhood, the family, and morals generally, from those who seek total manhood regardless of law, which itself is a series of permits and prohibitions. Sir Arthur's argument is quite as much against restrictions on the use of opium and other destructive habit-forming drugs, as against restrictions on intoxicating beverages. Strange that the professor did not mention two great literary lights who were opium-eaters—Thomas De Quincey and Samuel Taylor Coleridge. Yet De Quincey, disussing 'Coleridge and Opium Eating,' said of him and his habit:

" 'We are of opinion that it killed Coleridge as a poet. . . . It defeats the steady habit of exertion, but it creates spasms of irregular exertion. It ruins the natural power of life; but it develops preternatural paroxysms of intermitting power.' "

"Who could know this better than De Quincey? And has not this been the case with literary men who—with newspaper men—habitually use liquor, moderately? We can not concur in the Cambridge man's conclusions, because his evidence is based on a world 'wet' for thousands of years. We must have a 'dry' world for at least a few generations before fair comparisons of literature in general can possibly be made. It may be that Sir Arthur believes 'preternatural paroxysms of intermitting power' in literature more valuable to humanity than the general 'steady habit of exertion.' We do not. We stand rather for all those prohibitions of things evil when used to excess, as best for mankind generally, and as promoting the greatest good to the greatest number."

CONSOLATIONS OVER LOST ART

A VIEW different from Mr. Pennell's on American absorption of foreign art is given in the *American Art News* (New York) in referring to comments that come from Berlin and London on the gradual dissolution of great European art collections. Thus:

"We find regret tempered by the hope that this westward

Copyrighted by Paul Thompson.

HE SEES ART GOING TO PERDITION.

Joseph Pennell declares: "You can not have good art or good literature without drink."

movement of art objects will, in the end, help the art of Europe by preserving its tradition more firmly than ever in the New World.

"Writing on this matter of the dispersal of so many great private collections in Germany and the countries that formed the Austro-Hungarian Empire, a Berlin critic observes that, marching with the geographical and political alterations, is a transformation in the cultural circumstances of Europe, a truth so profound and so far-reaching in its effects as to give cause for much speculation on the eventual outcome. A London writer on this western movement in art takes consolation from the steady procession of British masterpieces to America in that 'it is all to the good that English art should be well represented in the newer homes of our race'; and declares that the exhibition of English portraits and landscapes in the United States can only result in strengthening 'the hold of English traditions and ideals in the great Republic of the West.' "

"That some of our art teachers are awake to the growing importance of the collections in American museums is shown by the fact that this summer, for the first time, a party of American art students is to be taken for a tour of the principal art centers of the United States. This artistic pilgrimage is sponsored by the University of California and will leave San Francisco on May 17. The motive for this American art tour is wholly admirable and may lead the way to the forming of a custom, time-honored in Europe and too long neglected here."

RELIGION-AND-SOCIAL-SERVICE

"THE AMERICAN LOURDES" DESTROYED

"THE ALMIGHTY BELIEVES in fire engines as much as he believes in churches," we are told in an announcement of the burning of the famous church of Ste. Anne de Beaupre, in Quebec, Canada, where, tho the priests in procession prayed against the flames, no miracle happened. The church, fired, by a curious irony of fate, from sparks originating in a pile of crutches left by those who had been cured at the shrine, was destroyed, the loss involving the big total of \$1,200,000. It was only the heroism of a monk that saved the relics

procession has worn the footways to the shrine and added to the huge store of crutches amid which the conflagration started because of defective electrical insulation. The original chapel fell to ruins, and the church which was just burned was the third or fourth which has housed the shrine. It was a basilica of great architectural beauty, famous over the whole continent. More wonderful than the outward lines of the structure, says the Schenectady *Union Star*, "were the amazing adornments, made largely from the offerings which grateful worshipers had

thrown upon the floor at the feet of the beautiful statue of the saint with its sunburst of solid gold, which persons who have seen it never will forget." Of the healings which are reported to have been wrought at this shrine and which "continue to this day," every person, says this paper, must judge for himself:

"Those who have been casual sightseers at this most unusual spot will testify, however, to having seen heaps of crutches, ankle braces and other devices which crippled persons are accustomed to wear. Crutches of every description, from the rude limb of a tree with its natural crotch, to the elaborately made crutch of the rich, might be seen here. If you are inclined to accept these as evidence, then an explanation is required to account for them. People do not journey many miles for the mere purpose of throwing away a crutch or two. These occurrences are not far-away legends; they have been almost daily events up to the present time.

"Medieval superstition? Perhaps. Who shall say where faith ends and superstition begins? Who shall account for the persistence of the superstition, if it be superstition, through three centuries down to these skeptical times when everything has to be accounted for with demonstrable reason? Who shall say that it is more remarkable that persons whose faith in the healing power of a sacred relic are more credulous than those who with a simple device, whose working nobody can fully explain, listen to voices in the air from unseen sources hundreds of miles away? Is one more mysterious than the other?"

It would be a sorry day for humanity, thinks the New Haven *Journal-Courier*, if such faith as has been exemplified in the history of this church failed on the earth—"if men and women ceased to believe that a power outside themselves could be invoked when all else failed. . . . That the priests could not save their shrine may prove nothing. 'He saved others, Himself He can not save.'" Yet,

"It is not well to buttress superstition. The plea is for an intelligent faith, but some faith is better than none. It is more important that the Canadian French reach out to Ste. Anne, whatever the visible results, than that they know nothing except that two and two make four. Let us get as much intelligence in faith and in all else as possible. We shall then be no less ready to attune with the influences of such places dedicated to holiness. The most skilled of practitioners will tell you that to wish to get well is much; to believe one is to get well is tremendously in one's favor. The faith cure is confirmed in the laboratory. Religion is rich in assurances.

"Superstition, belief that natural law is balked by faith—when really they cooperate; ignorant, inert dependence on miracles to be worked mechanically for a price, by mortals not better than ourselves—with schools and wider knowledge of physical phenomena these ancient credulities and absurdities

Photo by Underwood & Underwood.

THE FIRE STARTED AMONG THE CRUTES OF THE HEALED, which, by an irony of fate, only served as tinder to the fire which recently destroyed Ste. Anne de Beaupre, America's most famous shrine.

and the statue of the saint after whom the basilica had been named. But this destruction does not necessarily mean that there are no miracles, says the New York *Evening Mail*, asserting that "we can not get along without the supremely wonderful. Every doctor knows that faith is half the battle against disease. . . . Let the clergyman keep on praying, but let the fireman also pour on water."

"The American Lourdes," as America's most famous shrine is sometimes called, has a curiously interesting history. In the early days of the French settlement, runs the story, a boatload of Breton sailors found themselves in sore danger in the broad reaches of the St. Lawrence. Tossed about by a violent storm, they could see no land, and were in imminent danger of being drowned when they bethought them of praying to Ste. Anne of the Bowsprit, the patron saint of sailors. They vowed to erect a chapel to her if they were brought safely to shore. They were saved, and, true to their promise, they diligently raised the rude edifice which in after years became the great church whose loss is now generally bewailed. The first recorded miracle, we are told, occurred in 1658, when tradition has it that Louis Guimont was healed. In 1670, at the request of the first Bishop of Quebec, a relic of Ste. Anne was brought from France, and the wonders increased. For two and a half centuries since a steady

fade away. Yet there will never be a time when the discouraged in their extremity, having exhausted the resources of men, do not look up with confidence to heaven. It is very human that they should seek the shrines of the devout, whatever name or creed they bear—places sacred through their dead. Thus they think they draw nigh to God, and to such is the promise."

THE CAUSES OF FEUDS AND MOONSHINING

MURDER AND MOONSHINING are as vigorously condemned by the majority of the people in Kentucky's mountains as elsewhere, and if these people could have their way, pistol-toting, illicit distilling and other forms of lawlessness would be effectively prohibited. As a matter of fact, the lawless element is decidedly in the minority, writes Professor John F. Smith, of Berea College, in the *New York Times*, a fact, he says, which is not generally recognized by reporters and editors who are given to writing highly colored news accounts of Kentucky's feuds and julep-drinking colonels. But that there are too many feuds and pistol duels, Professor Smith frankly admits, and in explaining why such conditions exist he shows that the causes are external rather than inherent in the native temperament and similar to those that bring like results in other but less advertised districts. Berea College is in Kentucky, and Professor Smith can, therefore, properly claim to have some knowledge of the subject. In the first place, he points out, there is a "submerged tenth" in the Kentucky mountains just as there is in Boston, New York, Chicago, San Francisco and other cities, and in Kentucky it often holds the balance of power at election time just as it does in some of the Eastern cities. But often the most prominent families are involved in the "community killings," since "the mere possession of wealth and standing does not render any one immune from passion and hatred." An indirect cause for much crime, Professor Smith finds to be ineffective church work, tho—

"It should be said that a very large percentage of the churches in the mountains do a wonderful work for the people around them. The ministers in many of these are earnest, capable men, thoroughly devoted to the best interests of the people, and the church members are in accord with the laws of justice and right living. But there is another class of churches, rather uncomfortably large, that are painfully weak and inefficient. The ministers in many of them are unlettered men. Tho honest and devout, they are not trained leaders of the people. They do the best they know, but conditions have entirely outgrown them. They antagonize the young people, who would be willing workers of the church if they only had an opportunity and a leader. The preaching is often entirely out of keeping with the needs of the day. In numerous cases their manner of delivery is spectacular and medieval, and their sermons are often monotonous recitals of creeds, isolated verses of Scripture, and denominational differences.

"Tens of thousands of people have very little to do with the churches because the pulpits furnish no spiritual food for them and because there is no definite constructive program—a condition not confined to the mountain area of Kentucky. The people are naturally inclined to be religious, but I frankly admit that I see little hope for religious work in the churches of the 'other half' until a new type of preacher embodying the devotion of the old pioneer preacher and the qualities of the modern highly trained leaders of men enters the pulpit. The people deserve strong, constructive leadership, but it is not at present available. Only the strongest leaders who have had thorough training in rural sociology and economics should ever go out under church boards to become leaders of the mountain people. And they should never call themselves 'missionaries.'"

Another serious effect on life in the mountains is its isolation, which, tho it does not of itself lead to crime, yet produces factors which conduce to violations of the law. It puts distance between thousands of people and good markets. This accounts for much idleness, "for why should large crops be produced when there is no ready market at hand?" And among the multitude of troubles which idleness breeds in this particular instance is the making of "moonshine" whisky. If a father with a large family to sup-

port produces a large crop of corn, he can't sell it, unless at forty cents a bushel. But turned into "moonshine" mash he can get \$50 a bushel for it. Furthermore, besides making the best kind of consolidated school impossible, writes Professor Smith—

"Isolation makes it impossible for thousands of children and mothers to have adequate medical care. Doctors are scarce and roads are often almost impassable. Physical defects go uncared for, which frequently contribute to delinquency and crime. Nurses are in most neighborhoods not available. There is little medical examination of school children. Thousands of people are still inclined to give much attention to the advice of granny doc-

BEFORE THE FIRE.

The disaster is reported due to defective wiring, which ranks high in the list of causes of our too numerous church fires.

tors. All this is true because the State Board of Health has not the means to put enough forces in the field to carry on to the heads of the hollows."

The spirit of protest is still another cause of crime, says Professor Smith. People protest in many instances against a hopeless future. "It is often hard to wring a living from steep mountain fields; this gives rise to discouragement which may lead to rash acts or to violence." Then a very potent cause of crime is the "weak arm of the law," by which the writer means to say that in Kentucky mountains, as elsewhere, the laws are not always properly enforced. Lastly, some of the regions "have been on the border of pioneer conditions, and the people there have been influenced by the freedom and other forces that always operate under such conditions. And during recent years there has been a great awakening in the industrial life of many parts of the region which has been accompanied by all the various ills and constructive steps that invariably accompany such development." Professor Smith proceeds:

"Now, from what has been said any one may readily see that the things that cause crime in the Kentucky mountains are exactly the same as those that cause crime anywhere else in the land. The people of this great region are just like Anglo-Americans anywhere else. They are mountain people for geographical reasons only. They are subject to the same impulses, have the same hopes and high ideals, encounter the same obstacles in law enforcement, are much given to talking over ways and means of improving their churches, schools and neighborhoods. Many of them have had great obstacles to overcome and have reached old age with a rich experience of accomplishment that is well worth living for. The majority look forward with hope to a greater Commonwealth that will offer ample opportunities for their sons and daughters to succeed in life and make men and women of influence and usefulness."

THE CRESCENT'S SHADOW ON THE CROSS

ISLAM HAS DEFEATED CHRISTIANITY in the very land where Christianity was cradled, is the alarming report of a missionary whose work lies among the Mohammedans, and who warns us that from its strongholds in North Africa and Western Asia the power of Islam constitutes an ever-menacing challenge to the greatest of its rivals. Wherever the two faiths conflict in the Orient few of the followers of Mohammed are taken into the Christian fold, and these few are said to be unstable in their new faith. In all Northern Africa, writes Dr. Samuel M. Zwemer in *The Moslem World*, there are, perhaps, less than 300 living Christian converts. In Arabia there are less than fifty; in Persia less than 200; in Syria, Turkey and Persia, less than 200. In Malaysia, however, says Dr. Zwemer, who is stationed in Cairo and who is regarded as an authority on Islamism, there are more than 40,000 converts from among Pagan-Moslems; in India and China perhaps 10,000. "Islam has often been referred to as the challenge to Christian Missions," writes Findlay Andrew from Western China, says Dr. Zwemer, "and 'once a Hwei-hwei (Moslem), always a Hwei-hwei,' may rightly be said to be a direct challenge to the Church of Christ to-day. During the past few years a few Hwei-hwei have been reached with the Gospel, and after a profession of faith have been accepted either as Church members or as enquirers. The number has, however, been very small, and of those who 'have kept the faith' only about one remains in Church fellowship at the time of writing."

Is then the Cross defeated? asks Dr. Zwemer. His answer is that "victory will come by advancing on our knees, with dauntless faith, and in a hope that refuses to be baffled. Heroism is tested on the battle-field, not in the camp or the barrack-room. The Gibaltars and Verduns of the non-Christian world challenge our valor, when circumstances are most discouraging."

Islam and Christianity have often been described in terms of social ideals, standards of civilization, or political conquest; but primarily, says Dr. Zwemer, they are spiritual forces in their origin, their history, their goal. And the two have always been in conflict and always must be arrayed against each other. Says Dr. Zwemer:

"We admit the stupendous strength of the spiritual forces that exist and exert their influences in the world of Islam, but it is perfectly evident that these forces are incompatible in their aims, and irreconcilable in their ideals, with those of Christianity. The two religions have always been rivals, not allies. That this is unavoidable in the intellectual sphere is clear even from a casual perusal of the Koran. Socially also they are diametrically opposed to each other, both in their history and present-day program. Still more are they in conflict because of the deep religious convictions of their votaries. The more one studies Moslem life, knows it, and learns to love individual Moslems, the more one realizes that at their heart and core the two systems of thought and life are irreconcilable. The two may agree to live and let live, but they can not merge or speak a common tongue."

FOR A JEWISH-CHRISTIAN ENTENTE

A UNION OF CHRISTIANS AND JEWS for the moral reconstruction of Europe would have, we are told, more positive and far-reaching results than those following from any general conference of States still largely governed by self-interest. It would tend to "set the world far on its way to permanent peace." Jew and Christian worship the same God; both have the same moral code, and by stressing their agreements instead of wrangling over their differences they would find that there is nothing to prohibit or prevent a cooperation which would be mutually helpful and for the good of the world at large. Happily, notes *The Commercial and Financial Chronicle* (New York), there are signs of a growing spirit of union in the work and in the relations of Christians. The Protestant bodies are "getting together," and the great State Churches of Eastern and Southern Europe have been driven by the distress of their peoples to cast about for helpful intercourse and fellowship. The union of Christian effort in the mission field has proved the practicability of mutual cooperation at home, and "when the divisions of the great Eastern Church in Russia, Czecho-Slovakia, Serbia and Asia Minor find themselves impelled to seek fellowship with one another, when their people turn to them for help and guidance in their present distress, it is not beyond hope that the Roman Church will also find in its turn reason for strong and useful cooperation with all, if only because of the world's greatest need."

A similar reason exists for new relations between Christians and Jews. They have long stood aloof. Their differences have often been deep-rooted and bitter. To overcome this "it is necessary to show evils great and serious besetting both parties, and the need of cooperation for the protection of both." One has but to look to see that the world has been disorganized by war, to see that—

"It has loosened the ties of religious faith; it has relaxed morals and changed standards and customs; it has occasioned disrespect for parents and established ways; it has created an unrest, both intellectual and religious, which has given rise to a host of strange cults with new names, Oriental and home-made, Bahism, New Thought, Mind Healing, Theosophy, Christian Science, and the like, all purporting to be 'new,' and all, certainly, 'departures.' All are directed to the individual, exalting his importance, separating him in his interests from others, and emphasizing the supreme significance of his impulses, his desires and himself."

"Everywhere there is complaint over the manners and habits of the young people of the well-to-do families. The automobile, sports, week-ends, and the like keep them away from church. The synagogues and the churches tell the same story. Both worship the one God; both have in large part the same Scripture, for, as Augustine said, 'the New Testament lies in waiting in the Old, and the Old Testament is unfolded in the New.' Both have the same practical code of morals; both share the same community life; they love their children and value their homes alike; they support the same civic institutions, and do business together. In America and in Europe they are in large part alike identified as citizens of the common land in which they dwell. In New York and in many cities they are a large and influential part of the body politic."

If, then, the Jew and Christian could unite their intelligence and strength and direct a common effort to fundamental ends, "a new bond of union among the nations would at once be recognized, as well as a new sustaining force to uphold the hands of diplomats and legislators in their efforts to set things right by prudent legislation and mutual agreements." If it be asked how such union could be brought about, the answer is:

"By a definite change of attitude on both sides, definitely undertaken for the common good. By a recognition of its urgent necessity, and the unworthiness of existing prejudice. By opening the doors as widely as possible for visible and united cooperation. Then by the arising of leaders on both sides, able and large-minded, to forward a movement so new, so vital, so reconstructive and so necessary."

THE STORM-TOSSED RUSSIAN CHURCH

"RELIGION IS THE OPIUM of the people," runs a legend inscribed by the Soviet authorities on the walls of the City Hall in Petrograd, and it is not, perhaps, without other significance, we are told, that the Bolsheviks have now ordered a confiscation of the churches' wealth in order to help feed the starving. The decree requisitioning the Church wealth was published last month and, according to Walter Duranty, correspondent of the *New York Times*, it orders local official bodies "to take within one month from the publication of this decree the riches of the churches of all denominations in gold, silver and jewels whose requisition can not really injure the interests of the cult itself, and hand them over to the official financial bodies for sale for the benefit of the famine." Whether the Soviet authorities are seized with a genuine, if belated, desire to help the famine sufferers at the expense of the churches, or are taking the moment as an opportunity to get rid of a "hated and potentially a dangerous rival," remains, we are told, to be seen; but the decision is regarded as of momentous importance. Notwithstanding the terrific ordeal through which Russian society has passed since the overthrow of the Czarist régime, and notwithstanding the general breakdown of social institutions, says the *Boston Transcript*, "the Russian Church has survived with its organization substantially intact. It stands storm-tossed, yet still strong." From the churches and religious bodies—

"The Soviet Government will be able to obtain large sums of money with which to carry on the work of famine relief. Estimates of the wealth thus made available will vary greatly, yet even to-day in revolutionary Russia the 60,000 churches and 800 monasteries of the orthodox faith must still possess an enormous collective wealth. If properly administered, the treasure here available for famine relief should be instrumental in saving the lives of thousands, perhaps tens of thousands, of Russians.

"Nothing better proves the breakdown of Bolshevism than the decision of the Soviet Government to seize the treasures of the Church. It constitutes a frank admission that the Soviet system of government can not even provide the Russian people their daily bread."

The Soviet Government has been hostile to all forms of Christianity, writes Professor Jerome Davis in *The Missionary Review of The World*, and this opposition "has probably done more to help the Orthodox Church than the active cooperation of the Czar's Government has done in the past fifty years. The persecution has helped to weed out the less consecrated and more corrupt from among the priesthood and has brought to the front the more earnest of the religious leaders. Many of these are liberal-minded men who have had experience in the Russian Church in America." Professor Davis, who is head of the Department of Sociology in Dartmouth College, went into Soviet Russia last summer to investigate the opportunities for aid along religious and educational lines, we are told, and a previous three years' residence there has given him some familiarity with the language and an acquaintance with some of the religious leaders. He finds that altho the Bolsheviks oppose the Church, many of

them, however, still believe in much that Jesus taught. A book printed by the Bolshevik Government press in Moscow in 1919 states that while Communist theory opposes the Church, it agrees with many of the teachings of Christ, saying: "Jesus devoted his time directly to the workingmen and the poor, grouping them about himself. We know how he loved the children. When they came to him and the apostles forbade them, he said, 'Suffer the little children to come unto me and forbid them not.' In the same way in the Soviet Republic we say that the children are our best friends. They are the first

A BOLSHEVIK POSTER ATTACKING THE CHURCH.

It shows the Czar, a priest and a profiteer riding on the shoulders of the people.

in our thoughts and plans. We find ourselves also in agreement with Jesus in his attitude toward women."

Moreover, the Bolshevik hostility toward organized Christianity may be due in part, thinks Professor Davis, to what was un-Christian in the Orthodox Church under the Czars. The churches are, however, permitted to remain open and to hold services, and a congress of all the sectarian movements in Russia was allowed to convene in Moscow last year. The breaking of the Czar's control over the Russian Church enabled the priests to adopt new methods, and now, says the writer,

"They wish to introduce many of the features of Western Christianity, including Sunday-schools, men's clubs, social service and the best Christian literature. The Patriarch of the Russian Church implored me to ask America to send help to the Russian Orthodox Church. Here is a great opportunity to enter Russia, not to build up a Western Church, but to help make Christ and his ideals real in the life and thought of the people of Russia. Hundreds of consecrated Russian priests would to-day welcome the cooperation of Christian representatives from America."

CURRENT - POETRY

Unsolicited contributions to this department cannot be returned.

OF all the winds that blow, some straws must tell the tale. They are small things to evoke such pictures as these in the London *Saturday Review*; but our English cousins have imagination in poetry.

STRAWS

By WILFRID THORLEY

When the straws by the kerb-stone lie all the one way

You know very well what the log-books will say —
Hard winds in the Channel from Falmouth to Deal.

And tankers that ache through their coatings of steel;

Wind East by North-East blowing sleet on the brine,

Slow tankers in travail from Humber to Tyne,
And captains that swear by the Lord they'd give thanks

For a barge out of Runcorn untroubled of tanks.

When with straws that are woven and ribboned you make

A screen for your head lest your eyeballs should ache,

You know very well what the log-books reveal—
Blue water as smooth as the back of a seal.

And sun-mellowed captains who now seem to draw
All the sweetness of life through the stem of a straw,

Slowly sipping and sorry for all the poor souls
That sail between tow-paths and telegraph-poles.

When the straws from the nose-bags slide over the roofs

You know there is thunder and dust of sea-hoofs
From numberless nags that come cantering down,
And challenge the tankers to ride them or drown;

Then captains grow testy and can not sit still
As they dive to the hollow or leap to the hill,
And swear if they hadn't been fools they'd have stayed

To serve out the rum in a bar at Port Said.

When the straws are upright and a-rustle in rows,
You know very well what the log-books disclose—
Wide waters all smooth and wide heavens all dumb,

And captains whose lives are all honey and rum;

For, filling their glass till they're half over-seas,
The tanker runs on while they lie at their ease,
Full of pity for all the poor lads with no sand,
The limpets that hold on the fringe of the land.

THE Pullman brings together a various humanity, yet who has seen them before as they are seen in this *Scribner's* verse?

PULLMAN PORTRAITS

By RUTH COMFORT MITCHELL

I

Down the green plush lane, at the forward end of the car,

There are seven Iowa farmers' tired old wives
With their faces set toward the perfumed orange groves

For a lyrical end to their prosy, cumbered lives;
And all day long with their red, work-twisted hands

On their black silk laps they idle, they rest, they play;

They badger the grime-gray brakeman, make new friends.—

"Say, Pa, this gentleman *here's* from Ioway!"

II

While the bored, late breakfast crowd in the diner fumed

And a thin man snarled that his coffee wasn't hot,
I saw them carry her by with clumsy haste—

A silent, sagging shape on a sagging cot,
And all day long there seeps through my noisy car,

Through the tight-shut, shining door of the drawing-room,

The sense of a breathless race with hours and miles . . .

The sense of doom, of imminent, hovering doom:
And whenever the loose-limbed brakeman hurtles through,

Frolicsome-shy as a sidling setter pup,

The mother's jerking face at the crack of the door—

"Are we late? How late? Do you think we can make it up?"

III

There's an old young soldier raptly hurrying home
With a line of shining deeds across his coat,

But the scar far back in his aching-tired eyes
Is a deeper scar than the one along his throat.

And all day long I am watching him realize . . .
That the show is done; he has missed his cue:
he's late;

The bands are stilled and the welcome signs are down,

And his shining deeds,—his *war*—is out of date!

IV

A big, thick-wristed man in the section across;
The delicate, fresh-dressed woman by his side

With the look in her face of a stale, warmed-over dream,

Is a bride, a pitiful, tardy, Autumn bride,
And all day long, sitting still in her green plush seat,

She escapes, she flees, she hides . . . till the train's harsh tune

summons her back to the touch of his thick, cold hand,

To bring her November heart to the feast of June.

.

Can they ever learn to rest in their orange groves?
Is the engine aware of the drawing-room's tragic need?—

And the soldier's eyes—and the dream that stood too long?

I am tense with the urge for a greater, kinder speed;

And all day long, till the desert sun slides down
And the farmers' wives are noisy with plate and cup.

Now soft, now shrill, four-keyed, it pierces through . . .

"Are we late? How late? Do you think we can make it up?"

.

BUT why poor Harlequin? Probably in ironic indulgence of our limited judgment,

Harper's gives this a place.

POOR HARLEQUIN

By SEABURY LAWRENCE

I will take the laughter—

You may have the tears;

'Tis gayety I'm after,

Dancing down the years.

You may have the highroad—

I will take the lane,

Stopping in a by-road

Where birds sing again.

I will roam to far hills—

You may keep the glade;

There the day my joy fills—

There bright dreams are made.

NATURE and man are pitted and judged in this poem found in the New York *Evening Post*. Sterling is California's leading poet, and judged by this his leadership extends much wider:

PUMAS

By GEORGE STERLING

Hushed, cruel, amber-eyed,
Before the time of the danger of the day,

Or at dusk on the boulder-broken mountainside,
The great cats seek their prey.

Soft-padded, heavy-limbed,
With agate talons chiselled for love or hate,
In desolate places wooded or granite-rimmed,
The great cats seek their mate.

Rippling, as water swerved,
To tangled coverts overshadowed and deep
Or secret caves where the canyon's wall is curved,
The great cats go for sleep.

Seeking the mate or prey,
Out of the darkness glow the insatiate eyes,
Man, who is made more terrible far than they,
Dreams he is otherwise!

To-day (London) was always a purveyor of good poetry, and its temporary suspension meant our loss, but now that it resumes in its old form we signalize by quoting two:

EPITAPH IN BALLADE FORM

which Villon made for himself and his friends, waiting to be hanged with them.

Translated by RICHARD ALDINGTON

Brothers among men who after us shall live,
Let not your hearts' disdain against us rise,
For if some pity for our woe ye have
The sooner God your pardon shall devise.
Behold, here five or six of us we peize;
As to our flesh, which we fed wantonly,
Rotten, devoured, it hangeth mournfully:
And we, the bones, to dust and ash are riven.
Let none make scorn of our infirmity
But pray to God that all we be forgiven.

If, brothers, we cry out, ye should not give
Disdain for answer, even if justice 'tis
That murders us. This thing ye should believe,
That always all men are not wholly wise;
Pray often for us then, not once or twice,
Before the fair Son of the Virgin Mary,
Lest that—for us—His grace prove injury
And we beneath the lord of hell be driven.
Now we are dead, cease importunity
And pray to God that all we be forgiven.

The rain doth weaken all our strength and lave
Us, the sun blackens us again and dries;
Our eyes the ravens hollow like a grave;
Our beards and eyebrows are plucked off by pies.
Never rest comes to us in any wise;
Now here, now there, as the wind sways, sway we,
Swung at the wind's high pleasure ceaselessly,
More pecked by birds than hazel nuts that ripen.
Be ye not then of our fraternity
But pray to God that all we be forgiven.

ENVOI

Princee Jesus, above all hast mastery,
Let not high hell become our seigneurie,
There we have naught to do nor order even.
Brothers, keep here no thought of mockery
But pray to God that all we be forgiven.

IN THE WOODS

By DOROTHY EASTON

There's been some loving I can see
Among these wild anemonee,
For some are blushing rosy red,
And one has wept and bowed its head,
And in the trees the wood-doves tell
Their story wistfully and well,
While that old sport, the bumble-bee,
Laughs about it, close to me
Upon a dark blue-bell.

Did you hear the cuckoo call?
Did you want to grow so tall
You'd burst the April sky?
Did the speckled thrush awake
Your hearts, one evening in the brake—
And did you long to fly?
Then fling your heads together, fling!
For you there's only one short Spring—
And then you've got to die.

If you would prove the love sincere
 You've vowed to me tonight,
 Go get that Dipper—bring it here—
 Its size for soup is right.

Spoon-time

Dip your spoon into a steaming, stimulating plate of Campbell's Tomato Soup. You'll relish each savory sip. Even the aroma is a prod to drooping appetites. Consider Campbell's not only as a proper introduction to the dinner, but also as the main support of lighter repasts.

Campbell's Tomato Soup

is a skilful blend of the tonic juices and fruity parts of fresh, firm, red tomatoes, sun-sweetened on the vines; golden creamery butter, sweet and smooth; palate-pleasing spices, added with a professional sense of proportion by the Campbell's chefs in the spotless Campbell's kitchens. Who wouldn't love Campbell's Tomato Soup?

THE GREATEST BONUS—STEADY JOBS FOR VETERANS

THE AMERICAN LEGION has carried on the fight for a money bonus to such well-advertised effect that not very much notice has been taken of its fight for another bonus the national effects of which are beginning to be felt. This other bonus is called by Legion representatives themselves "the greatest bonus for our veterans." It consists, we are informed in large black letters that have become familiar in parts of the mid-West, in a "STEADY JOB." "Bonus," the workers for this particular bonus point out, is the Latin for "good," and they argue that the greatest good that can come to the ex-soldiers is work commensurate with the capabilities of each man. The Legion started a great employment campaign the latter part of last month. It was a campaign not only to place ex-service men in positions, but also to urge the ex-soldier to measure up to his responsibilities when work was found. The password was given as "Make Good." The story of the employment campaign, which is to be a permanent feature of Legion work, is told, with particular regard for the human and picturesque phases of it, by the *American Legion Weekly*, in an article headed "Setting Out Jobs in Spring Garden." The account runs:

"Storm Sweeps Massachusetts Coast," flickered the title on the weekly news reel. For once the caption was no exaggeration—it was almost an understatement. It might better have said: "Storm sweeps, seours, polishes, wet-washes, dry-cleans and ice-packs Massachusetts coast." For the picture that followed showed gigantic waves surging over the sea-wall into the town of Winthrop and converting summer cottages into islands, and hoary Cambridge elms—elms that were patriarchs when Professor Longfellow was teaching modern languages at Harvard—a-glisten with solid coats of November ice.

There are 25,000 unemployed ex-service men in Massachusetts, and there is a very real and very direct connection between them and the storm. For the storm did more than send waves crashing into Winthrop and bejewel the elms of Cambridge. It inflicted real damage throughout the eastern part of the State.

The Massachusetts Legion, which had long been active in behalf of the unemployed veteran, saw the damage and a glorious opportunity. At once a special committee appointed by the Legion State executive committee waited upon Governor Channing H. Cox and requested an emergency appropriation to repair the damage caused by the storm to State highways and reservations.

Within a week the Governor sent a special message to the Legislature urging an appropriation of \$50,000 to repair the devastation. The money was immediately forthcoming. The bill authorizing the payment was signed at eleven A.M.; by three P.M., Past Department Commander James T. Duane, head of the Legion Employment Bureau, had secured from the special commission appointed by the Governor to supervise the work an order to place 200 unemployed veterans on the job within two days.

Thirty-five hundred unemployed ex-service men applied for the jobs at the Legion bureau's office in the State House. In fact, so

great was the crush that the Governor himself had fairly to force himself through the crowded corridors to reach his office.

The selection of 200 men from 3,500 was a task calling for the greatest judgment and delicacy. It was accomplished by giving preference to men with dependents—the more dependents the more preference. In substantially all cases the men assigned to the jobs were married veterans with from three to ten children or with dependent mothers and fathers.

Were the men anxious to work? This is what Department Commander Charles H. Cole has to say about that:

"On the day the work was to start there was a terrific rain and hailstorm. The place where the work was to be done was about eleven miles from the center of Boston. Still, many of these men who lacked the necessary ten cents for carfare walked the whole distance—some of the hikers had to leave their homes before six o'clock to be at work on time. It was discovered that many of the men reached the scene of the work with their feet out through their shoes, and in several cases men were without underwear. They carried on through the storm and worked all day without gloves.

"Altho many of the men were drenched to the skin by the rain, on the third day only eight were absent from the work. Police officers were designated to carry the pay to the homes of those who did not report, as the superintendent of the job thought they would

probably be in need of the money. The officers found that every man who had not reported was sick in bed, and in practically every case was living in destitute circumstances."

Is it any wonder that Commander Cole sees in this incident "a demonstration of the spirit which won for America in the World War the admiration of the world for the pluck and determination of its young men"?

This account of one episode in the national veteran unemployment situation is cited both to show how effective a part the Legion is playing in alleviating that situation and also to give an inkling to the thrill that may be buried in the prosaic term "public works."

Public works sounds about as romantic as garbage removal. Romance, however, has nothing to do with it. There is nothing romantic about missing a meal—not until a long time afterward. And the ex-service man who is offered a chance to become a public worker prefers such a status to that of being a public charge.

Everywhere, on the Pacific Coast no less than on the Atlantic, in the South and in the West, the speeding-up of public works is proving perhaps the most satisfactory method of meeting the veteran unemployment problem.

In California many of the larger cities inaugurated public improvements during the winter largely as a result of Legion activity. The State, too, has taken a hand at the instance of the Legion, and many men are being employed on public highways who otherwise would be thronging Legion unemployment bureaus—and it isn't exactly vacation time in the bureaus yet. Washington, too, reports from Seattle that in public works, including Federal roads and reclamation projects, it is finding the best emergency means of meeting the unemployment problem.

The Portland (Oregon) Legion is routing most of its present applicants for work through a municipal woodyard—a city-

ONCE MORE ON THE ATTACK.

The American Legion has started a nation-wide campaign against unemployment. The above cartoon appeared on the cover of the "Employment Number" of *The American Legion Weekly*.

What Type of Asbestos Roofing?
This chart will help you decide

Kind of Building	Type of Asbestos Roofing	Brand or Trade Name
Small buildings	Slate surfaced roll roofing or shingles	Flexstone—red or green
Dwellings \$3,000-\$7,000	Slate surfaced roll roofing or shingles or rigid asbestos shingles	Flexstone—red or green; rigid—red, brown or gray
Dwellings \$7,000-\$25,000	Rigid asbestos shingles	Standard or extra thick—red, brown, gray or blended
Dwellings \$25,000 upwards	Rigid asbestos shingles	Colorblende—five-tone, brown with or without red or gray accidentals
Factories, shops and mills—Monitor and Sawtooth roofs*	3 or 4-ply ready roofing	Johns-Manville Asbestos Ready Roofing or Built-up Roofing
Flat roofs— all buildings*	Built-up roofing	Johns-Manville Built-up Roofing
Skeleton frame buildings— standard conditions*	Corrugated asbestos roofing with steel reinforcement	Johns-Manville Corrugated Asbestos Roofing
Skeleton frame buildings— excessive temperature or condensation conditions*	Corrugated asbestos roofing without steel reinforcement	Johns-Manville Transite Corrugated Asbestos Wood Roofing

*Note—Industrial buildings call for expert advice.
A roofing expert is available at all Johns-Manville Branches.

Every man in this crowd can afford Asbestos Roofing

THESE people will soon have to consider the question, "What Roofing?"

Some will be guided by economy.

Others will seek permanence and durability.

In either case the trail ends with Johns-Manville Asbestos Roofing.

Surprising as it is to most, this permanent roofing costs but a few cents more, per square foot, than the ordinary, perishable type.

Only a few cents more—yet in addition to permanence you get fire-safety. Johns-Manville Asbestos Roofings will withstand the intense heat of a plumber's blow-torch. Any dealer will quickly prove this to your satisfaction. Each type is given highest rating in its class by Underwriters' Laboratories, Inc.

Asbestos Roofing is made by Johns-Manville in many forms: shingles, artistic in colors and shapes, for homes; roll roofing for the sloping roofs of garages or small industrial buildings; or built-up, layer upon layer, on the great roof-decks of commercial structures. (See chart on left.)

The most striking attribute of Johns-Manville Asbestos Roofing is not its fire-safety and weather-resistance, not its economy and permanence, not the single fact that it never needs painting or re-finishing; but rather the fact that all these qualities are combined in this one roofing. The universal roofing is Johns-Manville Asbestos.

TEXACO GASOLINE

THE *VOLATILE* GAS

Volatility is the readiness with which gasoline gives up its power

BEFORE 1902 The Texas Company did not exist. In but 20 years the public demand for Texaco Products has built a business of immense size.*

This widespread demand is so insistent as to compel a continuous and rapid increase in production and distribution. The public shows its appreciation of *distinctive, uniform quality* in an unmistakable way.

This great demand for Texaco Products is final proof that the soundest scientific practice in the refining of petroleum, pays. Every Texaco Product is made upon this important principle.

Texaco Gasoline is a good example. More power and readier, was the universal wish. Texaco Gasoline gives it, through high and uniform volatility.

Texaco Motor Oil is another instance; the Oil famed for its heavy body and its refinement to a *clear, pale* color.

That Texaco Gasoline is the *same* wherever you fill your tank, is a vital point of its popularity. Touring in New England in summer, or beneath Florida palms in winter, visiting America's wonder-scenes such as the Grand Canyon, or the Rockies, or Niagara, or the unsung beauty of thousands of less known places, you find that the trail leads to the Texaco Red Star.

At these filling stations you always find Texaco Gasoline and Texaco Motor Oil, and the satisfaction of improved operation and upkeep.

THE TEXAS COMPANY, U. S. A.

Texaco Petroleum Products

*In the last ten years the consumption of Texaco Gasoline has increased from 160,000 to over 1,000,000 gallons a day.

explanation accompanying the appeal, which was sent out by G. W. Powell, assistant national director of Americanism for the Legion—

The slogan, "Drive until every veteran has a job" which was adopted by the Legion a week ago has been changed to "Let every community care for its own unemployed."

"Late figures coming in from a few parts of the country show that jobs are waiting for the unemployed veterans," Mr. Powell said. "To name any specific community in which ex-service men are needed would be a very bad policy, because unemployed men by the thousands would immediately flock to these communities. Of course, many of them would find that their trip had been made in vain.

"Thousands of ex-service men have left their home communities for the great industrial centers because they believed that they could make more money in these centers. New York, Philadelphia, Chicago and Pittsburgh are crowded with men out of work.

"Scores of men have left their homes because of the restless condition that follows every war. The wanderlust took possession of the soldier in France, and he has in many cases not been able to forget Paris, Nice and the ever-present possibility of moving on to some new wonder—some untasted delight. The wanderlust has led these men to the place where starvation now faces them and their families. These men must go back to their home communities and learn to 'carry on' without the inspiration of romance and a touch of uncertainty and mystery about their daily tasks.

"Getting the veterans back home will help the patriotic citizen do his duty for the unemployed and for this country. Neither the American Legion nor any other organization can do a great deal of good toward getting permanent employment in the industrial centers where work is now slack and where men are not needed."

Mr. Powell said that the State departments of the Legion are asking each of the 11,000 Legion posts to urge every "floater" to go home. Then the posts will take care of their own men who are out of work.

"OH, TELL ME, GENTLE POSTMAN!"

ASK THE POSTMAN in any sociable, middle-sized city of these United States what it is that makes his life least worth living, and the chances are that he will answer, "Questions." And of all the questions, which run from the time of day to a demand for an income-tax blank, the saddest one, according to report, goes—"Is that all you've got for me?" It is this question, more than any other one thing, says Frank Battell, commonly known as "Bat," a philosophical and poetical postman of Milwaukee, Wis., that makes him wonder whether there is a heaven. Bat—everybody calls him Bat—has written a poem to express his feelings about the matter. It has been widely published and copied in his native State, and runs thus:

The postman's life is not all joy
Though it has its pleasures, too;
Sometimes he feels like Ma's fair-hair'd boy,
And at other times he's blue.
Some people make him wait in the rain,
And it's hard to collect the "dues";
They tell him "You're late" till he fears his brain
Its feeble grip will lose.
But, of all the pests on a pest-cursed earth
That Satan ever set free,
The worst is the person who asks each trip:
"Is that all you've got for me?"

I well recall one specimen
Who had me going fair.
Twice daily when she closed her door
I'd grind my teeth and swear.
To see if, for once in her fair young life,
She'd forget her usual roast.
I'd saved up four mail order catalogues
And a ten-pound "Parcel Post."
Like a horizontal letter U
My poor back did incline;
But I spurred my jaded muscles
With a ray of pale moonshine.
As I staggered up her high front steps,
She chattered in fiendish glee:
"How is it you're late this morning—
"Is that all you've got for me?"

I can't forget one poor old man
Who had never done me ill.
Save that with that same old question
My spirits he would chill.
Though often sorely tempted.
Until then—the Saints be praised!—
My hand, against my fellow man,
Was never in anger raised.
But he sprung that gag with whiskers
That was old enough to vote.
And, like the straw on the camel's back,
It somehow got my goat.
Two savage blows with a flower pot,
And one with a paving stone,
And his mangled form lay at my feet,
With barely strength to groan:
"Go, break the news to my weeping wife,
And my sorrowing family,
But, tell me, Postman, ere you go,
Was that all you had for me?"

Many other questions seem manufactured for the special chagrin of postmen, says Harriet N. Pettibone, writing on the basis of Bat's experiences, in the *Milwaukee Sentinel*. She specifies and comments:

Here are a bagful of prize gum-drops he is given to chew most every time he swings around his route.

"How cold is it out this morning? Do you think I will need my overshoes just to go downtown and buy some muslin for Johnny's rompers?"

"What time will this package go out, carrier? To-morrow is my sister's birthday and you simply must get it there. I COULDN'T send it any sooner. I just finished knitting it last night."

"Mr. Mailman, will you bring up an income-tax blank this afternoon? They are so handy for you—right upstairs—"

Something to occupy his mind while he is loafing around the office! All he has to do in his ninety minutes at noon is to arrange 2,000 or more pieces of mail so he can spread it over a half-mile of territory in another 180 minutes; write forwarding addresses on a hundred other pieces, answer communications, enter removal orders, buy due stamps, turn in C. O. D. collections, sign for registers and borrow chewing-tobacco from an office confrère.

"Oh, Postman, I am just writing to my husband. He has been away FOUR days and I haven't had a minute to send him a line—it won't take but a jiffy—there now, I'll address the envelope and you can take it along. Poor dear, he will think he is getting an awfully stingy one—oh, I almost forgot to tell him about baby's tooth—I'll just add a tiny postscript!"

The mailman's daily schedule is mapped out for him, to the minute. From the time he arrives at the office and begins to "set up" his mail till he has turned in the last collection slip, it governs his movements. It says he must deliver each letter at the front door, and consume only one-half minute in so doing. It makes no provision for sliding in back entrances for a cup of coffee or waiting for postscripts about babies' teeth to be written.

Nor does it offer any solution to the east-side carrier who wanted to be accommodating when he found a note in one of his Cambridge Avenue mail boxes last summer.

"She said she would be out at the lake for two months," he grinned, "but there's be a bottle of milk left in the mail-box every morning and a saucer—would I please feed the cat as I went by!"

"A mail-carrier must think twice before he speaks and then keep his mouth closed," concludes Frank Battell.

"Bat" is not only the philosopher and poet of the service, but the humorist of the "swing room" as well. The world to Bat is one big joke on the mail-carrier. Every street is a comic strip whereon simple citizens are making life complex for helpless postmen.

"Years ago, in the wild and rosy days, when eider was one hundred and ten proof," as Bat remembers it, "one of the brothers was caught with the odor on him. As punishment, he was given a night collection on foot.

"I was waiting for a car at Fourth and Grand Avenue, in civilian clothes. The mercury was ten below zero when he stopt to empty the large letter-box into which some department store had wedged a few bushels of bills.

"With frozen fingers he wiggled them loose, cursing under his breath.

"Up comes a lady, fumbling in her bag.

"Oh, postman, are you collecting the mail?"

No highway engineer or road official should be without a copy of our latest manual, "Road Maintenance with Tarvia." Our nearest office will gladly send free copy on request.

"Nobody will deny—that every additional mile of good roads will serve to diminish the immense cost of distribution and transportation—that mean, gnawing expense which doubles the price of virtually everything we buy."—*Collier's Weekly*.

What did the Winter do to Your Roads?

In communities where the annual Spring thaw turns roads into mires of soggy mud, Spring is a season of discomfort and isolation.

Throughout the country, there are still thousands of such communities. Perhaps yours is one of them. Perhaps the picture at the top of the page is typical of some roads in your locality.

Now look at the Tarvia Roads shown at the right. These roads are waterproof and frost-proof. Neither the freezes of Winter nor the thaws of Spring have any effect upon them. These highways are firm, smooth, dustless and mudless all the year round.

Your community—*any community*—can afford such roads. They are comparatively low in first cost, and are so much more economical over a term of years that the saving makes a more extensive road program possible.

In many cases the old macadam or gravel can be utilized as the foundation for a traffic-proof Tarvia top.

We would like to tell you more about the many uses of Tarvia, its ease of application and its economy as a maintenance material for hard-surfaced roads and pavements of every type. A letter addressed to our nearest office will bring you facts, figures and pictures.

Hinsdale-Downers Grove Road, Downers Grove, Ill.

Nyack Rockland Lake Road, New York
"Tarvia-X" 1916

Road near Hanover Center, Hanover, Mass.
Treated with "Tarvia-B" since 1916

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department which keeps up to the minute on all road problems. If you will write to the nearest office regarding road conditions or problems in your vicinity, the matter will have the prompt attention of experienced engineers. This service is free for the asking. If you want *better roads* and *lower taxes*, this Department can greatly assist you.

Halifax, N. S.

"I shut my eyes to avoid seeing the murder, but he answered in the voice of a mother soothing a delirious child:

"No, madame, I am digging the grave of a soldier who fell at Gettysburg."

In the early days of the parcel post, according to the same whimsical authority, some one shot a rabbit, wound a loose newspaper kimona around it, attached a shipping tag, and mailed it to a friend in Milwaukee.

While the carrier waited for the front door to open, a hungry dog grabbed the game and tore off three or four blocks before he could be cornered and forced to give it up.

The copper on the beat wished to cheer up the exhausted postman: "You've got a nerve—to be hunting rabbits with a dog right in the city limits!"

The carrier dismissed him with a haughty wave of the hand:

"On your way, boy. I am hunting dogs with a rabbit!"

Bat is quoted as saying that one of the outstanding tragedies of his official career came to his attention shortly after the Volstead Act commenced to pinch. In his own sad words:

"I was caught out in a wet blizzard which first soaked my clothes and then froze them to my body. Just as I was sinking for the third time a lady whose mail I had carried for fourteen years said:

"Postman, would you be offended if I offered you a drink?"

"I gasped something about her having argued me into it and stumbled into the hall.

"She poured out enough of something to drown three goldfish in. I poured it where it caused a glow like a bottle of red ink on a Sunday tablecloth.

"Oh, postman," she lamented. "If I had only known! A hundred times in storms like this, I have wanted to offer you something, but I thought you would be horrified at the idea!"

"I was horrified, but not at that idea.

"That evening I borrowed an adding machine and figured up that I was 13,270 drinks behind the man on the adjoining district, when it was too late to retrieve, all because of an over-innocent face."

The woman who hesitated to offer him a lifesaver is the only one at large who does not empty her head to the mailman—fourteen carriers declare it in a breath. And they cast the proxies of the other 346 who were not around.

"The uniform gives them confidence," says Frank Battell, "so they open up the family skeletons—"

This good-looking chap's evidence might be more convincing if he did not modestly attribute several romances in his experience to the effect of the uniform, also.

The country lass who came to work on Ogden Avenue thought the postman was just about all right. He "passed a good time" with everybody.

"Here's one from ma," he told her as he handed her the family batch of mail with her letter on top.

"Is this one from William?" He teased her the second day.

Blushingly she told him she had no "William," but she always managed to be at the door when the blue uniform ascended the steps.

Then he was off the route for three days.

"Where have you been?" she chided him the fourth morning, dimpling at seeing him again.

"I've been getting married," and he couldn't say it without swelling out his chest a mite with pride over the deed.

The mistress opened the door next morning. The little country girl felt bad, in fact she had been weeping. He "was a heart-breaker," she reproached the upstanding young fellow.

But it was only the uniform, its owner repeated deprecatively. "She is married and has three little girls that run after me and grab me around the knees when I bring the mail now."

Another postman, during the war, opened the gates of foreigners in a neighboring section of the town. It was a time when

tragedy used the mails. He recalls that one old Hungarian woman met him at the steps every morning. Her eyes pleaded pitifully as she quavered "*Kein brief?*" as if unwilling to believe the postman's shake of the head. She was grieving over four sons carrying muskets somewhere in Europe. In the postman's words:

"One morning I was tickled to death—I had a letter for the old lady. It must have come through by way of Italy. She trembled as I put it in her hands, and clutched it to her breast as she hurried back into the house.

"But the following day her daughter met me up the street a ways, where the old woman couldn't see her. In broken English she warned me 'not to give mother letter.' The one the day before contained bad news—one of her boys had had both his legs shot off.

"So day after day the old soul would stand at the steps, always asking, hoping with her eyes and then dropping her shoulders hopelessly when I shook my head. If I did happen to have one, I passed on to the next house, circled around and sneaked up to the back door to give it to her daughter before she wavered back to the kitchen."

A company of Polish fellows went away in 1917. Most of them were red-cheeked lads from the south side, the boys of Company K. Almost the whole of that splendid strength was wiped out—and hardly a house south of Mitchell Street but lost a son or brother. The only Milwaukee doctor to lose his life in the fighting was of that company—and his brother was the carrier who had to hand his mother the letter that said "*Return to the Government Burial Department*" in the upper left-hand corner.

Carriers suffered over their mail in those months. As conspicuous as the black-bordered envelop and more commonplace—those tragic, stampless, Government missives, telling where a loved boy had been laid to peaceful rest until his country could bring him back home to a flag-marked spot near his parents. Some families are still listening for the footsteps that will bring their letter.

But the days when the big, square envelopes arrived with their stamp of the A. E. F.—the morning he started out with thirty or forty of THEM in his bag, didn't the mailman step along pertly? He grinned all the way up the street. Nobody needed to question him: "Is there any foreign mail?" They saw his face and put out their hands for the words from their boys in France.

A prosperous-looking gentleman moved across the aisle of a street-car one day. "Bat" recalls, to sit beside a postman. "Mailman," he began:

"How much pay do you fellas get?" and when he heard the uniformed man's reply, explained: "The reason I ask is on account of my wife's brother.

"Three times we set him up in a nice business. Every time he went broke. We got him the finest kind of jobs. If he ain't fired in two weeks, he quits.

"I says to my wife, 'this is the last—maybe we can get him in carryin' mail!'

"The boy ain't exactly foolish, you understand, but he can't keep his mind on anything!"

The man in the blue uniform politely advised his street-car friend to get the boy a mail-bag by all means, but—back at the office—

"That boy probably couldn't sort a pack of cards in four piles without mixing the suits—but he thinks letters would be a cinch."

Bat heard the aggrieved sniff—

"In most lines a man can get by with ninety-five per cent. accuracy," he commented, "and I have known motorists to live three or four years by complying with as little as fifty per cent. of the traffic rules, but let a mail-carrier mis-deliver or lose one letter out of every hundred, and the Postmaster-General would have thrown up his movie contract a month ago to come to Milwaukee and fire him in person."

Courtesy of the Milwaukee "Sentinel."

CHEERFUL IN SPITE OF IT ALL.

"Bat," otherwise Frank Battell, is a postman, poet and philosopher of Milwaukee. His analysis of the postman's life leads to the conclusion that it would not so bad if it weren't for the questions.

U.S.

*Sheetrock is
wall plaster
— cast in
sections!*

Insert shows the actual thickness of Sheetrock

ONE of the great merits of Sheetrock is that *it will not warp*. It stays flat, smooth-surfaced and rigid all the years you have it on your walls and ceilings. Being made of rock, it is not affected by atmospheric changes, heat or cold; so it never pulls away from the supports, never bulges, shrinks or buckles. Its USG Patented Edge insures tight, even joints. It is highest grade gypsum plaster, cast evenly and uniformly three-eighths inch thick and *it cannot warp*.

Sheetrock has other qualities exclusively its own. It is fireproof. It comes in broad ceiling-high sheets that are easily handled, easily put up, by any good carpenter. All he has to do is nail the Sheetrock directly to the joists or studding. It takes any decoration, wall-paper, paint, or panels. The use of Sheetrock Finisher with it assures perfectly flat, unbroken surfaces. Your dealer in lumber or builders' supplies has Sheetrock. "Walls of Worth" pictures its uses; write us for a free copy.

found in a state so pure that the natives burn it in oil lamps without refining. Coal in that district is so easy to mine that even the lazy natives use it."

Then, beyond all this wealth of mineral deposits, there are fur-bearing animals in the Arctic regions, especially the far north zones, whose skins in numbers would mean a fortune to the trapper who could possess them. Blue foxes skim over the ice like delicately colored specters, and their pelts are worth hundreds of dollars each. The polar bear is there, the marten, the beaver, the lynx, the ermine and the skins of each would bring dollars and many of them in the fur market.

Amundsen, when he sails up the Pacific Ocean into the Bering Sea, will be close to a group of persons who spent the winter at Wrangell Island and who probably would give years of their respective lives to enter a race with him for the North Pole. They belong to the party sent to Wrangell by Vilhjalmur Stefansson, the English Arctic explorer, who says by sending them there he is claiming the island for the British. True, DeLong, an American whaling captain, discovered the island in 1869 and several American naval ships landed men there in 1881, but Stefansson says the Americans lost claim to the land by letting a five-year period go by without having any one there, so his present party is claiming it for the British.

But what a wonderful contest it would make if Stefansson and Amundsen should race! The two explorers are as unlike in personal characteristics and methods of exploration as the North Pole and the South are apart. Stefansson's favorite method of Arctic exploration is to leave his ship and hit it off through the country with rifle, skis, and a dog train. Amundsen is a sailor.

If Stefansson should decide to make a rival dash to the Pole, whom would you pick as the winner? Stefansson spent five years in the northern wastes, 1913 to 1918, and knows them like a book. Still, he has discovered no pole. Amundsen is a "south water" man primarily; he discovered the South Pole. He probably has not had the extensive experience in the far North that Stefansson has had, but, once again, he discovered the South Pole.

Whom would you pick?

FIFTY YEARS OF ARBOR DAY

"THE TREELESS STATE," as Nebraska was called fifty years ago, set the very first recorded tree-planting day, when the State Board of Agriculture adopted a resolution by J. Sterling Morton designating the 10th of April for that purpose. In that year of 1872 more than a million trees were planted, and in 1885 the State legislature changed the date to April 22, in honor of Mr. Morton's birthday, and declared the day a legal holiday. Now 700,000 acres have been planted in Nebraska, and as long ago as 1895 the legislature of that State proudly proclaimed to the world by resolution that Nebraska shall henceforth be known as "The Tree Planter's State." Following the lead of Nebraska, we read in the *Classmate* (Cincinnati):

Tennessee and Kansas set Arbor Day in 1875. Then there was a lapse until 1882, when Ohio and North Dakota decided to have tree-planting days. In Ohio the date selected was the same as that of the convention in Cincinnati, which resulted in the forming of what is now the American Forestry Association. Warren Higley, of the Ohio Forestry Commission, suggested to the superintendent of schools that the school children have a part in the celebration. This resulted in a parade of 20,000 school children through the streets to Eden Park, where trees were planted in honor of famous men.

Many things have been charged to the war. One thing to its credit is an impetus in tree-planting such as the world has never seen. The day after the armistice was signed the American Forestry Association began its campaign for memorial tree-planting. The tree is the memorial offering of the individual. He can plant a tree without waiting for a planning commission or the act of a city council. The trees are being planted both in memory of the man who gave his life and in honor of the man who offered his life when his country called. In addition, we have Memorial Parks and Roads of Remembrance. Motor associations have taken up the plan of tree-lined roads.

This memorial tree-planting has taken on many phases. Pasadena calls her memorial trees her Hall of Fame. At Charlotte, Michigan, an unused piece of land was turned into a memorial park. A great boulder in the center holds the name of the county dead. Around that boulder is a circle of trees. The Force school in Washington, D. C., placed a Lombardy poplar for Quentin Roosevelt, the only former pupil of the school to give his life to his country.

A church plants a memorial row along the walk leading to the entrance; a graduating class plants a memorial row, one for each member, somewhere on the college campus. Twenty years later the class will hold a reunion there. A city plants a memorial drive connecting two parks, as is the case in Minneapolis. A rotary club plants fifteen miles of a highway leading into the city as at Tampa, Florida.

Tree-planting has long been the practice of foreign visitors when in another country. The Prince of Wales placed many when he visited here. Pershing placed memorial trees in France, as did Foch when in the United States. These trees are all being recorded by the American Forestry Association in its Hall of Fame for trees with a history. This idea has brought hundreds of nominations of trees marking historic spots throughout the country. There is no activity to which tree-planting does not lend itself. In no other way can a community be brought more closely together than by community tree-planting. The tree with its ever-renewing life has been adopted as the Nation's memorial.

An example of the way colleges have taken up memorial tree-planting is shown at the University of Washington, in Seattle. Due to climatic conditions, the university will have a wonderful arboretum in the years to come. Fifty-eight living trees were planted on the university campus last Armistice Day, to commemorate the fifty-eight former students of the university who died during the Great War.

Tree-planting is not a thing of this year or of the next. Indeed, it will be well to plant memorial trees every year. The people are just awakening to the possibilities of tree-planting. The trees are monuments with a meaning, for they live gloriously just as did those for whom they are planted. The glory is the thing to tell to the world. Our sorrow is a private, personal affair and needs no telling in bronze or stone. Instead, let us plant trees to tell of their joy in giving, for that is the way they who went forth to the great adventure would have it. Plant the tree with an appropriate ceremony. The American Forestry Association will send you a tree-day program and suggestions on what to plant. The character of the ceremony depends upon the character of the planting. We will soon become a tree-planting nation, and well, indeed, will it be, for as Joyce Kilmer, who "ran forward singing" to the great adventure, wrote:

"Poems are made by fools like me,
But only God can make a tree."

The American Forestry Association makes the following suggestions for tree-planting, for the various parts of the country:

For New England States, New York, Pennsylvania, New Jersey, Ohio, West Virginia, Kentucky, Indiana, Michigan, Illinois, Missouri, and Iowa:

Deciduous Trees—Sugar maple, Norway maple, scarlet maple, green ash, white ash, American white elm, red oak, white oak, pin oak, American linden, scarlet oak.

Evergreen Trees—White spruce, Colorado blue spruce, white pine, Scotch pine, balsam pine, hemlock, arbor vitae.

For Delaware, Maryland, District of Columbia, Virginia, North Carolina, South Carolina, Georgia, Tennessee, Florida, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma, and Texas:

Tulip, sycamore, pin oak, scarlet oak, white oak, black oak, red oak, white ash, bald cypress, Norway maple, scarlet maple, red elm, American white elm, Kentucky coffee tree, American linden, red gum, black gum, hackberry, willow oak, white pine, longleaf pine, magnolia, live oak, cedar of Lebanon, American holly.

For Wisconsin, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Colorado, Wyoming, Montana, and Idaho:

Bur oak, linden, Norway maple, green ash, wild cherry, larch, American elm, black walnut, hackberry, honey locust, black locust. *Less desirable*—Cottonwood, box elder, Scotch pine, Austrian pine, white pine, Norway spruce, Colorado blue spruce, white spruce, red cedar, arbor vitae.

For New Mexico, Arizona, Utah, and Nevada:

Hackberry, honey locust, green ash, American elm, black locust, bur oak, valley cottonwood, mountain cottonwood, mountain ash, box elder, arbor vitae, deodar cedar, box, euonymus.

For California, Oregon, and Washington:

Deciduous Trees—Coast Region: Large leafed maple, European linden, sycamore, weeping willow.

For Columbian Basin: Norway maple, European linden, sycamore, green ash, silver poplar, Russian poplar, white willow.

Evergreens—Deodar cedar, Monterey pine, Monterey cypress, Lawson cypress, big tree.

The American Forestry Association will send any one a tree-day program upon request to 1214 Sixteenth Street, N. W., Washington, D. C.

For the Man Who "Treats 'Em Rough"

Few car owners admit that they abuse their batteries. You for instance. You honestly think you take good care of your battery—but *the chances are against you!* For service station records prove beyond question that most drivers are neglectful. They are not systematic in utilizing the service provided for them.

You can positively lengthen the life of your battery, cut your annual battery cost and prevent the possibility of being stalled with a dead battery if you will follow these two bits of advice.

First: regardless of the make of your battery, form the habit of driving *every other week* into the Willard Battery Station and having your battery tested. *Second:* when the time comes for a new battery, be satisfied with nothing less than a Willard Threaded Rubber Battery.

It is powerful, tough and wear resisting—just the battery for those who occasionally "treat 'em rough". And it rewards *good* care by lasting longer and costing less in the end than any common battery.

Car and truck manufacturers know this—as witness the list of 193 makers who use only Willard Threaded Rubber Batteries for original equipment!

WILLARD STORAGE BATTERY COMPANY, CLEVELAND, OHIO
Made in Canada by the Willard Storage Battery Co. of Canada, Limited, Toronto, Ontario

They Looked Alike This Morning!

Buddy and Barney started out together, both with their faces washed, their ties on straight and their clothes all clean and new. Just look at 'em now!

One took care of his clothes and had a pretty good time. The other—well, you can see for yourself what happened to *him!*

We grown-ups are like that with our motor cars. Some of us just will "treat 'em rough" no matter what it costs us later.

These 193 car builders use Willard Threaded Rubber Batteries as Original Equipment

THREADED RUBBER BATTERY

CONFESSIONS OF A BUCKET-SHOPPER

THE BUSINESS OF FLEEING CUSTOMERS in bucket-shops throughout the land continues to thrive because there are so many people who are so anxious to be fleeced. It doesn't seem to matter how many victims the bucketeers have already separated from their money—there is always a crowd of new believers ready to take their turn. A cleverly conducted bucket-shop, we are assured, can well afford to pay \$500 to secure a \$1,000 account, and the man who presents the assurance worked in one where it was a part of the business to make each thousand-dollar account worth \$500 to the firm. The power of deceptively business-like appearances and general hocus-pocus is nowhere better illustrated, he assures us, than in those brokerage offices where people go to make their fortunes and, as a general rule, are lucky to get out with earfare home. "In the following paragraphs," writes the confessing ex-bucketeer, George Hazlitt, in *The Magazine of Wall Street* (New York)—

I have endeavored, as near as possible, to give an accurate and concise account of my experiences while employed in a bucket-shop, describing their methods of getting business and the subsequent fleecing of all who come in contact with them, with the sole idea in mind of warning those unfortunates who already are feeling the effects of these parasites and those who may be approached by them at any time. During the early part of 1920, through financial losses, I was obliged to seek employment, and having had some previous financial experience, I applied to several brokers without success, and was on the point of giving up for the day when I chanced to meet an acquaintance whom I had not seen for several years.

He told me of what he termed a wonderful opportunity with a house which was a member of one of the minor exchanges, the members of which he knew well. Of course, I was deeply grateful, and after going to his office, while he called up the aforementioned firm, was told I should go immediately to their up-town branch, and have an interview with their Mr. —, the manager. Upon my arrival I was told he was very busy and would have to wait, but would I step into the Board Room and make myself at home?

I was immediately struck by the elaborate fixtures, the striking business-like atmosphere and the number of customers. After waiting possibly an hour, I was ushered into the manager's private office. He seemed to be a most genial sort of man, and, after asking a few perfunctory questions, told me I could start as a salesman the following Monday, at \$25 per week, and \$2 per 100 shares traded as commission. Of course, I was overjoyed and went home thinking how lucky I was in securing a position so easily.

The following Monday I reported for work and was immediately assigned to a desk and telephone in a large room, with possibly fifteen others, and given a list of about 100 names of people whom I was told at various times had either purchased stock or were interested in the market. These I was to call on the telephone, using the following stock conversation:

"Mr. —, this is Mr. — of — & Co. I understand that you are interested in the market from time to time and, therefore, am taking the liberty of calling you on the telephone on the supposition that possibly we could be of some service to you." Invariably I received a negative answer and toward the end of the week I began to get discouraged, and could not understand, after listening to some of the other men's efforts, how the firm could continue to pay so many men and get such small results.

However, about a week later I chanced to get in conversation with a man and learned that he was interested in a highly speculative stock, then selling around 114; thinking I was a man of long market experience, he asked my personal opinion. Of course, I really was in no position to judge the merits of the particular stock he mentioned, but seeing an opportunity to get an account I rattled off a lot of figures, the meanings of which I knew absolutely nothing about and the prospective customer even less. Nevertheless he was profoundly impressed and immediately gave me an order to buy 20 shares at the market. The order was executed at 114¾, and that night I was very much surprised to see in the paper the high for the day was only 114. Upon inquiring the next day I was informed that on an odd lot you were obliged to trade ¾ away from the next sale. Upon subsequent investigation I learned that the stock could always be bought ¼ away.

By the end of the week the "sucker" had put up \$500 more, and the following Monday received another margin call for \$200 additional, at 10:30 A. M. As the salesman confesses:

I was unable to reach him at once, and at eleven, I received notice that he had been closed out at 97, altho he had been told on previous calls he had till 2:15 to meet his marginal requirements.

Naturally he was in the next day, and after a stormy interview he was reinstated at 97, altho the stock was then selling at 100. He immediately sold out at 99¾ and demanded a check. After further arguing he was assured he would receive his balance the following day, but as things turned out it was over a week before anything was received and then only half the amount due, the remainder being paid some time later under protest.

Naturally, these things began to make me suspicious and after thinking the matter over I went to the manager and told him just what I thought. However, he convinced me in the same suave manner he did customers that I was mistaken, telling me these things occurred every day in the brokerage business and that when I got a really good account I would realize the question of executions and margins never arose.

As weeks went on I got several more accounts and then one day I was asked to call on a prospective customer, a man about fifty, who had had an account for some years with a stock exchange house. He was very much interested in my plan of operations, namely, to call him on the telephone, if necessary, a dozen times a day, keeping him in touch with the trend of the market and advising what to buy or sell. At the end of my interview he gave me a check for \$7,000. When I reached the office the manager called me in and informed me my salary would be increased \$5 per week, and my commission from \$2 per 100 to \$3.50. He also gave me \$100 which he said was a small bonus in appreciation of my efforts.

The account was immediately taken out of my hands and by the end of two weeks the customer had exactly \$650 left of his \$7,000. Shortly after, a special inducement of \$50 for every \$1,000 brought into the house was offered, and as I was doing particularly well at this time, some weeks making as high as \$200, I was loth to give up, altho I had become fully acquainted with all the tricks of the trade, so to speak.

Not long after I was called into the office of the head of the firm, and introduced to Mr. —, who was to become the general manager of the firm, a man who had been formerly traveling salesman for a commercial house, and who knew absolutely nothing about the brokerage business. I was told point-blank that I must cease my activities in behalf of my customers' complaints. I must understand absolutely the house came first, last and always, that if a customer wished to follow my advice in trading, always advise the most speculative issues, if not, a low-priced stock, because in the former the customer invariably lost and in the latter the house took very little risk; always try to discourage the asking for profit checks, and if this was impossible, offer any excuse for delay.

In addition to the Telephone Department I have spoken of, there was a large force of outside salesmen, much older than myself, who had long experience in the rottenest of all swindles, namely, the promotion of fake oil and mining stocks. These men were selected with the greatest care. Only those appearing to possess the qualities of a gentleman were accepted. They were plentifully supplied with money and required to dress immaculately. Indeed, their appearance and general personality would command the instant respect of almost anybody. I have known of cases where it has cost the house \$500 for one of these men to make a trip to some distant city, purely on a chance of getting an account of \$1,000 or \$2,000. In conjunction with these men, an expensive advertising campaign was carried on in out-of-town cities, and all inquiries, no matter how remote, were followed up by these financial vultures.

In cases where customers sat in the Board Room and demanded to see their sales on the tape, the orders were executed, but immediately sold out. In some cases the house lost an ⅓ or ¼ and in others gained that much more.

Customers were always urged to over-trade, consequently, on any slight reaction, they were called for margin, always in excess of the required amount. This was explained to the customer as an assurance of the firm's soundness, wishing at all times to keep their accounts secure. As this method was quite in contrast to other bucket-shops, namely, carrying stocks on 5 and 8 point margins, even less, it helped to allay suspicion.

Toward the end of the year a special meeting of all the salesmen was called, and a plan outlined for the last three weeks, when most people would be tempted to withdraw profits if they were fortunate enough to have any, namely, a cash prize of \$500 to the salesman having the least amount of money withdrawn from his accounts between December 1 and January 15. The result was that customers were persuaded by every kind of a promise and guaranty that if they would take one more chance and follow the salesmen's instructions they would be sure to make a clean-up just at the time when every one needed a little extra cash. They were advised to buy the wildest kind of stocks. Some were

*Friction—the Unseen Enemy
of Production in Your Plant*

600-W

*Sharp facts about your
Steam Cylinder Lubrication*

ONE of the most important factors in the economical operation of a plant is Correct Lubrication.

At no point does the effect of correct lubrication show up more strongly than in the operation of steam cylinders.

So important is the correct lubrication of steam cylinders that the majority of builders of steam engines throughout the world recommend or approve the use of Gargoyle Cylinder Oil 600-W.

Gargoyle Cylinder Oil 600-W is more widely used throughout the world than any other brand of steam cylinder oil.

It has been manufactured with scientific exactness by the Vacuum Oil Company for over 40 years. It will correctly meet a wide range of operating conditions in steam cylinders.

Plant owners whose business policy it is to save maintenance-cost dollars rather than "price-per-gallon" pennies will tell you that Gargoyle Cylinder Oil 600-W is by far the most economical steam cylinder lubricant obtainable.

We have published two valuable pamphlets. One is called "Stationary Steam Engines;" the other is "Gargoyle Cylinder Oil 600-W." We shall be glad to send them to you without charge.

Stocks of Gargoyle Lubricating Oils scientifically correct for every engine and machine need are carried in principal cities throughout the country.

VACUUM OIL COMPANY

wiped out in a few days. Others carried the stocks for months before they could even break even. In addition to this the firm gave lavish cash presents to all employees, not based on length of service or loyalty but on the amount of money brought in during the year or period the man had been employed.

These things capped the climax as far as I was concerned, and I immediately resigned, knowing full well the ultimate result if I remained, either a jail sentence or a stigma on my name which never could be erased. As things turned out I was just in time as some ugly rumors had reached me in the past few weeks, and I understand it is but a short time before this concern will no longer be in existence.

I could enumerate many other instances but believe that these that I have will suffice, and sincerely trust that all those who are approached in the manner I have stated or who are the least bit doubtful as to the character of the firm they are doing business with will investigate to the fullest extent before placing their funds in jeopardy.

WHERE BANDITS HAVE A HAPPY HUNTING-GROUND

PATAGONIA, ASIDE FROM HAVING A NAME almost as interesting as Dickens's famous character's beloved Mesopotamia, is coming into newspaper prominence as the habitat of a certain prehistoric monster long thought to be extinct. It is also, we are authoritatively assured, entitled to prominence as the earthly paradise of banditry and of bandits. The prehistoric monster, said to resemble a plesiosaurus, may or may not be discovered, but there is said to be absolutely no doubt as to the existence of the bandits. It is a queer and lively country, attractive, to certain spirits at least, because it has not yet become tame and law-abiding as have most of the other corners of the earth. In fact, writes Marion Storm in the *New York Evening Post*, for some time now there have been plenty of hints to indicate that "the next goal of the exotic urge will be not the Poles, the isles of the Southern Ocean, or Tibet, but that land of startling stories and unstable settlers, Patagonia." According to report, there have always been giants in Terra del Fuego. Many of its forbidding islands are still unexplored. Moreover, continues Miss Storm:

All Patagonia persists in remaining picaresque. Argentina has striven to civilize that unbounded region with tentative railroads, governors, and mounted police, but not much has come of the enterprise yet. More adventurous capital and fewer bandits will be necessary. The prospect is that for a long time anybody will be able to relate tales of plesiosaurs in the lakes of Patagonia. Anything might come out of Patagonia.

Some say that the bandit swarms, in encountering whom the Argentine troops turn back, outnumbered, are the unhappy fruit of a too generous immigration policy. Next to Ellis Island, the Buenos Aires Immigration Station is the most prolific provider of population in the world. It is handsomely and elaborately equipped and liberally managed. Argentina wanted lots of immigrants to make her fruitful wildernesses blossom. She certainly got them, but they have proved, in Patagonia, to be far worse than the Indians and wild animals that they are exterminating. There, more than on the China coast or in the Australian bush, is now the Port of Missing Men. Gentlemen much in request at New York and London Police Headquarters have decided to reside permanently in the south, and the authorities at the Red House are aware of no satisfactory way of getting them out.

One trouble with the pioneer principle that the fittest will survive is that, as in Patagonia, a two-gun man may be altogether too fit for the country's peace. Where gentle and hopeful settlers have despaired, the bandit has made himself secure and comfortable. This vast southern Sherwood Forest, however, lacks chivalry. The recent warning of a Canadian writer comes to mind: "In opening our doors wide we are only too often providing an inlet for persons who have been 'impossibilities' in the Old World and are likely to prove even more 'impossible' here." Patagonia is full of plesiosaurian impossibilities. But unfortunately many of them have been contributed from our resourceful half of the New World.

The Argentine capital has repeatedly sent out small bodies of troops to take a crack at some of the bandits, and a modest garrison is maintained in the south. But there can be little more than guerrilla warfare against an agile enemy whom the dismounted cavalry and marines newly landed find it hard to locate and impossible to bring to open action. The "robber horde,"

on the other hand, are well posted as to troop movements, and so intimately in touch with thoughts thought in Buenos Aires that they are suspected of employing most unscrupulous wire tappers. The soldiers are not very keen over service in Santa Cruz, the southernmost and uneasiest Argentine province.

Not long ago telegrams from Puerto Deseado told that banditti in bands numbering altogether 500 men, well armed, well mounted, and bountifully supplied, were "sacking and burning" in that department. "As they pass through the country they gather up all the horses at the *estancias*, sack the stores, destroy the shearing sheds, and laborers' quarters, and burn the houses. Up to the present, twenty-two departments have been sacked and burned, and many prisoners have been taken. The families are fleeing to the coast, panic-stricken before the hordes of bandits, and the police at the stations along the line of the Puerto Deseado Railway in the interior have withdrawn because they are too few to be of any use."

It is very hard to get a straight story from Patagonia, because foreign companies with great interests in the interior to protect are anxious to make the accounts as alarming as possible, while the Government censors the news from the south in the interests of public calm. The tales in the British newspapers published in Buenos Aires are wild indeed: "News of the sacking of Pico Truncado station has been received. Motor trucks and motor cars were taken and wires cut. Gangs were on the way to assault Las Heras, Calet, Olivia, and Caramillo when the wire was sent." The cry grows louder: "A later telegram from Colonia Sarmiento, Chubut, says that the town of Las Heras (of about 650) has been sacked and burned. As the banditti are evidently surging northward in great numbers, Chubut will soon be devastated as well as Santa Cruz unless the Government shows more energy and appreciation of the situation." Later: "The manager of the bank at Pico Truncado has been taken prisoner."

So skilful were the marauders that at Comodoro Rivadavia they repaired a locomotive of which the railroad had despaired and puffed merrily away with their loot. Reports followed that:

The population at Rivadavia has become greatly alarmed, as the bandits are not many leagues away. They have taken prisoner a great number of local residents, including an Italian and a Spanish Vice-Consul.

The tension tightens: "Several large gangs of bandits are known to be on the way to La Oriental establishment. This big *estancia*, with its numerous buildings, is believed to be guarded by fifty well-armed men, and a fight is looked for if a serious attempt is made to sack the place. The *estancia* of Don Donato Baino, near Las Heras, has been sacked and burned."

As long ago as November the Argentine Government officially brought it to President Irigoyen's attention that American residents in Santa Cruz were sharing the general insecurity. On November 26 representatives of Great Britain and the United States called upon the Minister of Foreign Affairs in order to point out to him the necessity of attending to complaints received from countrymen of theirs dwelling in Santa Cruz. However, comments the *Standard* of Buenos Aires, "nobody, not even the Government, knows what may be passing in Santa Cruz."

An Associated Press dispatch from Santiago de Chile stated in January that frontier garrisons of Chilean forces in Magellan Territory had been strengthened as a result of reports that 300 bandits from Argentina, armed with machine-guns, were traveling in sixty automobiles toward the border.

The *Magellan Times* of Sandy Point, Chile, gave in November a list of prisoners taken by bandits in Santa Cruz, which included several foreign managers of estates bearing such names as Bird, MacKenzie, McLean, and Jones. The same paper declared that the Armour establishment at Puerto Beagle had been captured. The Chilean carabinieri seem to be the only force which has succeeded in repulsing the bandits, and some of the Santa Cruz natives are said to consider the robbers as the only organized and effective forces in the territory.

"The unpleasant fact has to be faced that the scum of the southern territories is advancing north with a rapidity and force which have caused a panic regarding Comodoro Rivadavia, an important oil-producing center, and that their next proceeding would be to set fire to the wells and tanks," says the *Standard*.

The Tenth Argentine Cavalry was sent to Santa Cruz some months ago, but being without horses or money could do little more than look on. The brigands are in the custom of thrusting prisoners into the front ranks, thus embarrassing operations of the troops.

A year ago there were about 150 "regular bandits" in Patagonia. The number has at least quadrupled in that time.

"We understand, of course," says the *River Plate Observer*, "that in the vast and sparsely settled territories there can be no permanent guaranty for anybody that a few bad men will not

Too Early

Babies don't need Pebeco, for they have no teeth. Neither do older persons whom "Acid-Mouth" has robbed of their teeth — it is then too late for Pebeco.

But for folks who have teeth and want to keep them, Pebeco is the right tooth paste. Cleans the teeth, keeps them firm, and counteracts "Acid-Mouth"—a condition that causes rapid tooth decay.

LEHN & FINK, INC.

635 Greenwich Street, New York

Ask your Druggist for the Pebeco Tooth Brush

It cleans every part of every tooth

Canadian Agents: Harold F. Ritchie & Company, Limited, 10 McCaul Street, Toronto

Too Late

How to tell if you have "Acid-Mouth"

First, send for Litmus Test Papers and big trial tube of Pebeco

Then moisten a blue Litmus Test Paper on your tongue. If it turns pink, that indicates an acid condition in the mouth. Brush your teeth with Pebeco and make another test. The paper will not change color, thus demonstrating how Pebeco helps to counteract "Acid-Mouth."

Fill in the coupon now, enclose ten cents and mail to us at once. The Litmus Test Papers and big trial tube of Pebeco will be sent you immediately.

LEHN & FINK, INC.

The Canadian Pacific Route

Bridging two oceans and linking four continents

Fortnightly Service to the Orient

Fastest Time Across the Pacific

FOUR magnificent Canadian Pacific Empress Steamships, the largest, fastest and most luxurious on the Pacific, will link Asia with America this year.

Empress of Canada
33,000 tons displacement
Empress of Australia
31,000 tons displacement
Empress of Russia
25,000 tons displacement
Empress of Asia
25,000 tons displacement

The Canadian Pacific Empresses hold the record for the fastest time to the Orient. The new, palatial *Empress of Canada* and *Empress of Australia*, now to be linked with the well known and popular *Empress of Russia* and *Empress of Asia*, are marvelous achievements of modern science and marine architecture. They possess individually the grandeur, speed and perfection of appointments that make them easily the choice of discriminating travelers.

Japan, China and the Philippines

Fortnightly Service from Vancouver, B. C., via Victoria
The new *Empress of Canada* makes her maiden voyage June 29th

Plan your trip now to Japan, Korea and Manchuria. See Fujiyama, the sacred temple cities of Nippon, visit the forbidden City of Peking, the ancient wall of China; the great Oriental ports of Shanghai and Hong Kong and the exotic city of Manila, in the Philippines.

As easy as a trip to Europe

PERSONAL GLIMPSES *Continued*

start bushranging. The country lends itself to the purposes of outlaws, or to the occasional depredations of violent characters who get out in the wilds and find victims among the lonely settlers.

But the wholesale terrorism of which we have recently heard is not to be mistaken for such isolated instances of brigandage. It is something that has existed at least throughout this year on a scale that indicates an organized campaign in which scores and scores of regular bandits are participating. Toughs have found the southern territories happy hunting-grounds.

What the *Observer* would like to see in Patagonia would be a special force of hard riders and good shots, given carte blanche to bring in the outlaws alive or dead. None of this sounds very unfamiliar. On, mourners of the vanished Wild West, turn your attention to the Wild South!

WHAT IS THE BEST WAY TO USE ONE MILLION DOLLARS?

THERE is a man in New York who has a fortune of a million dollars which he wishes to spend "for the good of humanity." The situation has been a favorite one, of course, with fiction writers time out of mind, but this man really exists, and his efforts to find out where his money will do the most good have resulted in suggestions of amazing diversity. In order to get at a popular idea of how his money might best be spent, the anonymous millionaire asked the advice of Bruce Bliven, one of the editors of the *New York Globe*, and Mr. Bliven, in turn, put the question up to the paper's readers. In the neighborhood of a thousand letters were received and, after suggestions dealing with private charity to individuals and the promotion of socialism, communism, or single tax had been excluded, Mr. Bliven published "essential parts" of many of the remaining letters. "One of the most fascinating revelations of human nature," he calls them, "that I have ever seen." They are of every possible variety, "From a pencil scroll on a five-cent tablet to beautiful missives on engraved letter-heads." Foundations to solve the housing problem are advocated by a member of the writers. Establish huge dairy farms near cities to supply infants with fresh milk, suggests another. Scholarships for needy students, support for impecunious artists and scientists, and an endowed public press that would really print the truth, are among other suggestions. With the names of the writers omitted, a representative list of the letters as presented by *The Globe* runs as follows:

I would suggest that he start to build small homes of about six rooms for the worthy. These homes could be put up for a nominal sum in quantities and paid for by the month instead of paying rent. The rentals could be used to put up more houses. When the tenant had paid in rent equal to

the cost of the house, the house would be his.

It has always been and it always will be the artists who keep alight the lamp of civilization. If you want to do good to humanity, you can do so through the artists. I would concentrate on architects, sculptors, painters, poets, authors, and musicians. Form an organization with prominent artists as advisers, to judge the first twenty applicants for loans of \$10,000 each, to be repaid in fifteen years without interest. The money to be invested in 6 per cent. bonds and the interest only used. Second advisory board would consist of applicants already granted loans, etc.

An institution should be established (a) to investigate local troubles, such as strikes, wherever they may be, to secure the real facts and make them public, regardless of who is at fault. (b) To investigate national policies and propose legislation, to secure the real facts and make them public. (c) To investigate international relations in the same way. (d) To establish a systematic national employment registry. (e) To educate the public at large to a higher conception of cooperation and conservation of man-power. (f) To establish a bureau for the dissemination of the truth in which the public can have confidence.

My proposal involves an all around ethical education of our people, especially young men and women, through a big national club—non-partisan, non-sectarian, non-religious, with club rooms everywhere provided with books, papers, music, and amusements; a bureau for vocational advice and assistance; facilities for giving people or for helping them to get for themselves everything essential to their physical, intellectual, moral, spiritual, and social welfare.

Thousands of model homes are needed at rentals within the means of those gouged by profiteering landlords. Building them would not be charity, for at the most reasonable rentals the enterprise would pay for itself.

Many of the most eminent scientists in Europe are starving and many a valuable contribution to the world's advancement is lost because its originator is forced to spend his time in search of food, etc. Why not endow an international university somewhere in a little town in this country, bring these men over, and give them freedom from care to devote their time to teaching and writing and the advance of science?

Give scholarships to deserving boys and girls who show they are above the average, so that they can continue in the grammar and high schools. If they received only \$5 weekly they would not have to leave school and go to work. It should be given only to those attending public schools, who are in real need and show ability in their studies.

I would place my million in a trust fund, the interest to be lent in moderate sums as long-term loans at lowest possible interest to people in modest circumstances for the following purposes: 1. Home buying. 2. Education or training of any sort. 3. Sickness or stress that threatens the home, life, or health of mother, baby, or father. 4. For inventions, patents, or small business beginnings.

I think a religious revival carried on through all the newspapers and magazines

THE route to - Yellowstone Park -in Gardiner- OUT Cody

Three great wonder spots—Yellowstone Park, Rocky Mountain (Estes) Park, and Colorado, all on one circle trip

The greatest show on earth—and the big vacation value of 1922! Take the *complete* tour—in historic Gardiner Gateway—out over thrilling Cody Road. Then—enchancing Rocky Mountain (Estes) Park—a short side trip. Go to Denver and the Pike's Peak region director "over the mountains" through the Never Summer country to Grand Lake and return through Denver's Mountain Parks. All on one trip, on through trains, for the low price of a round trip ticket to Yellowstone alone!

Vacation costs are down

This year, your dollar goes much farther; you can now afford to see the fascinating West.

Planned Vacations

Too Late!

INSURANCE covered some of it—not all. And there were the countless things that money could not replace. It was a sad little family that viewed the ruins of what had been their home.

Particularly sad was the family's head. Vividly, he recalled a certain advertisement—"Are you living on a volcano?"—and the discussion of the town's water system.

Unfortunately, it had not interested him. He had dismissed it as the talk of alarmists. But it had been all too true! The water mains, laid some dozen years before, had *not* been cast iron. The sudden demand of a serious fire had been too much for them. They had given way. And he, like many others, was obliged to stand idly by and watch in helplessness the destruction of his home.

It was the price of apathy. Will you one day pay it also? Or will you investigate the water situation in your town *now*?

If your water mains are made of anything but cast iron and have been underground for many years, they are a menace—not only from fire but from disease.

For durability, for safety and for ultimate economy, use Cast Iron Pipe—do not be misled by the slightly lower first cost of dangerous substitutes.

THE CAST IRON PIPE PUBLICITY BUREAU, 165 E. ERIE ST., CHICAGO

CAST IRON PIPE

PERSONAL GLIMPSES Continued

throughout this country, with the teachings of Jesus Christ strongly emphasized, would do the greatest good. If men are converted and follow the teachings of Jesus Christ all would be well and poverty and oppression will disappear.

I would buy a big tract of wild forest land in the Berkshires or the Adirondacks and turn it over to be conducted as a demonstration forest by Cornell or Amherst, or some other college with a forestry course in its curriculum. The existence of such a forest would be an example that might and probably would be followed. It could enable a number of young men to earn their way through college by wholesome, developing work and incidentally would train numbers of them in what will soon be an indispensable branch of our national economy—forestry. The products could be the basis of other industries with similar purposes and in the form of lumber could encourage home-owning by providing building materials at reasonable cost.

An attempt could be made to overcome, if not to eliminate, so far as lies in the power of one man, the slums of this and other large cities. Model tenements could be constructed to rent at nominal sums, but enough to make the plan just self-supporting. All work on construction to be given whenever possible to the deserving unemployed.

I am an old widow of sixty who was deserted with five babies in my youth. My only support is a son who works long hours and then has a harrowing trip in an overcrowded train, hanging onto a strap. For years we have been unable to find any clean, health-giving rooms to live in, such as a workingman on small income can pay for.

Why not use the money building such homes, one or two-family, small, clean, and neat-appearing houses that we could either rent or buy, where nature lovers could have a little garden and real sunshine, where we could recover from the toil and grind of daily labor?

I would have some of that money used for educational purposes, but not for institutions. I know of many who have to struggle and fight for their education. A fund established for the help of needy students would do some good. Money should be loaned at a low rate of interest and with somewhat easy terms of payment to men deserving of help.

A philanthropist could perpetuate his faith, charity and name by having built and furnished one or more large homes for old people, without the stigma of charity attached. Homes where the aged could go without any red tape having to be unwound; where kind-hearted and sympathetic attendants were employed.

The man who has millions to lay out for the benefit of humanity might use some of them in buying idle agricultural land and planting idle men on it. Thirty thousand dollars might be sufficient for a trial with fifteen men. My idea is to "stake" the men with a chance to become owners of a home to be paid for eventually by getting

the price out of the land. This idea was advanced through *The Globe* ten years ago.

Why waste valuable columns telling any millionaire how to spend his money? Do you think you can in the first place?

A millionaire and his money are not soon parted, but think, dear editor, of what valuable use you could make of that space in telling us poor devils who are trying to keep a roof over our heads, even if the water does leak through every room, how we can get jobs, we who seem to have so many talents, brains and intelligence.

Millionaires ought to be ashamed to own a million to-day. Just write one column for poor artists who just now are having a particularly hard time. Not the Greenwich Village variety. They choose that existence, love it, adore it, eat it up. No; I mean perfectly respectable family men who see their wives droop, get ill from an over-share of the burdens when the wolf howls too hard. What we need now is some spiritual uplift when we see it all going out and nothing coming in.

These people who are telling him how to spend his money, if they were in his place, wouldn't do the things they advise him to.

To maintain the average common man, woman and child in good health is a much-needed, constructive philanthropy. The enjoyment of good health is in every instance the best asset. With the laboring class it is usually the only asset; if they could be aided through periodic physical examinations in the enjoyment of health or the detection of disease in the earliest stages, a great public service, socially and economically, would be rendered.

A fund such as your friend possesses would be a godsend if applied to the needs of salaried and small business men who are now making their way, but need to be shown and assisted to a better way of living. The idea is to get such people away from large cities into the country and small towns, giving them a run for their money and incidentally making better citizens and neighbors. This fund would not be spent but invested, yielding a good return which could be turned over or withdrawn as desired.

Help establish the army of the practical arts so that all our artisans and scientists may be free to develop their skill and have the proper correlation so that we all may be working for constant advancement and make this a beautiful place to live in.

This is my idea: to let a poor widow woman with three children to keep and educate have the use of enough of that million until the children are able to earn for themselves. A foundation could be laid for such a purpose. As the boys or girls got to work and paid their sums back it would go on to help the next lot of boys or girls that would be left without their natural provider and helper, as mine are.

If I had a million or two and was anxious to aid humanity I would start several newspapers which would print nothing but facts. I would report everything a public official, politician or prominent citizen said in just the way he said it. I would print the Constitution of the United States in every copy. I would expose graft in fact not in theory. I would run a "situation wanted" ad free.

I think it would be a great benefit to humanity if said millionaire were to use his

SEE THOSE BABIES—typical babies in Seattle, healthiest city in the world and in a class by itself in respect to the low rate of infant mortality. If it's good for the babies it's good for you. Learn the secret.

Breathe deeply of this wonderful mixture of mountain and sea air, never too hot nor too cold, always balmy, tonic and life-giving. Whip our trout streams, glide over our shimmering mountain lakes and our placid inland seas. Climb our glorious mountains. Motor over our forest and mountain and sea-side roads. Golf, ski, swim, hike, camp, canoe, hunt and do any and all of the things you love—they're all here, if they're of the great out-of-doors.

It is the out-of-doors people we especially want, those who can revel in the wonders and delights of the greatest out-of-doors country on the continent; those who can appreciate the supreme masterpieces of Nature's handiwork in majestic and inspiring scenery and the sheer beauty of a lovely countryside—of big trees and ferns and wild woodsy things.

We want them to go back to their tasks renewed in body and soul, and our friends. We want them to learn why babies such as these are Seattle's babies. We want them to spread the tidings until all our over-wrought people will come to the Charmed Land for healing and regeneration.

Plan for a month, two months, or three months. It will be the time of your life. Mt. Rainier National Park will hold you for a month of delight if you can spare the time. Come by train or motor and direct to the Chamber of Commerce tourist bureau, 702 Third Avenue, Seattle, and they will make things easy for you. Low summer rates and fine motor roads.

Write today for booklet "The Charmed Land" and begin now making plans. SEATTLE CHAMBER OF COMMERCE, 901 Arctic Bldg., Seattle, Washington.

"The Wayfarer," stupendous musical biblical pageant, Seattle, July 24-29.

Maximum temperature, Seattle, 1921—80 degrees.

Average summer months' maximum for 20 years—71 degrees

Does that aroma of the pines still stir you?

In the vastness of the great out-of-doors, your canoe for a companion, your paddle your guide—and the smell of the pines! Man! That's living!

It is instinct that tells men to love the smell of the pines. Among the pines there is health.

The healthful essence of the pines—healing pine tar—in Packer's Tar Soap—will go a long way towards bringing health to your hair and skin. A healthy condition is the foundation of good looking hair.

Your first shampoo with Packer's will healthfully *cleanse* your scalp. A decided sensation of tingling refreshment will be apparent. The hair, too, will be softer and brighter. Its vitality will be higher. It will be noticeably improved in appearance.

Use either the well-known, standard cake, or use Packer's Liquid Tar Soap, which, delicately perfumed, has a different fragrance but the *same* dependable Packer habit of bringing health to hair and skin.

THE PACKER MFG. CO., INC., Dept. 84D,
120 W. 32d St., New York City

Canadian Wholesale Distributors: Lyman, Limited, Montreal;
The Lyman Bros. & Co., Ltd., Toronto

Sample Offer:

All druggists carry Packer's Tar Soap, but if you like, we will send you a sample of either the cake or the liquid on receipt of 10c. At the same time we will send you a copy of the Packer Manual "How to Care for the Hair and Scalp."

PACKER'S TAR SOAP

PERSONAL GLIMPSES Continued

millions in buying up lands within commuting distance of large cities or towns, build settlements with simple homelike dwellings which a wage-earner could buy for just the cost of putting up the house, pay what he could down and monthly rental according to what his salary would stand until \$500 had been paid. Then he could pay off the balance or leave it stand on mortgage at a small per cent.

Why not have your millionaire friend devote a million or two as a fund to purchase artificial limbs for those unfortunates obliged, like the writer, to wear them, but who find the cost of buying and maintaining them too onerous a burden?

There is one cause to which millions could be applied which would affect every being on earth. That cause is the elimination of involuntary poverty, so that it would become certain that no man or woman willing to work would be unable to find ample and paying work to do.

Would suggest for your millionaire friend that he build substantial apartments that could be rented at not over \$40 for five rooms and bath, a percentage of the profits to go into more buildings and, if possible, a portion to be given to hospitals.

I would spend my several millions by making provision for the continuance of scientific education along the lines of pure research. This would be a permanent benefit which could be brought about by the establishment of a bureau, either sufficiently endowed or in connection with State or university work, to support a plan similar to that of the Mellon Institute at Pittsburgh, Pa.

Rent from one to ten beds in reliable hospitals for needy sick people and the unfortunate stranger who is sick, without friends to look to his welfare. Also let fund pay for nurses to care for patients.

Provide a fund for the use and benefit of mothers and fathers who have reared a family, sons and daughters married, parents not having sufficient funds to pay their way in the homes of sons and daughters-in-law where parents are obliged to live, and where, unfortunately, sons and daughters-in-law feel that the old folks are more of a hindrance than a help. Co-operate with these relatives and allow the old folks to maintain their own homes with the aid of funds from such a source.

My suggestion is to create an endowment providing for a certain number of students from the different countries of the world. These students should pursue a course in civilization, national and international problems, public service, etc., this course to be established at Washington or for the present at one of our existing universities.

I want to suggest that the millionaire who has several millions of dollars to help mankind, and is not interested in foundations, socialism, and the like, devote his great wealth and humanitarian energies to establish in this country the means for the distribution of the knowledge of birth control.

SENATE CHAMBER CLOSE-UPS

"SHOOT!" cries the movie-director, and the camera-man turns his crank, while living figures picture themselves on celluloid for all the world to see. But there are other cameras. The eye is one. Particularly a writer's eye. And when we take up Mr. Robert Littell's vivid description of figures in the United States Senate, we can almost hear a director's voice cry, "Shoot!" Mr. Littell has "shot" Senator Reed of Missouri. He has "shot" Wadsworth of New York and Lodge of Massachusetts, and a dozen or so besides. If it was not Mr. Littell who wrote "The Mirrors of Washington"—a movie, in its way—it might plausibly enough have been Mr. Littell, and the burden of proof rests with him, or so readers of his article in the *New Republic* are saying. They base their guess on such evidence, for example, of this "close-up" of Senator Reed:

A one-sided man, with a dark, bitter talent for improvised speech, which he uses only in destruction. He never throws or squirts his vitriol, but pours it out drop by drop into perfectly formed little pools of sarcasm and hatred. After each sentence he waits for the acid to corrode its path into evil, and moves slowly a few steps to the right or left of his desk. A plain figure, neither fat nor thin, in plain blue clothes, with short businesslike gray hair; features scornful, a little ascetic. His words have rhythm, design, but his voice none, breaking after periodic lulls into loud, dangerous tones; a clear-cut voice, of a few notes, except for times when, as he leans forward, it shrivels in an ecstasy of sarcasm.

Naturally, Mr. Littell speaks for himself alone. Whether this is portraiture or caricature or a mingling of the two, the reader is left to judge, and so again in the case of Mr. Littell's "shot" at Senator Wadsworth:

A shapely, bald figure, very straight, young and vigorous, in a black cutaway; cold, incisive, with a voice of Eastern cultivation, in which a deep, intolerant anger moves just below the surface. Even when he is not angry this tone can be heard. I can see him respecting his anger, feeding it, taking it out on a leash for exercise, bringing it back into the Senate tugging to be heard, but still on leash.

Whatever the other kinds of criticism such a writer as Mr. Littell may bring to bear upon the Senate, the accusation of mediocrity is not one of them. Many Senators "once seen and heard, stand out from the mass." For instance:

Willis of Ohio, voted by the stenographers the handsomest man in the Senate, modern, still athletic looking tho overweight, with a pitiless voice like the forcible mutilation of sheet-iron.

McCumber of North Dakota, drawn and hook-faced like an Albino Indian, from whose confident chest come long noises of hearty dullness, marred by "s" sounds whispering through the big words.

Brandegge: too high a whistle for so heavy a locomotive. Norris: a pleasant, ungainly figure, a little white and tired,

Can't you recall the famous old nursery jingle that goes —

*Ride a cock-horse to Banbury-cross
To see what Tommy can buy;
A penny white loaf, a penny white cake,
And a two-penny apple-pie.*

ARE there any folks left who don't know that the most delicious food you can get is right around at your own grocer's?

It's the old story of the Bluebird of Happiness. After searching all over the world for "something good" you may find it right in your own home.

Now, for instance, what is more delicious than Post Toasties—the superior corn flakes—with cream or good milk?

Get the joy of that crispness and flavor from a bowl of these wonderful golden-brown flakes of toasted corn for breakfast—and you find yourself wishing that it could happen once more, and fearing that it won't.

And there you are at lunch again—another bowl of that same delightful goodness. Or at bedtime; exactly the same delicious quality which first made you wonder whether Post Toasties *could* keep on being so good.

Keep Post Toasties in the house, for all the family. Let the children have all they want, whenever they're hungry. There are many helpings from a package of Post Toasties, and there's no trouble or waste or delay in serving.

Post Toasties are *different* corn flakes by their own name. To realize all that corn flakes *should* be, order Post Toasties from the grocer—and be sure you get the Yellow and Red package.

Post Toasties

— improved corn flakes

Warn-O-Meter

The Warning
Light

Seen Day
and Night

The Sign of An Experienced Driver

THE experienced driver is well acquainted with the disastrous effects of motor overheating, and appreciates the protection this beautiful, electrically operated instrument affords. You can't overlook it. Its brilliant electric signals are always perceptible. It is not necessary to turn a spotlight on it to read it after dark, as it is as easily seen at night as in the day.

The Warn-O-Meter registers motor temperature taken from the motor direct—not from the water in the radiator. It gives you facts.

The elegant finish and attractive design of this instrument make it a conspicuously beautiful accessory for your car. In the non-indicating side of the Warn-O-Meter, a special insignia may be substituted for the nameplate, illuminated by the lights within the instrument and attractively displayed day and night. Plates of special design are extra equipment, but may be secured at any Stewart Service Station.

PERSONAL GLIMPSES *Continued*

with a warm, honest, alert bass. Overman: maned and dignified, calm, old-fashioned, voice rumbling and broken with an involuntary buzz. Lodge: small, straight, dried, distinguished, speaking with joyless precision. Borah: an ominous figure, the small black cloud in the sky, which may at any moment overcast all heaven and pour down a dark hail of passionate, earnest, masterly eloquence.

Walsh of Massachusetts glances at one of the Hearst papers, and nothing is visible from behind the pages but a scant formless crop of hair and a bulky expanse of cheek and jaw. Tom Watson, whose hair is perfectly heaped in the lesser Senatorial manner, is examining his income-tax blank, which he holds with delicate, if unconscious poise. The Beavers are at work: Warren, Walsh of Montana, Jones of Washington, whose honest back may be seen at almost any time bending over his desk, bending so diligently, even through the roll-call on the Yap treaty, that he inadvertently votes against it. On the left a small group is chatting: Moses and Johnson, seated, and Cummins and Wadsworth. Moses is making a mock speech to them in a low voice. Wadsworth and Cummins are amused, while Johnson fills Moses's coat pocket with torn scraps of paper.

And here we have a picture of Senator Lenroot:

Mr. Lenroot has a great hammer of a voice, clanging mercilessly, bitterly, like a fatal trap, and it goes well with an impatient face, hard and cornery, as if forged, or carved hurriedly out of ironwood. He stands rooted behind his desk, and whips Mr. Bursum with proof that he does not know his own bill, that his arguments would not be surprising if they came from a Democrat, that he has no conception of its consequences, that he did not know, and does not now care, if he creates a precedent whereby inevitably Civil War and Spanish War veterans must be retired at an additional cost of half a million.

While this metallic thunder comes from an angular and savage man, Mr. Bursum stoops a little; he sits, an excess Republican, among the Democrats; he has no presence; his features are blurred, uncertain, as if once of wax that had slightly melted; his voice is trailing, indistinct, defeated; he moves uncertainly about, forward to plead an answer, back wanderingly to his desk to look up a document, which, after long pawing, he can not find; the logic of his argument, hazy, ineffectively defiant, seems to demand that he go in and out among the desks, as if vainly pursuing its conclusion.

After watching for a while—

Your eyes swim; the Senate Chamber fantastically darkens; the carpet dissolves, rises like a flood until all you can see through its green fathoms are dim globes gleaming obscurely the bald heads of Senators now swallowed, crustacean. . . .

"McCormick, McCumber, McLean, McNary, Moses, Ladd . . ." a monotonous rumble half-awakens you. You have heard that kind of sound somewhere before. A midnight station, a full-throated conductor. . . . "Next station McCumber, change for Moses Pond and White River Junction. . . ."

THE LITTLE ENTENTE'S YOUNG FATHER

BEING an infant prodigy at thirty-eight is the happy privilege of Dr. Edward Benés, Czecho-Slovakia's representative at Genoa and the youngest prime minister in Europe. The correspondents speak of him almost as if he still wore rompers. And they remind us that in at least one respect his precocity should command world-wide admiration, for the infant prodigy is a father—of the Little Entente, which is active as a unit at the Genoa Conference. Writing in the New York *Tribune*, Mr. Wilbur Forrest describes Benés as the son of a Bohemian farmer and as “a political product of the European War,” while experienced men of diplomatic affairs and those long conversant with the craft of statesmanship who have been watching his career point him out as one of the biggest statesmen of Europe. We are told:

He was thrown into active political life when, as a delegate to the Paris Peace Conference, he put his signature to a treaty creating the free and independent republic of Czecho-Slovakia from a fragment of the old Austro-Hungarian Empire. Within less than four years he has advanced from the position of an exiled representative of his country, even before it was created, to its political head of State and a position in European affairs which is unique. Aged statesmen of Europe see in Benés the statesman of the future.

Aside from Lloyd George, who has often been called a political opportunist, Benés is perhaps the only statesman of Europe whose work stands out prominently against the chaos which Europe has known for the last few post-war years. Benés is a political realist, and his record, tho brief, indicates that he has the ability to tackle the tasks which have stumped the elderwise men.

When the European war broke out Edward Benés, at the age of thirty, was a student at the University of Prague and a professor at the Academy of Commerce. He was unknown except to his intimates, who recognized him as the author of interesting ideas and work in sociology and political physiology. Previously to this he had studied abroad at the Sorbonne in Paris, at the University of Dijon, where he took a degree in law, assuming the title of “doctor” at the age of twenty-five; in London and Berlin.

The Paris Peace Conference found Benés representing the interests of the Czechs and Slovaks, and his diplomacy here gained him the appointment as Foreign Minister of Czecho-Slovakia after that new republic had been born out of a treaty which Benés signed. Here reappeared the unity idea in which the new states of Czecho-Slovakia, Jugo-Slavia and the new and greater Roumania combined their interests in the Conference against the reduced but still monarchistic Hungary.

To-day Benés is known in Europe as the “young father of the ‘Little Entente,’” which, aside from the three original states, has been joined to all intents and purposes by Poland, bringing about a coalition of some eighty-eight million people, now known as the “Quadruple Entente.”

If the young Premier of the Czechs and Slovaks is the dominating figure in Central Europe to-day, Europe deduces that he will be the guiding force of the greater unified Central Europe to follow.

MOTORING AND AVIATION

Cuts from "14,000 Miles Through the Air" (Macmillan).

AN AIR CRUISE THAT MADE HISTORY.

The earth, which is some 25,000 miles in circumference, was more than half-way circumnavigated by the flight from England to Australia. Sir Ross Smith, who made this flight and whose journal of it has just appeared, starts next month on a flight around the world.

FLYING HALF-WAY ROUND THE WORLD

THERE was a gallant ship which set out on a voyage of 14,000 miles, for a prize of \$50,000 and the honor of being the first man-carrying vessel to follow the highways of the air between England and Australia. The ship was the Vickers Vimy, a sister of the British airplane which flew the Atlantic last summer. Months ago the cables carried the story of how the four air adventurers had completed their journey half-way around the earth within the time limit set by the paper which offered the prize; and now the pilot of the expedition, Capt. Sir Ross Smith, has published a journal of the long cruise, illustrated with photographs, under the title of "14,000 Miles Through the Air" (Macmillan).

"Lyons—Rome," "Cairo to Bagdad," "In the Clouds Above Burma," "Siam to Singapore"—so run some of the chapter headings. The pilot who tells the story had more than a sporting interest in the flight, it may be gathered from many suggestive passages in his journal. He loved his machine. This tribute to it appears in the chapter which records the start of the flight:

The machine was flying stately and steady as a rock. All the bracing wires were tuned to a nicety; the dope on the huge planes glistened and glistened in the sunlight; I was filled with admiration. The engines, which were throttled down to about three-quarters of their possible speed, had settled down to their task and were

DOWN IN AUSTRALIA AT LAST.

Citizens of the most distant of Great Britain's possessions inspecting the flyer which came by way of the air from England, on the other side of the world, directly under their feet.

sioner met us and proffered the hospitality of a native bungalow a couple of miles from the machine. Here we aroused intense interest; eyes taking little furtive glimpses at us peered through every crack and gap.

During the night we were awakened to hear some fellow prowling about outside. I waited until he was opposite the doorway, then a shot from my Very light pistol put him to a screaming end, and I have no doubt, a terror-stricken flight.

The natives had recovered from their shyness by next morning, and on our arrival were swarming around the machine with presents of coconuts sufficient to start a plantation; evidently they thought the *Vimy* a very thirsty sort of bird.

We took a cargo of nuts on board, as the water was unsuited for drinking, and, setting off in dazzling sunshine, once more pursued our course above scenes of tropical enchantment and alluring charm.

After following the north coast of Flores to Reo, we crossed over to the south side of the island and ran into isolated rainstorms. Once we saw a small active volcano in the distance and were tempted to go off and gaze down into its smoking crater, but as the weather indicated a change for the worse, we could not afford to make a deviation. We flew on as far as Pandar, and then swung off direct for Timor.

We had by this time acquired such confidence in our engines that it mattered little what lay below us—sea or land.

A thick haze soon obscured the land and all distant vision, but we eventually picked up the Timor coast a few hundred yards from our calculated position. Ten miles inland we came down in the aerodrome at Atamboea, our last landing-ground before Port Darwin.

The Dutch officials had thoughtfully arranged our petrol and oil supply close at hand, saving us a good deal of valuable time, which we were able to devote to a thorough overhaul.

To-morrow would be the great day whereupon reposed the destiny of our hopes, labors and ideals.

This was one of the aerodromes specially made by the Governor-General of the Netherlands Indies for the Australian flight, and had been completed only the day before our arrival. A guard of Dutch soldiers kept watch over the machine while we proceeded with their officers to camp, some six miles away.

It is hardly necessary to say that none of us overslept. We were too excited at the prospect of the morrow. We felt sure that if it dawned fine and hot, our homing was assured; but as we stepped out, before sunrise, into the still, sluggish air, we realized that our hopes of an early start were small. A heavy haze lay over the sea and the coast, obscuring everything; so we decided to await its clearing.

We were at the aerodrome before sun-up to discover that a great swarm of natives were even earlier risers than ourselves. Most had come afoot, but many had ridden their ponies, and they clustered on and around the fence, behind and beside the *Vimy*, like swarming bees. We had hauled the machine well back with the tail against the fence in order to take advantage of every foot of the short run.

Our start-off was brightened by one of those incidents that usually make material for comic papers. The propellers were just "kicking" over, like two great fans, and those natives sitting on the fence in the line of the slip-stream were enjoying the cool breeze and looking pleased with themselves. When I opened up the engines and

MOTORING AND AVIATION

Continued

both propellers swung into action, the sudden blast of air sent these particular spectators toppling back into the crowd, where ponies and natives made a glorious mix-up, at which we all laughed heartily.

If an airplane is forced to land in the sea it usually floats for a time, then the forward part sinks and only the tail remains above water. Remembering this, just before leaving Timor, we tied a parcel of food, a bottle of water, the Very pistol and some cartridges on to the tail so that we would have something to fall back upon in case of emergency.

Soon after 8 the fog began to thin, and at 8:35, to be exact, I opened up the engines and just managed to scrape out of the 'drome. Scrape is exactly the word, for the branch-tops of the gum-tree rasped along the bottom of the machine as we rose. It was indeed one of the closest shaves of the trip.

In front of us rose a chain of high hills, and, as the atmosphere was hot and we climbed very slowly, we made a detour to avoid them. Still flying low, we approached the coast and pulled ourselves together for the final lap—the jump across the Arafura Sea that lay between us and Port Darwin.

Keith took all possible bearings, noted wind direction, and made numerous calculations of ground speeds. Then we set compass course for Darwin, and, with a "Here goes!" we were out over the sea. All our hearts were beating a little quicker; even our fine old engines seemed to throb a trifle faster.

This was to be our longest stretch over open sea and I did not relish the prospect of being out of sight of land for five hours. However, as the coastline of Timor receded and disappeared behind us, my thoughts turned back to the great transatlantic flight made by the late Sir John Alcock in a *Vimy* similar to our own. What had we to fear with only a few hundred miles of open sea to cross, while he had nearly 2,000?

The Australian Government had arranged that a warship should patrol the sea between Timor and Port Darwin in case we should need help, and anxiously we scanned the distant horizon for the first glimpse of her.

Our watches registered 11:48 when Keith nodded ahead, and dead on the line of flight we made out a faint smoke that soon resolved itself into the smoke plume of a fighting-ship. It was H. M. A. S. *Sydney*, and we knew now that, whatever might befall, we had a friend at hand.

We swooped low, and exactly at twelve minutes past noon passed over the vessel, seeing plainly the upturned faces of the sailors and their waving hands. It was a cheer of welcome quite different from anything that we had experienced on the long journey. Perhaps it is not to be wondered at that the result of our snapshot was blurred through the shaking of the camera.

We took the opportunity of snatching a speed test, and found that we were averaging seventy-five miles an hour.

Two hours later both of us saw ahead and to port what appeared to be haze, but which we hoped was land, tho neither dared express his hopes. They were justified, however, ten minutes later, and hailing Bennett and Shiers, we pointed joyfully to Bathurst Island lighthouse.

It was just 2:06 P. M. when, as our diary prosaically notes, we "observed Austra-

lia." At 3 o'clock we not only observed it, but rested firmly upon it, for, having circled over Darwin and come low enough to observe the crowds and the landing-place, we landed on Terra Australis on December 10th, 27 days 20 hours after taking off from Hounslow.

We had won the race against time and the £10,000 prize with just 52 hours to spare!

CABLES TO GUIDE AIRCRAFT FLYING IN FOG

"LEADER cables," placed along the channels of harbors to guide ships into port, have lately been adapted to the use of airplanes. Such cables, it is believed, will enable aircraft to land safely at night or in foggy weather, making it unnecessary to illuminate the airdromes. An engineer officer of the French Navy, Lieut. Arthur W. Loth, who had previously perfected the ship-guiding device for use in the French Navy, has perfected and tested out the new invention, according to the *Comptes Rendus* of the French

Academy, with satisfactory results. As with the ship-guiding device, lines of magnetic force are thrown off from the cable to be received by "listeners" or specially arranged ear-pieces, worn by the pilot. There are three receiving coils fixed on the plane, says the French writer, who goes on to describe the process of guiding by cable as follows:

When the machine is moving directly above or parallel to the cable, a strong signal is transmitted to the pilot through the receiving coil in the center, and this continues so long as the cable is being "followed." The other coils show the pilot when the machine is to the right or the left of the cable. The signals can be heard for a distance of a mile and a half on each side of the cable and up to a height of 10,000 feet, the range being greater than in the case of a submarine cable because there is less loss of energy.

The fundamental principle of the Loth guide cable, says a writer in the April 10 issue of *Aviation* (New York), rests on the fact that if a high frequency alternating current is sent through a cable earthed at each end, a magnetic field of considerable intensity is created around the cable. The principles somewhat resemble those

CHAMPION of the Northwest

Arthur
Lundberg

Lundberg's wonderful victory over a big field, at Portland, Oregon, where he captured both the Northwest and Oregon State championship scalps, was won with a Dayton—the fastest, sturdiest and most dependable bicycle on the market.

The story of Arthur's success is interesting—it's a story of rider and bicycle leadership.

That the bicycle of his selection should have been a Dayton is only natural.

And there are some important reasons why you should own and ride a Dayton.

Dayton Bicycles

"Leaders Since Your Dad Was a Boy"

May we send you (free) a copy of our new art catalog? Most of all we would like to send you (also free and postage paid) a copy of a most interesting booklet entitled: "How to Choose a Bicycle."

This booklet tells a lot about bicycles in general—bicycle facts that every boy or girl should know before he or she can safely decide upon a particular type or make of bike. Send for your free copy of "How to Choose a Bicycle," at once. Address:

MOTORING AND AVIATION Continued

of directional wireless, used for some time to guide airships through fog or darkness. In the case of the guide cable invention:

The effects of the magnetic field can be detected by means of suitable instruments at considerable distances from the cable. Thus if an aircraft is equipped with these instruments, its navigator can determine his position relative to the cable, and thus ascertain his bearings.

Altho the principles are very simple, M. Loth was faced with numerous problems before bringing his system to perfection. Thus he had to do a tremendous amount of research and experimental work in connection with the formation and extent of the magnetic field surrounding the cable. This work took a long time, as measurements were often taken at intervals of a meter or so. The lines of force, shown in the accompanying diagram, were found to vary with the frequency of the alternating current sent through the cable. The lines

By courtesy of "Aviation," New York.

FIG. 2. Installation required on an airplane using the Loth guide cable.

shown in Fig. 1 represent the field resulting from using a frequency of 600 per second.

As regards the equipment of the airplane, this is simple in principle, consisting in mounting in a suitable place—for instance, on the tail of the machine three panels of insulated copper wire, so placed as to be at right angles to each other, as shown in Fig. 2, where 1 is the longitudinal vertical panel, 2 the lateral horizontal panel, and 3 the lateral vertical panel. These panels are connected to a telephone receiver, as in ordinary direction-finding wireless, via a commutator, so that the navigator can listen in on either of the three panels.

According to the position of the machine in relation to the cable, the intensity in each of the three panels varies or may even disappear. For instance, when the machine is flying parallel to the cable, the sound is a maximum in the longitudinal panel 1, and nil in the transverse vertical panel 3. As the machine diverges from the course parallel to the cable, the sound diminishes in the longitudinal panel, and increases in the lateral vertical panel, in which the sound becomes maximum when the machine is at right angles to the cable. The sound in the longitudinal panels then vanishes. The horizontal panel has the property that the sound in it vanishes when the machine is vertically above the cable.

It will thus be seen that if an airdrome has a cable running around it, the navigator of a machine can determine, even in a thick fog, the exact moment of crossing the cable, and by finding the height from the altimeter he can determine at what angle to

Why worry about baggage?

The theft or destruction of your baggage may mar the pleasure of your trip, especially if you must bear the burden of the loss financially.

The Insurance Company of North America issues a Tourist Baggage Policy that protects your baggage against practically all the perils of transportation and is worth many times the cost in the worry it saves.

If you travel at all, it will pay you to fill out the attached memorandum and mail it to us at once.

Any insurance agent or broker can get you a North America Policy.

Imperial Sanitary Floor

Put on like Plaster
Wears like Iron
-waterproof
-fireproof
-resilient
-noiseless
-dustless
Base and Floor one solid piece

A composition material easily applied in plastic form over practically any kind of floor. Laid about 1/8 inch thick. Imperial Floor does not crack, peel or come loose from foundation. A continuous, fine-grained, smooth, non-slipping surface. No crevices to gather grease, dirt, dust, disease germs or moisture.

Ideal Floor for Kitchen, Pantry, Bathroom, Laundry, Porch, Garage, Restaurant, Theatre, Hotel, Factory, Office Building, Railroad Station, Hospital—wherever a beautiful, substantial floor is desired. Several practical colors. Full information and sample FREE of your first and second choice of color.

IMPERIAL FLOOR CO., 55-57 East Avenue, Rochester, N. Y.

A Success for 15 Years

glide into the airdrome in order to make a landing.

A special commutator enables the operator to put any two of the panels in series and the information gained by so doing enables the exact position of the machine in relation to the cable to be determined. Thus, by placing in series the longitudinal and transverse vertical panels, the operator can determine whether the machine is inclined to right or left in relation to the cable. In order to determine whether the machine is approaching the cable from the left, to right, or from right to left, the longitudinal and horizontal panels are placed in series. Placing the transverse and horizontal panels in series serves to indicate the vertical distance above the cable. In other words, it shows whether the cable is running up or down the side of a hill or mountain, or whether it is running horizontally over flat ground. By the use of the Loth cable a machine can thus travel along over any sort of country, the navigator knowing his position, and knowing that he can not accidentally run into a cable in the fog, as his receiver will warn him when he approaches too close to the cable. When this happens while the machine is flying horizontally he knows that the cable is running up the side of a hill, and if he is on a familiar route he will probably know which is the hill in question. Put in another way, the guide cable is both a direction wireless and a contour map of the route flown.

It goes without saying that the invention had many difficulties to surmount, difficulties not directly connected with the system, but which had a considerable effect on its development. Thus it was found that the magnetos caused such a noise at the receiver as to drown, or nearly so, the sound from the wireless panels. To overcome this difficulty it was necessary to explore the magnetic fields of the magnetos thoroughly, and this was consequently undertaken and brought to a successful conclusion.

Mr. Loth has also found means of interrupting the sound from the wireless panels for the very short interval occupied while the spark plugs are giving off sparks. In point of fact, the receiving in the telephone ear piece is intermittent, but the intervals are so short as to be inaudible to the human ear which hears the receiving as if it were continuous.

The practical results obtained with the Loth guide cable are said to be briefly the following:

With the horizontal panel (2) in contact with the cable has been established from an altitude of 10,000 ft. With the two vertical panels contact has been attained from a height of about 8,000 ft. At an altitude of somewhat over 6,000 ft. the operator can hear on all three panels, and can begin to guide the machine without being much disturbed by the various noises on board. At lower altitudes the receiving becomes very loud. When flying at about 6,500 ft. the cable can be "picked up" from a horizontal distance of approximately one mile. As the machine flies lower, what might be termed the "useful zone" increases in width, until at ground level the range is about 9 miles.

These results were obtained with an experimental cable of 9,500 ft. in length and having eight sharp angles in it. The longest straight length was less than 2,000 ft. It is confidently expected that with a proper line, running more nearly straight and of greater length, even better results will be obtained.

MOTORING AND AVIATION

"SHOCKING STORIES" VS. THAT
INSTRUCTION BOOK

THAT instruction book which came with the car, and which manufacturers give such pains in having printed and distributed to their customers—do you ever read yours? A man interested in motoring matters lately made a little quest for a motorist who actually read his instruction book intelligently. It certainly was a quest, says the investigator, and he uncovered some shocking stories, even though the book itself is admittedly not as thrilling as some of the tales to be found in "Sensational Yarns." One car owner, he says, relating his experiences in *The American Motorist* (Detroit), hadn't even thought of the book, and wasn't exactly clear as to the reason for its existence anyway. After a diligent search of the car—

He found it tucked away under the rear seat, submerged in the folds of the rain coats. He offered the alibi that he thought it was some sort of advertisement. Another car owner confessed that he had torn out the pages in order to use the paper as a gauge of the valve tappet clearances, whereas the book would have advised him to use a thin visiting card for this purpose. He had read the instructions he would have known why accuracy was important, but he was not so "exacting." What remained of the book after he had mutilated it was smeared beyond legibility by grease on his dirty hands. It is interesting to find that reposing on the seat cushion back and span, though carefully read, was the very latest issue of "Shocking Stories." Can it be, I wonder, that the manufacturers are a little out of date in the way they present their advice? It is rather dry reading after all. The cover merely bears the name of the model and, mind you, in this day of picture craze not even a photo of the car. There are cuts, to be sure, throughout the book to reveal the innards of various parts of the machine's anatomy, but they are Greek to most motorists. There is no action in them—and naturally the man who loves to exercise the speedometer is equally fond of action in his instruction. The motorist has just cause for complaint—but only to a degree. There is no reason why he should go ahead making a vital mistake which results in consequences which he alone must bear.

However, if the manufacturer doesn't inject a little speed into his advice that is no reason why the motorist shouldn't goad himself to pass an occasional bad quarter-hour perusing and digesting the instruction book, however dry and uninteresting, however tame the illustrations. It's to his advantage. A little confession from the writer will illustrate:

I had been driving a car with a valve-in-the-head motor, and upon occasions adjusted the valve tappets. For such work I used two wrenches, one to back off the adjusting nut and the other to turn the adjusting nut. Quite naturally, therefore, when I came to adjust the tappets of the new car, which was of the L-head type, I did like-

wise. Forthwith I experienced all manner of trouble, for try as I would it seemed impossible to obtain any sort of accurate adjustment. The tappets were first much too tight, then much too loose. There was no rhyme nor reason to the thing—a fact which caused me days of work and worry minus use of the ear.

I decided that I would condescend to glance through the instruction book, or rather I decided upon the printed advice of the manufacturer as a last resort. But where was it? Oh, yes, I had tucked it away in my desk to keep it clean. Some day—that day we all expect when time will be plentiful—I would recline in an easy chair and read it from cover to cover. It goes without saying that this elusive day of rest might have been forthcoming had I read first before leaping. It developed that the tappets of my car were of the mushroom type, which means that the push rod is free to turn about so that the flat end that rides the camshaft will wear evenly. When I turned the adjusting nuts the tappets turned with them, and that accounted for my inability to effect any sort of reasonable adjustment. I should have used a third wrench to hold the push rod while I made the adjustment. In other words, I should have read my instruction book.

Yet the instruction book is treated unmercifully. They need a Laura Jean Libby to write it, insists this critic. Then perhaps Old Boy Hard Experience wouldn't have such a monopoly on the situation. To him is left the task of eventually turning every motorist back to his instruction book, which he does to perfection, tho always after the damage has been done and the bills paid. However—

The motorist in question is now so partial to his instruction book that he has ordered a new one in case something happens to the original. And when I explain how it happened that he paid a nifty repair bill, the reader will appreciate the reason for his change of heart. Whenever this chap had any spare time he always tried to find trouble, even if there wasn't any to be found. He carried the idea of car care to extremes. To this, furthermore, was added the additional fault of assuming that he knew as much as the manufacturer could divulge via instruction book.

At length this led him to inspect the distributor. He couldn't find any dirt in the cover, nor could he find anything wrong. But he had high hopes. He was not entirely unsuccessful, for, lo and behold! it developed that the tip of the rotor was not touching the contact points of the distributor head. How then was the spark ever going to reach the ignition wires? How was the motor to run with all this out of commission?

Much to his chagrin, however, he had to admit that the motor had been running, and most decently at that. Yet there was no contact. It worried him. Worried him so that at length he lifted out the rotor and by bending the tip with the pliers fixed it so that in revolving it would touch each of the contact points. Then he replaced the cover and started the engine.

Whereupon the distributor made itself known by emitting an uncanny noise. It clicked and trembled and carried on in a most unusual manner. Presently there was a culminating click followed by utter silence. The engine paused, deliberated and decided to pitch tent for the night. There was nothing left in the way of action except the motorist's flow of cussing. When he

KIMBALL

"Masterful in quality and charm of tone"

The KIMBALL includes:

*Grand Pianos
Upright Pianos
Player Pianos
Phrasonome Pianos
Reproducing Pianos
Phonographs
Pipe Organs
Music Rolls*

THERE is a distinctive quality in the KIMBALL charming tone that can only be described as "masterful." World-famed artists of the past and present have recognized this distinguishing quality—and have accorded to the KIMBALL an enthusiastic endorsement.

MACGREGOR

**Radite Won't-Rust Irons
Retain Perfect Balance**

IT ISN'T only that you can play these clubs in the worst kind of rain, wet, sleet or slush without danger of rusting—but there is a very practical golfing reason in their favor.

Constant buffing on the emery wheel to keep your irons shined up is bound gradually to wear away the metal enough so as to change in time the weight of the clubs as well as the balance, feel and actual resilience.

Yet with these Radite Irons your Pro need only to wipe them off after each round to keep them in the finest possible shape—shiny and sound. Not only is this a lot easier and more satisfactory for the Pro—but it is better for the clubs, for their original balance and weight are not changed even in the slightest.

Locker dampness—wet course—sea air—nothing affects Radite Irons. They always retain the same perfect balance. Ask your Pro or Dealer about them and let us send you descriptive catalog and further information.

MOTORING AND AVIATION

Continued

raised the distributor head and examined the rotor he found that the tip had broken off and that the contact points were chipped. This was the result of his handiwork and, in turn, the consequence of banking too much on his own knowledge of what's what in carology. It was high time to consult the instruction book—if it could be found.

What he learned was that the ignition system on his car was different from that on the machine he had previously owned. The rotor of the older model was so designed that it actually did come in contact with the contact points and would not distribute the spark properly if it didn't. But the new car—so the instruction book stated in plain but unexciting English—was equipped with a rotor which revolved in such a way that the tip came within a sixty-fourth of an inch from each contact point as it passed by. This was done to intensify the spark and to prevent wear of the parts. The rotor tip was not meant to touch anything. Everything was O. K. except the motorist, who might easily have made this discovery through turning to page nineteen, paragraph four.

It is not an uncommon thing to see a motorist going to the extreme of having the valves ground in because the car lacks power. Sometimes this sort of treatment is the only remedy, but more often it is about as necessary as a fourth brush on a generator. Over toward the last page of any good instruction book there is listed a bit of advice in case the engine shows signs of heaves. This is all written in simple style and is unusually valuable, even tho the love interest is a trifle neglected. I know of one chap who spent a neat sum for repairs only to learn after it was all paid for that he had been running the car with too little water in the radiator. This, incidentally, was the first thing the instruction book listed in its page of hints.

Instruction books invariably suggest that if the car lacks pep on hills it is well to see if the fan belt is on duty. But such a simple suggestion meets with disdain on the part of the average car owner. He would much rather drive into a repair shop and be inconvenienced for a day or so rather than bother to read the manufacturer's attempt at serious literature. I have just about concluded that the thriving business of butchering "busted" buses is greatly indebted to this wholesale neglect of the book of the "Breeze," the "Speedo" or whatever the case may be.

When one car owner moved to a new State and went to apply for a license he spent about three hours chasing around to find the necessary data on the stroke and bore of the engine. In this new locality the make of car he drove was not quite so well known, thus accounting for the fact that he was obliged to drive ten miles to the nearest dealer in order to learn the exact information. But if instead of relegating the instruction book to the wastepaper basket he had kept it in the side pocket for ready reference he could have walked right out to the car and by merely glancing at page one could have gone through the little game of multiplying the stroke by the carburetor and the number of pleats in the seat cushions divided by the number of quarts of oil in the crankcase. It would have been simplicity itself.

There is so much of vital importance tucked away in the pages of an instruction

TOURS AND CRUISES

book that it is nigh unto nuttury to consider the work as a fifth wheel. Some of these days the manufacturers are going to ask aid of George Ade or some stage comedian to put over the necessary information in fourth speed; but in the meantime the old saying that it's a wise motorist who knows his own ear still holds true. And frequent perusal of the instruction book, however tedious, is the only way to breed this familiarity.

BIRDS ARE STILL THE CHAMPION AVIATORS

BIRDS still hold the world's aviation championship for reliability and consistency of performance. They are sometimes forced down by collision with the shining lenses of lighthouses, or blown against wires and tall buildings, but accidents of this sort happen far more rarely with them than with their human imitators. They make long and fast non-stop flights and seldom come down because of engine trouble or the collapse of wings. The fact is, says the New York Sun:

Birds have some secret—many secrets—for navigating the air which man has not learned. Some men aviators have gone higher in the air than any birds seem to go, but so far as human records go there is nothing to show that a condor, eagle or other high-flying bird ever tried for the altitude prize. Birds are extremely practical and do not go to immense heights just for exercise or for the purpose of getting a wide outlook above the earth or for the gratification of personal or birdonal pride. There is no doubt that the best flyers among the birds would go to far greater heights than is their habit if they believed they would find anything to eat that near the sky.

Birds in soaring and sailing show that they are proficient in the use of several factors in the art of flying that have not yet been mastered either in principle or practise by the most skilful aviators. A vulture or a crane after a few preliminary wing beats sets its wings and mounts in wide, sweeping circles to a great height, apparently overcoming that which we call gravity with no exertion apparent to human vision, even when assisted by powerful telescopes.

The Carolina rail, or sora, has small, short wings, apparently ill adapted to protracted flight, and in ordinary circumstances when it is forced to fly it does so reluctantly and alights as soon as possible. It flies with such awkwardness and seems to become so quickly exhausted that several writers on birds have inferred that most of its spring and fall migration must be made on foot. Yet it has been learned that the Carolina rail has one of the longest migration routes of the whole rail family and easily crosses wide reaches of the Caribbean Sea.

The humming-bird, smallest of all birds, crosses the Gulf of Mexico, flying more than 500 miles in a single night. The golden plover flies from Nova Scotia to South America, and in fair weather makes the whole distance of about 2,500 miles without a stop, and probably requiring not more than forty-eight hours to make the trip.

Music Hath Charms.—"How do you like your music?"

How I increased my output and income with Corona

Mail the coupon for your copy of this fascinating booklet. Learn how this wonderful little Personal Writing Machine is helping men and women to success

"MY CORONA paid for itself four times in a single month."—"Two hours of work each night netted me more than eight hours of hard work during the day." "Six evenings' work more than paid for the machine."

These are just a few extracts from interesting experiences of Corona owners. Many more are told in a new illustrated booklet which also describes in detail this little 6½ pound typewriter which has become "private secretary" to nearly half a million people.

For \$55 in easy payments, or \$50 cash, you, too, can own a Corona. The coupon will bring you full particulars.

The Sturdiest of all typewriters

No typewriter in the world has proved itself able to stand the punishment Corona has taken during its sixteen years of service, including a remarkable war record.

Yet for all its sturdiness, Corona weighs but 6½ pounds and can be carried with you anywhere in its neat case.

INVESTMENTS AND FINANCE

THE FUTURE OF AMERICAN MANUFACTURING

WHILE we are undoubtedly on the upswing of the existing business cycle, these little booms and depressions we experience every few years are, as a writer in *The Annalist* notes, only "ripples on the surface of a rising curve of physical production" which has been carrying us steadily upward for about fifty years. The question, we are told, is whether this "long-run curve" can continue to rise for another fifty years. "Upon the future slope of this curve hang tremendous consequences; the profits of American business, the size of the American population in 1950 and in 2000 A.D., the maintenance of the American standard of living, the position of the United States as a world power fifty or a hundred years hence and, in short, the whole destiny of the America of our children and our children's children." The writer, Mr. Homer Hoyt, a professor of Economics in the University of North Carolina, points out that we have developed a manufacturing capacity in excess of our own needs, so that considerable amount of foreign trade is necessary for our prosperity. We must now choose between two alternatives. We may keep the prices of manufactured goods from falling any lower, and restore the balance of prices "by raising the prices of farm products up to the level of other goods and services." "Such a consolidation of American prices on a plateau 60 per cent. above the pre-war level would tend to maintain an internal equilibrium, but it would," we are told, "cut us off from foreign markets." We could prosper to a certain extent with the help of tariff laws, for "we have resources enough to be self-sustaining, provided we limit our population and maintain a proper balance between agriculture and manufacturing, by contracting the size of our manufacturing plant." But, we read,—

If we follow this course, we must be prepared while maintaining internal peace and contentment to see other nations forging ahead in population and in manufacturing capacity, and becoming ever relatively more powerful as we stand still. We must be prepared to give up our insatiable thirst for industrial expansion. It will be a happier, better balanced national life with greater stress upon art and culture perhaps, but it will not make us more vigorous and powerful as a nation.

Now comes the other alternative. We can maintain the expansion and manufacture that has been going on for half a century, but to do so our manufacturers must lower their prices to pre-war levels or below, and this means a program of standardization and consolidation at home and active competition abroad. As Professor Hoyt outlines the process:

Standardization, increasing use of ma-

chinery and industrial concentration are interchangeable terms. Each one is both the cause and the effect of the other. The more standardized the article, the more machinery can be used in its production, and the cheaper the cost. The greater the degree of standardization, the greater the concentration of industry. Two concerns making one standardized article will undercut each other's prices until one gains all the business. The great number of styles and brands which is favorable to hand and not machine production is caused by the attempt of small concerns to avoid price competition, by producing goods that will sell on the basis of a difference in quality instead of a difference in price.

Standardization of American goods will thus either be the cause or the effect of a series of gigantic mergers and consolidations, which will not end until all of American industry is in fact one technical manufacturing unit. As nations are becoming complete self-sustaining industrial and manufacturing units, since Germany pointed the way, American industry as a unit will tend to compete with Great Britain, Japan and Germany as units for the markets of the world. By consolidating all of our industries until all become part of one complete industrial machine, we shall produce at far less expense than we do at present with hundreds of thousands of separate units that fit loosely and wastefully together. The so-called point of diminishing returns in manufacturing recedes further and further with every increase in standardization and concentration. For a single industry producing a standardized article, cost decreases with every increase in output until a world monopoly is attained. But this is not all. The cost of producing the one standardized article with a world monopoly is lowered still further if other standardized articles are produced in the same country, for, in the technical machine industries, concentration and efficiency in one line aid concentration and efficiency in other lines.

Professor Hoyt shows how this process might logically develop until "every industry is a monopoly and these monopolies are located in one country under one gigantic world control." He reminds us that factory capacity is, to a large extent, potential military power, "and the Disarmament Conference had nothing to say as to that." Therefore, he concludes,

Business profits, the prosperity of American wage-earners and the very existence of the United States as a great Power demand a complete reorganization of our manufacturing industries, to the end that out of the present chaotic medley of firms duplicating each others' efforts and using antiquated hand methods of production, there shall arise gigantic industrial consolidations producing standardized goods linked together in one efficient American manufacturing machine that will undersell the world. We do not seek this power in any selfish or imperialistic sense, but until competitive manufacturing expansion is limited by a conference of nations, self-preservation demands that America do her best.

CHARITY THAT PAYS

WHILE charity "seeketh not her own," we have it on equally good authority that bread cast upon the waters "shall return again after many days." And so, the *New York Times* on its financial page briefly calls attention to the interesting fact that "in more ways than one, the response to the call for aid from the impoverished and starving masses in Europe has been a paying proposition to this country":

Makers of all kinds of apparel have gained because so much of used but wearable goods, was shipped abroad to cover the naked, thereby making it necessary for the senders to replenish their wardrobes. When it comes to the foodstuffs, the result is more patent. The enormous quantities of grain recently sent to the afflicted in Russia and other countries by the aid of contributions and charity funds had the effect of raising the prices of farm products in this country materially. A rise of merely 10 cents a bushel in the price of wheat has meant \$100,000 extra for every million bushels retained here. It is not improbable that producers here have gained a dollar for every dollar's worth sent out as a charity.

BRITISH SHIPPING NO BETTER OFF THAN OURS

IF MISERY loves company, then our Shipping Board officials ought to take a melancholy satisfaction in the recent statistics issued by the Chamber of Shipping of the United Kingdom showing the large number of inactive British ships, *The Nautical Gazette* remarks. What is more important on its bearing on the ship subsidy controversy is the fact that "the Administration's ship subsidy bill is only designed to make good the difference between American and British vessel operating costs." But British ship owners and American are equally at a loss to know how to compete with the smaller European nations with their depreciated currencies and low overhead costs. And our subsidy plans do not help at all in solving the problem of competition with these most cheaply run merchant marines. The British situation is revealed by the fact that, according to the authority cited, "712 vessels representing more than one-tenth of the total tonnage registered in the British Isles were laid up in the leading British ports at the beginning of the year." At the same time "only about 350 of the 1,492 steel vessels belonging to the Emergency Fleet Corporation were in commission. But if it be remembered that only one-third perhaps of these vessels are suitable for normal trade purposes, the American showing is not such a bad one." *The Nautical Gazette* continues:

According to Sir Frederick Lewis, the newly elected President of the Chamber of Shipping, one of the reasons why so many British vessels are laid up and so many British seamen out of employment is that British ship operating costs, and especially wages, are so much higher as compared

"I Guess—"

TOO OFTEN a guess on investments means as little as a guess on the weather.

A carefully selected investment must be based on a study of facts—not guesses.

Our representatives who talk with an average of 3000 banks a day are welcome because they are offering securities which have been bought on facts, not guesses.

with those prevailing on the merchantmen of European continental countries. In competing with the smaller European maritime nations with their depreciated currencies, lower repair costs and other advantages, both the British and American merchant marine are therefore laboring under the same handicap of higher vessel operating costs.

Instead of regarding the existing handicaps as insurmountable and calling for subsidies and other forms of state aid, the British ship-owners have resolutely set to work to increase the efficiency of their ships and to bring down their operating costs.

Our ship-owners should follow the example of their British competitors and put their own house in order at the very earliest opportunity.

A Sheffield correspondent of the New York Journal of Commerce takes up this same subject from the standpoint of a Britisher and finds something to say on both the bright and the dark side. He agrees with the writer already quoted that British shipping has to meet the competition of other nations which subsidize their ships and pay lower wages than do Britain or America. He also notes various tax privileges given to citizens engaged in shipping or foreign trade by a number of governments, and calls attention to the fact that "many foreign ship-owners made tremendous and untaxed profits in the war period while our British ship-owners were controlled and had their profits restricted." "That is the dark side of the picture." But, we are told, "the bright side inspires hope." Coal miners and iron and steel workers have recently accepted wage reductions and the miners have been increasing their output. As a result of these things—

We are rapidly regaining our lost coal trade. After touching a point under 20 per cent. of the normal pre-war export tonnage we are now doing 80 per cent. and improving week by week. At the present rate we shall touch the pre-war record before May. This is vital from a shipping point of view. Coal forms by far the biggest proportion of our cargoes.

The revival of the steel industry means more cargoes for British ships. As the English writer continues in his letter to *The Journal of Commerce*:

With the coal and steel industries back at something like the old rates of production and exportation, the British shipping surplus will be absorbed. Then again we have about 3,000,000 tons of our shipping beyond what is the recognized age limit. Now that labor on scrapping has cheapened and materials for new ships have been reduced by 60 per cent. we may look for wholesale breakings up of old boats, and when the current shipyard labor trouble is over, orders for new ships. From this point of view the prospects are that shipping and ship-building revival will not long be delayed. Much, of course, depends on the

MANY sound securities may now be purchased which will eventually sell at much higher prices, and in the meantime will yield exceptionally good returns.

attitude of labor. If the shipyard men follow the example set by the miners and steel workers, revival will certainly come.

WHY MEAT PRICES ARE HIGH

THE angry feelings that rise in the heart of the consumer when he reads about wholesale meat prices being down to almost the pre-war level and considers how his local butcher is charging just about as much as ever are not entirely justified, observes a writer on the financial page of the *New York Evening Post*. Meat retailers are credited by this authority with trying hard to bring down their overhead so that prices will attract the consumer and also bring in a reasonable profit. In this connection certain figures on selling costs for retail meat dealers compiled by the Department of Agriculture are summarized, showing that—

The cost of retailing meats is now about double what it was in 1913. The investigation covered thirty cities with 3,505 retail meat stores. Accounts of over 400 stores for 1919-20 were fully analyzed, and supplementary studies were made for 1921. Of each dollar that the consumer spent for meat, 81.14 cents represented the wholesale price, 16.57 cents represented the cost of retailing, and 2.29 cents represented the retailer's net profit. The largest item of retailing costs was wages, amounting to 61.86 per cent. of the total. The average wages of meat-cutters increased from 32 cents per hour in 1913 to 60.7 cents in 1921. Between 1919 and 1921 there was a decline in the wholesale prices of meat, but the cost of retailing increased. This shows why meat prices did not come down in the butcher's shop in comparison with the slump in the prices which farmers received for their live stock.

TEMPTING THE ANNAMITE TO LEND

SOME of the French colonial governors are being hard put to it to obtain funds for development purposes. The allowances from the central government seem meager enough and the natives, even where they are prosperous, have not yet been educated to invest, nor indeed, are they likely to be thrifty by temperament. Maurice Long, Governor of Indo-China, has therefore been trying an experiment, which if it succeeds, says the Paris correspondent of *The Wall Street Journal*, "will be repeated and may well be extended into other French colonies." His loan was launched in Indo-China last month. The very launching was itself a novelty, "for the idea of asking the natives to subscribe to the development of their own colonies has not been tried before in French territory." But, we read, "its terms are more novel still":

The Annamite knows nothing about bonds or coupons, but he knows a great deal about gambling. So the governor-general is asking him to subscribe 50 piastres on the chance of getting 10,000, 1,000 or 500 back by a lucky draw at any time within the next 30 years, and on the promise of getting 100 piastres in any case at the end of thirty years. In other words the loan is for 6,180,000 piastres, or something over 33,000,000 francs, with four annual drawings, involv-

ing two prizes of 10,000 piastres, 10 of 1,000 and 76 of 500, while every bond of 50 piastres is to be repaid at double the figure in 1952. Before the war the piastre was worth 2.5 francs; to-day it is worth 5.75 francs.

Interest rates in Indo-China are common at 20 or 25 per cent., so that a humble 6 per cent. would go nowhere.

If you add that the native bondholder will be able to get advances on his security from the Banque d'Indo-Chine at 6 per cent. and that he will be able to sell it by the establishment of regular markets in all the bank's branches covering all the colonial issues, public and private, you will see that the idea of Maurice Long is to convert the Annamite into something of a financier as well as to tempt him as a gambler. Indeed less than 2 per cent. of the bondholders can obtain prizes, while all of them can speculate on a rise in the market quotation. The Stock Exchange habit may take root in Annam as deeply as in Gotham.

WHERE THE FARMER CAN BORROW

RECENT heated discussions of farm credits and the formation of various new sources of credit available to the agriculturist make useful a brief statement of the chief sources of credit now actually available to the farmer. This list prepared by the New York Trust Company appears in its publication, *The Index*:

1. The Farm Loan Board, supervising
 - (a) Federal Land Banks providing long-term loans on farm first mortgages.
 - (b) Farm Loan Associations lending on farm mortgages to their members' funds derived from Federal Land Banks.
 - (c) Joint Stock Land Banks, authorized under the Farm Loan Act, lending on farm first mortgages.
2. War Finance Corporation, offering short-term credits up to \$1,000,000,000 direct to producers of, or dealers in, agricultural products, or indirectly to them through financial and cooperative institutions.
3. Federal Reserve Banks offering rediscount privileges to member banks on agricultural paper having a maturity of not more than six months.
4. Member banks and trust companies offering the usual credit accommodations in their own communities and through correspondent banks.
5. Non-member banks and trust companies offering the usual credit accommodations in their own communities and through correspondent banks.
6. Cattle Loan Organizations.
7. Farm Mortgage Companies.
8. Insurance companies, mutual, stock and fraternal organizations lending on mortgage.
9. Investment bankers arranging farm mortgage loans for private investors, and bond offerings based on mortgages.
10. Merchants, factors and buyers advancing credits against growing crops and other farm products.
11. Private individuals investing direct in farm mortgages.

SAFETY—

for bankers
and
depositors

WHEN acid is applied to a Mantint Safety Check, not only is the tint destroyed; the entire printing: name of bank, date lines—everything disappears! Only the handwriting and the plain, white paper remain.

This Mantint idea, patented, is typical of Mann up-to-dateness. Our seventy-five years of experience in making quality office and bank stationery (see list of products in margin at left) endow us with the knowledge, ability and craft to produce the finest; the Mann plan is to keep ahead in ideas, as well as in excellence.

Specimens and literature on Mantint Safety Check will be sent on request! If you want constructive suggestions on office systems, supplies or equipment, write and we'll be glad to have our representative call!

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"F. S., Superior, Wis.—"Please answer the following question. In the words *im'pact* (noun), *im-pact'* (verb); *au'gust* (noun), *au-gust'* (adj.); *per'fume* (noun), *per-fume'* (verb); *proj'ect* (noun), *pro-ject'* (verb); *ac'cent* (noun), *ac-cent'* (verb); *prod'uce* (noun), *pro-duce'* (verb), we find the accent on different syllables. Why should *process* and *cement* be pronounced the same while the others have different pronunciations for the different parts of speech?"

There is nothing fixed about English pronunciation. It varies with the moods and tenses of the times. *Abuse*, noun and verb are stressed on the last syllable; so also *accost*, *command*, etc.

In English every word of two syllables necessarily has one of them accented. Some writers have asserted that many dissyllabic words, such as *convo*, *concourse*, *discourse*, *shipwreck*, are stressed on both syllables, but this is due to a misinterpretation of sounds. They confound the clearness of the enunciation of the last syllable with the accentual stress upon the first.

Certain other dissyllabic words that are nouns and verbs are stressed differently, the nouns being stressed usually on the first syllable, the verbs upon the last, such as *ab'ject*, *ab-ject'*; *im'pact*, *im-pact'*; *proj'ect*, *pro-ject'*; *prod'uce*, *pro-duce'*. This is the result of an instinctive effort on the part of the genius of the language to compensate to some extent for the want of different terminations for these different parts of speech.

In English, in general, the stress is thrown as far back as possible, but it is not improbable that, as the verbs referred to above take additional suffixes in the making of participles, the inclination is to pronounce the part of speech to which the suffix is added with the stress nearer to it rather than upon the first syllable as is done in the noun. The verb can be pronounced easily with the accent in the same place as in the noun, but the participle can not be so easily pronounced and the adjective or adverb formed from it, with that accent. Take, for example, the word *reb'el*, noun. Compare it with *re-bel'*, verb, and stress the participle as you do the noun—*reb'el-ing*, and you will note at once the awkwardness, for one immediately senses the jar—*re-bel'ling* is what we mean.

"M. L. B., New York, N. Y.—"Please tell me the origin of *Mother's Day*."

Mother's Day originated through the efforts of Miss Anna Jarvis whose Mother died in 1906. On Sunday, May 9, 1907, she told a friend, whom she had invited to observe with her the anniversary of her Mother's death, that she wished to dedicate a day of the year to all mothers. Before May, 1908, came around many other persons were interested, and organizations were formed to observe the second Sunday in May as Mother's Day.

Philadelphia observed this day on May 10, 1908. Since 1912, the day has been observed in Texas. In 1913 Pennsylvania made it a State holiday. It was first observed in England in 1913. There the second Sunday in May is observed in all churches, and the previous Friday observed in all public schools. The badge of the day is a white carnation.

"R. R. R., New York, N. Y.—"Can you give me any information concerning the meaning of the term *gallows-hill*?"

There is nothing to explain about the term. The words themselves indicate the meaning—a hill on which the gallows are set. Formerly in each county in England there were a number of such hills, relics of which still exist in spots. Tyburn, the historic place of execution outside the limits of London, was situated on a hill, nearby which the Marble Arch of Hyde Park now stands. On the Surrey Downs near Hind Head and the Devil's Punch-Bowl there is another marked by a gibbet cross, and in 1786 a memorial tablet bearing the following legend was erected there.

"Erected in detestation of a barbarous Murder Committed here on an unknown Sailor; Sept. 24, 1786, by Edwd. Longon, Michl. Casey & Jas. Marshall, Who were all taken the same day, And hung in Chains near this place."

Erected in 1909, using 5 different kinds of wood; the only old wood that could be used in rebuilding this Deal Lake, New Jersey, boathouse in 1917 was the original Redwood. It was sound and free from rot, although in contact with the water for 8 years.

Redwood at the Lakeside

WHETHER you build a boathouse, a cottage home or a mansion, the permanent beauty and the cost of keeping it up depend on the character of the materials used.

Redwood is permeated during its growth with a natural, odorless preservative which protects it against all forms of rot and decay, the action of the elements, and the activities of boring worms and insects.

Redwood lumber, siding, shingles, porch posts and columns, gutters, trim, mouldings and balusters, railings and pickets are more economical, because they last for years. Free from highly inflammable resinous compounds, Redwood reduces the fire hazard wherever used.

If you are planning to build, write for "Redwood Homes" booklet. To architects, engineers and industrial executives we will gladly send our "Construction Digest" and our "Engineering Digest".

Exterior Construction
including—Colonial siding, clapboards, shingles, door and window frames—gutters, eaves, water tables and mudsills—porch rail, balusters and columns—mouldings and lattice. Pickets and fencing—Pergolas and green-houses.

Interior Finish
Natural, stained or painted.
Wood block floors.

Pure Copper for Screens

The severest test to which screen cloth can be put is actual use in the severe weather conditions found in the tropics or near the sea coast. Screen cloth which stands up under these conditions will give good service anywhere. Copper screen cloth has undergone tests of actual service in the Panama Canal Zone where large quantities of it are used.

Jersey Copper Screen Cloth is uniformly the most durable screen material because it is made of copper 99.8% pure; hence there is no variation in composition or finish. Each wire is of the same high quality. Of all the metals commonly used by man, pure copper is the most enduring.

Jersey Copper Screen Cloth is made by a special Roebeling process and compares favorably with steel in strength and stiffness. You will find in Jersey Copper Screen Cloth wearing qualities that no other screen cloth possesses—it is ideal for window, door, and porch screens.

You can obtain Jersey Copper Screen Cloth, 16 mesh, (coarser should never be used from hardware merchants in many places, or you can specify its use in custom-made screens. Our stores and agencies are located in many cities main office in Trenton. We will aid you to get it if requested.

We will gladly send you a booklet entitled "A Matter of Health and Comfort" upon request. If you are a home owner, you should read it.

CURRENT EVENTS

FOREIGN

April 5.—The British Government, according to a dispatch from London, has addressed a note to the Allies declaring that, owing to the fact that Great Britain has to pay the interest on her debt to the United States, she reserves the right to call upon the Allies to pay, in turn, the interest on their war debts to Great Britain.

The British Government acknowledges the claim of the United States for \$241,000,000 to pay the cost of the American Army of Occupation.

Armand Jeannes, the betrayer of Edith Cavell, the British war nurse shot by the Germans during the war, is condemned to death by a Belgian court.

April 6.—Premier Poincaré wins a vote of confidence in the Chamber of Deputies on his insistence that France must keep up her Army by compelling eighteen months' military service for every man. Two years' service has been required heretofore.

April 7.—Six persons, including two Americans, are killed when two airplanes on the Paris-London aerial express route collide over Thieulloy, 70 miles north of Paris, and crash to earth.

The Japanese Navy Department issues a statement saying that the strength of the Japanese Navy, as restricted by the Washington Arms Conference, is sufficient for the defense of the Japanese Empire.

Irish Republican rebels destroy 500,000 gallons of Belfast whisky and wine as part of the campaign to boycott all goods made in Ulster.

April 8.—Ulster banks at Lanesborough and Castlereagh, County Roscommon, are raided by armed civilians and robbed of a total of £900.

April 9.—Irish Republican army members opposed to the Irish Free State hold a secret convention in Dublin and adopt a constitution and declaration of aims, not yet made public. In a speech at Wexford, Michael Collins, head of the Irish Provisional Government, declares "it looks as if civil war can be averted only by a miracle."

Eleven French soldiers are killed and ten injured by the explosion of a mine and a quantity of ammunition hidden in a cemetery in Silesia.

The Council of Ambassadors requests the Swiss Government to permit former Empress Zita of Austria-Hungary to reside in Switzerland.

Pope Pius XI announces that he will do all in his power to contribute to the success of the Genoa Conference.

April 10.—The Genoa Conference, attended by 1,066 delegates and assistants from 34 nations, opens with the election of Premier Facta, of Italy, as President, and an address by Premier Lloyd George, who says that peace is the first need of Europe, and that if the conference fails a sense of despair will sweep over the whole world.

George Gavan Duffy, Minister of Foreign Affairs in the Irish Free State Cabinet, is dragged by a crowd of young men and women from the platform on which

he was making a pro-treaty address at Tullamore. British soldiers patrol the streets of Dublin for the first time since the signing of the truce.

April 11.—Michael Collins and Eamon de Valera accept invitations from Lord Mayor O'Neil of Dublin to meet in that city and attempt to reach an agreement on the differences between the Free Staters and the Republicans.

The Allied program for the restoration of Russia, as handed to George Tchitcherine, Bolshevik Foreign Minister, at the Genoa Conference, requires Russia to accept all debts, and reform transport, courts and exchange, and to protect foreigners.

Luis Borno, a Haitian attorney and member of the present cabinet, has been elected President of the Republic of Haiti by a unanimous vote, according to a dispatch from Cape Haitien.

DOMESTIC

April 5.—The Association representing the largest coal operators in Indiana and Ohio reject the proposal of Representative Nolan, Chairman of the House Labor Committee, that operators and miners hold a joint wage conference on April 10.

Governor John Parker, of Louisiana, announces that he will attempt immediately to suppress the Ku Klux Klan in that State.

Senator King, of Utah, introduces a resolution calling for an investigation into the so-called abuses in the Bureau of Internal Revenue.

April 6.—General Gregory Semenoff, an anti-Bolshevik leader of Russia, is arrested in New York at the instance of a firm which charges him with stealing a shipment of woolen goods valued at \$478,578.

Chairman Butler, of the House Naval Affairs Committee, introduces a resolution giving the President authority to dispose of the excess fighting tonnage of the Navy, in conformity with the provisions of the Washington Disarmament Conference.

April 7.—Five thousand miners in the non-union coal field of Somerset County, Pa., strike in protest against inauguration of the 1917 wage scale by independent operators.

The Senate passes the bill providing for 24 more Federal judges.

April 8.—Seventeen persons are reported dead and more than 80 injured as a result of tornadoes that sweep western Texas and southern Oklahoma.

The 1923 naval bill carrying out the 5-5-3 ratio is reported to the House of Representatives. It carries a total of \$233,224,000, and cuts the enlisted personnel from 95,000 to 65,000, plus 2,000 apprentices, leaving the officer total substantially intact.

April 11.—Nearly nine months after it passed the House and was referred to the Finance Committee of the Senate, the tariff bill is reported to the Senate, to be called up for consideration on April 21. It is estimated that the measure will raise between \$330,000,000 and \$350,000,000.

PACKARD

-a new, a larger, a more beautiful
Single-Six

With the advent of this new Packard, we believe that a definite turning-point has been reached in the manufacture of the better motor cars.

Packard resourcefulness in producing motor carriages of incomparable charm, and brilliant, dashing performance, has, in this instance, surpassed itself.

But—something infinitely more im-

portant and impressive has also been accomplished.

The new Packard conveys an instant and vivid conviction of value so very great as to be almost epochal.

We are sure that this group of eight inimitable cars will compel you to comparisons which are certain to give the new Packard a position of overwhelming advantage.

Packard dealers are prepared to demonstrate these new cars

The price of the new Single-Six five passenger touring is \$2485 at Detroit
 The new price of the Twin-Six touring is \$3850 at Detroit

THE ▾ SPICE ▾ OF ▾ LIFE

They Never Are.—Genoa, April 9.—No surprises are expected.—*Special Cable to The New York Herald.*

Tactics.—“No woman ever takes another woman's advice about frocks.”

“Naturally. You don't ask the enemy how to win the war.”—*London Opinion, from a Play.*

Stop! Look! Listen!—“Is this a fast train?” the salesman asked the conductor. “Of course it is,” was the reply.

“I thought it was. Would you mind my getting out to see what it is fast to?”—*Evansville Crescent.*

How to Do It.—“A sixty-dollar hat?” “Yes.”

“My husband wouldn't buy me a sixty-dollar hat.”

“He would if you started to yell for a grand piano.”—*Louisville Courier-Journal.*

Taking a Chance.—MAGISTRATE OF IRISH COURT (after a turbulent scene amongst general public)—“The next person that shouts ‘Down with England,’ I'll have thrown out into the street.”

Prisoner (excitedly)—“Down wid England!”—*London Opinion.*

But Not Vice Versa.—When little Percival arrived at school on the opening day, he carried the following note to the teacher:

“Dear Teacher: Our sweet little Percival is a very delicate, nervous child, and if he is naughty—and he is likely to be naughty at times—just punish the boy next to him, and that will frighten him so he'll be good.”—*Wayside Tales.*

Happy Suggestion for Uncle.—Little Spencer let no grass grow under his feet, when uncle came for a visit, before rushing up with this:

“Uncle, make a noise like a frog.”

“Why?” asked the old man.

“‘Cause when I ask daddy for anything he says: ‘Wait till your uncle croaks.’”—*The Van Raalte Vanguard.*

The Spring Fever Patient's Prayer.

Ship me somewhere west of Ennui, t'other side of Have-to-Work;

Pin a blooming tag upon me, bill me to the town of Shirk;

Purge my sordid recollection of the jester's bells and cap;

Find me some Utopian section where there's no one does a tap!

Ship me somewhere west of Ennui, get a fishing-rod for me;

Get me bait and then, doggone y', go away and let me be!

Never mind about provisions from a grocer's musty shelf—

Deviled crabs and like divisions!—let me forage for myself!

Let me stay there, west of Ennui, 'way beyond the toiling zone—

I am selfish, but, doggone me, I prefer to be alone.

Ho! my bones are fairly achin' for a camp along a crick,

And the music of the bacon as it sizzles on a stick!

—John D. Wells in *Buffalo Times.*

And Harder to Spell.—FLUB—“What do you think of Czechoslovakia?”

DUB—“Well, it's hard to say.”—*Life.*

Sea Air vs. Mountain Dew.—MOTHER—“I wish that the papers would quit writing about these mountain moonshiners.”

DAUGHTER—“Why, mother?”

MOTHER—“Because I want father to take us to the seashore this summer.”—*Burr.*

No Bargain.—“Dear John,” the wife wrote from a fashionable resort, “I enclose the hotel bill.”

“Dear Mary,” he responded, “I enclose check to cover the bill, but please do not buy any more hotels at this figure—they are cheating you.”—*Life.*

Precept and Practise.—SHE—“Oh, George! I've just won a hundred-pound prize for the best article on the cruelty of trapping wild animals.”

HE—“Good egg! What are you going to do with it?”

SHE—“Oh, now I can afford a new fur coat!”—*London Mail.*

The Witch!—CONDUCTOR—“Pardon me, madam, but your girl seems more than twelve.”

HER MOTHER—“Conductor! Would you take me to be the mother of a girl that age?”

CONDUCTOR—“Lady, don't tell me you're her grandmother!”—*Sydney Bulletin.*

He Won.—A young but exceptionally brilliant professor in a Western college was dismissed from the faculty because of his inordinate betting. The president, interested in his career, secured him a position in an Eastern college. To the president there he wrote: “The young man has a promising future, and anything you can do to cure him of betting will be a benefit to society.”

The professor went East, and was cordially received. Conversation had proceeded but a few moments when he said to the president, “I'll bet you seventy-five dollars you have a wart between your shoulder blades.”

The president hesitated. “Young man,” he said, “I never bet; but just to teach you a lesson I will take you up.”

He thereupon proved to the young man's satisfaction that he was in error, and the professor paid the seventy-five.

The president wrote West relating the incident, concluding—“I hope that I have cured him.”

The other wrote back: “I fear the case is hopeless. The very day he left here he bet me one hundred dollars that he could make you take off your shirt.”—*Judge.*

Does This Picture Tell the Story of Your Plumbing Troubles?

100 PER CENT PERFORMANCE OF BRASS PIPE

That was the significant result of a survey of hot water service in more than 100 apartment houses containing 1000 apartments.

Iron or steel pipe quickly succumbs to corrosion. Pipes become choked with rust, and the "red" water annoyance follows; corrosion eats holes in the pipe, and the resulting leaks cause expensive repairs and inevitable renewals.

Miles of Brass piping are in use in the big, modern office buildings. Architects and Engineers who build these structures know by experience that Brass pipe *permanently* resists rust and provides freedom from plumbing trouble and expense.

Whether you are building a new house or repairing an old, it will pay you to install Brass pipe.

*Brass is cheaper because
you pay for it only ONCE*

COPPER AND BRASS
RESEARCH ASSOCIATION
25 Broadway, New York

THE pipe, which absolutely measures the useful life of your plumbing installation, is the smallest item (only 10 per cent) of the plumbing cost.

BRASS pipe throughout adds only about $\frac{1}{3}$ of one per cent to the cost of your house, and most likely saves you more than that in the first ten years of its permanent, expense-proof service.

Name

Address

Spinning telephone cable, with the world for a spool

Cable enough to go 'round and 'round the earth has been turned out by machines like this, at the Western Electric telephone plant in Chicago.

In a year the output is over 6,000 miles—and since the average cable is made up of 406 separate wires this means 2,436,000 miles of copper wire.

The demands of your telephone service are great and growing.

Each year you need more cable, more telephones, more switchboards—and not only more equipment but better equipment.

All this has brought an ever greater manufacturing problem, which the Western Electric Company is fully able to meet. It has drawn on an accumulating experience now matured by forty-five years of constantly heightened skill and self-imposed standards of practice.

New Pictures of Precious Porcelain

The most beautiful, the most authoritative and the most instructive work of its class ever published for the benefit of the student and the collector of porcelain is entitled

A GENERAL HISTORY OF PORCELAIN

By Wm. Burton, M. A., F. C. S.

It is fresh from the press and is a work of exceptional magnificence, embracing a complete and interesting survey of the gradual development of porcelain making and decorating from the earliest Chinese productions 200 years before the Christian era down to the present day. The work is in two sumptuous volumes, illumined with 32 exquisitely colored illustrations and 80 fine photographic reproductions of the most famous porcelain art specimens in museum collections of China, Korea, Japan, Persia, and the several countries of Europe. The text of the book also embraces reproductions, in facsimile, of work connected with various periods and porcelain factories.

Mr. Burton, author of this standard work, has written other books on porcelain and is well acquainted with porcelain factories and porcelain makers of Europe. He has devoted years to the study of porcelain and is perhaps the greatest living authority on the subject. This book will be a valuable and artistic addition to the library of every porcelain connoisseur, and will prove to be a standard work of reference for facts relating to porcelain and illustrations of the world's choicest collections of it.

Royal 8 vo. size, 459 pages, splendidly bound in light blue cloth with gilt lettering and decorations.

On A Street Corner In Rome 2000 Years Ago

By Robert M. Lawrence

YESTERDAY, a man in whom I have long been interested, came to me with discouragement and disappointment written on his face. There had been some changes made among the men in the office where he worked, and another—not he—had won a coveted promotion.

"What's the use?" he said. "For two years I've been waiting for this chance. And now it's gone. It just goes to show that getting ahead in business is purely a matter of luck."

"Tom," I said, "do you ever read Shakespeare?"

"Oh, I used to in school. Why?"

"Then go home, take down a copy of Julius Caesar, and turn to Act 1, Scene 2. Rome had chosen Caesar for its Emperor and Cassius and Brutus stood enviously on a street corner while the crowds acclaimed him. It was the honor that both had hoped for, dreamed of. And Brutus had about made up his mind that getting ahead in this world was purely a matter of luck. Then Cassius laid his hand upon the shoulder of his friend and spoke:

"Men at some time are masters of their fates. The fault, dear Brutus, is not in our stars, but in ourselves, that we are underlings."

"Ten thousand million times has history repeated itself since that moment in Rome twenty centuries ago. It repeated itself in your office today. It will go on repeating itself as long as men must learn by hard experience that the power to be what they want to be lies solely within themselves."

And what I said to my young friend I wish I could write on the heart of every man who is standing hopefully and expectantly upon the threshold of a business career.

Tens of thousands of young men enter business each year without the slightest training for the work they are to do. Most of them take the first position that comes their way, believing that if they just plod along they will, in some mysterious way, become successful.

You can't do that any more than you can hang out your shingle without any previous training and succeed as a doctor. These days you've got to study the different branches of business just as thoroughly as you would study medicine, or law, or engineering.

For the problems of business are just as complex—the rewards as large (*or larger!*) for the men who qualify as specialists in some branch or branches of commercial work.

AFTER all, there are very few geniuses. Remember, the great business men of today were not always great. At 20, 25 and 30 most of them were in the most ordinary occupations.

John N. Willys was a laundryman. Frank A. Vanderlip, "the most aggressive financier in America," was a machinist. Thomas E. Wilson, of Wilson & Co., was a railway clerk. T. Coleman duPont was a coal miner. John H. Patterson, who founded the National Cash Register Co., was a toll collector. Charles M. Schwab was a grocery clerk.

At 22, Edison was a roaming telegraph

operator—out of a job—too poor when he arrived in New York to buy his own breakfast.

At 31, W. L. Douglas borrowed enough money to rent one room in a building at Brockton, Mass., and started the shoe business that made him a millionaire.

Twenty-four of the fifty men mentioned in B. C. Forbes' book on "Men Who Are Making America" were born poor. Many of them had greater handicaps than you will ever know.

But sooner or later every one of them woke to the fact that in himself—and in himself alone—lay the power to do the thing he wanted to do and to be the man he wanted to be.

And that same realization must come sooner or later to you. You can, if you will, know the joy of getting ahead in business and in life. All you need is the will to do and the decision to start now.

"The secret of success in life is for a man to be ready for his opportunity when it comes."

Disraeli

"Our greatest glory is not in never falling, but in rising every time we fall."

Goldsmith

"Nature—when she adds difficulties—adds brains."

Emerson

"Be what Nature intended you for and you will succeed; be anything else and you will be ten thousand times worse than nothing."

Sydney Smith

You need not worry about the method. For there is a simple, practical plan that more than two million have proved successful in the last 30 years. It is to let the International Correspondence Schools help you. There is no doubt, no question about your ability to prepare yourself for promotion and more money—for the position you want in the work you like best.

Every mail brings letters from students of the International Correspondence Schools telling of advancement and increased salaries won through spare-time study.

These advancements are not only in the technical subjects, such as Electrical, Mechanical and Civil Engineering, or Architecture, Chemistry, etc., but also in Salesmanship, Business Management, Advertising, Accounting, etc.

One investigation of the incomes of a number of I. C. S. students shows some with incomes of \$50,000 a year; others earning \$25,000; still more with incomes of \$10,000 a year and better, and hundreds earning \$5,000 a year. Still another investigation of nearly 1,000 I. C. S. students shows an average salary increase of 350% over what they were earning at the time they enrolled.

THE success of the I. C. S. has been due not only to the personal, practical problem-solving method of instruction of which it was the originator, but also to the high business and professional character of the men behind the courses.

Take, for example, the business courses, such as Business Management, General Accountancy, Cost Accounting, etc. Among the well-known accountants, business men and teachers who are giving active assistance in keeping the textbooks and instruction methods of these courses up to the highest possible standard are:

J. LEE NICHOLSON, C.P.A., first President of the National Association of Cost Accountants, author of "Factory Organization and Costs," "Cost Accounting," etc.

CHARLES J. NASMYTH, F.A.A., C.P.A., a member of the American Institute of Accountants and for six years official auditor for Price, Waterhouse & Company.

EDWARD P. MOXEY, A.M., C.P.A., Ph.D., Professor of Accounting in the University of Pennsylvania, author of "Principles of Factory Cost Keeping," etc.

E. H. FISH, B.S., for six years instructor and assistant professor in the Worcester Polytechnic Institute and now consulting engineer on Employment and Welfare Work with Cooley & Marvin.

A. HAMILTON CHURCH, since 1909 engaged in the practice of Industrial Engineering, his work covering the steel, electrical, ordnance and textile industries.

These are but five of the more than 300 men who have contributed and are contributing their advice and counsel to the preparation of I. C. S. courses. Whatever the course, if it is an I. C. S. course, you can be sure it represents the best thought of men who are leaders in that particular field, and is drawn from their practical experience.

Let us tell you more about the I. C. S. and what it can do for you.

It doesn't cost a penny or obligate you in any way to mark and mail the coupon printed below, yet that seemingly simple little act may be the means of changing your whole life. Today—not Tomorrow—is the time to take the first step forward.

GERMANY AND RUSSIA DEFYING THE ALLIES

LIKE A LIGHTNING FLASH IN THE NIGHT the announcement that Germany and Russia had signed a treaty behind the backs of the other Powers at Genoa was a sudden revelation of a possibility that publicists have been discussing ever since the Versailles Treaty was signed. The treaty signed at Rapallo on Easter Sunday by Dr. Walter Rathenau for Germany and George Tchitcherin for Russia reestablishes full diplomatic relations between the two countries on an equality basis, and mutually cancels all war claims, as well as claims arising from the nationalization of property. Further, "the two Governments undertake to give each other mutual assistance for the alleviation of their economic difficulties in the most benevolent spirit." This treaty may be abrogated at the demand of the Allies, but it is taken by many as indicating an approach of these two Powers to a Russo-German alliance that is bound to be realized, if not now, then later. If this means anything at all, exclaims the *Philadelphia Public Ledger*, "it foreshadows a new European line-up, with Russia and Germany forming what may become a military as well as an industrial and political alliance against the rest of the Old World."

Why should the Allies be disturbed, asks Arthur Brisbane in the *New York American*, because Russia and Germany decide to live up to that part of the Lord's Prayer relating to debts and trespasses? But other commentators, in the main, do not see the situation in quite so pious a light. The danger to Western Europe is even greater than it was in 1914, declares Maurice Casenave, former French High Commissioner in the United States. An Associated Press dispatch from Paris quotes Mr. Casenave as saying further:

"Here is Germany recognizing Bolshevism and joining with it. This has a meaning for America as great, in my mind, as the war had. The American Government and American public opinion ought to see the significance of these events, but if they do not now they will be disagreeably shocked by the consequences."

French and British delegates, the Genoa correspondents tell us, regard the pact as the "first step in a Russo-German alliance." One British spokesman, we read, "went so far as to say that the

signing of the separate treaty was a challenge to the whole world." "The possibilities of German-Russian cooperation are unlimited; they stretch from Vladivostok to the Rhine," cables Edwin L. James from Genoa to the *New York Times*. Mr. James sees in this pact "the final death-blow to Woodrow Wilson's dream that the World War meant the end of the

balance of power and an alliance in brotherhood for the nations." The Russo-German pact, he adds, "will be offset by a tighter cooperation of England and France." Two days after the treaty was signed Paris dispatches reported German "shock troops" in the Ruhr Valley and "Russian Red armies threatening the Polish and Rumanian frontiers." And in an Associated Press dispatch from London we read that Germany and Russia had already concluded "a secret military agreement involving the mutual use of Soviet soldiers and officers and German officers and 'non-coms.'" Another Genoa dispatch quotes General Ricciotti Garibaldi, the last surviving son of the Italian patriot, as saying:

BUT WAS ANYBODY HURT?

—Kirby in the *New York World*.

"Any one who has followed European politics knew the Russians and Germans always work hand in glove, and this treaty is merely tangible proof of their partnership."

"Bolshevism was invented in Berlin, when Germany wanted to punish the Czar and his Government for taking up arms on the side of Germany's enemies. Germany still controls Bolshevism, which she employs from India to Greenland, hoping to succeed in securing revenge for the defeat she suffered in the war."

"German troops are being organized in Russia, while German airships are being built in Switzerland, Holland and Sweden, even in France. If Mr. Lloyd George's plan is to check the European preponderance of France with the help of the Russians and Germans, he would be doing his country a very poor service, as, after destroying France, the Russo-Germans would turn against England, which is their real enemy, and England would have a poor chance of standing up against them."

While admitting that "there is no economic peril to other nations in the Russo-German compact," the *New York Tribune* reminds us that it is nevertheless "an alliance of hatreds," and as such contains "grave political peril." Concerning its

economic aspect, *The Tribune* remarks:

"The world would have both Russia and Germany prosperous. If Germany can furnish leadership and Russia natural resources, resulting in a common benefit, no one will complain. Moreover, if Germany profits by the partnership, she can better pay her reparations debt."

But of the treaty's perilous possibilities on the political side, it goes on to say:

"Since Russia broke faith with her allies, abandoning them when the fighting was heavy, and since Germany surrendered to avoid invasion, the two nations have been the moral outcasts of Europe.

"They are fit copartners in an alliance of hatreds. The sinister motives and influences urging them to ally themselves have long been plain to everybody. At last they deem it safe to throw off their masks and openly join in a brotherhood of outlawry. This is what makes the compact blackly significant.

"Both rage against world order. Both are enemies of peace. Each for its own reasons would nullify the adjudication of Versailles. Together, a solid block of 200,000,000 people, they possess great potential power. Germany is nominally denied a large army. Observers are posted to report when smoke comes from the chimneys of her cannon factories. But there is nothing forbidding the moving of Krupps to Moscow!"

"The diplomatic foundations of a new war are being openly laid," avers this paper, which argues that nothing but the solidarity of the Allies can avert it. Yet, "instead of union the spectacle is of the Allies in one group, Russia and Germany in another and the neutrals in still a third," notes the *New York Globe*. In a later editorial *The Tribune* again urges the Allies "to meet union with union." Moreover, it calls upon the United States to "let it be known to which side our weight is to be given."

By thus shaking us "from the lethargy of dull prejudice or indifference," and by bringing to us a realization that "Germany and Russia in combination constitute a force double the size of all Allied Europe" and that Russia "is under no treaty military restrictions," says the *New York Herald*, "the conference has fully justified its existence."

Some of the outstanding results of the Russo-German diplomatic bomb are listed as follows by the *Philadelphia North American*:

"First, British policy toward Bolshevik Russia has suffered disastrous defeat. Second, France has been justified in her unyielding opposition to dealing with the Red autocracy and in her resolve to maintain armed strength wherewith to enforce the Versailles Treaty. Third, Germany has fashioned a new weapon with which to strike at the reparations terms. Fourth, the Bolsheviks are fortified to flout the conditions which the Allies sought to impose and to dictate their own."

In a note of censure the Allied Powers at Genoa informed Germany that they considered her secret conclusion of a treaty with the Soviet Government "a violation of the conditions to which Germany pledged

itself on entering the conference." The note went on to say:

"By inviting Germany to Genoa and offering her representation on every commission on equal terms with themselves, the inviting Powers proved their readiness to waive memories of the war and granted Germany an opportunity for honest co-operation with former enemies in the European tasks of the conference. To that offer of goodwill and fellowship Germany replied with an act which destroys the spirit of mutual confidence indispensable to international cooperation, the establishment of which is the chief aim of the conference.

"In these circumstances the undersigned do not consider it fair or equitable that Germany, having effected her own arrangement with Russia should enter into a discussion of the conditions of an arrangement between their countries and Russia. They therefore assume that the German delegates have by their action renounced further participation in the discussion of the conditions of agreement between Russia and the various countries represented at the conference."

"The old German diplomacy is not dead; it still 'packs' a torpedo or two," exclaims the *New York Evening World*. "Here is another example of German trickery," remarks the *Philadelphia Inquirer*. "The Germans have done more in three days to prove the French contentions that they are untrustworthy than the most unreasonable French militarist could have desired," notes the *Brooklyn Eagle*; and the *Jersey City Jersey Journal*, in an editorial headed "That Russo-German Blunder," says:

"During the war German diplomatic blunders were little short of amazing. Germany seemed totally unable to understand the psychology of any situation. It gave altogether unnecessary offense right and left. The same inability to perceive how an action is likely to be viewed by others is still a German shortcoming. There seems to be on the part of the Germans an astounding lack of imagination."

Germany's separate pact with Russia "is not a crime, but a blunder," avers the *New York Evening Post*, which goes on to say:

"And it is a blunder precisely because Germany, by her separate action, has fixt the label of Ishmael on herself. She had been invited to a general conference of the nations. She had been admitted to a place on the commissions. In other words, she had been readmitted into the family. And by her own action she has taken herself out again.

"Neither is it of much importance to discuss the rights and wrongs of the separate clauses in the treaty as affecting Versailles or this and that arrangement. The great purpose of the Genoa Conference has been the restoration of peace, as Lloyd George calls it; and by that he means not a cessation of fighting, for there has been no fighting for a long time, but a relaxation of suspicions and fears, the creation of friendliness. By this test the separate treaty is a blunder. The proof is written in the Allied note address to Germany, and more than that in the angry state of mind that has swept the Allied countries. Some of the best friends of Germany are now saying that the treaty may have been right but was certainly 'inopportune.'

"Peace obviously has not been promoted in Europe by an action

AN INTERESTED SPECTATOR!

—Thiele in the Sioux City Tribune.

THE FELLOW WHO WAS TO TURN THE GRINDSTONE DIDN'T COME.

—Knott in the Dallas News.

which has irritated the Allies and alarmed the new nations in Central Europe."

"If during the session of the Washington Conference, Great Britain and Japan had taken advantage of the occasion to negotiate a new alliance between those two Powers sharply hostile to the interests of the United States and of France, and plainly intended to neutralize and render of no effect the purpose for which the Conference was called, it could not have done a more extraordinary or dangerous thing than the representatives of Germany and Soviet Russia have done at Genoa in signing an alliance which replaces the Brest-Litovsk treaty, cancels all war claims, and forms a new union between Eastern Europe and Central Europe for political as well as economic purposes," remarks the *Boston Transcript*. "Even their warmest friends and stoutest apologists," says the *New York Times*, "admit that the Germans made a great tactical blunder." The *New York Evening Mail* reminds Germany and Russia that "neither can return to a normal condition without the help of those countries their alliance is meant to flout." And in the *Philadelphia Public Ledger* we read:

"This is Germany's first appearance in years as anything like a national equal in international circles. On her first emergence she breaks faith, ignores the whole spirit of the conference and plays the traitor to its pledged purposes. Genoa was not called to make old-fashioned separate and competitive agreements, but to end them through a new set of Continental contracts. German action has thrown the fat in the fire. For her it may be a blunder as vital as that she made when she mistook Belgium for a military road instead of a nation. She is bringing France and Britain closer to each other than they have been since the Armistice."

Germans, we are told, are surprised at the excitement their compact with Russia has caused. As Dr. Rathenau, Germany's Foreign Minister, explained to the correspondents at Genoa:

"This treaty does not in the least interfere in the relations of Russia and Germany with any other state, but simply cancels the past with regard to Germany and Russia and lays the foundation for future common reconstruction. Because we reached this understanding during the Genoa conference it does not mean that we intend to renounce the general European aims of the conference."

"Indeed Germany and Russia are convinced that our understanding will help in the attainment of the object of the conference, namely, definite reestablishment of European peace."

And according to another spokesman for Germany at Genoa:

"This action was purely one of self-defense on the part of Germany. We would not have signed the treaty if we had been invited to the private conferences. We were so isolated that we decided to conclude a treaty with the devil."

Turning to the German-American press, we find eager defense of Germany's action, which, according to the *New York Staats-Zeitung*, was forcibly brought about by the attitude of the Entente Powers. In this newspaper's view, the French aim was to make the Genoa Conference the instrument by which the slave chains of the Versailles Treaty should be lengthened and enlarged to hold future generations of Germans in bondage. As for Lloyd George, it credits him with having a broader

outlook on the world situation, but charges that he is wholly lacking in the courage to act according to his lights, and writes him down caustically as a small-minded politician who balances the fate of the world's peoples against a few votes of his countrymen. It points out then that as Germany and Russia found themselves shut off by the close corporation of the Entente Powers, it was the most natural thing in the world for the Teuton and the Slav to get together. It is all right for the Big Three, Lloyd George, Barthou and Schanzer to slip off and secretly discuss the fate of Germany and Russia, we read, but for Germany and Russia themselves to indulge in the same sort of confidence, is nothing less than a crime, it would seem. As a matter of fact, conversations between Russia and Germany had been going on for a long time and the whole world knew about them, according to this journal, which adds that Chancellor Wirth made mention of these negotia-

tions in the Reichstag. Meanwhile it insinuates that the Allies are looking longingly across the seas to the "Big Brother" America, on whose face they see, however, "only a cold sneer."

Another German-American newspaper, the Socialist *New Yorker Volkszeitung*, wonders sarcastically why all the blame and reproof for the German-Russian agreement is flung at Germany, while Russia seemingly goes unrebuked. The explanation it deduces from press correspondence from Genoa is that the Allies are afraid of Soviet Russia's delegates, and while they pretend to be admitting them to Genoa on probation, they really show them wholesome respect which is based entirely on fear of them. That the proletarian Bolsheviks of the Red Republic of Russia should be so considerately treated, while the German delegates are held up to obloquy, strikes this Socialist daily as a fact deserving the profound meditation of good bourgeois Germans everywhere.

Mr. Telitcher, of the Russian delegation, denies that the Russo-German treaty involves any breach of confidence or loyalty either on our part or the Germans'; and he announces that "we stand ready to conclude similar treaties with other nations, including the United States." He explains further that the treaty has no political significance whatever, its inspiration being purely economic and financial.

HENRY FORD'S FIVE-DAY WEEK

WILL HENRY FORD'S FIVE-DAY WEEK, with the minimum basic day-wage of \$6 unchanged, benefit the Ford employee who has been working six days a week? True, he has an added day's leisure for rest and recreation, or for self-improvement, but he also loses at least half a day's pay. Will family and individual budgets have to be slashed because of the recent reduction in working days? These are some of the questions that occur to the *Newark News*, published in a manufacturing city. Ford announces that in order to provide employment for several thousand of Detroit's idle workers, and to afford workers already on the payroll more time to spend with their families, the Ford Motor Company and its allied interests will adopt, as a settled policy, the 40-hour week, the workers now in the service to continue to receive a minimum wage of \$6 per day and new employees \$5 per day. Dispatches from Detroit note that a minimum of \$5 per day was the wage-scale established in 1914 by Henry Ford, and that it was during the war period that this was raised to \$6 to enable employees to meet higher living costs.

"The Ford plan is joyous news to all who like to think of bringing work down to the irreducible minimum," remarks the *New York Herald*: "later we shall have a thirty-hour week, then a twenty-hour week. Perfectly fascinating."

Approximately 55,000 men, according to Edsel Ford, will be affected by the new order, while some 5,000 additional employees already have been taken on. The management, we are told, believes that with more leisure the workers will be more contented and that there will be a corresponding increase in efficiency. Certainly, as the *Boston Financial News* predicts, "the working out of this latter innovation will be watched with considerable interest, if not concern, by all other employers of large numbers of workmen." A few editors recall the wide-spread scoffing, and the prediction that Ford would suffer financial collapse, upon his radical departure from common practise almost a decade ago. "Yet," observes the *Louisville Courier-Journal*, "it was after he announced an astonishing and seemingly impractical wage-scale that he made his greatest success." And, in the opinion of the *New York Herald*, Mr. Ford is just as canny now as he was in 1914. Says *The Herald*, in an editorial headed "Henry Ford's Stroke of Genius":

"Henry Ford's five-day week may be only another proof that his business genius blazes undimmed upon his own automobile industry, in which he is the world's incomparable inventor, manufacturer, salesman and publicity agent.

"It can not be that Henry Ford has failed to discover, along with so many other employers, that the Saturday half-holiday wasn't any good as half a work-day, anyhow. The workers report, ready to quit before they begin, with their eyes on the clock and their minds on what they are going to do after their midday release.

"It can not be that Henry Ford has failed to consider that even he, like other employers, couldn't get half a day of work out of his men on Saturday for half a day of pay.

"It can not be that Henry Ford has failed to speculate on the very good chance that he, the man who is always speeding up production, can so speed it up further that he will get as many cars out of his 50,000 men working five days a week, with a correspondingly smaller pay-roll, as he before got out of them working five and one-half days a week.

"Other employers couldn't do it with their clerks, and possibly the average labor, for while such workers can speed down on Saturday forenoons, with their eyes and brains full of the half-holiday ahead of them, there is no Henry Ford dynamics to speed them up the other days. Henry Ford can."

Apparently organized labor is satisfied with the new arrangement, for Samuel Gompers, head of the American Federation of Labor, is quoted as saying that "Mr. Ford will find his new plan as beneficial as he found the introduction of the eight-hour day, both as to quality and quantity of output." "Mr. Ford, in his

recent announcement, shows that he fully understands the human element, or factor, in production," agrees Matthew Woll, one of the vice-presidents of the American Federation. And as we read in the *Pennsylvania Labor Herald*, of Allentown:

"In establishing the five-day work week plan in his Detroit factories, Henry Ford again shows that he intends to maintain the most efficient shop force in the automobile industry. Instead of reducing working forces and disrupting his producing machine, Ford supplies his present needs by working his force five days per week and keeps his wages to the point where his employees can maintain a decent standard of living. This in turn keeps these men in a state of mind where the maximum production can be secured, and it is a question whether or not the production will not be increased per work-day, rather than decreased through the shorter week. Any manufacturer who treats his employees fairly will surely be well repaid, and Ford is entitled to anything he gets by trying to keep in mind that his employees are entitled to a decent living and that production in his plant will be maintained with that thought in mind."

"It is true," admits the *Boston Christian Science Monitor*, "that Ford's plan means that the pay envelop of the present employees, who are on a \$6-a-day basis, will be found to contain only \$60 each bi-weekly pay day, but it is also true that by stabilizing conditions in the city as a whole the new plan is almost bound to react upon living conditions favorably. As this paper goes on to point out:

"The almost unmeasured benefits which this action promises in relieving the unemployment situation in Detroit will offset, at least to some degree, any loss that might be felt by individuals, and even tho the new rate does mean a slightly decreased hourly wage, it must be remembered that cuts in wages are being made all through the country, and that the generally improved living conditions are enabling a family to live comfortably to-day on considerably less than a year or so ago."

"As to the five-day program in the abstract, it is obvious that it is better to have six men employed five days a week than five men six days, with the sixth out of work all the time," believes the *Newark News*. And, notes the *Boston Financial News*:

"The five-day week becomes all the more spectacular introduced, as it is, at a time when more work and longer hours, rather than less of either, is being advocated by the world's leading economists and business men alike, not only as a panacea but as a requisite to the return of normal business and living costs. The contrast is specifically striking in the case of the textile industry, the operators of which assert that nothing short of more work at less pay will insure its survival. An added contrast may be found in certain phases of the steel and iron industry which apparently continues to require twelve-hour days and seven-day weeks."

"A generation ago, when the eight-hour day or 48-hour week movement got under way," recalls the *Cleveland Plain Dealer*, published in a great industrial center, "there were numerous old fogies who predicted that the country would be ruined if the shorter week became general, but they have been proven false prophets." Moreover—

"If all the capitalists of the country followed the example of Henry Ford the 4,000,000 to 5,000,000 unemployed workers would be quickly absorbed, the work that is to be done would be spread over all industry, much human suffering and misery would disappear, and business would come back to 'normalcy' in short order."

On the other hand, the *Cleveland Commercial* fears that the new Ford policy will create more unrest among the labor people of the country and cause them to ask for the same conditions. The *Huntington (W. Va.) Advertiser* also finds it "difficult to see that Ford's present employees will derive any benefit from the new arrangement." As this paper sees it—

"They will receive wages for five days instead of six days. Their earning capacity has been reduced one-sixth. Doubtless most of them would consider one day out of seven sufficient for recreation and rest, and would prefer to work that sixth day instead of loafing and earning nothing."

THE "WET" CAMPAIGN LAUNCHED

THE GREATEST OF ALL BATTLES between the "wet" and "dry" forces of America is now visible on the horizon. With the approaching Congressional campaign, say editors from all sections of the country, the "wet" forces are seeking "liberal" candidates to supplant those who do not favor a repeal of the Volstead Law, and the "dry" forces are seeking to reelect to Congress those who have shown themselves friendly toward Prohibition, and to depose those who have shown themselves unfriendly. In both camps the movements are well organized. "To one force," writes Frederick Houk Law, in *The Outlook* (New York), "belong those people who believe that men should be free to choose between right and wrong; to the other those who think that they can bring about righteousness through the passage of prohibitive laws." Particularly in the past six weeks has it been noted that the organized anti-prohibition movement has been gaining momentum. This gain is ascribed by the liberal New York *Telegraph* to a mass meeting of four thousand persons in Carnegie Hall, New York, which, it says, "was not unlike the assemblies held in Faneuil Hall, Boston, just before the Revolution." The meeting was held under the auspices of the Association Against the Prohibition Amendment, which refers to itself as "a nationwide organization of reputable citizens working to repeal the Volstead Law." According to *The Telegraph* there was voiced at Carnegie Hall, "a demand for the restoration of the liberties and ancient rights of the people," together with the assurance that "if this Congress does not take cognizance of such demonstrations, a Congress more amenable to reason will be elected."

The first battle of the Association to elect members of Congress favorable to a liberalization of the Volstead Law will be waged during the coming summer months in ten States—Pennsylvania, New York, New Jersey, Kentucky, Ohio, Indiana, Illinois, Minnesota, Wisconsin and Iowa. The Association does not look for an immediate repeal of the Eighteenth Amendment, for its directors realize that the adverse vote of thirteen States can prevent that, but they hope to elect "liberal" Congressmen, and trust that the nucleus thus formed will be the beginning of a big anti-prohibition movement. The purposes of the Association, set forth in brief by its director, are—

- "1. To get the Volstead Act out of the law and keep it out.
- "2. To oppose the passage of a similar tyrannical law and to endeavor to have enforcement of the Eighteenth Amendment, so long as it remains in force, left to the people of the several States, under the concurrent clause.
- "3. To work patiently, fairly, and patriotically for the repeal of the Prohibition Amendment and in the hope that the Constitution of the United States will be preserved from mutilation by an organized fanatical minority.

"4. Pending the accomplishment of the above program, to favor and encourage obedience to the Prohibition laws, as now effective."

But the Association Against the Prohibition Amendment is merely one of twenty national organizations which "will be in the fight for a modification of the Volstead Law," writes David Lawrence, Washington correspondent, in the New York *Evening World*. Against these "wet" organizations will be arrayed some twenty temperance organizations, "with a pledged financial income of more than \$2,000,000 a year." Continues this correspondent:

"The temperance forces are much more efficiently organized than their opponents. Thirty-five Protestant Evangelical denominations with a membership of 24,000,000, two-thirds of which are voters, and two Roman Catholic organizations with about 1,000,000 voters are claimed as the backbone of the temperance movement.

"It is estimated that there are 120,000 enrolled pulpits from which pastors actively and continuously are supporting the Prohibition cause. Added to these are fraternal organizations and the famous Anti-Saloon League and Women's Christian Temperance Union, with memberships contributing monthly to promote Prohibition work.

"The 'wets,' on the other hand, have taken a tack which they hope will swing sentiment toward them. They do not urge the return of the saloon—they insist it will not come back. They do not base their campaign on the question of repealing the Eighteenth Amendment.

"But they are concentrating on the Volstead Law, hoping to exhibit certain of its provisions as too extreme and inconsistent with the intent of the Eighteenth Amendment. The objective is the return of light wines and beer, tho the Anti-Prohibition forces are by no means united on that point.

"The 'drys' are not having it all their own way. This election for Congress is the first in which a Prohibition issue can be fought out without being encumbered by national Presidential questions and party platforms. It's the first time since the Eighteenth Amendment was adopted that the returned soldier, who is said to be against Prohibition, will have a chance to register a protest."

"The current agitation for light wine and beer is not an agitation for the saloon," says the St. Paul *Pioneer Press*. "If the country must choose between the product of innumerable moonshine stills and non-intoxicating wine and beer, common sense dictates that the choice should fall upon the latter," declares the Chicago *Daily News*, while *The Journal* of that city reports that "voting on the light wine and beer question in Chicago indicates that four out of five persons would like to see legislation bringing back the milder alcoholic drinks." A similar canvass among the members of the San Francisco Chamber of Commerce shows that 94 per cent. of the Chamber's 5,600 members voted "wet." "When a sensible change is made, and light wine and beer are licensed, the nation will find itself better off morally, physically, and financially," thinks the *Wheeling Register*.

Despite the foregoing activities of the "wets," however, "it is

too early to predict the failure of Prohibition," believes the *Washington Herald*, while the *Manchester Union* tells us that "there is no real doubt of the general 'dry' sentiment of the nation." "No important question has ever been settled by so decisive a majority as that recorded in favor of Prohibition," notes William J. Bryan, in *The Commoner*, of Lincoln, Nebraska. Moreover, believes the *Chicago Post*, "if this was the work of a 'fanatical minority,' as the 'wets' claim, they will find a fervent majority eager to confirm the 'minority's' achievement." As a matter of fact, however, avers this paper:

"The idea that Prohibition stands in the Constitution of the United States as the act of a 'fanatical minority' is one of those fond delusions which men cherish who believe things merely

THE COAL-STRIKERS' VERDUN

IF FALKENHAYN HAD TAKEN VERDUN it would possibly have meant the winning of the war by Germany, a fact which justified the loss of hundreds of thousands of lives in attacking and defending that stronghold. So, as several editors recognize, the non-union coal mines of the country are the Verdun of the coal strike; they form the strategic objective of the union strikers' drive and are the key to the strike situation. "The coal strike is being fought out, won and lost, along the rim of the great non-union fields in West Virginia, Pennsylvania, Kentucky and Maryland; there is, and will be," declares the *Philadelphia Public Ledger*, "the real battle-line, 'the big show' of the present strike." Any popular indifference to

the strike based on the belief that continued or increased activity in the non-union coal fields would make up for the cessation of output from unionized mines should cease, declares the *Cleveland Plain Dealer*. For, it notes, "even bituminous operators admit that non-union miners in large numbers have already joined the ranks of the strikers." The non-union mines are more severely affected by the strike than most people had anticipated, says *The Wall Street Journal*, calling attention to unexpected inroads made by the strikers among non-union mines in Pennsylvania and West Virginia. What this means is explained in the *Philadelphia Public Ledger* editorially, already quoted:

"On April 1st the country had about 60,000,000 tons of coal in stock. Weekly average requirements amount to about 8,600,000 tons. Last week,

the first of the strike, coal production was between 3,500,000 and 4,000,000 tons.

"Non-union operators, knowing West Virginia produced 60 per cent. as much coal as Illinois, Ohio and Indiana combined in 1921, claimed on the eve of the strike they would furnish 6,000,000 tons a week. They failed to do so. Strike chieftains promised immediate inroads on the inner citadels of the 'open shop.' Their success has not been great. Another week, and the outlines of the struggle will be more apparent.

"In the next sixty days the strike will be won and lost. If the non-union miners deliver 4,000,000 tons a week the strikers lose. If these mines are caught and smothered in a wave of unionizing, then the strikers win and the operators and the public lose; for the most certain loser is the public—the same old, meek, long-suffering public that always pays the bills."

But, we are reminded by *Saward's Journal* (New York), "the United Mine Workers are more active in making claims of success than the operators are in contradicting them; this makes the reports somewhat one-sided and open to suspicion."

"There will be a serious bituminous coal shortage throughout the country inside of four weeks," one of the strike leaders predicted a few days ago. During the first week of the strike the total coal production in the country—3,784,000 tons, practically all bituminous—was about a third of normal and was, in fact, the lowest accorded for any week since the United States Geological Survey has been compiling statistics. Approximate estimates made by union leaders after the strike had lasted two weeks gave a total of 665,000 strikers, something more than

because they like to believe them. The campaign which ended with the adoption of the Eighteenth Amendment began with the agitation of a minority, which may be called 'fanatical' if you so please. But the campaign succeeded because the minority had become the majority. Moral persuasions were reenforced by economic arguments, and the combination won the victory.

"The moral reasons for Prohibition stand up; the economic arguments grow stronger. The Eighteenth Amendment with each year will become more firmly embedded in the nation's organic law. Patiently, lawfully and patriotically the anti-prohibitionists may continue their labors, but we warn them that in hoping to restore the pre-Volsteadian era they are 'imagining a vain thing.'"

That the anti-prohibitionists will have plenty of opposition is gathered from editorials throughout the country. And out of a poll of 134,321 prisoners in 322 jails, reports the president of the Prisoners' Relief Society, only 909 favor the repeal of the Prohibition Amendment. "This is no time to weaken the dike," asserts the *Fort Worth Record*, while a labor paper of that city, the *Union Banner*, assures us that "the rank and file of labor in this State would fight as hard to keep liquor out as they did for years to keep it in."

"The 'wets' seem to forget," remarks the *New York Globe*, "that before the Amendment was even submitted twenty-six States had adopted State-wide prohibition." "It has been ratified by forty-six of the forty-eight States," we are reminded by the *Philadelphia North American*, which sees little likelihood of anti-prohibitionist success in the coming Congressional campaign.

65,000 of whom were recent recruits from non-union mines. More exact figures, not including districts in Kentucky and Alabama, compiled at the United Mine Workers' headquarters, and given to the press from Indianapolis, showed that on April 15, 514,000 union miners were on strike and that 117,000 non-union men had joined, making a total of 631,000.

The chief non-unionized bituminous fields being in Pennsylvania and West Virginia, the progress of the union drive in those regions, as related in news dispatches, should be noted briefly. The strike began April 1. Pittsburgh dispatches of the 12th gave the information that "with more mines going down to-day in the non-union strongholds, operators in these territories with steel and other industries dependent on the mines for coal and coke are alarmed over the situation." By the 18th union officials named 130 non-union mines in Pennsylvania that had been closed, and asserted that the coke supply was already "85 per cent. down." By the 19th, strike leaders were pointing out that certain grades of bituminous coal had doubled in price since April 1. On the other hand, operators were hitting back by evicting striking non-union workers from their company homes, and were being cheered by reports of strikers straggling back to work and evidence that the men in the important Connellsville field had definitely rejected the advances of union organizers. By the 20th mines were reopening in Fayette County.

In the West Virginia sector of the drive against the non-union mines, legal weapons have been figuring conspicuously. Coal-carrying railroads reported a drop of more than 50,000 tons in non-union soft-coal production in the first ten days of the strike. In one important West Virginia field operators admitted that only about half of their normal tonnage was being mined during this time. But, says a representative operator, as quoted in the press dispatches: "We are not going to close the mines; we are going to operate them." The injunction weapon is no new thing in West Virginia, where, it should be noted, the strike situation merely accentuates a campaign for unionization that has been

going on continuously and at times spectacularly for years. The operators' attorneys have managed to secure injunctions from a Federal Court covering several different coal fields in the State. The filing of these injunctions to keep these West Virginia fields open, observes Mr. John J. Leary, Jr., who has been following the coal strike for the *New York World*, "show that, as usual with West Virginia decrees, they are sweeping, that issued on April 14, in the matter of the New River field, prohibiting the union or its agents from promising support to those who may join its ranks." "No gains in membership in the recently formed local unions in the Winding Gulf field have been made since the injunction order," cheerfully comments one West Virginia mine operator. The attitude of the union is expressed in this statement by President Lewis of the United Mine Workers:

"The United Mine Workers regard issuance of these writs as an unwarranted trespass upon the rights of citizens and an effort to strip the United Mine Workers of their natural and legal rights as an organization.

"We have no objection to being enjoined from doing things in themselves unlawful, but these writs seek to enjoin the union from committing acts which are lawful."

But it was soon evident from the West Virginia dispatches that the issuing of the injunctions is only the beginning of the legal fight. The operators have been trying to extend and make permanent the injunctions. The miners through their counsel have been fighting these moves and carrying appeals to higher Federal courts. The latter won a point when on the 18th Judge Knapp of the United States Circuit Court of Appeals suspended one of the West Virginia injunctions in so far as it restrains peaceful persuasion of non-union miners and the maintenance of tent colonies. This was interpreted by the union leaders as sanctioning the work of unionization so long as it is accomplished without intimidation or violence, and they consider it a complete upset of "the plans of the non-union coal companies of Mingo County, West Virginia, to drive the union out of that field."

STORM CENTER OF THE TARIFF DISPUTE

WE DON'T SEEM TO BE ABLE to revise the tariff without throwing into the arena of public discussion some phrase which becomes a bone of contention in Congress, gives all the debating societies a subject for their arguments, and forces editorial writers to turn out columns of explanation. People used to ask, "What is Reciprocity?" or "Why is Schedule K?" Now the question is, "What is American valuation, what difference does it make what kind of valuation we have, and why are they talking about it so much in Congress?" Without going into the intricacies of the subject, the first part of the query may be answered by showing how each plan works in the case of some well-known article.

Take, for instance, a camera on which the duty in the Senate bill is 20 per cent. It costs \$4 to buy in Germany where wages are low, whereas, a newspaper correspondent observes, an equally good camera made by highly paid workmen in an American factory would sell for \$20. Under the present valuation plan the duty would be 20 per cent. of \$4, or 80 cents; but under the new American valuation plan the duty would be 20 per cent. of \$20, or \$4. Of course, in the case of French perfumery worth \$4 to the importer, but actually no better than domestic perfume selling at \$2, the American valuation plan would reduce tariff duties.

Roughly speaking, that is how the new valuation scheme would affect tariff rates. Now this valuation matter has become what one paper calls "the spectacular storm center" of tariff discussions, because the Senate Finance Committee has rejected the American valuation plan as embodied in the bill passed by the House. And so, as a Baltimore paper puts it, "the two Houses of Congress have at last broken forth into open war." Mr. Fordney, tariff leader in the House, declares: "We'll have American valuation in the tariff bill or we'll be here till the snow flies." But Senator Capper, leader of the powerful farm bloc, hardly believes "there will be any possibility of securing agricultural support for the American valuation plan." Other Senators, like Mr. Gooding of Idaho, believe some sort of American valuation plan will be adopted. So it seems likely that the Senate will take full advantage of what Chairman McCumber of the Finance Committee offers them—"a thorough opportunity of debating both the American and the foreign valuation principles."

It is noted by the *Columbus Dispatch* (Ind.) that "in newspapers ordinarily favorable to the theory of protective tariff legislation there has been a very wide expression of disapproval" of the American valuation idea. The Senate Committee is congratulated by the *Chicago Daily News* (Ind.) because it abandons this novelty, "denounced by the overwhelming majority of merchants and economists." Farther west the *Seattle Post-Intelligencer* (Ind.) welcomes the omission of an arrangement under which "there will be uncertainty, trickery, dishonesty and graft." The Republican *Buffalo Express* is glad to see this "trouble-producing" feature thrown overboard. The *Minneapolis Journal* (Rep.) agrees, feeling that the American valuation plan would involve "unduly high protection for manufacturers at the expense of the consumers." The *Rochester Post-Express* (Rep.) argues similarly that the effect of the American valuation plan would be "to give protected industries a concealed protection above that given them by the schedule rates."

There are "certain very grave practical objections" to the American valuation plan, as the *Baltimore News* (Ind.) sees it:

"It apparently levies a tariff on a tariff. You put a tariff on an article, which raises its American value, and then you are apparently under the necessity of raising the tariff, with a prospect of the indefinite repetition of the process. This, of course, would be absurd."

"Good riddance," is the *New York Tribune's* characterization of the omission of American valuation from the Senate bill. As this Republican newspaper sums up its objections to Mr. Fordney's plan:

"Under it importers making purchases three or six months ahead could not know what duties would be collectible on the goods they bought; it would open the door to surreptitious increases and decreases of rates, requiring the selection of an arbitrary percentage to be applied to all rates in order to translate them from the old system into the new; it would make almost valueless the appraising decisions of a century, decisions and rulings vital in the administration of a tariff law.

"The net effect would thus be to make it impossible for importers and domestic manufacturers alike to know where they stood—the one class as to the duties its members would be asked to pay, and the second the price level its members would be compelled to compete with. On all counts, therefore, American valuation is well gone."

But the friends of American valuation are far from regarding it as dead. "There is little chance that Fordney will yield," one observant newspaper editor remarks. And this is exactly the way Mr. Fordney seems to feel about it. He believes, and he insists, that the Senate will come completely around to the House favor of American valuation. The point is, the Washington dispatches quote the Chairman of the Ways and Means Committee as saying, that "there are many items in the dutiable list that to give them proper protection on the foreign valuation basis would require duties of from one thousand to two thousand per cent. That is extreme and the people would never stand for any such rates."

The Michigan Congressman finds support not only in the House and among Senators, but in the ranks of both Republican and independent journals. The *Denver Rocky Mountain News* (Ind. Rep.) is of the firm opinion that just now American valuation is vital to tariff legislation; that the Senate should reject the American valuation plan seems most regrettable to the *Albany Knickerbocker Press* (Rep.). One of the strongest expressions of condemnation of the Senate Committee's "sin of omission" in connection with American valuation comes from *The Manufacturers Record*, which calls it "a confession of cowardice and a compromise with dishonesty." This independent protectionist weekly, a business man's paper published in Baltimore, argues strongly for the retention of American valuation as follows:

"Let importers bellow to their hearts' content, but the fact remains that American valuation and American valuation only can insure fair and just appraisals at the Customs Houses. The history of rates based on foreign valuations is largely a long series of double invoices, false valuations and tampering with the returns.

"Not less dishonest have been many of the attacks on the principle of American valuation. It was claimed a year ago that this meant a tariff on a tariff and would pyramid costs. Truth wiped that falsehood from the front pages.

"Valuation is the heart of all ad valorem imposts. If the valuation, therefore, can be a variant prone to be tampered with, ostensibly heavy imposts can be in fact reduced to laughable proportions by the simple expedient of undervaluation.

"There is no permanency to any of the factors that visualize cost of production in Europe. The continental moneys fluctuate so widely that cost in terms of currencies is no index of actual worth.

"There is no such thing as truth in foreign valuation. It is guesswork.

"Let the Senate shake itself free from the imprecations of international financiers and dare to be honest. The principle of protection can not survive if one great volume of imports subject to specific duties pays honestly while another great volume, paying ad valorem rates, sneaks through the customs barriers dead-headed by foreign valuation. How can we hope to maintain American standards if we ourselves solemnly declare by act of Congress that American valuation is not acceptable?"

NEW YORK'S BIG FOREIGN POPULATION

TWO SIGNIFICANT REPORTS on the huge foreign elements in New York City contain figures that may surprise even those who thought they knew the situation. The first is the Federal Census, which tells us the number of New Yorkers actually born in foreign lands. They are listed in the accompanying table and represented in part in the diagram. The second report, made by the New York City 1920 Census Committee, includes not only the foreign-born, but also their children, which makes the totals of "foreign stock," of course, much larger. The leading elements in this latter list are Russian (including Poland), 994,356; Italian, 802,893; Irish, 637,744; Austro-Hungarian, 603,167, and German, 593,190. In short, points out the Census Committee, "New York contains more foreigners of all sorts than the combined populations of Chicago, Boston and Detroit."

"How startling these census truths are may be summarized in the fact that the increase in the Russian and Italian residents of New York from 1910 to 1920, despite the war, was greater by 100 per cent. than the births of native whites of native parents," notes the *Providence News*. Meanwhile there were losses not only in the Irish element, but also in the city's English, Scotch, Welsh, German and Swiss stock. While the French increase was 40 per cent., the Spanish was 180 per cent., and the Greek 200 per cent. The native population is given as only 1,164,834.

The Russian and Italian figures occasion considerable surprise among editors. "There are now more Russians in New York than in Moscow," observes the *Brooklyn Eagle*, "and more Italians by a hundred thousand than in Naples. Not only that, but there are more Russians and Italians than there were Germans and Irish at the period of their maximum." As we read in the *New York Herald*:

"An interesting matter for comparison is the gain which both of these nationalities have made over the Germans and the Irish, who for years were the two most numerous foreign elements in New York. In 1900, when the Germans led all other foreign-born nationalities, they numbered 789,668; even then they were 200,000 fewer than the Russians. Now by the 1920 census they are 400,000 fewer than the Russians. The Italians now exceed the Germans of 1900 by more than 13,000; they exceed the maximum Irish element of the 1900 period by 77,382, and they exceed the Irish of the 1920 census by about 170,000.

"The Austro-Hungarian element in 1920, which includes all the immigrants from the former monarchy of Austria-Hungary, number 603,167, which is also more than the German maximum in 1900. There was a falling off in northwestern Europeans, that is, in British, Scandinavians, Dutch and Germans. The French element of the population made a slight increase, 14,383, which was the largest made by any of the northwestern European elements. The Bulgarians and Turks did not increase their

representation—they were the only peoples of eastern Europe who did not—the Roumanians made a decided gain.

"The peculiar feature of the census of New York City is that it has not for years, so far as nationalities are concerned, represented a corresponding condition throughout the country."

WHITE FOREIGN-BORN POPULATION OF NEW YORK CITY.

This diagram affords a graphic comparison of the sixteen foreign nationalities that contribute most numerously to the make-up of New York's polyglot population. The table below gives the exact figures, according to the Federal 1920 census, for these and other foreign-born New Yorkers.

1. Russia.....	479,797	15. Scotland.....	21,545	29. Mexico.....	2,487
2. Italy.....	390,832	16. Greece.....	21,455	30. Turkey in Asia...	2,273
3. Ireland.....	203,450	17. Spain.....	10,980	31. Turkey in Europe..	1,754
4. Germany.....	194,154	18. Finland.....	10,240	32. Wales.....	1,510
5. Poland.....	145,679	19. Switzerland....	9,233	33. Newfoundland....	1,403
6. Austria.....	126,739	20. Denmark.....	9,092	34. Portugal.....	1,026
7. England.....	71,404	21. West Indies.....	8,722	35. Australia.....	1,023
8. Hungary.....	64,393	22. Lithuania.....	7,475	36. Palestine.....	913
9. Roumania.....	38,139	23. Central and South		37. Asia Minor.....	442
10. Sweden.....	33,703	America.....	6,621	38. Atlantic Islands ..	414
11. Czecho-Slovakia..	26,437	24. Jugo-Slavia.....	5,271	39. Bulgaria.....	308
12. Canada.....	25,271	25. Netherlands....	4,750	40. Luxemburg.....	302
13. Norway.....	24,500	26. Syria.....	4,485	41. Albania.....	103
14. France.....	23,020	27. Armenia.....	3,779	Total (including other	
		28. Belgium.....	3,467	smaller groups)	1,991,547

"New York being the gateway, it is not strange that the newer elements in immigration (the Russians and Italians) are displacing the older (the Germans and Irish)," thinks the *New York World*. On the other hand, *The Herald* goes on to explain:

"The immigrants from Scandinavian countries, the elements which show the greatest falling off in the New York census of 1920, have not been remaining in New York or on the Eastern seaboard, but have gone to the forest or agricultural lands of the Northwest."

TOPICS IN BRIEF

IRELAND is free, but not easy.—*Columbia Record*.

CIVILIZATION may totter, but it totters forward.—*Boston Transcript*.

The Irish seem to make better policeman abroad than at home.—*Greenville Piedmont*.

THE Republican party, too, seems to have its problem of the unemployed.—*Detroit News*.

JACK DEMPSEY says he doesn't want to fight in France. He never did.—*New York Tribune*.

SOLOMON said: "There is no new thing under the sun," but he didn't say it by radiophone.—*Boston Globe*.

EVERY G. O. P. attempt to explain that "efficiency" move has a strong accent on the "fish."—*Philadelphia Record*.

A SCENARIO writer does to real literature what the average contractor does to real architecture.—*Detroit Journal*.

THEY are asking men to wear corsets on the theory that somebody ought to wear them.—*Newspaper Enterprise Association*.

COMMISSIONER ENRIGHT, in saying that there is no crime wave, speaks advisedly; it has become a steady surf.—*Boston Herald*.

LLOYD GEORGE thinks it may take more than a fortnight to reform the economies of Europe. Wha'Genoa'bout that?—*Philadelphia Record*.

ANYWAY, Ireland is on the road to sound finance; the rioters over there break up a printing-press every night or so.—*Washington Post*.

SCREAMS of a woman frightened bandits away from a meat market. The woman is believed to have just priced the round steak.—*Detroit News*.

ANY father who has just married off his daughter in handsome style knows why King George is offering his private yacht for sale.—*Cleveland Plain Dealer*.

LLOYD GEORGE may not know the meaning of the word "pass the buck," but he must chuckle now and then as he sees who is fighting De Valera.—*Boston Herald*.

THE Russian revolution, according to Emma Goldman, "is a complete failure." That's what Americans told her when she was trying to duplicate it in the United States.—*Seattle Times*.

A PSYCHIATRIST warns us that a successful assault upon evolution would mean the downfall of reasoning. Still there are candidates who would get more votes if that happened.—*Washington Post*.

WE'D like to get Sir Arthur Conan Doyle's opinion, as a spiritualist, on our land of departed spirits.—*Columbia Record*.

MR. VOLSTEAD is a constructive statesman: he has created a new business, put it within reach of the commonest people and made it pay.—*Washington Post*.

IF the Genoa Conference succeeds in the economic rehabilitation of Europe perhaps its services may be secured to attempt the same thing in New York City.—*New York Tribune*.

WILL H. HAYS, of the "movies," says there are too many "thou shalt not's" in business. We haven't observed that the ten in the Decalogue have hampered the "movie" people much.—*New York Tribune*.

THE unread are the easy prey of the Red.—*Columbia Record*.

THE early worm gets the fishhook.—*Newspaper Enterprise Association*.

IT would be better if Ireland picked the harp more and the quarrel less.—*Washington Post*.

FORD has bought 10,000,000 nuts, which is even a larger order than he placed aboard the *Oscar II*.—*Wall Street Journal*.

THESE strikes are more or less like coffee. Settling them seems about the only way to get at the grounds.—*Manila Bulletin*.

"IT is hard to give away a million," says John D. It sure is. You have to get one first.—*Newspaper Enterprise Association*.

WOULDN'T it be awful if the girls didn't have any more sense than we think they have?—*Newspaper Enterprise Association*.

PROBABLY something sinister about the way Great Britain is paying the interest on her American loans.—*Wall Street Journal*.

MR. BRYAN disagrees with Darwin's monkey theory and there are those who have disagreed with Mr. Bryan's donkey theory.—*Detroit News*.

THEY say Harding went to Florida because he was disgusted with Congress; but everybody can't do that.—*Newspaper Enterprise Association*.

COUSIN BILL HOHENZOLLERN didn't get an invitation to that royal wedding in England, but he didn't have to buy a wedding present, either.—*Brooklyn Eagle*.

AS we get it, the difference between Wilson's and Harding's remedies for conditions is about the same as that between castor oil and castoria.—*Manila Bulletin*.

WHILE seven million Russians are being fed by charity, Trotzky pauses long enough to say that the Soviet Government "does not need the rest of the world."—*New York Morning Telegraph*.

PUBLIC improvement bonds of the Philippines have sold in New York at more than par. Perhaps there was an impression there that the public here needed improvement.—*Manila Bulletin*.

THE first-line trenches of prosperity are the excavations for new buildings.—*Asheville Times*.

THE indications are that the people of the United States are about to lose another great strike.—*New York Tribune*.

A NATION that can not convict its murderers makes a fine show legislating the length of a bathing skirt.—*Columbia Record*.

ONE of the most curious things about American politics is that without a single historical exception a partizan is invariably a member of the other party.—*Washington Post*.

IT might prevent a lot of window-breaking and door-smashing if the Mayor presented the keys to the city to some of the criminals now residing here.—*New York Tribune*.

THE RETREAT FROM MOSCOW.

—Fitzpatrick in the St. Louis Post-Dispatch.

FOREIGN - COMMENT

BRITISH-AMERICAN TRADE RIVALRY IN CHINA

KEENEST COMPETITION between British and American trade interests is on the way in China, according to Japanese newspapers, which warn their readers that Japan must look sharp to safeguard her own markets there. Whether British or American trade is to come out on top, they do not venture to predict, but they do urge the necessity for

appreciating what the outcome of the rivalry may mean to Japan, not only in China, but everywhere, says the Tokyo *Nichi Nichi*; Britain and America are displaying remarkable activity in restoring trade. In England, it tells us, a floating exhibition company has been organized which will send a steamer round the world next year. The passengers on this steamer will be delegates of about 300 leading commercial and industrial companies in England, who will make investigations of market conditions and other matters in every port they touch. Moreover, this Japanese daily in-

forms us that in England there is in process of organization a financial enterprise of £20,000,000,000 for investments in France, Germany, Italy, Belgium, and other countries, with the view to revive European trade. As to China, we read:

"As a result of the Washington Conference, the principle of the Open Door in China has been established, but this is not enough for Britain. As regards Britain she must find some other more effective means for the restoration of her trade there, for it would be a great mistake to think that the Open Door principle will secure the British trade in China, for the Washington Conference has done nothing further than guarantee the equality of opportunity to all the countries of the world. Unless Britain now endeavors to find effective means by which to take advantage of the principle of open doors, she will one day find herself left far behind other countries. This is the gist of the warning given by Mr. Ellis Barker to the British nation. Britain is now going to establish in China many large Chinese-British trade guilds, which it is hoped will greatly help to develop the British trade in China. The recent trade association, promoted by leading business men both British and native in China, may be regarded as a first step toward this end."

The Osaka *Mainichi* calls attention to the ship subsidy bill presented by President Harding, which it summarizes as providing in the main for—

"First, the appropriation of \$32,000,000, or 10 per cent. of the total customs revenue, for the subsidization of American vessels in the fiscal year of 1923; secondly, the provision of funds for the construction of ships under the recognition of the Government to the extent of two-thirds of their value at interest of two per cent. per annum; thirdly, the extension of the coastwise trade of the United States to the Philippines and prohibition of the operation of foreign ships in the service between the United States and the

archipelago; and fourthly, the imposition of discriminatory high railway freight rates on goods for import and export that are carried by foreign bottoms in order to protect American shipping."

At the present time, this daily avers, the ships in the register of the United States aggregate 8,500,000 tons. Supposing that ships of 7,000,000 tons are qualified to receive the subsidy,

\$32,000,000, if allocated to them, this journal believes the amount will scarcely exceed \$4.00 per ton a year, and is "doubtful whether any such insignificant monetary aid will prove of service to American shipping in the enormous difficulties it is now experiencing." We read then:

"The amount of funds to be loaned American shipowners at a very low interest is said to be in the neighborhood of \$100,000,000. This financial help to be accorded to them by the United States Government will surely facilitate the construction of superior vessels on their part. The possession of a large number of fast-going liners

is the best means for tiding over the present difficult situation. While Japanese shipowners are importing more than 200,000 tons of old and superannuated ships from abroad, and even the fastest of all Japanese ships is unable to steam at a speed exceeding 17 knots an hour, Britain and the United States are operating clippers with a speed of more than 20 knots an hour in the Pacific services. To-day, there is a tendency that the transportation of such cargo whose prices are subjected to constant fluctuations in the market as raw silk across the Pacific from Japan to the United States is being gradually monopolized by ships of Britain and the United States. If superior ships of these countries, especially the United States, are placed in the Pacific services, Japanese ships will be soon outclassed and our shipping trade will sustain a fatal blow. It behooves our authorities and people to deliberate on this point."

The inclusion of the Philippines in the sphere of the coasting trade of the United States and the expulsion of foreign ships from the America-Philippine service, we are told, were previously decided upon by the United States Government at the time of the legislation of the shipping regulations. But the execution of the decision was postponed till the end of February past, "owing to the objection of the people of the Philippines," and it is further stated that—

"Now the time for postponement has expired and it is safe to consider that foreign ships will be denied participation in the said service. However, the extension of the coasting trade of the United States as far as the Philippines will never engender an international dispute, altho it will be continuously controverted by the Filipinos. In view of the fact that Japan places Taiwan in the scope of her coasting trade and excludes ships of other countries from the service between her mainland and the island, she is in a position to desist from filing her protest with

TAKING NOURISHMENT.

—News of the World (London).

the United States for closing the American-Philippine service to her shipping. We wonder why Japan does not throw the Taiwan service open to foreign shipping and try to maintain her services to the Philippines in concert with Britain.

"With reference to the imposition of discriminatory railway freight rates on cargoes carried by ships of countries other than the United States, the American authorities postponed the enforcement of the provision therefor in the shipping regulations indefinitely in the face of the vehement opposition to it by American railway companies and chambers of commerce in cities on the Pacific Coast as well as the governments and shipping companies of Japan, Britain and other countries. But the United States authorities are contriving to carry their object into practise by including the same provision in the new shipping subsidization law. To accord discriminatory treatment to our ships with respect to railway freight rates is clearly in conflict with the commercial treaty concluded between Japan and the United States. The Japanese Government will, therefore, lodge a strong protest with the United States Government concerning the matter. On the other hand, British shipowners are already decidedly opposed to it and are ready to adopt retaliatory measures. Under these circumstances, the endeavors of the United States authorities in this direction will again end in failure."

HOME RULE ALL ROUND IN BRITAIN—The birth of the Irish Free State is said to start talk anew in some quarters of "Home Rule all round in Britain," by which is meant autonomy for Scotland and Wales as apart from England proper. In Wales Home Rule has already entered the range of practical politics, according to the London *Pall Mall Gazette*, which relates:

"Under the Welsh plan the Imperial Parliament would reserve its powers on questions affecting the crown, peace and war, foreign affairs, regulation of trade and industrial legislation and postal and other communications.

To a Welsh Parliament would go control of local government, education, judiciary, agriculture and internal commerce. Restoration of the ancient office and title of Lord President of Wales is proposed. To save the Welsh rural areas from domination by the great industrial population of the South, the Welsh Parliament would include an Upper House, consisting of two representatives of each county and county borough, and two from the national university of Wales.

There is some opposition to the plan even in Wales, but the proposals come nearer to meeting the aspirations of moderate nationalist Wales than anything that has hitherto been advanced. Tho there is little likelihood of immediate legislation, belief among the Welsh members that the principality is within sight of a parliament in Cardiff is firm and general.

RUSSO-SWEDEN BUSINESS GRIP

AFTER LONG NEGOTIATION between Russia and Sweden the two countries exchanged the fraternal business grip to their mutual satisfaction, we are told, and at the same time it is noted as an instance of Soviet Russia's rising trade sagacity that she has come to an agreement with Norway for the purchase of Norwegian fish. Swedish newspapers recall that the Russian markets were very profitable for Sweden before the war, and they welcome their reopening, while Russia, they assume, is only too anxious to receive goods for her starving population. But the Swedish press is careful to point out that the so-described "preliminary agreement" with Soviet Russia does not include an acknowledgment of that country as a *de jure* government. The question of compensation for seized Swedish property in Russia, we are told, is referred to a future arrangement, and meanwhile Russia has the right to maintain representation in Sweden at what is practically an embassy status.

As summarized by Swedish organs, the Russo-Swedish agreement also provides that the contracting parties may not conduct political propaganda in each other's country, tho the citizens of either country have the right to settle in the other, and there to engage in business. The commercial decisions are compared to those existing between "mostly favored" nations; and altho no arrangement is made for the grant of Swedish credit to Russia, an opportunity is afforded for an eventual private grant of credit through the intervention of the Swedish Government. We read also that the Swedish Government recovers the possession of its properties in Petrograd and Moscow under the agreement, which may be terminated by either party, but only on a previous notice of three months.

As the Swedish negotiations were conducted by representatives of the Socialist Premier Branting's Socialist Cabinet, naturally Swedish Socialist and Communist journals greet the agreement with enthusiasm. But many Swedish papers of other complexion

"America and Germany are said to be collaring all the contracts going by underbidding British manufacturers in the world's markets."

—Bulletin (Glasgow).

are decidedly reserved in their remarks, if not severely critical, and their criticism is aimed chiefly at three points. The first is the so-called "reciprocity" of the pact, which is said by these critics to be all to the advantage of the Russians; the second is that the representative of the Soviet Government is to be considered as the single and only official representative of Russia; and the third is the fact that no definite resolve has been reached affecting Russia's old debts to private Swedish interests. In the opinion of these adverse observers, Russia has gained too much and Sweden too little, and the conservative *Svenska Dagbladet* (Stockholm), avers that "there is a quite unreasonable disproportion between the concessions granted to the two negotiating parties," while it adds:

STRIKES THROUGH CHINA'S OPEN DOOR

THE OPEN DOOR in China has let many good things into that country, it is said, and some that are not so good, at least for the employing section of the public, for the drastic adoption of Western unionism methods by the Chinese, say these ominous observers, is a startling development. In a period of nine months there were fifty-two labor strikes in two cities of Kwantung, namely, Canton and Chaochow. They affected more than eighty different lines of trades, and as Mr. Hollington K. Tong points out in the *Shanghai Weekly Review*, they resulted in an increase of wages of an average of twenty-five per cent. South China is leading in the strike movement, we

TIMES CHANGE, AND BOLSHEVIKS CHANGE WITH THEM.

BOLSHEVISM IN 1922.

"Let these European representatives come in to sign the trade treaty."

—Wahre Jakob (Stuttgart).

"The necessity for give and take in a question of trade exchange is self-evident; but under this arrangement only Sweden gives and Russia only takes. We have a very poor bargain before us. The indulgence shown toward exceedingly doubtful Russian demands should have been out-weighed by far larger and particularly safer advantages to Sweden and her economic life than we find in the agreement."

This newspaper is so disgusted that it suggests a new conference to make a better arrangement, and in similar tone the Stockholm *Dagens Nyheter* (Lib.) regrets that the Swedish Government demands that the agreement be passed or rejected in its entirety without allowing changes to be made in individual paragraphs. This daily strongly advises a change of procedure for "it should not be overlooked that altho it is in the interest of Sweden to come to an agreement with Russia, nevertheless Russia's interest undoubtedly is sufficiently strong to put a reasonable limit to Swedish surrender." But other Liberal papers are fairly well satisfied, and the *Goteborgs-Posten* considers that the new trade pact is about as good a one as can be compounded under present circumstances.

Sweden's leading Socialist organ, *Social-Demokraten* defends the agreement vigorously point by point, and concludes by saying:

"Arguments against this agreement are founded in emotional habits of thinking that disregard the world of realities. The Bolsheviki have behaved badly. We have never concealed our opinion of their behavior, but now, wholly ignoring what harm we ourselves may suffer from continued punishment inflicted on the Bolsheviki for their infamous conduct, the non-Socialist press plead for such reprisal on our part. It is as if we, so morally noble, should say to them: 'With such base folk as you we in our nobility can have no dealings!' It is true that the present agreement pulls such a morally high-minded attitude to the ground. But it is done in the service of still higher interests. It is done to clear the way for better conditions in general in our harrowed section of the world."

read, because laborers, both skilled and unskilled, in that section of the country, are more advanced in thought and more ready to cooperate with one another in a public conflict. Adverting to the Hongkong strike, which extended to the very domestic servants in the homes of the city, this writer says that its recent settlement is interpreted as a triumph for the workers, and he proceeds:

"It will have a certain effect upon the laboring class in other parts of Asia, confirming the popular belief that where there is a will there is a way. The strike evil is being spread over all China slowly but steadily. A few years ago the Chinese read with amusement the news from the West about the closing down of huge mills and factories in America and Europe in consequence of the walk-out of laborers and did not imagine that such a thing would be possible in this country where the supply of labor exceeded the demand. They are now realizing that their view is erroneous. As floods and pestilence can not be avoided in China, neither can strikes."

"Farsighted employers are endeavoring to prevent strikes by anticipating the wishes of their employees. They are considerably successful. Chinese workmen, as a whole, are more subservient to the interest of those who pay them than Western laborers. They can be easily satisfied, and are less harsh with their terms when they consider that they have not received proper and fair treatment. China is as yet free from the strike of a national scope, which will come when the importance of the labor movement is better known among the masses. During the next few years it can be predicted with certainty that only petty strikes will take place within the country. The Hongkong strike is an exception."

The rise in the cost of living is one of labor's justifications in demanding higher pay, this writer tells us, for during the last five or six years the cost of living in China has "increased at least 200 per cent., while the scale of wages for labor has not been revised upward in proportion." Moreover, Chinese workmen want more pay because they see the importance of "giving their children a sound high-school or college education."

GERMANY'S "RESURRECTION"

"DO YOU BELIEVE in Germany's resurrection?" is the Eastertide inquiry of a German newspaper to various eminent Germans, and their response of unquestioned confidence that Germany will rise again shows in strange contrast, according to some, against the howls of despair

THE GERMAN COMMUNIST THREAT.

"Stuffed" and Nonsense.

—The Bystander (London).

elicited by the latest demands of the Reparations Commission. On the other hand it is also stated that the outspoken resistance of the German press to these demands is the surest sign that Germany is "coming back with a punch." The regulations laid down by the Reparations Commission, according to the Berlin *Deutsche Allgemeine Zeitung*, reveal proposed methods of obtaining indemnity that would interfere in unheard-of manner with the sovereignty of Germany. The financial control of China and Turkey is a kind of fiction compared to this suggested humiliation of a great civilized country, says this Stinnes organ, which adds:

"The new situation resultant from these demands means in our belief that the policy of fulfilment hitherto followed can not longer be adhered to. The Government must have been warned by the great rise in foreign exchange of the way along which complete subservience to the enemy is leading us. To fulfil the conditions now proposed—or better, to attempt to do so, since it can never be done—would plunge Germany into ruin. It is impossible to conceive that any Government will yield to a policy that means further impoverishment and misery of the German people."

The *Berliner Tageblatt* counsels the Government and the Reichstag to declare openly to the Allies that "we can not follow them along this road to our own destruction, and also to more terrible dislocation of the economy of the world." The Nationalist policy in France is tagged with the odium of the new demands by the Berliner Nationalist *Kreuzzeitung* which says that Poincaré "dominates Europe," and laments piteously that "faults which England and America, and ourselves above all, have made in Versailles are now avenging themselves bitterly." What is more—

"The noose from which Germany and otherwise powerful England must now free themselves was formed by the mistake of our signature at Versailles, which neither England nor America had foreseen. Germany can hope for support in her fight for

existence only if she starts out in virile fashion, and rejects the feminine policy of fulfilment."

The Communist *Rote Fahne*, attacks the Government in concert with the rest of the German press, but also urges that Germany form an alliance with Soviet Russia. This suggestion is realized, some say, in the "treaty of trade and amity" which Germany "sneaked over on the Allies at Genoa as an Easter surprise." This separate treaty nullifies the Brest-Litovsk agreement, reestablishes diplomatic relations between Russia and Germany, and we are told also that it affects the Versailles Treaty, "so deeply, that if the provisions were carried out, Germany would escape the payment of at least \$500,000,000 in reparations." The first consequences of the German and Russian accord, in the official French view, is that a new groupment of interests is formed, and because of the manner in which this was done, "a new principle of division is created." Meanwhile the Pan-German *Deutsche Tageszeitung* speaks bodingly of a second revolution, if the policy of fulfilment of the treaty conditions is continued, and it says that the terror of the Revolution of November which brought about the German Republic would be "child's play" compared to this new upheaval.

The Berlin *Lokal-Anzeiger* is the newspaper which put the question "Do you believe in Germany's resurrection?" to such personages as General Ludendorff, the "war-apostle," whose concise reply was: "The German nation now unites in resistance against its foes—or it dies." Admiral Scheer avers that "German strength and persistence can not be downed," while Mr. Arthur von Gwinner, Senior Director of the Deutsche Bank, declares, his belief in Germany's resurrection "under the postulate that we do not do our-

GERMANY'S ETERNAL CRY.

"Take off the cap and remove the insects, and the flower of European economy will bloom and flourish."

—Kladderadatsch (Berlin)

selves out of our own future by immorality, extravagance, and excessive desire for usual pleasures." Says General von Hindenburg:

"I believe in Germany's resurrection! The low level of morality and lack of national feeling now so much manifesting themselves are not the true expression of our character as a people. Loyalty and uprightness, dignity and industriousness, will in time regain the upper hand, and then, with God's help, we shall go up the hill again."

SCIENCE - AND - INVENTION

A TRUCE OF ELECTRICITY AND STEAM?

AN END OF THE LONG FIGHT between the steam and the electric railroads is forecast by an article contributed to *The Electric Railway Journal* (New York) by C. E. Thompson, assistant to the president of the Chicago, North Shore and Milwaukee Railroad. According to Mr. Thompson, traffic relations are already improving. Past ill-feeling is disappearing with the desire of both types of lines to render better service. Electric lines have created new traffic, have relieved steam roads of their unprofitable short hauls, and are becoming the natural feeders of the trunk lines. The prejudice which has so long prevented traffic relations Mr. Thompson regards as a matter which every electric railway man should now appreciate, as many of the conditions which brought about the ill-feeling of the steam road men for the electric road are now experienced by the electric railway in the competition of the jitney, the motor bus and the motor truck. He continues:

"Not all the blame should be laid at the doors of the electric railways, for, had the steam roads recognized that electric railways were a natural development and taken steps to use them as feeders rather than as competitors, the situation would be very different to-day. The electric railways, and the steam roads, also, should recognize that the motor car and motor truck are natural developments; that they have a field of usefulness and should take steps promptly to use them as allies to gather traffic in out-of-the-way places and deliver it to the rail-carriers.

"I believe the ill-feeling of the past is fast disappearing. Many of the large steam railway systems have electrified terminals in large cities, some have entire divisions operated by electric power, and others are operating the electric railways in their territory as part of their system.

"When the steam roads were loaded to the breaking point during the World War, the electric lines demonstrated their ability to handle large volumes of traffic and made a place for themselves as a part of the transportation system of this country. In the transportation act of 1920, Congress recognized the electric railways, and while they rightfully exempt them from many of the provisions of the act, the law provides that through routes and through rates and divisions shall be established between all carriers subject to the transportation act, and vests the Interstate Commerce Commission with the power to establish through routes and joint rates between carriers without regard for the kind of motive power used. In case the carriers can not agree as to the division of joint rates, the Commission has the power to fix the proportion that each company shall receive.

"With the better understanding that now exists, the demonstrated ability of the electric roads to perform as efficiently as the steam roads, with the disposition to deal fairly and openly, with the regulatory agencies definitely instructed by law, and the desire on the part of both the steam and electric roads to give the best possible service to the public, there seems to be no serious obstacle in the way of establishing the same traffic relations between electric and steam roads as now exist among the steam roads.

"If such relations are desirable I believe the American Electric Railway Association, the various State associations and the individual companies should make a united effort to bring about full recognition by the steam railways. When the facts are presented showing the enormous volume of business now handled by electric lines, what a factor they have been in the building up of communities, how they have created a riding habit among the people, how they have relieved the trunk lines of the unprofitable short-haul business, and have been and can more and more be used as the creators of traffic and the natural feeders of the steam roads, and how the best interests of the public can be secured by full traffic relations, the desired results will readily be obtained."

The big question, however, Mr. Thompson says, is to what extent are interchange arrangements desirable? In order to discuss this question intelligently, he divides it

into two natural divisions—passenger traffic and freight traffic, and goes on:

"Passenger rates are based on the distance traveled. Generally speaking, the rates are the same on all lines, both steam and electric, in a given territory. The only benefit to the public through joint fares is that of service. Time and inconvenience are saved by purchasing a ticket and checking baggage to destination, and where through routing of cars or trains is arranged for, the elimination of the transfer adds to the comfort and pleasure of the passenger. Joint passenger and baggage rates with steam roads are desirable and should be readily obtained. Before an aggressive effort is made long this line, however, it would be well for the electric lines of this territory to get together and put into effect joint passenger and baggage rates among themselves.

"Freight rates are computed on an entirely different basis from passenger rates. While the length of haul is one of the elements considered, the classification of the articles is the chief element and the rate becomes proportionately lower as the distance becomes greater.

"Most of the electric roads have physical connections with steam roads and interchange business at these junction points. Through routes and joint rates can, as I have pointed out, be obtained. Whether or not interline shipments can be handled on a basis that will pay all costs depends largely on the division of the through rates. These are times when each department of a business should be self-supporting. A very exhaustive study should be made as to the probable financial results before arrangements are made for participation in all the tariffs published for the carriers.

"Contrary to the general opinion, I think the merchandise freight offers the greatest opportunity for the electric lines. Many lines are now engaged in this branch of the business with considerable success. Through rates between electric lines, and between electric lines and the steam roads, will do much to increase the popularity of this business. The principal difficulties are the lack of proper terminals in the larger cities and the cost of handling at stations. Both problems can be solved by cooperation between the carriers. The use of containers will, I believe, solve the excessive cost of handling at stations and the transfer between terminals."

PUNCHING PEARS TO TELL WHEN THEY ARE RIPE—

There need be no more guesswork as to when pears are ready to pick. An instrument has been devised at the Oregon Experiment Station that will tell just when the fruit reaches the right stage of maturity for eating, canning, or shipping. Says Science Service's *Science News Bulletin* (Washington):

"Ordinarily the man who has a lone pear tree in his back yard does not need to worry about the exact time when his pears should be picked, except to get ahead of his neighbors' children. By noting the color of the fruit and by testing it for softness and taste he can easily tell when it is ready for home use. But the grower of pears on a large scale has much more difficulty in deciding just when his pears should be picked. He must harvest them while they are still hard and green and he must know just how green or how hard they should be to attain the highest keeping and eating quality and reach the far distant market in perfect condition. The apparatus that has been perfected measures the pressure required to punch shallow holes one-half inch in diameter in the flesh of the pear. Experts have worked out the correct pressures for the various varieties. Bartlett pears requiring forty pounds pressure to make the perforations are too green for picking but when they soften to such an extent that only thirty-five pounds pressure are required, they are ready for picking and for long-distance transportation. When the flesh reaches a condition that will not withstand twenty-five pounds pressure, they are beginning to soften too much for long-distance shipping and should be sent to a local market or canning factory."

OCEAN WAY-STATIONS FOR AIRPLANES

"MOTHER SHIPS" for airplanes now form a part of every respectable navy, and none will be scrapped as a result of the Washington Conference. But a mother ship that will stay in the same place, thus serving as a permanent landing-station, is a different thing. Such a station

Illustrations by courtesy of "The Popular Science Monthly," New York.

HOW THE AIRDROME WOULD BE ANCHORED.

must be anchored to the bottom, and how shall a vessel cast anchor where the ocean is three miles deep? An answer to this question is given by E. R. Armstrong, a Wilmington, Del., engineer, who announces a scheme for deep-sea anchors that he asserts will revolutionize ocean travel, making it possible to employ airplanes in comparatively short "hops," which he is convinced is the only feasible method for regular transatlantic air service on a commercial scale. Mr. Armstrong's plan for deep-sea anchorages is described and illustrated by Wilfred S. Ogden in an article contributed to *Popular Science Monthly* (New York, May). Writes Mr. Ogden:

"With this discovery, making the first tangible plan of establishing floating way-stations at 500-mile intervals along the ocean route, comes the announcement of a gigantic new American project for a transatlantic airplane system to provide transport at a cost no greater than the rates on first-class liners and to reduce the time of the 3,000-mile passage from New York to Plymouth, England, from an average of eight or nine days to from 24 to 36 hours.

"Heretofore a depth of about 200 feet was considered the practical limit for safe anchorage, because of the great weight of a sufficiently strong chain or cable at least 600 feet long.

"While studying the performances of the United States trans-continental air-mail service, Mr. Armstrong became convinced that long-distance flying is practicable only in comparatively short jumps. The problem as applied to crossing the Atlantic resolved itself, consequently, into providing way-stations at intervals easily spanned by craft of ordinary speed and with a fuel capacity sufficient to keep them aloft for five or six hours.

"The total weight that can be carried by an airplane is equal to the weight of the machine plus the weight of the load it can transport under normal flight conditions. The load comprises the weight of fuel and crew, which are indispensable, and the weight of the pay load, which necessarily varies with the distance.

"A 30,000-pound machine flying at 120 miles an hour would have a maximum range of flight of about 1,300 miles if its useful load consisted entirely of fuel. For a distance of 1,000 miles the fuel load would have to be 9,500 pounds, leaving 2,500 pounds for the pay load. At 500 miles the fuel load would not exceed 5,000 pounds, and the airplane could therefore carry a pay load of 7,000 pounds. Over a distance of 250 miles it would be able to carry a pay load of 9,400 pounds. It has been calculated that by providing suitable landing-stations on any flight course the pay load of an airplane can be made 80 per cent. of its total useful load.

"Considerations of this sort early showed Mr. Armstrong the need for an invention of the type he has now achieved. He turned his back on the attempts of most of his colleagues—to develop airplanes that would make the entire flight of 3,000 miles from New York to London in a single jump—and devoted his efforts to providing the way stations needed to put the crossing within the easy flight range of any average airplane.

"His invention provides means for deep-sea anchoring of station ships equipped with landing-platform, compensating automatically for the longitudinal pitch of the vessel, itself gyro-stabilized to eliminate the roll incident to rough seas.

"The idea of using ships at sea as landing-places for airplanes is not new. 'Mother ships' were successfully employed by the British during the war, while the United States Navy has built and is building airplane carriers equipped with platforms on which land airplanes may alight, and from which they may take off with extreme facility.

"The difficulty in working out such a project as Mr. Armstrong now suggests has been in the past the utter lack of feasible means for deep-sea anchoring. If not anchored, even tho provided with power, the whole series of stations would be widely scattered by a severe Atlantic storm of several days' duration."

The Armstrong method illustrated in the accompanying sketches departs from the customary method of linking the anchor directly to the vessel by cable. This is impracticable, because the great weight of three miles of cable would seriously hamper the movements of the ship in response to wind and waves.

Instead, the inventor attaches his cable to an anchorage float, similar to the buoys used as channel markers, but so proportioned that its displacement is greater than all combined

submerging forces to which it might be subjected. To this float is attached the anchoring cable of such weight, strength and length that the lifting effect of the float, added to the maximum force of the anchored vessel pulling against it,

HOW THE PROPOSED AIRPLANE STATIONS ANCHORED IN APPROXIMATELY THREE MILES OF WATER WOULD BE

is insufficient to raise all of the cable from the bottom. We read further:

"To the float is attached a towing hawser, the other end of which is made fast to a towing engine in the bow of the vessel to be anchored. The engine would be designed to automatically take up the slack in the hawser, while the propelling equipment of the vessel proper would be employed, on the other hand, to relieve the strain on the line in severe storms. The float would be equipped with apparatus for discharging oil to calm waves in bad weather.

"As an example, Mr. Armstrong, assuming a sea station or an anchored vessel of approximately 1,600 tons, arranges the anchorage and proportions the weights of anchor, cable, float, and sea stations as follows:

"The anchor, of the mushroom type, weighs 5,000 pounds and is attached to the cable by 1,000 feet of steel chain cable, two inches in diameter and weighing 230 pounds a fathom.

"To the chain cable are attached 5,000 feet of galvanized steel cable $1\frac{1}{2}$ inches in diameter; then 5,000 feet of $1\frac{3}{4}$ -inch steel cable; then 5,000 feet of two-inch steel cable; and then the last upper stretch of 5,000 feet of $2\frac{1}{4}$ -inch steel cable, secured to the float, the entire cable weighing about 75 tons.

"The anchorage float is 36 feet in diameter and 15 feet deep, with a displacement of 380 tons, made of steel plating and provided with a signal mast. It is equipped with a shackle to which is attached the end of the $1\frac{3}{4}$ -inch galvanized steel deep-sea towing hawser, 1,200 feet long; the other end of the hawser being connected with the winding drum of the automatic steam towing-machine in the bow of the sea station.

"Under abnormal climatic conditions the entire apparatus is designed to respond to the drifting force of the wind and waves merely by lifting a greater or lesser part of the anchoring cable from the bottom of the ocean, while maintaining a balance of all the component forces. The anchored vessel has a drifting radius of more than two miles.

"Assuming that the drift of the float and sea station has been $2\frac{1}{4}$ miles from the line perpendicular to the position of the anchor, and assuming a backward drifting force by the sea station of 30,000 pounds (which might be the drift of a 2,000-ton vessel in a violent hurricane), the backward drifting force results in an increased displacement of the anchorage float of about 51,000 pounds which in turn increases the strain on the anchoring cable 60,000 pounds. The result is the raising from the bottom of the ocean of such a weight of the anchor chain and cable as will produce the necessary downward strain at the angle derived by balancing the resulting forces.

"A sufficient length of the anchor chain and cable will always remain on the bottom and cause the anchor to act always in its most effective position. The various forces resulting from wind and waves merely vary the displacement of the anchorage float and the length of cable in contact with the bed of the ocean.

"The inventor proposes to equip the sea stations, anchored at intervals of about 500 miles, with flying-decks 180 feet broad and 800 feet long, available alike as landing-fields for small single-seated racing land airplanes or multimotored, heavy tonnage flying-boats.

"Each station also would have its radio equipment and operators 'trouble ships' to rescue disabled airplanes forced to descend to the water between stations, floating landing-platforms for the benefit of seaplanes, complete crews of mechanics, spare pilots, and meteorological personnel and instruments, including kite balloons for conducting weather observations.

"The vessels would also contain comfortable quarters for housing travelers who, because of darkness or inclement weather obtaining at the time or forecast, might prefer to wait over for a later transport."

POISON-PROOF HENS

FROM JOHN BURROUGHS'S last book, "Under the Maples," the editor of *The Guide to Nature* (Sound Beach, Conn.) calls what he terms "this astonishing statement": "You can not poison a hen with strychnine." On reference to Dr. A. K. Fisher, in charge of Economic Investigations for the U. S. Biological Survey, this was found to be sober fact. He wrote:

"Chickens and the wild gallinaceous birds seem to be practically immune from the effects of strychnine. Just why they have this immunity is a point to be learned. Extensive field operations and operations carried on in the laboratory by the Canadian Government, the Biological Survey, and the Public Health Service show that a quail weighing not over five or six ounces will eat with impunity enough strychnine poisoned grain to kill squirrels weighing in the aggregate twenty pounds. In our extensive operations in the Western States against injurious rodents, we have distributed over 5,000 tons (165 carloads) of poisoned grain. Altho the assistants carrying on this work are skilled in finding dead animals, up to the present time we have been unable to find one single game bird destroyed by our operations. It may be of interest to you to know that we have further safeguarded the birds by using barley and oats instead of wheat as a vehicle. At the present time this grain is rescreened so as to remove all weed seeds which, when poisoned, might be taken by small seed-eaters."

The editor comments thus:

"This is indeed an astonishing situation and it opens up interesting suggestions and great possibilities. Why not get rid of rats around poultry yards by using strychnine? Rodents are susceptible to strychnine, and as the hens are immune we shall escape the danger that most of us have feared if the hen by chance should eat the poisoned grain. We wonder if anybody has experimented along those lines."

FOILING THIEVES WITH A FLEXIBLE KEY—A flexible key, one that will go into and work in a tortuous hole, has been developed in Germany. The many robberies that are constantly reported everywhere have created a demand for such a key. we are told by *The Scientific American* (April). Says this paper:

"According to a British writer's description, the wards and the bow are not connected by a stiff stem, but by four superimposed strands of ribbon steel which prevent any sideways movement when the key comes into play. Thus there need not be a straightway between the escutcheon on the front of the door and the actual keyhole in the lock-case, which can be fixed at an entirely different level, and the point of introduction for the key is independent of the locking point. Between the outside and inside fittings there is a tubular channel with a slit in the bottom to allow the passage of the wards. This channel in German is called *Schlüsselzuführungsschiene*, or literally 'key-conveying rail,' a word long enough to insure the prevention of burglary. The housebreaker is unable to determine the position of the locking mechanism, nor can he open it with a false key, a wire brush, or a strip of lead. To burst it open is out of the question, as the explosive would fall out through the slit in the keyway made for the passage of the ward. The flexible key is not as unwieldy as one might expect, because it can easily be rolled up into a spiral and put into a neat case to fit the pocket of its legitimate proprietor."

THE LAWN ARRIVES—

A SUGAR CINDERELLA

THE CINDERELLA of the sugar industry" is what *The Louisiana Planter* (New Orleans) calls uba, or zwinga cane, a half-wild variety extensively grown in India, whence it has traveled to all tropical cane countries.

There is a good deal of it in Cuba. It is the chief variety grown in Japan and the Loo Choo islands, and the only variety of commercial importance in Natal, South Africa. H. P. Agee, director of the Hawaiian sugar experiment station, has found something of the kind in those islands, the Hawaiian correspondent of the *Planter* writes. He proceeds to give us this interesting account:

"B. E. D. Pierce, a Natal sugar planter now in Hawaii on his way round the world, is high in his praises of the particular 'uba' variety grown in South Africa, but Agee is in doubt whether the variety rather extensively grown here as stock feed is the same thing.

The name is the same, and in a general way its habit of growth is similar, but not knowing when, how and whence it came to Hawaii, there is doubt.
